

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

HARVARD

SEP 26 1891

ENTERED, according to Act of Congress, in the year 1873, by
D. APPLETON & COMPANY,
In the Office of the Librarian of Congress, at Washington.

P R E F A C E.

THE volume of the *ANNUAL CYCLOPÆDIA* for 1872 presents the satisfactory settlement of all disputed questions between the United States and Great Britain, by the unusual means of arbitration ; the peaceful operation of a republican form of government in the ancient kingdom of France, and the most astonishing manifestation of national resources on the part of her people ; the voluntary resignation of his throne by the King of Spain, which was accepted by the people, his retirement, and the gradual introduction of another republic in Europe ; the condition and progress of Italy since the removal of the capital to Rome, and the exercise of the entire temporal power by the King ; the reforms in Germany tending to limit the power of the people, and increase, concentrate, and consolidate the control of the Emperor over the numerous states, and to remove all organized sources of opposition to his absolute sway, together with other changes brought about under the influence of popular or monarchical principles among the people of Europe. The important local questions and the relations of the various nationalities of the world, arising from race, numbers, military power, wealth, and the combined antagonistic interests in operation, are here set forth with fulness and completeness.

The interest of the affairs of the United States was increased by the recurrence of a presidential election. The appeal to the people on the part of the Government for an approval of its conduct and a renewal of authority in the hands of those exercising it, while the determined but confused efforts of opponents were exerted to secure its condemnation and dismissal from office, led to the manifestation of some very unusual phases of political action, which are stated in these pages. The rapid improvement of all sections of the Union since the late disasters, the influence of novel civil and political relations on a portion of the citizens, the efforts to secure equal civil and social privileges to every one, the developments by industry as displayed in the census, the rapid advance of all the States, and especially the Southern, the material improvement

of the people, and the measures adopted by Congress, with the debates thereon, are herein fully presented.

The details of the internal affairs of the United States embrace the resources and expenditures of the Federal Government; the decrease of the public debt, and the reduction of taxation; the extension of manufactures; the decline of the commercial interest; the banking system; the expansions and contractions of values; the extension of internal trade and commerce; the financial affairs of the States; their debts and resources; the various political conventions assembled during the year, with their platforms; the results of elections; the proceedings of State Legislatures; the increase of educational and charitable institutions; the rapid extension of transportation by railroads, and of communication by telegraphs, and all those matters which exhibit the rapid progress of the people.

Under Diplomatic Correspondence, will be found the proceedings of the Court of Arbitration, at Geneva.

The discoveries in the various branches of Astronomical, Chemical, and other sciences, with new applications to useful purposes, are extensively presented.

The improvements of Mechanical Industry have been marked and useful, although less extensive than in many previous years.

Geographical Discoveries have been actively pushed forward, and with some surprising results.

The record of Literature and Literary Progress is not less interesting than in any previous year, and ample details are given of its state, as well at home as in England, and in each of the countries on the Continent of Europe.

The history of the religious denominations of the country, with the results of their conventions, and their branches, membership, and progress of opinions, are here given from official sources.

The memory of deceased persons of note, in every department of society, is briefly noticed.

All important documents, messages, orders, treaties, and letters from official persons, have been inserted entire.

A complete Index of names of persons and places, and of the events and facts comprised in the first ten volumes of the *ANNUAL CYCLOPEDIA*, will be issued in one volume without delay.

THE ANNUAL CYCLOPÆDIA.

A

ADVENTISTS, a religious denomination in the United States, founded by William Miller in 1833, after whom they have sometimes been called Millerites. They believe the second advent of Christ, and the establishment by him of the millennium, to be near at hand. They number about 80,000 members. Most of the Adventists believe in the final annihilation of the wicked. One branch of them celebrates Saturday instead of Sunday as a holy day; they are, therefore, called Seventh-Day Adventists.

Seventh-Day Adventists.—The General Conference of the Seventh-Day Adventists was held at Battle Creek, Mich., on the 29th of December, 1871. The following statistics were presented:

	Minist.	Lieuten.	Chur.	Number of Members.
Maine.....	2	2	9	208
New England Conference.....	2	1	16	300
Vermont.....	5	4	13	234
New York.....	7	8	31	589
Ohio.....	0	4	9	204
Michigan and Indiana.....	11	14	58	1,543
Wisconsin.....	8	8	24	640
Illinois.....	2	4	13	246
Minnesota.....	2	2	9	250
Iowa.....	2	4	18	400
Kansas and Missouri.....	1	..	5	..
California.....	2	..	4	180
Swiss Mission.....	1	..	2	63
Total.....	40	46	204	4,901

The pledges to the fund for systematic benevolence amounted to a total sum of \$25,956.42. A visiting delegate from the Conference of the Seventh-Day Baptists was present. The home missionaries had labored in Canada, Indiana, Tennessee, and Virginia, and with the Danish and Norwegian populations of the Northwestern States. A favorable report was made of the missionary work carried on under the direction of the General Conference at

Tramelan and Chaux-de-fonds, in Switzerland. The Conference recommended the continued prosecution of this work, as well as of that among the foreign-born populations of the United States. Some of the leading doctrines of the denomination are expressed in the following resolution, which was adopted:

Resolved, That we gratefully acknowledge the providence of God in calling our attention, as a people, to truths of such priceless value as the doctrine of the advent of our Lord at the door; the closing work of our High-Priest in the heavenly sanctuary; the three messages of Rev. xiv.; the Sabbath and the law of God; the subject of Christian temperance; the nature and order of the work of the Judgment; the doctrine of spiritual gifts; the nature and destiny of man; the final restoration of our earth to its original excellence and glory; and the gathering together of the whole family of the redeemed at the return of our Lord in the clouds of heaven.

A second resolution recited a number of the more important events which had taken place during the year, as indicating "the speedy approach of the final day," as incentives to a renewed consecration "to the important and responsible work" of warning mankind "of the judgments of God now impending." The receipts of the treasury during the year were \$4,073.81; the sum of \$3,156.82 had been paid out. The net assets of the Publishing Association were \$60,893.09, or \$10,879.07 more than at the close of the previous year. The denomination has a weekly paper, the *Advent Review and Herald of the Sabbath*, which is published at Battle Creek, Mich.

Evangelical Adventists.—The American Evangelical Advent Conference met at the Hebron Encampment on August 7th. The Conference confined itself to the usual business of an ecclesiastical body. Financial affairs were assigned to the American Millennial Association, which met at the Hebron Encampment on August 10th. The total receipts of the Association, including the balance from the previous year, were \$6,437.67; its expenditures,

The Government of the Netherlands, by a treaty concluded at the Hague, February 25, 1871, ceded all the Dutch possessions on the coast of Guinea to England. The treaty was not officially published until January 20, 1872. The ceremony of the transfer took place on April 6, 1872.

The French have abandoned the three stations of Grand Bassein, Assinee, and Dabou, retaining on the Gaboon only a coaling-station; and evacuated, in accordance with a treaty concluded in January, 1871, with the chieftain of Sat-Dior, the district of Lator, which had been annexed by General Faidherbe. They now have possession of the Senegal only as far as Medine (250 lieues), the small province of Diander, with the towns of Rafisque, Dakar, and the island of Gorée, the stations of Joal and Portudal, on the coast below Gorée, as well as the rivers Salum, Cazamance, Rio Nunez, Rio Pongo, and Mellacorie.

By a proclamation of the Governor of the Cape Colony, dated October 27, 1871, the newly-discovered diamond-fields on the lower Vaal, and in the adjacent territory of the Griqua chieftain Waterboer, were incorporated with the Cape Colony. The official occupation of the country took place on November 17, 1871. The new territory has received the name of Griqualand West, and is divided into the three districts of Priel, Griquatown, and Kligadrift. (A full account of the annexation of this territory, and a map showing the boundaries of the territory and of the three districts, are given in "Correspondence respecting the affairs of the Cape of Good Hope." Presented to Parliament, London, 1871.) The population of Griqualand was, in March, 1872, estimated at 50,000.

The frontier line in dispute between the Transvaal Republic and the Bechuana tribes in the west was determined by the Governor of Natal, as arbitrator, on October 17, 1871.

AGRICULTURE. We begin as usual with our approximate estimate of the crops of 1872. It is to be regretted that at a time when so much depends upon promptness and enterprise, in gathering and publishing returns of all our varied industries, private energy should so far outstrip public enterprise in the collection of our agricultural statistics, and that we should obtain the agricultural reports of not only the United Kingdom of Great Britain and Ireland, but of most of the kingdoms of Europe, months before our own are accessible. It is possible that no way can be devised to collect them more promptly over such a widely-extended territory, but at least a strenuous effort should be made to do so. The spring of 1872, following a severe winter, though one of very little snow, and but moderate rains, was late, cold, and backward, and serious fears were entertained lest the crops, especially of fruits, winter wheat, and grass, had been destroyed, partially or wholly, by the cold, and winter drought. These fears, happily, proved

groundless. The summer was one of abundant rains and of intense heat, the autumn mild and pleasant, and with but slight frosts till so late a period that the crops were not injured. Even in sections so elevated as to make the cultivation of Indian-corn and of grapes extremely hazardous, both ripened completely, as, for instance, in the foot-hills of the Rocky-Mountain region. Most of the crops were somewhat larger than in 1871, though generally below those of 1870. The prevalence of the horse-disease, in October, November, and December, did not greatly affect the gathering of the crops, though it interfered seriously with the efforts of the farmers to put them promptly upon the market. This was especially the case with the cotton and corn crops.

The *Wheat* crop was generally very good. In California, and, indeed, throughout the Pacific slope, it was enormous, an increase of fully seventy-five per cent. on that of the previous year, and aggregated above 80,000,000 bushels. Over 9,000,000 bushels had been exported before December 1st. All that line of States lying west of the Mississippi River had largely increased their production of wheat, the increase being not less than 15,000,000 bushels. The Southern States had added fifty per cent. to their crop. New York, Pennsylvania, New Jersey, Delaware, and Maryland, on the other hand, had fallen off nearly thirty-five per cent. The aggregate crop for 1872 will not prove less than 245,000,000 bushels, and may reach 250,000,000.

There was also a good crop of *Indian-corn*, fully equal to that of 1870, which was then the largest ever raised. The only States where it was below the average were Rhode Island, Delaware, Maryland, Virginia, Florida, Wisconsin, and Minnesota, only the last two being States where it is a very important crop, and in both these the falling off was very small. On the other hand, most of the Southern States were from twenty to thirty-five per cent. above the average, and most of the Western States from five to twenty per cent. above. California's crop was twenty-seven per cent. above the average. The aggregate is not below 1,120,000,000 bushels, and the quality is much above the average, while the corn-fodder was excellent.

The *Rye* crop was about two per cent. less than the previous year, rather from decreased acreage than from diminished yield to the acre. In Kentucky, Georgia, Texas, Minnesota, South Carolina, and California, the production was largely in excess of that of former years; while in New Jersey, Pennsylvania, New York, Vermont, Rhode Island, and Mississippi, there was a decided falling off. The aggregate crop was probably about 15,000,000 bushels.

Oats were a moderate increase on the crop of 1871, the aggregate being about 265,000,000 bushels. All the States west of the Mississippi, as well as Maine, Vermont, Rhode Island,

Connecticut, North Carolina, Georgia, Indiana, and Illinois, produced much more than the average, while the remaining States were generally somewhat below their usual mark.

Barley was hardly an average crop, though California, which grows more than any other State, had increased twenty-one per cent. on the 7,287,000 bushels of 1871, and Kansas, Nebraska, Oregon, Texas, and Tennessee, had materially increased their production, which was not previously large; but New York, the second State in its yield, had fallen off six per cent., and Ohio, which stood third, had lost ten per cent. The aggregate can hardly be less than 26,000,000 bushels.

Buckwheat, always a small crop and cultivated in only twenty-six States, will not, probably, aggregate much more than 8,000,000 bushels for 1872.

The crop of *Potatoes* (*Solanum tuberosum*) in 1871 was above the estimate, reaching 120,461,700 bushels; that of 1872 is believed to have been about 6,000,000 below this, or, in round numbers, 114,500,000 bushels. The ravages of the Colorado beetle (the ten-lined spearman) are said to be decreasing in the Western States, but the rot is more severe than usual in the Eastern and Middle States. The horse-disease greatly impeded the marketing of this crop.

The *Sweet-potato* crop (*Batatus edulis*) was about seven per cent. below that of 1871 in quantity, and probably did not exceed 47,000,000 bushels.

The *Hay* crop of 1872 was much better than that of 1871, and approached very nearly to that of 1870. It was also of excellent quality, except when injured in making, by wet weather. It could not have fallen below 24,000,000 tons. The money value of this crop is strangely ignored in most of the estimates of our agricultural wealth. It is not, like cotton, exported, and therefore does not affect our foreign exchanges, but its actual cash value, in a year when the crop is one of ordinary magnitude, is greater than that of the cotton-crop. For the year 1872 the market value of the hay-crop was not less than \$380,000,000.

Tobacco was on the whole a remarkably successful crop. That of 1871 turned out much better than was expected, yielding 263,196,000 pounds, instead of 240,000,000, as estimated, but the crop of 1872 was so much larger, especially in the States which produce most of it, that the yield could not have fallen below 340,000,000 pounds. The quality averaged about the same as last year, though in Kentucky and Missouri it was slightly better than in 1871.

The *Cotton* crop was somewhat below the average, though considerably larger (probably about 16 per cent.) than the small yield of 1871. The Commissioner of Agriculture estimates it at 3,472,444 bales, or 1,614,886,556 pounds. It would have come up to the average, but for local droughts and a somewhat

wider prevalence of insect depredations than usual. The following table shows the probable crop in each of the cotton-growing States:

The crop of *Sugar* from the sugar-cane was somewhat below that of last year. There are but seven States which cultivate the sugar-cane—viz., South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, and Texas, and of these only Louisiana and Texas produce any considerable quantity. In Louisiana, political disturbances, heavy taxation, a constant deterioration of the seed-canes (it is only propagated by layers there), the clayey character of the soil, the need of larger capital for the introduction of steam-ploughs and of improved processes in sugar-making, are seriously interfering with this crop, and rendering us more dependent upon imported sugars. The sugar-producing islands of the West Indies and the Sandwich Islands are, with each year, supplying larger quantities of sugar to our markets. The home production from the cane in 1872 would not much exceed 130,000 hogsheads. In a few instances, superior cultivation brought the sugar production up to 3,500 or even 4,000 pounds to the acre, but very many of the sugar plantations yielded less than a ton to the acre, and some not a single hogshead (1,000 pounds). The Sandwich Islands sugar-lands produce from $8\frac{1}{4}$ to six tons per acre, and the West India sugar-plantations from $2\frac{1}{4}$ to $4\frac{1}{4}$ tons; while the improved processes of manufacture enable them to save products wasted in Louisiana, which are alone sufficient to pay the cost of manufacture. A crop which cannot be raised from the seed, and is so constantly liable to deterioration, can hardly be deemed worth cultivating. Sugar and molasses are produced from the *sorghum* in twenty-four States; but the product was about eight per cent. below the average last year. Still it does, in many sections, supply the place of cane-sugar, and is now so refined as to differ from it very little in flavor. The supply of the maple-sugar is about the same each year. It is, except in some limited districts, only a luxury, and, as such, brings fancy prices. Sugar from the sugar (or Silesian) *beet* is gradually becoming a more staple article, and will eventually, doubtless, in part, supply our annually increasing demand for sugars. The best success, so far, has been attained in its production

in California, where it is said to be exerting sufficient influence to reduce, by one or two cents in the pound, the price of cane-sugar. The great difficulty in its production is, the loss of so much of the sugar in the processes necessary to free it from the great variety of organic and inorganic matters which are contained in minute proportions in the beet-juice. These constituents vary in different soils, and are much less numerous and in smaller percentage in California than in the Mississippi Valley; but, everywhere, they seriously affect the profits of the manufacture. The attempt has been made, during the past year, to introduce some of the sugar-bearing palms into Florida and Texas, in the hope of utilizing them in the production of sugar, but they will hardly supply any very large percentage of the crop.

The *Flax* product did not vary materially from the previous year—though, perhaps, slightly below it. A determined effort is now making, and with considerable success, to introduce extensively throughout the Southern States the culture of *jute*. Of all the textile fibres, this is, perhaps, most easily cultivated and most profitable. The *ramie-plant* is adapted to finer textile manufactures, and is easily grown, but the process of preparing it for manufacture is long and difficult, and, as yet, no machine has been invented which accomplishes this object quickly and economically. *Jute*, on the contrary, is more easily prepared for market than either flax or hemp, though by a process somewhat similar. Its legitimate uses are abundant; it is the material of which gunny-bags, coffee-sacks, cotton, hop and wool baling-cloths are most cheaply made; it is used as a cheap substitute for artificial hair, and it forms, we are sorry to say, the material most employed in the adulteration of silk, and silk and linen goods. We are now importing it in immense quantities (\$4,487,810 worth of it in 1872), and, if we must use it, it is certainly better that we should raise it ourselves.

The leguminous plants, *Peas and Beans*, which form a considerable addition to our food as well as some portion of the food of domestic animals, vary but little from year to year in the amount produced and thrown upon the market. If a somewhat larger acreage is sown in these crops in a given year, a blight is sure to affect one or the other. In 1872 the bean-crop was about an average, while the yield of peas per acre was about 12 per cent. below the average, but the increased acreage brought the aggregate crop about to the usual amount.

Of *Fruits*, *grapes* were, except in the New England States, largely above an average crop, though inferior in quality to the product of other years; the *apple* crop was, especially in the earlier varieties, unprecedented in its abundance, though somewhat hindered in reaching the market by the horse-disease; *pears* were also greatly in excess of the usual crop.

We give on p. 6 our usual table of the num-

ber and value of each kind of live-stock at the beginning of February, 1872.

The returns of the actual numbers of live-stock in February, 1873, have not yet been published; but, from advanced sheets of the Agricultural Report, for the Year 1872, we gather the following particulars: The increase in the number of horses for the year is about two per cent., notwithstanding the heavy losses by the epizootic. This would make the aggregate number about 9,171,000. In mules, the increase is very small, the whole number not much exceeding 1,800,000. In oxen and other cattle the increase is not quite two per cent., the aggregate being about 16,700,000. In milch-cows the increase is a little more, averaging a fraction above two per cent., the aggregate being about 10,525,000. In sheep the increase is greater, the aggregate being 32,680,000. The number of swine has not increased, owing to the ravages of hog-cholera, and other diseases, but it has not materially diminished. The prices of horses have considerably advanced, except in Missouri, Kansas, and Nebraska, where there has been a slight decline. This is also true of mules, the advance being even greater than in horses. Milch-cows have, generally, declined slightly in price, while oxen and other cattle have about held their own. Sheep are advancing steadily in price, the increase ranging in the Western States from 20 to 90 cents per head. In swine there has been a small decline in prices, and a more considerable one in pork-products.

We may sum up the progress of the year in agricultural matters very briefly. Some advance has been made in agricultural implements and machinery; notably in ploughing by steam, whether by traction engines, which seems the favorite method in the South, and is perhaps better adapted to heavy clay-lands when used for sugar, cotton, or rice; or by the Williamson engine, which is an improvement on the British "Thompson road-steamer," having broad, vulcanized rubber tires. The latter seems to be more desirable for large farmers than anything yet invented. It will go over any surface without injury, over hard or soft ground, can be used for ploughing and cultivating, will plough from one to three acres per hour, according to length of land and depth of furrow, will turn on a space not exceeding in diameter its own length, can be used successfully for driving, threshing, and other machines, will draw from twenty to thirty tons of freight in wagons on a fair country road at the rate of six or eight miles per hour, consumes about one ton of coal a day, requires for working it an engineer, fireman, and a boy to drive a water-cart, and costs, with plough and tackle complete, \$5,000. But, while this is well adapted for large farms, like those of the Southern and Western States, there is needed something of much lower price, simple, strong, and efficient, which will serve the purpose of the smaller farmers, who, with farms of from 100 to 500 acres, require

AGRICULTURE.

TABLE SHOWING THE ESTIMATED TOTAL NUMBER AND TOTAL VALUE OF EACH KIND OF LIVESTOCK, IN FEBRUARY, 1872.

something better than horse-power to facilitate their work. It is not impossible that this something may be found in the Thermo-specific Engine.

Another item of progress is found in the improved and more successful processes of making sugar from the beet, especially in Cali-

fornia. The increasing production of textile fibres, and the introduction on an extensive scale of new ones, are good indications for the increasing value of agricultural products; but still a better one is the greater attention which is now paid to the careful selection and cultivation of the best seed for cotton, hemp, wheat,

oats, potatoes, etc. It is confidently stated that this selection of seed in cotton increases the yield from twenty-five to fifty per cent., and improves the quality so that it commands 1½ cent a pound more than the ordinary grades. In cereals the increased production is nearly as great; and experiments made with hops prove that the careful selection of plants of early varieties will bring the crop to market nearly a month earlier, which would almost double its value.

The more thorough and extensive use of manures, especially of mineral and concentrated manures, is another step forward in the way of progress.

The demand for the fossil phosphates, discovered a few years since in the vicinity of Charleston, S. C., is constantly increasing, and fears are entertained of the exhaustion of the supply at no very remote period. A recent discovery of fossil phosphates, over a wide extent of territory, and in inexhaustible quantities, in Russia, promises, however, to supply the lack. A similar discovery at Iceford, Spitzbergen, has recently been brought into the market. The utilization of sewage is attracting increased attention not only in this country, but in Europe. There are practical difficulties in the way of its very general use, in regard to its deodorization without the destruction of its value as a manure, its economical concentration, and its transportation to any considerable distance; but these will doubtless be eventually overcome. Meanwhile, there are extensive manufactories of fish-guano from fish-offal and from the millions of menhaden, or moss-bunkers, caught every summer and autumn in Long Island Sound, and rendering companies in most of our large cities, which produce a highly-nitrogenous manure from the dead animals and other offal gathered in every large city. For all these artificial manures there is an active and constantly-increasing demand. It is also a gratifying indication of progress that the agriculturists of the Southern States, who, a few years ago, could not be induced to apply manures to their lands, are now the largest purchasers, and the most strenuous advocates for thorough manuring; and that the Western agriculturists, who trusted for so many years to the fertility of their deep, rich soil, have begun to believe in deep ploughing and thorough manuring, and are thereby gradually returning to the great crops yielded, in the early days, by their virgin soil.

Stock-raising and the preparation and marketing of beef-products have made great advances in Texas, and, to some extent, on the plains. There are single enclosures of from 115,000 to 170,000 acres of pasture, stocked with 50,000 or 60,000 cattle, in which all the processes of drying, concentrating, and condensing beef, the shipment of hides and tallow, and the forwarding of the freshly-slaughtered carcasses in refrigerating steamers to New

Orleans, Philadelphia, and New York, are carried on upon an immense scale. By these methods the beef, much of which has heretofore been wasted, will all be saved, and the city markets benefited in obtaining better meats at a reduced price. The application of the Signal-Service system of weather predictions to the use of agriculture, and the appointment by most of the agricultural societies of committees of conference with the Signal-Service Bureau to facilitate this beneficent purpose, indicate the desire of the farmers generally for a higher measure of scientific culture in its practical bearings upon their profession. In this connection, too, we should notice the great increase of farmers' clubs, agricultural and horticultural societies, and associations for the improvement of particular crops. The agricultural colleges are, some of them at least, demonstrating the wisdom of the provisions for their organization. The Kansas Agricultural College has done a good work in experimenting in the culture of trees on the wide and treeless plains of that State, and has given an impulse to tree-planting there which will eventually change the climate, and restore to those denuded lands the elements of a greater fruitfulness and the capacity for sustaining a dense population.

The thorough and systematic method of irrigation now adopted in California, Nevada, Colorado, and to a considerable extent in Utah, Wyoming, and New Mexico, may well give rise to the hope that, ere long, the Great American Desert will exist only in name, and that fertile fields, and eventually extensive forests, will take the place of these wastes of sand and alkali, where only the sage-bush and saline plants could maintain their existence. This system of irrigation needs to become universal over most of that region, and will do so as soon as adequate capital can be enlisted in the construction of irrigating canals and ditches. The ruins of those ancient cities on the elevated plains lying on either side of the Green, Colorado Chiquito, and Colorado Rivers, give abundant evidence that in their time irrigation was practised over all that region, and not only the lakes, and streams of the hillsides, but the torrents from the melting snow, and the rain-water, were carefully husbanded to give fertility to the soil.

The small but perceptible gain in the yield per acre of our principal cereals shows that there has been a positive change from the reckless and exhaustive modes of culture, and that our agriculturists have, at least, begun the work of reform and improvement in cultivation of the soil. There is, however, great room for further progress, and will be until we shall have reached that point to which the Japanese attained ages ago, when soils which yielded their ample crops every year were even more productive than when their surface was first broken by the plough at least two thousand years before.

ALABAMA. Comparatively little progress has been made in developing the rich natural resources of Alabama during the past year, owing, in part, to the unsettled political condition of the State, and to the confusion and uncertainty of her financial affairs. The State debt on the 21st of November amounted to \$8,743,000, consisting of \$2,876,000 in general 8 per cent. bonds, \$770,500 in 6 per cent. bonds, and \$3,296,800 in 5 per cent. bonds, besides \$2,000,000 in 8 per cent. bonds loaned to the Alabama & Chattanooga Railroad, and \$300,000 in 8 per cent. bonds loaned to the Montgomery & Eufaula Railroad. These bonds are held chiefly in foreign countries, or by residents of other States. Redeemable certificates of the State, to the amount of \$400,000, are circulating as currency, but are generally held at a discount. Of these, \$300,000 were authorized in 1867, and the remainder by an act of the last Legislature. The indorsement of the State has also been given to the bonds of various unfinished railroads to a large amount. The indorsement system of the State, which was inaugurated by the Legislature of 1871 to investigate the matter, which was rendered toward the end of January, 1872, the total amount of bonds indorsed for various roads, up to that time, was as follows:

Alabama & Chattanooga Railroad Co.....	\$5,300,000 00
East Alabama & Cincinnati.....	400,000 00
Montgomery & Eufaula.....	1,300,000 00
Mobile & Montgomery.....	2,500,000 00
Selma & Gulf.....	640,000 00
Selma, Marion & Memphis.....	720,000 00
South & North.....	2,200,000 00
Mobile & Alabama Grand Trunk.....	820,000 00
Savannah & Memphis.....	820,000 00
Total indorsed bonds.....	\$13,600,000 00

The same report states that bonds of the State were loaned directly to the New Orleans & Selma road, to the amount of \$320,000, in addition to those mentioned above as loaned to the Alabama & Chattanooga and the Montgomery & Eufaula. It also states that, if the railroads which claimed the indorsement of the State were carried to completion, the liability on this account would be increased as follows:

South & North, 83 miles further.....	\$1,826,000 00
Mobile & Alabama Grand Trunk, about 230 miles.....	3,680,000 00
Vicksburg & Brunswick, about 240 miles..	3,840,000 00
Selma, Marion & Memphis, about 80 miles..	1,280,000 00
Montgomery & Eufaula, about 5 miles.....	80,000 00
East Alabama & Cincinnati, about 180 miles.....	2,980,000 00
Savannah & Memphis, about 240 miles....	3,240,000 00
Selma & Gulf, about 56 miles.....	896,000 00
Total.....	\$17,622,000 00

The length of railroads built in the State in the last five years amounts to nearly 1,000

miles. The Montgomery & Eufaula line has been completed, and connects the capital with one of the most populous and productive portions of the State. Progress on the North & South Alabama road has been slow, owing to the necessity of cutting through the Cumberland Range, which has hitherto been a practically insurmountable barrier between the northern and southern districts. The Alabama & Chattanooga crosses diagonally from Georgia to Mississippi, and was designed as a great thoroughfare for travel from the Atlantic coast to the mouth of the Mississippi River. Among the uncompleted lines are the Grand Trunk, extending from Mobile to the north part of the State, which has reached the Warrior River, 55 miles from Mobile; the Savannah & Memphis, which is in operation for a distance of 40 miles in a northwest direction from Opelika; the Selma, Marion & Memphis, which will traverse the agricultural districts of Middle and Western Alabama, and connect with the Mobile & Ohio Railroad. The Selma & Gulf Railroad, after being completed for a distance of 40 miles, has been sold to an English company; and the East Alabama & Cincinnati has not proceeded beyond its twentieth mile from Opelika, a point reached more than a year ago.

The financial affairs of the State and her liability, on account of the indorsement of railroad bonds, formed the subject of a large share of the deliberations of the last Legislature. The constitutionality of some of the existing laws was questioned by individuals, but no serious disposition was shown to repudiate any of the obligations of the State. Various measures of relief were proposed and discussed, but none of importance adopted. An act was passed providing for the funding of the regular State debt, and another authorizing a renewal for twenty years of the bonds which fell due in May, 1872. The most important of the defeated measures provided for a substitution of 8 per cent. State bonds, to the amount of \$4,000 to the mile, for the indorsement of the State upon railroad bonds authorized by previous laws. An act supplemental to that of December, 1871, which provides for the sale of the State bonds by financial agents in New York, was vetoed because it provided for the payment of the proceeds directly to the State Treasurer, thus necessitating the sending of large sums from New York to Montgomery.

The trouble occasioned by the failure of the Alabama & Chattanooga road to pay the interest on bonds indorsed by the State, an account of which was given in the last volume of this work, is hardly over even now. The Governor paid the interest which fell due in January, in accordance with the authority given him by the Legislature. An act was passed at the last session giving him power to purchase and dispose of the road in the interest of the State. The bankruptcy proceedings which were begun in 1871 resulted in the sale of the

property by the assignees, in April, and the State became the purchaser, at the price of \$312,000. Of the purchase-money, \$100,000 was raised by a temporary loan, and the balance remains unpaid, the time for payment having been extended by Judge Busted, of the United States District Court. At the time of the sale, two suits were still pending, the object of which was to overturn the bankruptcy proceedings, and prevent the State from obtaining control of the road, and the State of Georgia had also a lien upon that portion which was within her limits. These circumstances made it difficult for the Governor to find a purchaser on favorable terms. Parties were at length found who agreed to form a company to purchase it on the following terms:

1. To assume the payment of the indorsed bonds, \$4,720,000.
2. To pay all future accruing interest
3. To secure, by first mortgage bonds, running twenty years, all past due interest on said indorsed bonds.
4. To pay \$212,000 due to the assignees in bankruptcy.
5. To refund the \$100,000 paid the said assignees by the State.
6. To pay the further sum of \$58,000, to aid in defraying the expenses incurred by the State in and about the road.

Before the consummation of this agreement, Judge Bradley, of the United States Supreme Court, sitting as a circuit judge, rendered a decree in substance confirming the bankruptcy proceedings, and establishing the validity of the liens of the State upon the road. The same judge appointed two receivers, with power to take possession of the road from Chattanooga to Meridian, but provided in the decree that said receivers should surrender it to any parties to whom the State of Alabama should sell. The appointment of receivers was designed to effect a delivery of the entire road and movable property belonging to it to the purchaser, without molestation or hinderance. The decree invested the receivers with power to raise \$1,200,000 by mortgage on the road, to complete its construction and amply equip it. The receivers have taken possession of the road, repaired and put it in operation throughout its entire length. The purchasers, in accordance with agreement, have paid to Colonel Gindrat, the Governor's agent, \$75,000, part of the \$158,000 to be paid in cash to the State, promising to pay the balance in a short time. This they have thus far failed to do. Nor have they yet complied with the other stipulations of the contract. Hence, no conveyance has been made to them.

The session of the Legislature which began in November, 1871, came to a final adjournment on the 26th of February. Besides the measures relating to the finances and railroads, already alluded to, several important acts were passed. First in importance was a new elec-

tion law, the result of a compromise effected by a joint committee of members of both political parties. It provides that every male citizen, or person who has declared his intention of becoming a citizen, twenty-one years of age and upward, and a resident of the State six months, and of the county three months before the election, shall have the right to vote. It declares that the residence shall not be lost or acquired by temporary absence without the intention of remaining absent, by being a student in any institution of learning, by being confined for safe keeping in a jail or penitentiary, by navigating any waters of the State, or the United States, or the high-seas, without having acquired any other residence, or by being absent in the civil service of the State or the United States. The time of the election of various officers is fixed in accordance with their constitutional terms of office, beginning with the first Monday of November, 1872, and provision is made for special elections, to be ordered by the Governor, whenever they become necessary on account of vacancies. The counties are to be divided into election precincts in January of each year, and the places of voting are to be designated by the county commissioners. The Judge of Probate, Sheriff, and Clerk of the Circuit Court, or any two of them, must appoint their inspectors and one returning officer for each precinct. The inspectors are to conduct the election, and must take an oath to perform their duties to the best of their ability. The polls must be opened between seven and eight o'clock in the morning, and continue open until six in the evening. Whenever any person votes, one of the inspectors must receive his ballot and call his name audibly and distinctly; and the name of each elector, whose ballot has been received, must immediately be taken down by each clerk on separate lists, which are headed "names of voters," and called poll-lists, and the number of the order in which such elector votes must at the same time be entered by each clerk against his name, the first elector voting being numbered one, and the second number two, and so on to the last elector voting. Each ballot must be numbered in the same way, and deposited in the proper box without being examined. A board of challengers is to be appointed at the same time with the inspectors, and by the same officials. The members of said board of challengers must reside in the county, and, if practicable, in the precinct for which they are appointed, and shall consist of two intelligent and discreet electors from each political party in the State. And it shall be the duty of said board, or any member thereof, to challenge any person, offering to vote, whom they, or either of them, may know or suspect not to be lawfully entitled and duly qualified as an elector. And, if said board of challengers, or either of them, shall fail or refuse to attend at the time of opening the polls, it shall be the duty of the inspectors

of the election to supply by appointment the vacancy in said board. When any person offering to vote is challenged, if his ballot is not withdrawn, he must be required to take oath regarding his qualifications as a voter, and that he has not voted before or elsewhere on the same day, and perjury in such cases is punishable by imprisonment for not less than two years nor more than five, at the discretion of the jury trying the case. Penalties are also provided for the neglect of any of the officers named to perform the duties assigned to them, and for illegal or fraudulent voting. After the closing of the polls the votes are to be counted by the supervisors, and then sealed up in the boxes and returned by the returning officer to the Judge of Probate of the county. A statement of the number of the votes is within five days to be forwarded to the Secretary of State, except the votes for Governor, Lieutenant-Governor, Secretary of State, Auditor, Treasurer, and Attorney-General, the statement of which is to be sent to the presiding officer of the Senate. Within five days after the meeting of the General Assembly the returns are to be opened and the result proclaimed, and certificates of election must be sent to the persons having the highest number of votes in each case. The election of any person declared elected may be contested for one or more of the following causes:

"1. For misconduct, fraud, or corruption, on the part of any inspector, clerk, returning officer, or board of supervisors.

"2. When the person whose election to such office is contested was not eligible thereto at the time of such election.

"3. On account of illegal votes.

"4. Offers to bribe or bribery, intimidation, threats to discharge from employment, violence, abuse, or any other misconduct calculated to prevent a fair, free, and full exercise of the elective franchise.

"But no person shall contest the election of any person to any office on account of race, color, or previous condition of servitude."

The person contesting an election must give security for the costs of the contest, which he must pay if he fails to establish his case, and may recover from the party whose election is contested if he is successful. Provisions are made in detail for the trial in cases of contested elections. If it be shown that any other person than the one whose election is contested was legally elected, judgment must be given to that effect. Provision is next made for choosing presidential electors, and for the proper performance of their duties. The last sections of the act contain sundry general provisions, among them the following:

SEC. 92. *Be it further enacted*, That if any person, by bribery or offering to bribe, menace, threats, discharges, or threatens to discharge from employment, or by any other corrupt means, attempts to influence any elector in giving his vote, or deter him from giving the same, or disturb or hinder him in the free exercise of the right of suffrage at any elec-

tion within this State, he is guilty of a misdemeanor, and, on conviction, must be fined not less than one hundred nor more than one thousand dollars, and sentenced to any workhouse or jail, of any county in this State, for not less than thirty days nor more than six months, at the discretion of the jury trying the same.

SEC. 93. *Be it further enacted*, That any person who fraudulently alters or changes the vote of any elector, by which such elector is prevented from voting as he intended, is guilty of a misdemeanor, and, on conviction, must be fined in not less than five hundred dollars.

SEC. 95. *Be it further enacted*, That it shall be the duty of the sheriff of each county in this State, on each day of election, to be present in person or by deputy, at all election precincts where elections are held in his county, whose duty it shall be to maintain good order, and no person shall be allowed within thirty feet of the ballot-box, except while casting his vote, in order that every elector who desires to vote shall do so without interference or interruption; and to maintain good order, and carry out the intent and purposes of this act, such sheriff or his deputy may specially deputize a sufficient force to act at all election precincts on the day of any election, that he, in his judgment, may deem necessary to maintain good order; and, in case of necessity, raise a posse comitatus to put down all riots, or attempted riots, or disturbances.

SEC. 97. *Be it further enacted*, That if any person or persons disturb, on election-days, or prevent, or attempt in any way to disturb or prevent any elector from freely casting his ballot, such person or persons shall be guilty of a misdemeanor, and, on conviction, shall be fined not less than five hundred nor more than one thousand dollars, and sentenced to any workhouse or jail of any county of this State for not less than six months nor more than one year, at the discretion of the court trying the same.

SEC. 99. *Be it further enacted*, That it shall be unlawful for any person or persons to sell or give away any liquors of whatever kind or description during the day on which any election may be held in this State; and it shall be the duty of the sheriff, deputy-sheriff, or any constable, to arrest all persons violating the provisions of this section, as prescribed in the last preceding section of this act; and any person violating the provisions of this section is guilty of a misdemeanor, and, on conviction, must be fined and imprisoned, at the discretion of the court trying the same.

SEC. 100. *Be it further enacted*, That any person, found drunk or intoxicated at or about any polling-place during any election-day, shall be arrested by the sheriff or his deputy, and dealt with as prescribed in section 98 of this act, and may be indicted for a misdemeanor and suffer the pains and penalties prescribed in this act.

Among the other acts passed at this session, was one "to invite and procure immigration to the State of Alabama," and one "to encourage investments of money within the State by life insurance companies of other or foreign States." The latter gives to such companies the same rights and privileges as are held by companies incorporated in the State, provided they file with the Auditor an annual statement of their condition, showing the amount of their premium receipts, and of their investments in the State. By another act, the Agricultural and Mechanical College, for whose benefit certain lands were granted by Congress in 1862, was finally established at Auburn, "the East Alabama Male College" having been purchased by the State for its use.

Subsequently, this institution was successfully organized. The fund of the college now amounts to \$218,500, invested in 8 per cent. bonds. Acts were also passed providing for a central normal school at the University of Alabama, establishing a normal school for white female teachers, to be located in accordance with sealed proposals made to the Superintendent of Public Instruction, and providing for the education of teachers of colored schools. These last were approved in December, 1871. The new town of Seale was incorporated in Russell County. An act to authorize the sale of the swamp and overflowed lands of the State to the Mobile & Northwestern Railroad was vetoed by the Governor, on the ground that such a sale would not be in accordance with the object for which these lands were granted to the State by Congress, namely, "to enable the State of Alabama to construct necessary levees and drains to reclaim said lands."

The political campaign of the year was attended with considerable excitement, but no serious disorders. The Democratic State Convention was held at Montgomery on the 19th, 20th, and 21st of June. Presidential electors were named, and the following State ticket was put in nomination: For Governor, Thomas H. Herndon; for Lieutenant-Governor, Edward H. Moren; for Secretary of State, Jabez J. Parker; for Auditor, Thomas J. Burnett; for Treasurer, James F. Grant; for Attorney-General, John W. A. Sandford; for Superintendent of Public Instruction, Joseph Hodgson; for Commissioner of Industrial Resources, Edward F. Comegys; for Congressmen at large, Alpheus Baker, John J. Jolly.

The platform adopted by the convention was as follows:

Resolved, 1. That in the opinion of this convention, under existing circumstances, the National Democratic Convention ought not to make nominations in opposition to the nominations recently made at Cincinnati. But this resolution is not intended to instruct the delegates to be sent to Baltimore.

2. That the Democrats and Conservatives of Alabama will abide by the action of the National Democratic Convention.

3. That this convention condemns, as alike demoralizing and dangerous to good order and peace, all associations of men formed to evade or violate the laws, whether State or Federal; that it is the duty of every good citizen to obey the laws, until repealed by the law-making power (or decided to be unconstitutional by a court of competent jurisdiction).

4. That this convention denounces as alarming to the citizen, and destructive to constitutional liberty, the use of the military in the execution of the laws, on the pretence of protecting the freedom of elections; that every person, who, by law, is entitled to vote, should be permitted to exercise this great privilege of freemen, unseduced by corrupt influences, and unawed by power; that the purity of the ballot-box is the life of republics.

The Republican State Convention assembled at Montgomery on the 12th of August, and continued in session till the 16th. The nomi-

nations were as follows: For Governor, David P. Lewis; Lieutenant-Governor, Alexander McKinstry; Secretary of State, Patrick Ragland; Auditor, R. T. Smith; Treasurer, Arthur Bingham; Superintendent of Public Instruction, Josiah H. Speed; Commissioner of Industrial Resources, Thomas Lambert; Congressmen at large, Alexander White and C. O. Sheeb. The platform consisted of four resolutions. The first indorsed the action of the National Convention of the party at Philadelphia; the second favored internal improvements on as liberal a scale as was consistent with prudence and economy; the third declared that it was the duty of Congress to secure the rights of citizens under the fourteenth amendment of the Federal Constitution by permanent legislation; the fourth declared that education of the people, generally, was the only means by which liberty and free government can be preserved, and opposed disfranchisement for any cause except crime.

The election occurred on the 5th of November, for all classes of officers throughout the State. The Board of Electors pledged to vote for the reelection of President Grant were chosen by 10,828 majority, the total vote being 169,716, of which 90,272 were for the Republican, and 79,444 for the Liberal and Democratic ticket. The Republican State ticket was also successful. The total vote for Governor was 171,239, of which Lewis received 89,868, and Herndon 81,371, giving the former a majority of 8,497. Of the Congressmen elected, 5 were Republican and 3 Democratic. Much importance was attached to the election of members of the Legislature, not only on account of measures to be passed relating to public finances, etc., but because a Senator to Congress was to be chosen to succeed George E. Spencer.

The Legislature was to meet on the 18th of November, but before that date the correctness of the election returns was disputed. The Republicans claimed that certain persons who had received certificates of election in Barbour and Marengo Counties had been fraudulently counted in by the supervisors, for the purpose of securing a Democratic majority. On the day when the session was to commence, the Republican members declined to meet with the Democrats at the Capitol, because the persons having certificates of election from Barbour and Marengo Counties, being present and recognized as members, would put the organization and the decision of contested cases into the hands of the Democrats. They accordingly met separately at the United States Court-House in Montgomery, admitting to seats those who claimed to have been legally elected in the doubtful counties, but had not received certificates. Thus two bodies were sitting at once, each claiming to be the Legislature, and each having, according to its own decision, a constitutional quorum of the members elected. The Democratic body

at the Capitol organized and was recognized by Governor Lindsay as the legal Legislature. The Republicans in session at the Court-House sent a committee to wait on the Governor, but he replied that the Legislature could meet nowhere but at the Capitol, and that it had been regularly organized at that place. On the 23d of November, David P. Lewis was declared to have been elected Governor for the new term, and two days later he took possession of the executive office. Committees from both of the rival bodies waited on him, and that assembled at the Court-House was recognized by him as the Legislature. To the other he sent a communication, in which he gave his reasons for recognizing the Court-House division as the Legislature, in the following terms:

The right of a citizen to a seat in the General Assembly is derived from his having received the votes of a majority of the electors of the county or district which he claims to represent.

Representative government can rest on no other basis, which can secure its integrity and perpetuity, and all laws which are enacted to arrive at this result are merely directory in their construction, and auxiliary in establishing the foundation of the right to act as such representative. A *prima facie* claim of right must yield to evidence which rebuts it, and no technical rules can be invoked which will exclude any evidence which is pertinent and competent in establishing the issue. Courts, in their investigation of facts, are limited in the admission of evidence only by its pertinency and competency, unless forbidden by some positive law, demanding its exclusion. And in this case, when the fact to be ascertained is no less momentous than whether the people are represented by those who have received the votes of the majority of the electors whom they claim to represent, the final decision of the question by *prima facie* evidence when other proof is obtainable, or by any technical rules which subordinate the essential fact in issue, would only invite the subtlety of fraud, to strangle the fundamental right of representative government in the meshes of its ingenuity.

It is true that the means possessed by this department of ascertaining the evidence necessary to its action are limited and imperfect.

The necessity for prompt action, and the want of power, preclude a full investigation, and legislative action for contesting disputed seats will afford a means of rectifying any error in the indispensable action demanded at my hands. The action of this department, by its recognition, only renders the body so recognized *de facto* the General Assembly of the State. The building in which the bodies assemble is of no significance in determining that either body is or is not the General Assembly. The constitution is silent as to where the General Assembly shall meet. The statute now in force only declares that it shall meet in the city of Montgomery. * * * If the law constituting the General Assembly rendered the building in which it convened essential to the legal validity of the body, cases might arise in which a physical contest for the possession of the building could hardly be avoided in the heated rivalry of two bodies, each asserting its own claims. The essential question is, which of the bodies has a quorum of members, in its respective branches, who were elected by a majority of the electors in the counties and districts which they claim to represent? In the solution of this question, claimants of seats, having the certificates of the Secretary of State, authorized by the popular vote, are undoubtedly entitled to their seats, and it is equally clear that claimants of seats, without the certificate of the Secretary

of State, who have received the vote of a majority of electors voting in their counties or districts, are the lawful representatives of such communities. The three members from Barbour County and the three members from Marengo are both necessary to the quorum of either body claiming to be the House of Representatives. The House meeting at the Capitol contains these six members with the certificates of the Secretary of State, and has with them fifty-four members, or three over a quorum. The certificates of the Barbour claimants are contradicted by the returns of the Barbour supervisor, now on file in the office of the Secretary of State. These certificates were issued pending an injunction which restrained the supervisors from counting a part of the Barbour vote, on partial returns, which are completed, but not until the certificate was issued by the Secretary of State, and the Secretary refuses to issue any other certificate, though the complete returns show the certificates are issued to, and held by, gentlemen who received a decided minority of the votes of electors voting, as shown by the records in his office. Whatever duties may devolve upon the Speaker of the House upon the presentation of a new certificate regular upon its face, such a claim of right cannot stand before any tribunal on the facts above stated, whose duty it is to see that the fundamental principles of a representative government are to be practised.

In respect to the Marengo members in the House at the Capitol, while the members from that county hold certificates not contradicted by the returns in the office of the Secretary of State, it is beyond dispute that the supervisors cast out about 1,000 votes which were polled against the certificated members, leaving the majority of votes against these gentlemen, and in favor of the claimants of the seats in the House, assembled at the United States Court-room in this city. This presents a case of equal clearness against the certificated members in the House at the Capitol, and the rights of the majority of voters can only be vindicated by a recognition of the right of the gentlemen claiming seats in the House, at the United States Court-room, based upon the majority of the popular vote. This leaves the body at the Capitol, claiming to be the House of Representatives, with only forty-eight legal members, and is not a quorum under the laws of the land. And, as the constitution expressly declares that a "majority of each House shall constitute a quorum to do business," I find myself unable to recognize the bodies which you represent as the General Assembly of Alabama.

The members at the Capitol continued their sessions from day to day, and issued an address to the people, in which they argued the legality of their course and condemned the action of the Governor. On the 11th of December the Governor sent the sheriff of the county to take possession of the Capitol, but he was immediately arrested for contempt. Federal troops were stationed near by to preserve order in case of necessity, while the State militia was at the call of the officers of the Legislature at the Capitol. Meantime, both bodies claiming to constitute the Legislature of the State had appealed to the President of the United States for recognition. The subject was referred to the Attorney-General, and he proposed a plan for a compromise and a settlement of the difficulty, which was accepted by both parties. This plan was as follows:

1. The officers of each organization shall tender their resignation, to take effect upon the permanent organization of the House of Representatives as hereinafter provided.

2. On the — inst., the hall of the House in the Capitol shall be vacated, and at 11 o'clock of that day all the persons holding certificates of election as Representatives shall assemble therein; but the persons holding the certificates of Secretary Ragland shall be the only representatives seated from Barbour County, and shall make, in the usual manner, a temporary organization.

3. Two tellers, one Republican and one Democrat, shall be appointed by the Speaker *pro tem.*, who shall publicly, and in the presence of the House, count the votes cast for Representatives in the County of Marengo, and for that purpose they shall take the returns of the precinct inspectors of said county, or, in case they cannot be procured, the evidence of said inspectors, as far as the same may be necessary, to ascertain the actual vote cast as aforesaid; and the persons found upon such count to have the highest number of votes for Representatives shall be seated as such from said county; but the persons now holding certificates of election as Representatives from Marengo shall not vote upon or in said temporary organization; nor shall any business other than deciding the contest as to said county be transacted during such organization.

4. When such contest is determined, the House shall make a permanent organization in the usual way.

5. On said the — instant, the Senate-Chamber shall be vacant, and at 12 o'clock the persons holding certificates of election as Senators shall assemble therein, and organize, with the Lieutenant-Governor presiding, with the person holding the certificate of Secretary Ragland in his seat as the only Senator from Barbour County, and the votes for Senator in Marengo County shall be counted in the same way, and upon the same kind of evidence as is hereinbefore provided for the House contest as to said county, and upon such count the person found to have the highest number of votes for Senator from said county shall be seated as such, but the person now holding the certificate of election to the Senate from said county shall not vote upon any question while the contest about his seat is pending; and then the contest as to the district comprising the counties of Butler and Conecuh shall be decided in the same way and upon the same kind of evidence, and the person now holding the certificate of election as Senator from said district shall not vote upon any question before he is declared elected upon a count of the votes of said district as aforesaid, nor shall the Senate do any other business before these contests are settled.

No person not holding a certificate of election shall take a seat in either body until his right thereto is affirmed as above provided.

All those claiming to be members, and seated in either organization, shall be allowed mileage and *per diem* compensation prior to the temporary organization, as hereinbefore provided for: after which persons holding certificates from Secretary Parker for Bourbon County shall cease to draw pay, and those contesting seats for Marengo and the district of Butler and Conecuh who are finally excluded shall be allowed *per diem* pay until said contests are respectively ended, and the officers and employees of each organization shall be paid the usual compensation.

(Signed) GEORGE H. WILLIAMS,
Attorney-General.

The two Houses were subsequently organized and the contested election cases went over the holiday recess. The proceedings thereon will form part of the record for 1873.

AMERICA. All questions between the United States and Great Britain were adjusted during the year. The Board of Commissioners, appointed by the respective Governments, duly assembled at Geneva, in Switzerland,

and, after a patient hearing of the claims of each, made a pecuniary award to the United States. This result was accepted by each nation. The question of the Northwestern boundary between the same Governments, which was submitted to the Emperor of Germany, was decided by him in favor of the claims of the United States. It involved the possession of the island of San Juan. Immediately after the decision was officially known, the British forces were withdrawn from the occupation of the island. The presidential election in the United States took place during the year, and resulted in the choice of President Grant for a second term. The reduction of the public debt during the year has been \$88,278,875. The Enforcement Act of Congress was continued in force for the year, and in April the President issued his proclamation relative to disturbances in South Carolina. Many destructive fires occurred, especially one in Boston, on November 9th and 10th, at which the loss was estimated at \$78,000,000, of which \$60,000,000 was personal property, and \$18,000,000 the value of buildings.

The peace of the South American States was disturbed by no foreign war during the year, but internal strife prevailed intermittently in Ecuador, Venezuela, Peru, and the Argentine Republic. A serious revolution was discovered in the latter country on the eve of its outbreak. The chief fomenter was General Arredondo, the notorious revolutionary leader. Indian raids were productive of much loss of life and property; and in the Tandil massacre 85 persons were killed by a band of religious fanatics. The Paraguay-Brazilian question, so long at issue between the Cabinets of Rio de Janeiro and Buenos Ayres, was amicably terminated, and cordial relations restored between the two countries. A few cases of yellow fever appeared at Buenos Ayres and Montevideo, and the disease raged for some time at Rio de Janeiro. Small-pox had been rife in Chili; and an epidemic had attacked three Brazilian towns, and carried off 8,000 out of 18,000. The sanitary condition of Guayaquil and some other towns in Ecuador had been ameliorated; and the Government of Buenos Ayres was taking active measures for the establishment of adequate water-works and a regular system of street-sewerage. The elections in Brazil were attended by much agitation and some bloodshed; most of the members returned were from the republican ranks. Paraguay ceded to Brazil, as a war-indemnity, the territory comprised between the Paraguay and Paraná Rivers, north of the Apa, about 1,000 geographical square miles. The boundary question is not yet settled between the Argentine and Bolivian Republics; the latter still urges her claim to the Chaco as far south as the Bermejo, and had already formed and begun to colonize a new province, corresponding to the Argentine province of Salta. The Bermejo will probably be the west dividing

line between Paraguay and the Argentine Republic. The transandine telegraph, from Buenos Ayres to the Chilian capital, was opened to the public service in July; a line was commenced between Montevideo and Rio de Janeiro; and a submarine cable is shortly to be laid between the latter city and Lisbon. Railways were under construction in every direction, Ecuador being the only South American state without one. Fluvial navigation was rapidly extending. Don José Balta, President of Peru, was assassinated in August, and succeeded by Don Manuel Pardo. President Morales of Bolivia met with a like fate at the hand of his nephew, on the 27th of November. Don Adolfo Ballivian was immediately elected in his place. A serious conspiracy against the Morales Government had been discovered and frustrated in June.

The war between Honduras and Nicaragua was not ended at the close of the year. A project for the formation of some of the Central American states into a single independent republic was spoken of.

AMES, JOSEPH, N. A., an American portrait and *genre* painter, born in Roxbury, New Hampshire, in 1816; died in New York City, October 30, 1872. He received his early education in his native State, and, developing a fondness for the painter's art while yet a youth, he commenced painting portraits there, and, as his fame grew, migrated to Boston, where he attained considerable success in his chosen pursuit. But no sooner had he acquired the means of foreign travel and study, than he went abroad and spent some years in Rome, in the diligent study of his profession. While residing there, he executed some very successful portraits and *genre* pieces, among others a very fine portrait of Pio Nono. On his return he settled in Boston, where he remained till 1870, when he removed to Baltimore, in the hope of regaining his health, which had become seriously impaired. Failing in this, he removed after a few months to New York, and occupied a studio in the Young Men's Christian Association Building, where his admirable skill and the truthful character of his portraits brought him constantly more orders than he could fill. He was elected an associate of the National Academy of Design in 1869, and an academician in 1870. Among his pictures which have long had a high reputation were, "Gazzaniga," "President Felton," "The Death of Webster," "Maud Muller," and "The Old Stone Pitcher." But his latest works were among his best. His portrait of Ross Winans, and that of a young lady of Baltimore, were among the special attractions of the Academy at its exhibition in 1872; and he had completed in his studio a fine Roman scene, which he had entitled "The Water-Carriers," a spirited portrait of Rufus Choate, and one of Madame Ristori as *Medea*. Mr. Ames was remarkable for his conscientiousness in his work, never leaving any portion

of the details unfinished, or lacking in minute perfection. He died of brain-fever, after a brief illness. He leaves a family of unusual distinction and talent. His widow is also an artist of great merit, the author of the busts of Lincoln and Andrew, and his young daughters have already given earnest of high artistic capacity.

ANGLICAN CHURCHES. According to the *Kalendar of the English Church* for 1872, the Anglican Church (exclusive of the Protestant Episcopal Church in the United States*) had, in 1871, the following number of dioceses:

England and Wales (including 2 archbishops).....	28
Scotland (1 primate).....	7
Ireland (3 archbishops).....	12
Gibraltar.....	1
British India.....	5
China.....	1
West Indies.....	4

Melanesia.....	1
Jerusalem.....	1
Total.....	100

Convocations of Canterbury and York.—For the first time since its revival, official recognition was given to the Convocation of Canterbury at the opening of its session in February, when "letters of business," as they were styled, were read from the Queen, empowering it to deal with certain matters contained in the fourth report of the commissioners who were appointed by the Queen, in 1867, to inquire into the practices, orders, and rubrics of the Church, and their true interpretation, and to suggest amendments to them.

The subjects thus submitted to the Convocation consisted mainly of provisions recommended by the Commissioners of Ritual for the use on certain occasions of worship of shorter services than those prescribed in the Book of Common Prayer, and of propositions for the disuse or modification of the Athanasian Creed. These matters formed the principal topics of discussion at the earlier meetings of the Convocations both of York and Canterbury. The action of both bodies, with reference to the provision of shorter forms of service, was favorable, and was substantially the same. The declaration of the Convocation of Canterbury was modified to conform more nearly to that adopted by the Convocation of York. As finally passed at the meeting in March, it was in substance as follows:

It is desirable:

A.—That a shortened form of daily service, taken from the Morning and Evening Prayer, be allowed on week-days in parish churches and chapels, in lieu of, and in cathedral and collegiate churches in addition to, the ordinary Morning and Evening Service, provided such shortened form be first approved by the Church in her Convocations.

* See PROTESTANT EPISCOPAL CHURCH.

1. That such shortened service be formed by omitting (except on Christmas-Day, Ash-Wednesday, Good-Friday, and Ascension-Day) the Exhortation, one Lesson (not being a proper Lesson), one Cantic, and the prayers following the Third Collect; the service to conclude with the Prayer of St. Chrysostom and "The Grace of our Lord Jesus Christ," etc.

2. That, under the discretion reserved by this Convocation, so to modify its final decision of February 13th, as to secure, if possible, unanimity with the Northern Province, the *Venite* and one or more of the Psalms (one Psalm at least, or one portion of the 119th Psalm being always retained) be added to the number of allowable omissions agreed to by this Convocation.

3. That thus the order for the shortened services for use on ordinary week-days, agreed to by this Convocation, defines the maximum amount of omission in the Order for Morning and Evening Prayer, which may be made at the discretion of the Minister, viz.: The Exhortation, the *Venite*, one or more Psalms (one, at least, being always retained, or one portion of the 119th Psalm), one Lesson (not being a proper Lesson), one Cantic, and all or any of the prayers following the Third Collect; the service to conclude with the Prayer of St. Chrysostom and "The Grace of our Lord Jesus Christ," etc.

4. That in all churches and chapels, whether cathedral, collegiate, or parochial, the priest in charge may, on special occasions, employ such prayers taken from the Prayer-Book, and such lessons from the Holy Scriptures, as to him may seem best, provided always that such service shall be allowed by the Ordinary.

5. That it is desirable that all doubts should be removed as to whether sermons must, of necessity, be preceded by the Divine Service appointed for the day. But that no prayer be used with such sermon, except the Bidding Prayer, or such prayer as shall be taken from the Book of Common Prayer.

B.—On Sundays and holy days, where the Order of Morning and Evening Prayer is duly said at some other hours, it shall be lawful for the minister of any cathedral, collegiate or parochial church, or of any chapel, to use, as an additional service, any form of prayer which is taken from the Book of Common Prayer, except from the Office for the Celebration of the Holy Communion, with Psalms and Hymns, if such service shall be allowed by the Ordinary.

C.—That it is desirable that all doubts should be removed which have arisen as to the lawfulness of using in any church the Morning Prayer, Litany, and Communion Office, each as a separate service. 1. That it be lawful to use the Morning Prayer, the Litany, and the Order for the Administration of the Lord's Supper or Holy Communion, together, or as separate services in varying order, at the discretion of the minister, under the direction of the Ordinary.

D.—That it is desirable that the forms of prayer referred to in the foregoing resolutions should be allowed to be used in school-chapels and such-like buildings, in lieu of the ordinary service.

The Athanasian Creed was brought to the consideration of the Convocation of York at its meeting in February by the Dean of Chester, who made a motion recommending that its use be discontinued in the public worship of the Church of England. The motion was discussed for two days, and then withdrawn.

The Archbishop of Canterbury introduced the Athanasian Creed before the Upper House of the Convocation of Canterbury, at the meeting in February, as one of the subjects considered in the report of the Commissioners of Ritual, to which the Queen had invited the attention of the Convocation. A

committee of the Lower House, to whom the report of the Committee on Ritual had been referred, made a report recommending the insertion of a rubrical note explanatory of the sense in which the Creed should be understood. The Upper House decided to suspend action pending the consideration of the subject by the Lower House. At its meeting in May, the Lower House expressed itself in favor of the unaltered maintenance of the Athanasian Creed in public worship, and declared that there was "no room for an explanatory note." It then requested the Archbishop to appoint a committee to consider whether it was desirable that a synodal declaration be made with respect to the sense of any clauses in the Athanasian Creed "that have been misunderstood and misrepresented." The Upper House refused to make any declaration against the alteration of the creed. At the meeting of the Convocation in July, on motion of the Bishop of Winchester in the Upper House, a joint committee of the two Houses was appointed, "to consider the whole aspect of the use of the Athanasian Creed in the Church of England."

This committee met at the palace of the Archbishop, at Lambeth, on the 8d of December, and resolved to recommend the publication of an explanatory statement of the sense in which the warnings of the Athanasian Creed are accepted by the Church of England. The declaration is to be framed hereafter. The resolution was passed by a vote of 27 in its favor, and 18 against it. Various amendments were offered to this resolution, and rejected, as follows: one for delay, by a vote of 28 to 19; one for the omission of the damnable clauses, by a vote of 32 to 8; one to allow the alternative use of the Apostles' Creed, by a vote of 34 to 6; one for the omission of the rubric before the creed, by a vote of 36 to 8; one for the substitution in the rubric of "may" for "shall," by a vote of 32 to 7; and one proposing that a short act of Parliament be passed on the subject. The last, it is stated, was not even seconded.

The members of this committee are:

On the part of the Upper House—the Bishops of London, Winchester, Norwich, St. David's, Bath and Wells, Peterborough, Llandaff, Chichester, Oxford, Exeter, Bangor, Ely, St. Asaph's, Lincoln, Gloucester and Bristol, Rochester, Hereford, Salisbury, Lichfield.

On the part of the Lower House—the Prolocutor, the Deans of Canterbury, Westminster, St. Paul's, Norwich, Wells, Rochester, and Lincoln-elect, Archdeacons of Canterbury, London, Nottingham, Huntington, Maidstone, Stafford, Taunton, Gloucester, Exeter, Rochester and St. Albans, Leicester, Surrey, Colchester, Coventry, Archdeacon Randall, Chancellor Massinberg, Canons Swainson, Harvey, Selwyn, Gregory, Seymour, Mosley; Dr. Kay, Dr. Jebb, Lord A. Compton, Messrs. Gibbs, Kemp, Perry, Hopkins, Sumner, Buckle, Horn, Fagan, and Bathurst.

The Convocation of York, at its meeting in April, invited the Convocation of Canterbury to join with it in requesting her Majesty to direct steps to be taken to secure the due representation of the laity in the meetings of the Convocation. The Convocation of Canterbury discussed the subject at length, without coming to a definite conclusion. The bishops, however, unanimously expressed the opinion in their addresses, that the introduction of laymen, instead of reforming, would revolutionize the Convocation.

The Irish Synod.—The Irish Synod met at Dublin in April. The committee on the revision of the Prayer-Book, who had been appointed at the previous meeting of the Synod, presented a partial report. They had come to a conclusion on only a few points, and merely submitted their minutes. They had agreed that the word "priest," wherever it occurs in the rubrics, should be altered to "presbyter;" that the damnable clauses of the Athanasian Creed should be omitted; that the absolution in the service for the visitation of the sick should be dropped; that in the service for the ordination of priests the words "receive the Holy Ghost" should be replaced by a prayer for the gift of the Holy Ghost, and that the words "whose sins thou dost forgive they are forgiven" should be omitted; that the selections from the Apocrypha should be dropped from the Lectionary, and the saints' days designated as "black-letter" saints' days should be omitted from the calendar; that it should be made lawful to speak the words used in delivering the elements of the communion to so many people as may be kneeling at the altar at one time; that the parish-clerk be allowed to place the elements of communion on the table before the commencement of the service; and that the rubric in reference to ornaments be omitted. The revision of the Lectionary had been intrusted to a committee of bishops, who had adopted the English Lectionary without material alterations. Numerous amendments to the baptismal service had been proposed with a view to change the phraseology of the service, or to define it so that the doctrine of baptismal regeneration should be avoided, but none of them had been agreed upon.

The Synod, acting upon the matters presented in this report, decided that the lessons from the Apocrypha should be excluded from the Lectionary. It agreed to the insertion of a new rubric declaring the word "priest" to be synonymous with "presbyter," and approved of the recommendation for the omission of the rubric with reference to ornaments. It adopted a rubric providing for a shortening of the services on week-days, and permitting the division of the services. The Synod directed, with reference to saints' days, that "no special mention shall be made in the calendar of any days except those which shall have Gospels and Epistles assigned them."

The propositions for the alteration of the Athanasian Creed were rejected. A motion was made to allow the service of absolution to be pronounced by deacons, but it was defeated.

The committee on revision were reappointed, with instructions to report to the Synod the following year. They were forbidden to reopen any of the questions on which a decision had been reached. A resolution was passed deprecating "the introduction into Ireland of the system of education proposed by the Roman Catholic hierarchy to the Government."

The Synod adopted the following address in reply to one which had been received from the Protestant Episcopal Church in the United States:

To the Bishops, Clergy, and Laity of the Protestant Episcopal Church of the United States of America.

The Archbishops and Bishops, and the clergy and laity of the Church of Ireland, in their session of the General Synod, assembled at Dublin in 1872.

Brethren, beloved in the Lord, We have received with gratitude your address, the pledge and token of your lively sympathy with us at the present time. In the many trials and difficulties which beset us, some of which, by the good hand of God upon us, we have already overcome, while the others, by the same gracious help, we hope to overcome, it is not a small comfort to us to be assured that we have the cordial sympathy and earnest prayers of our brethren in the faith beyond the Atlantic. We are well pleased to know that you, who have already trod the same difficult path which we are treading now, having nearly a century ago actually made the experiments which we are making at the present, are watching us with interest and affection. We shall find in our recollection of this fact another motive to approve ourselves not altogether unworthy of our place in that great Christian communion to which we belong. Nor shall we cease to pray that the Church Apostolical and Evangelical, Catholic and Reformed, like our own, which is the best hope of a great Christian future for America, may abound more and more in all wisdom and knowledge, and in all gifts and graces of the Spirit, and may more and more perfectly fulfil that great work for which we believe it was ordained. We remain your faithful brethren in Christ.

Signed by the Primate of All Ireland on behalf of the General Synod.

The total amount of money which had been received and subscribed to the sustentation fund of the Synod at the beginning of 1872 was £37,231 14s. 10d.

The Bennett Judgment.—A decision, which it is thought will have an important bearing upon the doctrinal position of the Church of England, was rendered by the Privy Council on the 8th of June, in the case of Sheppard against Bennett. This case came up on appeal of the complainant from a decision of the Court of Arches, which was given on July 23, 1870. The defendant, the Rev. James Early Bennett, Vicar of Frome Selwood, had written certain works entitled "Some Results of the Tractarian Movement in 1833," and "A Plea for Toleration in the Church of England." He was charged in the complaint with having maintained in these works "doctrines directly contrary or repugnant to the articles and for-

mularies of the United Church of England and Ireland in relation to the sacrament of the Lord's Supper." The doctrines which he was thus charged with supporting were: 1. That the body of Christ is present in the elements upon the altar. 2. That the priest makes a real offering of Christ to God in the Eucharist. 3. That adoration is due to Christ in the consecrated bread and wine. Mr. Bennett had, in a third edition of one of his works, modified the language in which the doctrine of the real presence had seemed to be implied. The phrase "the real, actual, and visible presence of our Lord upon the altars of our churches" was changed so as to read, "the real, actual presence of our Lord, under the form of bread and wine, upon the altars of our churches." So, also, while Mr. Bennett, in his first edition, had used the words, "who myself adore, and teach the people to adore, the consecrated elements, believing Christ to be in them," he said in his third edition, "who myself adore, and teach the people to adore, Christ present in the elements under the form of bread and wine." He had further explained that his meaning in writing the original passage was the same as that which was conveyed in the words substituted, and that he had willingly adopted a new form of expression in order to avoid the different construction to which the words first used were liable.

The Dean of Arches held in his decision of July 23, 1870, that the original language of Mr. Bennett's works, standing by itself, would have rendered him liable to conviction of offence against the laws of the Church, but that his subsequent corrections and explanations altered its bearing to a sufficient degree to relieve him from penalty. Concerning the doctrine of sacrificial worship, the dean decided that Mr. Bennett had not exceeded the liberty which the law allows on that subject. The complainant appealed against the decision to the judiciary committee of the Privy Council.

The final arguments in the case were heard by the committee in November, 1871. The decision was read by the Archbishop of York, in behalf of the Lord Chancellor, on the 8th of June following. In regard to the charge that Mr. Bennett had taught the doctrine of the real presence of the body of Christ in the elements upon the altar, the court first showed that the articles and catechism of the Church teach that the body of Christ is "given, taken, and eaten in the supper, after a heavenly and spiritual manner," and that the mean whereby it is received and eaten is faith. It then declared that, although the assertion by Mr. Bennett of a "real, actual, objective" presence, did indeed introduce terms not found in the articles or formularies, it did not appear to assert expressly, or by necessary implication, a presence other than spiritual, nor to be necessarily contradictory to the 28th Article of Religion.

It was urged for the appellant that the

Church recognizes only one body of Christ, the natural and glorified body, which is "in heaven, and not here;" that, therefore, the only presence which can be held consistent with the declaration is a presence to the soul of the communicant; and that "no mode or manner of presence is conceivable, which can reconcile the proposition that the true body of Christ is in the elements, with the proposition that the natural body is in heaven, and not here." The court replied: "Their lordships are of opinion that these inferences, whether probable or not, are by no means of that plain and certain character which the conclusion they are asked to draw from them requires. The matters to which they relate are confessedly not comprehensible, or very imperfectly comprehensible, by the human understanding; the province of reasoning as applied to them is therefore very limited; and the terms employed have not, and cannot have, that precision of meaning which the character of the argument demands;" and added: "The respondent has nowhere alleged in terms a corporal presence of the natural body of Christ in the elements; he has never affirmed that the body of Christ is present in a 'corporal' or natural 'manner.' On the contrary, he has denied this, and he speaks of the presence in which he believes as 'spiritual,' 'supernatural,' 'sacramental,' 'mystical,' 'ineffable.'"

On the second charge, namely, that Mr. Bennett had taught that the priest makes a real offering of Christ in the Eucharist, the Council decided that the doctrine of the real sacrifice is not taught in the articles or formularies of the Church, and remarked:

It is not lawful for a clergyman to teach that the sacrifice or offering of Christ, upon the Cross, or the redemption, propitiation, or satisfaction wrought by it, is or can be repeated in the ordinance of the Lord's Supper. It is well known, however, that, by many divines of eminence, the word sacrifice has been applied to the Lord's Supper in the sense not of a true propitiatory or atoning sacrifice, effectual as a satisfaction for sin, but of a rite which calls to remembrance and represents before God that one true sacrifice. (A passage was then read from Bishop Bull in illustration.) To apply the word sacrifice in the sense in which Bishop Bull has used it to the ordinance of the Lord's Supper, though it may be liable to abuse and misapprehension, does not appear to be a contravention of any proposition legitimately deducible from the Thirty-ninth Article. It is not clear to their lordships that the respondent has so used the word sacrifice as to contradict the language of the Articles.

On the charge that Mr. Bennett had taught that adoration is due to the consecrated bread and wine, the court ruled that the doctrine so described is contrary to law, and must be condemned. But they admitted, as the Dean of Arches had done, Mr. Bennett's explanation of his language, and did not consider themselves called upon to condemn him.

One charge yet remained, in the form of a specification, that Mr. Bennett had maintained that adoration is due to Christ, present upon

the altars, "under the form of bread and wine, on the ground that under their veil is the sacred body and blood of our Lord and Saviour Jesus Christ." Upon this the court ruled:

The Declaration of Kneeling states that, by the direction that the communicants shall receive the consecrated elements kneeling, "no adoration is intended or ought to be done either to the sacramental bread and wine there bodily received, or to any corporal presence of Christ's natural Flesh and Blood." According to this declaration, neither the elements nor any corporal presence of Christ therein ought to be adored. The 28th Article lays down that "the Sacrament of the Lord's Supper was not, by Christ's ordinance, reserved, carried about, lifted up, or worshipped." In the 25th Article it had been affirmed that "the Sacraments were not ordained by Christ to be gazed upon, or to be carried about, but that we should duly use them." It was laid down in *Martin vs. Mackonochie* that such acts as the elevation of the cup and paten, and kneeling and prostration of the minister before them, were unlawful. If the charge against Mr. Bennett were that he had performed an outward act of adoration on any occasion in the service, the principles laid down in *Martin vs. Mackonochie* would apply to this case. Such an act could not be done except in the service, because the Sacrament may not be "reserved." But even if the respondent's words are a confession of an unlawful act, it is questionable whether such a confession would amount to false doctrine. Some of their lordships have doubted whether the word "adore," though it seems to point rather to acts of worship, such as are forbidden by the 28th Article, may not be construed to refer to mental adoration, or prayers addressed to Christ present spiritually in the Sacrament, which does not necessarily imply any adoration of the consecrated elements, or of any corporal or natural presence therein. Upon the whole, their lordships, not without doubts and division of opinions, have come to the conclusion that this charge is not so clearly made out as the rules which govern penal proceedings require. Mr. Bennett is entitled to the benefit of any doubt that may exist. His language has been rash, but, as it appears to the majority of their lordships that his words can be construed so as not to be plainly repugnant to the two passages articled against them, their lordships will give him the benefit of the doubt that has been raised.

The appeal was dismissed.

The Church Congress.—The Church Congress is a voluntary body, and possesses no authority for legislative or judicial action. Its meetings for 1872 were held at Leeds. They commenced on the 8th of October, and continued during four days. The most prominent of the topics discussed were: "The Parochial System of the Church;" "Lay Coöperation;" "Vital Christianity as affected by the Present State of Science and Civilization;" "The Church in its relation to the State and Non-Conformists;" "The Just Principle of the Church's Comprehensiveness in Matters of Doctrine and Ritual;" "The Deepening of the Spiritual Life;" "Sunday-Schools;" and "The Duty of the Church with regard to Elementary Schools and their Inspection in Religious Knowledge."

The Agitation for Reform.—A large public meeting was held in London on the 15th of February, in support of measures for reform in the Church of England, and in opposition to the movement for disestablishment. Lord

Castleton presided. Dean Stanley was the principal speaker. Resolutions were adopted:

1. That the reform and not the disestablishment of the Church of England should be the policy of the present time;
2. That in the opinion of this meeting the propositions of the Archbishop of Canterbury to Convocation, which have for their object increased liberty in the use of the Prayer-Book services, should receive the sanction of the Legislature;
3. That it is desirable that the creed commonly called the Creed of St. Athanasius should no longer be recited in the public services of the Church;
4. That it is desirable to give the laity in parishes, by means of a representative organization, some voice in the introduction of changes in the Church services within the law, and facilities for taking further part in the local administration of the Church;
5. That it is desirable that the serious attention of Churchmen should be turned to amendments in the system of patronage, a reformed constitution of Convocation, and other questions of Church reform.

The Bishopric of Madagascar.—The English Church papers reported, in April, that through the interposition of the Archbishop of Canterbury, an amicable arrangement had been effected between the persons who were interested in the movement to secure the appointment of a bishop to Madagascar and the London Missionary Society. This Society had opposed the appointment of the bishop, in the fear that the introduction of another ecclesiastical body to the natives of Madagascar might unsettle the minds and disturb the faith of the converts. The Church Missionary Society had also opposed the appointment on the ground that the setting up of a rival ecclesiastical jurisdiction in Madagascar—a field in which the London Society had heretofore labored exclusively—would be a violation of the comity of missions. It was said to have been agreed, on the part of the promoters of the Episcopal appointment, that the bishop, should administer to the spiritual interests of the English residents on the island, and that he might establish missions among the heathen population, but that he should abstain from direct interference with the Christian missions already established. With this understanding, the London Missionary Society was understood to withdraw its opposition to the appointment of a bishop.

After much canvassing, a suitable person was found upon whom to confer the office, and arrangements were fully made for his consecration by the Archbishop of Canterbury, when at the last moment, very near the end of the year, Mr. Gladstone, on behalf of the Crown, refused the license. Without this license the Archbishop was unable to proceed further. A brief history of the efforts to select a bishop for this see is of interest in connection with these facts. When the formation of the bishopric of Madagascar was first contemplated, proposals were made to the Rev. William Ellis, a missionary of the London Missionary Society, that he be ordained by the Archbishop of Canterbury, and consecrated to the Episcopal office. Mr. Ellis declined this proposition. Negotiations were then opened with a gentleman who is described as "now one of

her Majesty's chaplains," whose name is not given, but they were without result. The bishopric was then offered to the Rev. R. H. Baynes, Vicar of St. Michael's, Coventry. He at first accepted it. The Church Missionary Society now interposed, and declared that their agents would be instructed not to place themselves under the new bishop's jurisdiction. Thereupon Mr. Baynes, after consultation with his diocesan (the Bishop of Worcester), determined not to have any thing more to do with the bishopric. After several other efforts had been made to arrange matters, it was understood that the formation of the bishopric had been definitely determined upon, and the Rev. Henry Rowley was nominated to the see. Mr. Rowley had long been connected with the Universities Mission to Central Africa, and had labored there with Bishop Tozer; he had also labored zealously in the formation of the mission of St. George's-in-the-East. It is he whose consecration Mr. Gladstone has defeated.

Correspondence on Church Union in South Africa.—A correspondence took place near the close of the year 1871 between Bishop Gray, of Cape Town, and the Rev. Dr. Faure, Moderator of the Synod of the Reformed Dutch Church in South Africa, with reference to a union of the two Churches. It originated in the passage of a resolution by the English Episcopal Synod in favor of such union. The Dutch Synod responded with an expression of willingness to consider the subject. Bishop Gray in his letters mentioned as the points on which the two Churches are agreed, the acceptance of the inspired Scriptures, of a written liturgy, and of the necessity of creeds. Dr. Faure spoke of the English Prayer-Book and Episcopacy as points to which the Reformed Dutch Church would make objection. The correspondence assumed the form of an argument on the parity of bishops and presbyters, and the claims of the Book of Common Prayer. It soon appeared that organic union could not be obtained. Dr. Faure then, on behalf of the Reformed Dutch Church, made propositions for an exchange of pulpits, for a system of united prayer, and for cooperation in the circulation of the Bible, and in other forms of Christian activity. The English bishop declined these propositions, because, he said, "Whatever it is that keeps us apart unfits us, in my estimation, to be at once safe and outspoken teachers of each other's people."

Free Church of England.—After the announcement of the decision in the Bennett case, the secretaries of the Free Church of England issued an address, in which they stated that that Society was organized chiefly to oppose ritualism, and to unite the laity in the government as well as the work of the Church. They claimed as an advantage for their organization that the Evangelical clergy of the Established Church are debarred by ecclesiastical regulations from going into parishes where ritualism prevails, whereas the Free

Church of England is free to enter any parish with a revised Prayer-Book, from which the sacerdotal element is erased, and can conduct sound Protestant services. The Society had already expended £15,000 in establishing such services, and they asked £50,000 more to extend the movement so far as might be necessary. The policy of the leaders of the Society, as it is indicated in its address, and as it is shown in their subsequent proceedings, is to induce the Evangelical clergy to maintain their position against ritualism within the Church of England, while they accept the aid of the Free Church in the parishes into which they cannot themselves go.

The tenth annual convocation of the Free Church of England was held in London on the 25th and 26th of June. A code of by-laws was adopted. Five ministers were ordained after the forms of the revised Prayer-Book. In these forms the doctrine of the apostolic succession is ignored. The report of the Council "dealt vigorously with the Bennett judgment, and characterized it as a tortuous defence of ritualism."

ARGENTINE REPUBLIC (**LA REPÚBLICA ARGENTINA**), an independent state of South America, extending from the twenty-second to the forty-first parallel of south latitude, and from 53° to 71° 17' west longitude. It is bounded on the north by Bolivia; on the east by Paraguay, Brazil, Uruguay, and the Atlantic; on the south by the Atlantic Ocean and Patagonia, from which latter it is separated by the Rio Negro; and on the west by the Cordillera of the Andes, which forms the dividing line between the Argentine and Chilian Republics. The Argentines dispute with Chili the right to the territory south of the Rio Negro as far as Tierra del Fuego, according to the original division by Spain; and Bolivia urges its claim to that part of the Gran Chaco bounded by the rivers Bermejo and Paraguay. The republic is divided into fourteen provinces, which, with their areas and population, according to the last census, are as follows:

PROVINCES.	Area, sq. m.	Pop.
LITTORAL OR RIVERINE PROVINCES.		
Buenos Ayres.....	70,000	591,653
Corrientes.....	60,000	180,863
Entre-Rios.....	50,000	122,476
Santa Fé.....	30,000	85,648
ANDINE PROVINCES.		
Catamarca.....	35,000	81,369
Mendoza.....	65,000	67,393
La Rioja.....	35,000	52,962
San Juan.....	38,000	66,360
CENTRAL PROVINCES.		
Córdoba.....	60,000	287,394
San Luis.....	20,000	56,509
Santiago del Estero.....	35,000	140,538
Tucuman.....	28,000	126,040
NORTHERN PROVINCES.		
Salta.....	50,000	97,675
Jujuy.....	30,000	40,429
Total.....	591,000	1,827,384

These figures show an increase of 146 per cent. as compared with the census of 1836. All the capitals bear the names of their respective provinces, except that of Entre-Ríos, which is Concepción (La Concepción del Uruguay). The chief towns, with their population in 1869, are contained in the following table:

Capitals.	Pop.	Capitals.	Pop.
Buenos Ayres.....	177,787	Córdoba.....	28,523
Corrientes.....	10,870	San Luis.....	8,748
Concepción.....	6,513	Santiago.....	7,775
Santa Fé.....	10,870	Tucumán.....	17,438
Catamarca.....	5,718	Salta.....	11,716
Mendoza.....	8,134	Jujuy.....	8,072
La Rioja.....	4,489		
San Juan.....	8,358	Total.....	304,596

The current of immigration still flows uninterruptedly to the Argentine shores, and is ever on the increase. The number of immigrants in 1863 was 10,400; in 1864, 11,682; in 1865, 11,770; in 1866, 13,960; in 1867, 23,900; in 1868, 29,384; in 1869, almost 38,000; in 1870, 39,667; in 1871, 81,614; and the arrivals in 1872 showed still swelling numbers. The decrease in 1871 is attributed to the epidemic which visited the republic in the early part of the year. The principal centres of immigration are Buenos Ayres, Santa Fé, Entre-Ríos, Corrientes, Salta, and San Juan. The foreign population in Buenos Ayres was set down in 1869 at 250,000, made up of the following elements: Italians, 70,000; Basques, 40,000; French, 30,000; Spaniards, 30,000; Irish, 30,000; English and Scotch, 10,000; Germans, 10,000; other nationalities, 30,000. The Italians, who are the most numerous class of foreigners, number at present in the province of Buenos Ayres 60,000, upward of 40,000 of whom (or about one-fourth of the entire population) are in the city. The colonies in the various parts of the country, and especially those of Santa Fé, are in a very flourishing condition. A bill was to be laid before Congress for the creation of a land-office for the sale and distribution of Government lands. President, Domingo F. Sarmiento, elected October 12, 1868, for six years; Vice-President, Dr. A. Alsina; Minister of the Interior, Dr. H. Frias (June, 1872); of Foreign Affairs, Dr. C. Tejedor; of Finance, L. L. Dominguez; of Justice, Public Worship, and Public Instruction, N. Avellaneda; of War, Colonel M. de Gainza. The governors, etc., of the fourteen provinces were as follows:

Buenos Ayres.....	Dr. M. Acosta (May, 1873, for 3 years).
Minister of the Interior.....	Dr. F. Pinedo.
Minister of Finance.....	F. B. Madero.
Catamarca.....	F. Galludés.
Córdoba.....	J. A. Alvarez.
Corrientes.....	M. V. Gelabert.
Entre-Ríos.....	L. Echagüe.
Jujuy.....	P. J. Portal.
Mendoza.....	L. Castellano.
La Rioja.....	A. Villanueva.
Salta.....	B. Zorrilla.
San Juan.....	V. Videla.
San Luis.....	J. B. Luzero y Sosa.
Santa Fé.....	Dr. S. de Iriondo.
Santiago del Estero.....	L. Frias.
Tucumán.....	P. Helguera.

The following table shows the state of the finances during the years 1870-'71:

REVENUE.	
Import duties.....	\$13,000,000
Export duties.....	2,150,000
Storage.....	500,000
Stamp duties.....	280,000
Postal service.....	130,000
Telegraphs.....	80,000
Sundries.....	80,000
Total.....	\$16,160,000

EXPENDITURES.	
Floating debt.....	\$8,800,000
Interest and amortization of the consolidated debt.....	7,816,601
Department of the Interior.....	1,737,492
Foreign Department.....	121,172
Finances.....	2,193,676
Justice, Public Worship, and Public Instruction.....	1,084,735
Army and Navy.....	5,103,363
Total.....	\$26,810,088
Deficit.....	\$10,650,088.

FOREIGN DEBT OF 1871.	
British Loan of 1854, @ 6 per cent.....	\$4,144,910
British Loan of 1854, @ 8 per cent.....	5,022,990
Foreign debt.....	1,921,220
British loan of 1868.....	11,552,730
Debt to Brazil.....	1,321,130
Loan negotiated in London, April 30, 1871, with Murrieta & Co. @ 8½% (6 per cent. interest and 2½% per cent. amortization).....	30,000,000
Total foreign debt.....	\$53,962,970
Home debt.....	{ Old debts..... 16,608,417
	{ Loan from Wanklyn & Co., of Buenos Ayres, June 10, 1871, 6,000,000
Total national debt.....	\$76,571,387

The national debt in 1871-'72 was \$87,500,000; in 1862 it was but \$15,000,000.

Besides the national budget, each of the fourteen provinces has its own special budget; that of Buenos Ayres amounts annually to \$2,000,000.

According to the various custom-house returns, the total exports for the republic amounted, in 1871, to \$26,753,218; and the total imports to \$46,624,766.

The exports and imports for Buenos Ayres alone were as follows:

EXPORTS.	
Hides.....	\$7,300,000
Sheepskins and furs (nutria).....	2,000,000
Wool.....	5,900,000
Horse-hair.....	600,000
Tallow.....	5,900,000
Jerked beef.....	1,000,000
Animal products.....	500,000
Ostrich-feathers.....	100,000
Sundries.....	100,000
Total.....	\$32,800,000

IMPORTS.	
Great Britain.....	\$11,500,000
Belgium.....	1,570,000
Brazil.....	2,680,000
Chile.....	570,000
France.....	12,370,000
Holland.....	1,240,000
Italy.....	1,510,000
German States.....	1,800,000
Spain.....	2,110,000
United States.....	2,680,000
Uruguay.....	1,350,000
Other countries.....	690,000
Total.....	\$39,010,000

Total value of the exports and imports for Buenos Ayres.....	\$62,310,000
Exports from other ports, \$3,453,218 }	
Imports from other ports, 7,614,766 }	11,067,979

Total commerce of the Argentine Republic in 1871..... \$73,377,979

These returns are, however, practically for ten months only, all mercantile movement having been suspended for two months in consequence of the late plague. It is also believed that, if the value of smuggled goods were added to the imports, the total would reach 60 millions; while the exports, if full account were taken of the produce that actually leaves the country, would be little short of 35 millions; thus showing an aggregate trade of 95 instead of 73 millions for the republic.

Great Britain stands foremost in the list of nations trading with the republic, the total value of the commerce between the two countries being 21½ millions; next in order is France, 9½ millions; next comes Belgium, 7½ millions; then the United States, 5½; while the trade with Paraguay (¼ million) is the least important of all.

The importations from Brazil, Chili, and Uruguay, mainly comprise European merchandise transhipped in those countries. Strange to say, the trade with Chili is greater than with Brazil; and that with the United States is more extensive than the trade with Spain and Italy together. Belgium usually held the first rank in the Argentine export tables, until 1871, when England took the lead. On comparing 1871 with 1870, it is observed that France fell off one-half both in imports and exports; England from 10 to 12 per cent.; the United States one-third in imports; Germany and Spain one-fourth; while Belgium remained stationary; Italy increased by one-third, Chili one-fourth; and Uruguay nearly doubled. The total decline in trade caused by the yellow-fever plague was over 10½ millions, the port of Buenos Ayres showing only 47½ millions, against 62 for the previous year. In normal times about 88 per cent. of the whole trade of the republic is done through the port of Buenos Ayres; Rosaria stands for 8, and the remaining ports for 9 per cent. The major part of the exports to Chili are by way of Mendoza, and pass duty free. It is remarkable that little has hitherto been done to render the vast mineral resources of the Argentine States profitable to the nation. "In 1871, the value of silver, lead, and copper, sent from all parts of the republic, did not reach \$450,000. In spite of wars, epidemics, droughts, and other obstacles to the material development of the country," writes his Excellency Sr. Don Manuel R. García, Argentine minister to the United States, "the exports have quadrupled in quantity, and quintupled in value in the seventeen years from 1853 to 1870." In effect, the exports of the former years, comprising ox-hides, horse-hides, tallow, wool, sheepskins and jerked beef, amounted to 97,453 tons, at a value of \$6,990,770; while the figures for the latter year were 397,722 tons, and \$39,294,690. This increase, large as it may appear, represents but a small proportion of the products of the country, the mineral and agricultural resources of which have not yet been devel-

oped, for want of hands, capital, and suitable roads. Official reports show the exports of animal products to have been in the proportion of \$22.50 for each inhabitant in the province of Buenos Ayres alone in 1853, \$60 in 1860, and \$80 in 1870. A significant fact is that of the freighting of a vessel in November last for the export of wheat, 1873 being the first year in which that cereal ceased to be imported into the republic.

The interior is in the enjoyment of perfect tranquillity; and a hopeful sign of the times is the rapid decay of that spirit of *guachoism* which in former days was so injurious to the permanent and industrial interests of the country. The new wool-clip promised to be exceedingly plentiful, and command prices nowise inferior to those of former days. Pastoral investments appear to be more profitable than ever, and sheep-farming especially to be in a very prosperous condition. If, during the long depression, *estancieros* were obliged to sell sheep at ruinously low prices, some of them even retiring from the business bankrupt and discouraged, the recent rise in values has largely benefited their more fortunate successors: sheep, once sold in large flocks at 8 reals a head, now bring 12, and many buyers have actually cleared the purchase-money out of the profits of the first shearing. The culture of tobacco has so far been attended with fair success, and promises to be one day an important industry in the republic. Machines for the manufacture of beet-sugar had been received from England for the Alexandra colony, admirably situated on the banks of the Rio Javier, in the Gran Chaco. The value of land, not only in Buenos Ayres City, but in the outlying camp, is steadily on the advance; as an instance of which may be mentioned the recent sale of a square league, some sixty miles from the city, for \$125,000, a price far beyond any hitherto obtained for that kind of property.

In financial circles, the project of the conversion of the Provincial Bank having been disposed of, the all-important one of establishing a National Bank absorbs the general attention; and a charter has lately received legislative sanction. In September the Senate had unanimously passed the first reading of the bill for the building of six new lines of railway for the upper provinces, to connect them with Chili on the one side, and Buenos Ayres on the other. These lines were to be of 40-inch gauge, and about 1,600 miles long, the estimated cost being \$50,000,000 (about £10,000,000). The Government was authorised to bind the National Treasury to a guarantee of 7 per cent. A bill had passed the provincial Senate granting a bonus of £1,000 and 2,200 acres of land for every mile of the proposed railway from Tandil to Bahia Blanca (190 miles), which will be the completion of the great Southern line. The law authorising the Dolores extension had been passed,

with a bonus of £500 per mile to the company. The prospectus had also been published and subscriptions called, for the Northern line to Rosario (189 miles), and branches, embracing in all 500 miles. The works were expected shortly to commence on the Port Campana Railway (40 miles) to provide a suitable port on the Paraná. The Ensenada Railway was finished, and was to be opened to public traffic before the close of the year. Besides the proposed railway by the Planchon, a project is on foot for building another, 800 miles farther north, from San Juan into Chili, at an estimated cost of £12,000 per mile, the Argentine and Chilean Governments giving a guarantee of 7 per cent. on their parts respectively. An appropriation of \$200,000 had been made for the erection and improvement of public offices in Buenos Ayres and some of the other provincial capitals. The works on the Tucuman Railway were expected to be commenced toward the end of October. A remarkable augmentation was reported in the traffic receipts of the Central Argentine Railway; the receipts for the month of June were almost \$66,000, being an increase of 60 per cent. in the passenger and 17 per cent. in the freight traffic, as compared with the corresponding month in 1871. The gross increase for the year is, however, not over 14 per cent. The line to the Rio Cuarto was to be opened by the end of the year; and the works on the line from Mercedes to Concordia were advancing rapidly. The transandine telegraph, establishing communication between Buenos Ayres and Santiago, the Chilean capital, was inaugurated in July, and continued in uninterrupted operation. Telegraph-lines through other parts of the republic are in active process of construction, and there are numerous lines projected; among others, one from Montevideo to Rio Grande do Sul, in Brazil; which, thanks to the submarine cable already laid to Montevideo, will place Buenos Ayres in telegraphic connection with Rio de Janeiro, and ere long with Europe, it being affirmed that a cable from the Brazilian capital and Lisbon will be completed in the course of 1873. In January, 1870, there were but two horse-car railways in the city of Buenos Ayres, with an aggregate length of 4,780 metres; the city has at present nine lines, covering 106,687 metres. Some 16,000 metres more are in process of construction; and more new companies are about to be formed.

The army of the Argentine Republic, exclusive of the militia and national guard of Buenos Ayres, is composed of 6,482 men: 2,909 infantry, 2,861 horse, and 712 artillery. There are 29 generals, 273 commandants, and 263 officers. The republic has seven vessels-of-war, one of which mounts 12 guns.

The shipping statistics for 1871 show an aggregate of 1,526,281 tons, four-fifths of which refer to Buenos Ayres, and the remainder to the other ports. This is exclusive of the

coasting-trade. There were, in all, 1,628 steamers, and 2,410 sailing-vessels; the nationalities and tonnage were distributed as follows:

NATIONALITY.	Steam.	Sail.
English.....	321,084	301,779
Italian.....	159,886	99,975
French.....	77,496	98,843
Various.....	260,112	807,156
Total.....	818,578	707,753

The number of steamers plying monthly between the various European ports and the Plata was to be extended from about 20 to 25 by the opening of the present year; 14 of these were to be English. Negotiations were being made between the Argentine and Uruguayan Governments for a new Sanitary Convention.

The port of Ensenada will, it is expected, shortly be opened, and the bar removed; for which purpose Congress seemed disposed to make an appropriation of \$500,000.

Strenuous efforts were being made to improve the sanitary condition of the city of Buenos Ayres. A committee was appointed during the year to inquire into the matter and report upon the practicability of establishing a thorough system of drainage in the city (street-sewerage having been hitherto unknown here), and furnishing the latter with a supply of potable water adequate to the necessities of the population.

The combined energies of the national and provincial Governments are sedulously employed to promote the progress of public education. The University of Córdoba and the colleges (*Colegios Nacionales*) have so far given results at least equal to those predicted by the warmest defenders of the system; the aggregate number of professors in these colleges is 170, and that of the students 2,600. A normal school for teachers has been established in Paraná, and has already over 60 pupils on its roll.

In 1872 there were in the whole republic 1,407 schools, public and private (exclusive of the university and colleges); but these were attended by only 81,183 children, out of 468,987 children between the ages of 6 and 15 years. In other words, 391,990 children between 6 and 15 years of age had not yet taken the first steps in education. Two ecclesiastical seminaries are supported by the national Government, one in Buenos Ayres, the other in Córdoba. The Astronomical Observatory in Córdoba, under the direction of Mr. B. A. Gould, from the United States, was inaugurated in October, 1871, by the President of the Republic. There are in the republic 21 public libraries, inclusive of the *Biblioteca Nacional*, established in 1870. A national exhibition was opened at Córdoba, October 15, 1871, and closed on the 20th of the following January. The building was divided into three sections; 11,704 objects were exhibited by

2,270 Argentines, and 401 foreigners. The mineral riches of the country were represented by 3,000 specimens of metalliferous stones. No less than 471 prizes were awarded by the jury. The total cost of the exhibition was \$365,934.28.

A singular meteorological phenomenon occurred at Rosario in December, 1871: a severe tempest had ended in a shower of stones which lasted ten minutes, and caused great mischief. The stones varied from the size of a nut to that of a pigeon's-egg. The river Paraná had fallen very low; and, strange to say, the Rio Negro, an affluent of the Uruguay, had at the same time overflowed its banks, inundating the circumjacent country to a considerable distance.

A spirit of revolution was manifested in Corrientes during the election for Governor; and an invasion of Entre-Ríos by Lopez Jordan was spoken of. In Martin Garcia, an island at the head of the estuary of the Plata, some 200 prisoners revolted and succeeded in procuring arms; in the attempt to quell the disturbance, eight of the rioters were killed, 18 wounded, and a large number made good their escape to Uruguayan territory, where they concealed themselves in the woods. The question of transferring the seat of government from Buenos Ayres was again agitated in the early part of the year, some recommending Córdoba, others Rosario, and all agreeing upon the expediency of having the government in a small quiet town, where it would be less exposed to mob-law and coercion, than in a populous city.

Extensive coal-mines were discovered at Madayer, by Don Felix Klappenback, who thus became entitled to the reward of \$25,000 promised by the Argentine Government for such discovery.

In February Santa Fé had for the third time in the space of a few months been the scene of an invasion by the Indians, who devastated fields, killed a colonist, and retreated with a drove of mares. A fourth invasion took place March 4th, when the Indians, numbering from 2,000 to 3,000, carried away many captives, and drove off some 80,000 horned cattle and 40,000 horses. On the 7th the church and all public buildings were full of families, who had to sleep on the ground and in the courts, most of them being deprived of clothes. General Rivas set out with troops in pursuit of the savages, 200 of whom were killed when overtaken. The most of the animals were recovered.

In February a revolution broke out in Corrientes headed by two colonels, who, without firing a shot, seized the Governor, his ministry, and the military commandant of the city, and threw them into prison. Some chiefs of one of the parties in Uruguay participated in the movement. A battle was fought near Curuzú Cuatía, in Corrientes, on the 6th of February, between 8,000 of the insurgents and the

national troops under Babiene, the former being routed and all their infantry captured. Babiene was, however, finally defeated in another encounter with the revolutionists at Tabaco. After the battle, which lasted 20 hours, and in which many were killed and 500 wounded, the commander of the revolutionary party set free all the prisoners, including Babiene. Thus ended the civil war of Corrientes. A secret reaction took place in Entre-Ríos in favor of Lopez Jordan, notwithstanding that he had been openly declared to have been the cause of all the misfortunes of that country. The Indians made frequent predatory excursions in the province of Córdoba.

On New-Year's day the town of Tandil was entered by a band of forty gauchos, who disarmed the soldiers on guard, set a prisoner free, and shouting, "Death to the masons and *gringos* (foreigners)!" began a general massacre, which terminated with the slaughter of some thirty-five persons. These gratuitous abominations were not perpetrated for the purpose of robbery and pillage, but were a crusade of religious fanaticism against masonry; the perpetrators were not criminals, nor did they belong to the mobocracy; but war against masonry had long been preached from the pulpit; and the Tandil assassins were Catholics, who believed that in ridding society of freemasons they were accomplishing the Divine will. The leader of the murderous band was a Bolivian, who had for some time travelled through the rural districts proclaiming himself to be a saint and prophet sent by God from Bethlehem, and possessed of the power to cure all manner of infirmities by the laying-on of hands. This *Dios-médico* (God-physician), as he caused himself to be called, had found many believers in his pretended virtues, not only among the poor and ignorant, but also in the ranks of the opulent and influential. Nor did the authorities make any move to put an end to the imposture until fanaticism had reached the culminating point, and nearly two-score of peaceful citizens had perished under the knife of the assassin. Measures were then taken for the apprehension of the murderers, twenty of whom were taken prisoners, including the infamous Dios-médico himself, who had assured his followers that no hurt could come to them while they were with him. Eighteen others were secured some time afterward; of the entire number, fourteen were condemned to death, and fifteen to 15 years' imprisonment with hard labor; and their fanatical leader was shot dead in his prison by the populace. As some English families had been killed in the Tandil massacre, the results of the latter were discussed in the British House of Commons; and representations were made from the Foreign Office in London to the Argentine Government. Earl Granville's dispatch, of June 22d, closes in the following terms:

The Government of the Republic has heretofore shown itself very sensitive in regard to allegations

made on behalf of British settlers, namely, that the treatment which they experienced at the hands of the public authorities, and the insufficiency of the protection extended to them against the incursions of lawless persons on their properties, were not only contrary to the assurances under which they were induced to settle in the country, but wholly incompatible with what might be reasonably expected from a civilized government. But the Government of the Republic, if it allows such a state of things to continue, must reconcile itself not only to the reproaches of other nations, whose subjects suffer from its neglect of its obvious duties, but also to the loss which it will sustain in consequence of persons who would otherwise be disposed to settle in the country being deterred, by the reports which previous settlers may make, from exposing themselves to such risks.

Considerable damage was produced by a dearth of water in the province of Santiago, induced by a change of course in the Rio Dulce, which formerly afforded a plentiful supply of water to the suffering districts. The farmers purposed petitioning the national Government to have the river turned again into its old course. The province of Buenos Ayres was visited by a swarm of locusts, which threatened the country with devastation. The swarm lay their eggs in the ground and die; by-and-by the young are hatched, and, their appetite increasing with their growth, they devour every species of vegetable growth, even to the twigs and bark of trees.

A great river was turned out of its bed and made to take another. The Rio Bermejo, formerly so full of obstructions to steam navigation, was cleared of all obstacles by two Argentine engineers, Messrs. Roldan and Molina, by emptying into it the waters of the Grand Teuco through new canals, and thus changing the course of the river; so that parts which before were only six inches deep, have now three feet of water; and the navigability of the Bermejo has been permanently secured.

Yellow fever appeared at Montevideo in March, and, though the cases were not numerous, the alarm was naturally great in Buenos Ayres. Ten cases were soon after reported in the latter city, and it was feared that the seeds of the disease had been latent there since the epidemic of the year before. The Argentine ports were immediately closed to all shipping from the Oriental Republic; but, fortunately, the malady disappeared with the few cases mentioned.

On the 14th of April it was reported that Gail Jordan was on the frontiers of Brazil with 2,000 men, and sufficient money and arms to undertake a campaign for the revival of the dream of Artigas and Urquiza, namely, the formation of an independent republic with the provinces of Corrientes and Entre-Rios, and the Banda Oriental.

Congress authorized an appropriation of \$3,000,000, for the purchase of monitors and arms; the latter to comprise 60,000 Henry rifles, 20,000 Spencer carbines for cavalry, 20,000 sabres, and 20,000 lances; besides 10 steel guns, which will form a total of 25 first-class

field-pieces; and ten 300-pounders, for island and coast fortifications. This act led to the presumption that the question then at issue between the Argentine and Brazilian Governments was assuming a more serious character.

A revolution of enormous proportions in Santiago was discovered on the eve of its outbreak, and in time to frustrate the plans of the leader, Arredondo. Two wagon-loads of uniforms, accoutrements, and 20,000 ball-cartridges, intended for the insurrectionists, were seized by the Government troops. Some of Arredondo's emissaries were captured, one of the number being a lieutenant of the Seventh regiment of the line.

The Bolivian Government sent a detachment of 400 men to occupy the Argentine Chaco, in the neighborhood of Salta, where a new Bolivian province had been created. The Argentine Government had already formally assumed jurisdiction over the Chaco, and made Villa Occidental, a Paraguayan town, built upon territory which Bolivia asserts to be indisputably hers, the capital of the new annexation, notwithstanding that the treaty for its cession by Paraguay remained, and still remains, unnegotiated.

Privileges were granted in July for the establishment of gas-works and horse-car railways in the city of Mendoza.

The most important international questions of the year were with Bolivia, relative to the boundary-line between the two republics, Bolivia continuing to urge her claim to the Chaco, as far south as the Rio Bermejo; and that with Brazil concerning treaties with Paraguay. A note from the Foreign Minister of the republic to the Brazilian Cabinet, protesting against the right of that Government to negotiate treaties with Paraguay without the intervention of the two other allies, Uruguay and the Argentine Republic, and declaring such separate negotiation to be a breach of certain articles of the treaty of May 1, 1865, was regarded as offensive by Dom Pedro's Government, and war for a time seemed imminent. Early in July, however, General Mitre arrived at the court of St. Christopher's, empowered to settle the questions at issue in the only way then remaining to his Government, namely, by assuring the Rio Government that no offence had been intentionally offered in Dr. Tejedor's note, which assurance was likewise confirmed by another note from Tejedor himself. The temperance and diplomatic wisdom which presided over the steps mutually taken to restore cordial relations between the two countries were creditable to both. Thus terminated the controversy; and the Argentine Republic was to arrange boundary questions by separate negotiation with Paraguay, following in that respect the example already given by Brazil. It was anticipated that the Rio Bermejo would be definitively settled upon as the western dividing line between Paraguay and the Argentine provinces; in which event,

Villa Occidental would naturally be restored to Paraguay, and the Brazilian occupation of the island of Atajo cease—an occupation so offensive to the Argentines.

ARKANSAS. The political campaign of the year in Arkansas was one of peculiar interest. It was opened by a meeting of the Democratic Central Committee at Little Rock, on the 2d of March, which called a convention of the party, to meet at the same city on the 19th of June. The chairman of the committee, in issuing the call, said:

In view of the peculiar circumstances and fearful exigencies of the times, when every political movement should be characterized by the utmost caution and circumspection, and when it is so vitally and essentially important that wisdom, moderation, and dispassionate judgment should influence the conduct and action of all men and parties in dealing with the great facts of our present political situation, I would most earnestly urge upon the people, in electing delegates to our proposed convention, to select the very best men they can find among them for the delicate and responsible duties that will be imposed upon them in that capacity. Let us have a convention of delegates who have sufficient intelligence to fully realize the situation—sufficient judgment to apprehend the real wants and necessities of the people, and comprehend the best and most practicable remedies to be adopted for their relief.

Soon after, a meeting of the Central Committee of the "Liberal Republican" party, an organization first formed in October, 1869, was held, at which delegates were appointed to the National Convention at Cincinnati, and a State Convention called, to assemble on the 18th of June. In their address, the committee said:

Believing that the times are auspicious, and the public mind prepared for the adoption of such a line of policy in the approaching national and State contests as will insure success to a Liberal party, based upon a liberal platform, which, while avoiding the errors, follies, and extreme measures of both of the old parties, is yet sufficiently wise and comprehensive to embrace every measure necessary to restore purity to the Government, bring about peace and harmony among the people, and promote all the best and highest interests of the country, we feel satisfied that the people of Arkansas will respond to this call in a manner and spirit worthy the great and glorious objects contemplated by this and similar movements throughout the nation.

The regular Republican State Central Committee met on the 6th of April, and called a State Convention for the 18th of May. There was a division in the committee at this meeting, the places of four members being declared vacant on account of a protest against the action of the committee, signed by them in 1870. These men, and others sympathizing with them, published an address, setting forth the action of the committee and the cause of the dissension. The other members of the committee, who were in the minority, called another convention, which they claimed would be that of the regular Republican party, which was to meet on the 22d of May.

The first of these conventions, in order of time, was that of May 18th, which assembled in the Hall of Representatives at Little Rock,

and included delegates from all the counties but three. Several delegates were colored men. A committee was appointed to select delegates to the National Convention at Philadelphia, and resolutions were adopted approving of the Administration of President Grant, expressing sympathy for Powell Clayton "in the assaults which the enemies of the Republican party have made upon him," and "unshaken confidence in his honesty, ability, patriotism, and fidelity to the great Republican party;" declaring the appreciation of the convention of the "high character and ability displayed in the administration of Hon. O. A. Hadley," and pledging him "the confidence and support of the true Republicans of Arkansas; and repudiating and denouncing "the action of Joseph Brooks, B. F. Rice, J. L. Hodges, and others who are attempting by every means in their power to disrupt and disorganize the Republican party of this State;" and declaring that "we consider the action of B. F. Rice and the minority of the State Central Committee, on the 6th day of April, 1872, as premeditated, revolutionary, and without precedent, and done for the express purpose of accomplishing the disintegration of the Republican party, and that we heartily indorse the action of the majority of the State Central Committee as being eminently wise, patriotic, and just."

The final resolutions were as follows:

Resolved, That to those Republicans who are following after the strange gods set up at Cincinnati we are constrained to say, in the words of Horace Greeley during the late rebellion, "Erring brothers, depart in peace."

Resolved, That the erring brothers of the Republican party, who have been led astray by unscrupulous and designing demagogues, claiming to be Republicans, are hereby cordially invited to return into the Republican ranks.

At the convention called by the minority of the Republican State Committee, all the counties but six were represented, and a full ticket of State officers was nominated. This was as follows: for Governor, Joseph E. Brooks; for Lieutenant-Governor, D. J. Smith; for Secretary of State, E. A. Fulton (colored); for Auditor, J. R. Berry; for Treasurer, T. J. Hunt; for Attorney-General, W. P. Grace; for School Superintendent, Thomas Smith; for Justices of the Supreme Court, Wm. M. Harrison and John Whytock; for Superintendent of the Penitentiary, Richard Samuels (colored); for Congressman at Large, W. J. Hynes. A ticket of presidential electors was also put in nomination. The following platform was adopted:

1. It is the opinion and declaration of this convention that the ring which controls the State government, and the bad men who cooperate with them, have inflicted upon this State the most corrupt and oppressive government ever tolerated by a free people.

2. They have robbed the people of the benefits of the ballot by fraudulent registration, ballot-box stuffing, and the issuing of false and fraudulent certificates as to the results of election.

8. They have increased taxation to an enormous extent, and, at the same time, increased our State indebtedness to millions, without any corresponding benefit to the people of the State.

4. They have, where in their power, prostituted the courts of the State until they have become the engines of injustice and political oppression. They have required from the officers of the School Department political services of a most disgraceful character, and have thereby seriously injured the public-school system of the State.

5. They have fraudulently and corruptly assumed patronage which did not belong to them, and have most shamelessly abused the patronage intrusted to them by the people; therefore, we hold it to be the duty of all friends of honest and just government to use all fair and honorable means to drive the miscreants from office: therefore, be it

Resolved, That we are in favor of "universal suffrage, universal amnesty, and honest men for officers."

2. That we are in favor of such legislation as will secure to the people an honest election, and a full, fair, and free expression at the ballot-box.

3. That we are in favor of a reduction of taxation to the actual amount necessary to an honest and economical administration of the government.

4. That we are in favor of such a reform in the courts of the State as will make them respectable, inspire confidence in them as legal tribunals, where equal and exact justice will be awarded to all men, irrespective of political opinions or personal animosities.

5. That we are opposed to the enormous appointing power now exercised by the Governor of the State, and are in favor of all officers being elected by the people, whom they are to serve.

6. That we are in favor and demand that the public-school system be managed in the interest of education, rather than a political machine.

7. That we are opposed to the present corrupt management of the finances of the State, by which it is necessary to issue scrip at a discount, whereby the burden of taxation is greatly increased.

8. That we are in favor of civil as against military government, and unqualifiedly condemn the use of the military power in times of peace to carry elections against the choice of a majority of the legal electors.

9. That we are in favor of setting apart the lands of the State as homesteads to actual settlers, instead of having them legislated away to corrupt rings of State officials.

10. We are in favor of so adjusting the salaries of State, county, and municipal officers, as to secure a fair but not exorbitant compensation.

11. We are in favor of changing the management of the State penitentiary, which now costs the State about \$200,000 per annum, so as to make it as near self-sustaining as possible, and the enormous expense of the public printing, which costs about \$150,000 per year, should be reduced to a reasonable compensation for such service.

12. That we oppose the repudiation of every honest debt, but we are equally determined to shield the State against all pretended debts imposed upon our people by the fraudulent issue of levee and railroad bonds.

13. That all officers nominated at this convention, or at county or district conventions, if elected, will be held to a strict accountability to the people for their official acts.

14. That we reiterate our relentless adherence to the great central doctrine of republicanism—that all men are created free and equal, and are of right entitled to equality of civil and political rights before the law, regardless of race, color, condition, or religious belief; and we declare ourselves in favor of the removal of civil and political disabilities.

The following additional resolutions occa-

sioned some discussion, but were adopted by a large majority:

And whereas, A large number of persons were indicted in the Federal courts in this State for a most flagrant violation of the election laws, and President Grant, upon the application, and in the interest of such indicted criminals and their accessories, suspended honest and efficient officers, for no other reason than that they would rigorously enforce the law, and allowed and permitted such indicted criminals to designate and name the marshal to select the jury by which they were to be tried, and the attorney to prosecute them for such offences, whereby the criminals were turned loose without punishment, and the law trampled under foot, and fraud and crime encouraged, and has seen fit to take sides with and support and sustain the corrupt State-house ring in their iniquities against the people; and whereas, it is now evident that President Grant will receive the nomination for President by the convention of office-holders in Philadelphia: therefore, be it

Resolved, That we emphatically condemn the course of the President, in his intermeddling with Arkansas affairs in the interest of crime and disorder, and decline to send delegates to the Philadelphia Convention.

And whereas, Horace Greeley and B. Gratz Brown are now before the American people as Republican candidates for President and Vice-President, upon a platform which we heartily approve, and that they are men of unquestioned ability, integrity, and patriotism, and have for many years been the earnest and consistent advocates and champions of republicanism and universal freedom: therefore, be it

Resolved, That we most cordially indorse the nomination of Horace Greeley and B. Gratz Brown, and the platform upon which they stand, and pledge ourselves to cooperate with the friends of civil government and reform throughout the land in securing their election; therefore, to the end that a free people may be disenthralled from the unjust and unlawful burdens and calamities which are imposed upon them, we cordially invite all the friends of free government, law, order, and justice, to cooperate with us in this fearful but determined conflict which a wronged and a robbed people are waging against corrupt and despotic rulers, under Greeley's rallying-cry of "honest men for office, and thieves to the rear."

The Liberal Republican Convention, which met on the 18th of June, reaffirmed the platform of 1869, ratified the action of the National Convention at Cincinnati, declared it the especial duty of the party to combine all the elements opposed to the existing State and national administrations, and adopted the following resolutions regarding nominations:

Resolved, That the question of nominations for State and electoral tickets be referred to the State Central Executive Committee, with full power to nominate, to receive resignations, and to fill vacancies; and that they be authorized and instructed, on or before the first day of October next, to assist and concur in the arrangement of a presidential electoral ticket, so as to unite the votes of all the supporters in the State, of the nomination of Greeley and Brown.

The Democratic Convention of the 19th of June, after a stormy session of three days, accepted the nominations and platform of May 22d, in adopting the following resolutions:

Whereas, It appears to us, the representatives of the Conservative and Democratic party of Arkansas in convention assembled, that the majority of men constituting the present State administration have proved themselves unworthy the high trust reposed

in them, and have, by their peculations in railroad, levee, and all other bonds of the State, almost bankrupted its credit abroad and at home, and have used fraud and unlawful force for the purpose of retaining power against the will of the people, we therefore declare it to be our opinion that it is absolutely necessary to the welfare of the people that a radical change in the administration of the affairs of the State, and many of the counties, should be effected: therefore—

Resolved, 1. That the best policy to be pursued by the people, to make certain of success in the coming election, is to have unanimity of action as well as feeling on the part of all good citizens of all parties who favor reform in the administration of the affairs of the State and county governments.

2. That the chairman of each Democratic-Conservative county executive committee be requested to put into operation the amendment to the Enforcement Act of Congress, in regard to the appointment of the supervisors of election in each voting precinct of their respective counties.

3. That the delegates appointed to the Baltimore Convention, to meet the 9th of July next, be instructed to vote for the ratification of the nomination of Greeley and Brown, as candidates for President and Vice-President of the United States in the ensuing election.

4. That we indorse the Cincinnati platform of political principles, and the platform of principles adopted by the Reform Republican party in their convention of May 22, 1872, at Little Rock.

5. That it would be unwise and inexpedient for the Democratic party to nominate a State ticket for the ensuing election, and we declare against it.

6. That the State Democratic Central Executive Committee be and is hereby authorized to act with like committees of all Reform Republican organizations, in this State, opposed to the present Administration, in the conduct of the ensuing canvass.

7. That we earnestly urge the organization of the Conservative and Democratic party in all election districts and in all counties, and the using of any honorable means to secure the election of county officers and members of the General Assembly, and that a cordial invitation be extended to all persons opposed to the present State administration to unite with us in said organization, and we pledge ourselves to oppose the election of all independent candidates for any of said offices, running against regular nominees.

This action caused considerable dissatisfaction in the Democratic party, but served to bring practically into one organization the opponents of the State administration.

The leaders of the regular Republican body now began to move, and the State Central Committee, of which Powell Clayton had become chairman, issued a call for a new convention, which was to assemble at Little Rock on the 21st of August, to nominate State officers, a Congressman at large, and an electoral ticket. An address to the people was also published, defending the course of the party, and its administration of the government of the State. The convention, which met at Little Rock on the 21st of August, was in session two days. There was considerable discussion, but its action was in the main harmonious. The State ticket put in nomination was as follows: For Governor, Elisha Baxter; for Lieutenant-Governor, V. V. Smith; for Secretary of State, James M. Johnson; for Treasurer, Henry Page; for Auditor, Stephen Wheeler; for Attorney-General, T. D. W. Yon-

ley; for Supreme Judges, M. L. Stephenson, and E. J. Searle; for Superintendent of Public Instruction, J. C. Corbin; for Superintendent of State Penitentiary, H. B. Robinson; Congressman at large, John M. Bradley.

The platform approved of the conduct of the national and State administrations, indorsed the action of the National Convention at Philadelphia, and set forth the following statement of principles:

2. We fully recognize the equality of men before the law, and favor the largest liberty to the people, without regard to race, color, creed, or nativity.

3. For the future, as in the past, we pledge ourselves to the maintenance of free schools and a general diffusion of knowledge among all classes, and we hereby declare it as our opinion that the present school law ought to be so amended as to do away with the office of circuit school superintendents, and the question of education and the support of schools be remitted to local authorities.

4. We favor a firm, honest, and impartial enforcement of the registration and election laws of the State, to the end that every qualified elector may, without fear or intimidation, exercise the privilege of choosing the servants necessary to administer the government; and we hereby heartily indorse the action of the Republican members of Congress in providing supervisors of election, whose duty it is to witness whether a free and fair registration and election are held, and that an honest count of the vote is made.

5. Disfranchisement for political offences has ever been regarded by the Republican party as a temporary measure, only to be resorted to in the establishment of civil government in harmony with the issue settled by the war in the States lately in rebellion. This object having been virtually accomplished, we announce it as our opinion that a removal of such disabilities may be made without endangering the public peace or prosperity of the State, and we demand that the members of the next General Assembly shall adopt the proposed amendment to the constitution on the subject of franchise, and provide by law for the submission of the same to the people within sixty days thereafter.

6. That the power to prescribe and regulate the qualifications of voters belongs absolutely and exclusively to the people of each State, subject to the single limitation imposed by the fifteenth amendment to the Constitution of the United States, viz.: "That no State shall deny or abridge the right of a citizen to vote merely 'on account of race, color, or previous condition of servitude.'" That in every other respect the right of the State to fix and determine the qualifications of its voters is unlimited and exclusive, and has never been questioned by any party, nor by any jurist or court in the country. And while we heartily indorse the President for recommending, and a Republican Congress for passing, the late act of Congress removing the disability to hold office imposed on certain classes by the fourteenth amendment to the Constitution of the United States, we emphatically declare that said act of Congress did not and could not abrogate any part of the constitution of this State, and did not enfranchise any citizen who is disfranchised by the constitution of this State.

7. We are in favor of a reduction of taxes to the lowest possible limit consistent with the preservation of the credit of the State, and pledge ourselves to oppose any and all attempts that look to a repudiation of any portion of the legal indebtedness of the State.

8. In our opinion the revenue law should be so amended that taxation should not be burdensome to the poor; therefore, in the interest of the laboring-

classes, we demand that personal property to the value of at least three hundred dollars be exempted from taxation.

9. We believe it to be the duty of the next General Assembly to propose such an amendment to the constitution as will reduce the number of judges of the Supreme Court of the State from five to three.

10. We believe the law creating the office of Commissioner of Immigration and State Land should be repealed, and that the duties of this office should be devolved upon the Commissioner of Public Works and Internal Improvements.

11. We demand of the Legislature the passage of a law submitting to the people the election of all officers, State, county, and township, not prohibited by the constitution, and that an election for such officers be fixed at the earliest practicable day.

12. We demand, also, the passage of a law prohibiting collectors and treasurers from, either directly or indirectly, buying or of being interested in the purchase of any scrip, warrants, or public securities, by them in their official capacity, and that the same funds collected from the people shall be turned over to the State and county treasuries, under penalty of forfeiture of office, and other adequate pecuniary penalties.

13. We are in favor of so amending the laws that the fees now received by salaried State officers shall be paid into the State Treasury; and we further favor such a reduction of salaries and fees of all officers as will be commensurate with the service required and the labor performed.

14. The management of the penitentiary is a subject of endless vexation in most States of the Union, and we will favor the enactment of any law that will render it self-sustaining, or save the State Treasury from such depletion as it has suffered under the present law, or that under which it was managed when the present State government went into operation.

15. We are in favor of an amendment to the constitution reducing the exemption now established therein to an amount of real and personal property consistent with the protection of the unfortunate and the safety of commercial transactions.

16. We shall demand of the next General Assembly a strict and impartial investigation into all alleged fraud and corruption, and will especially demand a thorough investigation of the means used in procuring the enactment of the law providing for the funding of the Holford bonds, whereby the State was burdened with a disputed debt to an amount equal to one million dollars.

On the 24th of August the three Central Committees representing the organizations opposed to the Republican party held a joint meeting and endeavored to agree upon a common ticket. The Liberal Republican Committee refused to accept the ticket already adopted by the two other organizations, and on the 1st of October prepared an address to the people, in which they put forth the following ticket: For Governor, Andrew Hunter; for Lieutenant-Governor, J. O. Toppan; for Secretary of State, J. M. Johnson; for Auditor, W. R. Miller; for Treasurer, Thomas Boles; for Attorney-General, F. W. Compton; for Superintendent of Education, L. J. Joyner; for Superintendent of the Penitentiary, R. G. Jennings; for Supreme Court Judges, J. J. Clendenin, and J. D. Walker; for Congressman at large, James M. Pomeroy.

Owing to the disaffections in the Democratic party which had sprung out of the acceptance of the ticket headed by Joseph E. Brooks,

the Democratic Committee immediately issued an address in favor of accepting this new ticket of the Liberal Republicans in place of that indorsed by the convention of June 19th. The party which had originally nominated the Brooks ticket was incensed at this, and refused to cooperate with the Democrats in local organizations, or to modify in any way its own nominations. This induced the Democratic Committee to issue another address on the 10th of October, withdrawing the new ticket, and stating at length the reasons for so doing. At the conclusion of this address they said: "We earnestly appeal to our friends and fellow-citizens, who are favorable to the adoption of measures of true reform by the law-making power of the State, to come back to the original plan of the party, as adopted in convention, and be sure, whenever they can, to elect members of our own party to seats in the General Assembly. To the General Assembly we must look as our only hope of relief. If disaster arises to us from any other course, by whomsoever adopted, let the sin of it be upon their heads, and not upon ours, whose counsels we shall point to with pride that they have been offered, although they may have been rejected."

A question arose before the election as to what persons were entitled to registration. The Governor, in reply to inquiries on the subject, declared that he was satisfied that the act entitled "An act regulating elections in this State, and the mode of ascertaining who are entitled to vote at said elections," published among the statutes of 1871, "was not passed in accordance with the provisions of the constitution of the State, and therefore is not law." "In view of this," he said, "the registration will be made, and the election conducted, under the law of 1868." He also decided, with the sanction of the Attorney-General, that those who were disfranchised by the fourteenth amendment of the Federal Constitution, and whose disabilities had been subsequently removed by acts of Congress, were not entitled to registration, under the State constitution. When that constitution was formed, the fourteenth amendment had not been ratified by the requisite number of States, and a clause was introduced depriving several classes of the right to vote—among them, "those who may be disqualified by the proposed amendment of the Constitution of the United States known as Article XIV." According to the decision of the Governor and the Attorney-General, the subsequent removal of disabilities did not restore the right to vote to these classes without a change in the State constitution. This position was regarded as erroneous by many, but it was adhered to by the Governor in his instructions to registrars.

The election occurred on the 5th of November, and, according to the returns, as officially made, the total vote for presidential electors was 79,000, of which those for Grant and Wil-

son received 41,073, and those for Greeley and Brown, 37,927, which gives the former a majority of 3,146. The total vote for Governor was 80,096, of which Baxter received 41,681, and Brooks 38,415 — majority for Baxter, 5,266. The Republican majority for the other officers was somewhat smaller. No returns were made for Greene, Poinsett, Scott, and Johnson Counties, and, in some other cases, the vote of single towns was thrown out. In Greene County, a new registration was ordered two days before the election, after the lists had been sent out to the voting-precincts. When the new order was received, the clerks gave notice that no election would be held, but the people met, and voted under the first registration. In Poinsett County, it was said that the precinct-returns were stolen from the clerk before his abstract was made out. In Johnson County, a new registration was ordered, but not made, and, the election being made under the first one, the clerk made no returns. In Scott County, the registration-books were stolen before the election, and, though the people voted, no returns were made. In these counties, a majority of the votes actually cast were Democratic. It was also asserted, by leading Democrats, that there were frauds in the registration and in making up the returns. Senator Rice, who offered a resolution in Congress, asking for an investigation of the matter, declared that the names of 80,000 persons were stricken from the registration-lists after they were completed, and that 17,000 more Republican votes were returned than were actually cast. The congressional investigation was not ordered before the holiday recess, but a mass meeting was called by the Democrats and "Liberals" of the State, to be held at Little Rock, January 4, 1873, to which returns were to be brought, if possible, from all the precincts in the State. If it should appear from these that Brooks was elected, it was the declared purpose of the leaders of the party to inaugurate him as Governor, notwithstanding the official vote. On the other hand, Governor Hadley called upon the President to send troops into the State, to prevent disorders and violations of law, and issued circulars to the commanders of militia to hold their forces in readiness to be called out at any time. Thus the matter stands at the close of the year.

The total public debt of the State, on the 6th of January, 1873, was \$3,662,397, consisting of 6 per cent. bonds to the amount of \$3,050,000; old debt not funded, \$2,365,748; levee bonds, swamp-land scrip, &c., \$2,146,649; auditor's warrants and treasurer's certificates outstanding, \$1,100,000. Besides this there were bonds issued to railroads amounting to \$4,950,000.

An unfortunate occurrence, growing out of political hostilities, took place, in Pope County, in July. On the 4th of that month, "barbecues" were held by both political parties, one

at Shiloh Camp-ground, in Pope County, and the other about three miles distant from the same spot. The county officers, Wallace H. Hickox, clerk, E. W. Dodson, sheriff, and J. H. Williams, deputy-sheriff, who belonged to the Olayton or radical Republican party, had been charged with some irregularities in office, and had many bitter political enemies. In returning from the Republican barbecue to the town of Russellville, Williams, the deputy-sheriff, according to his own representations, was fired upon and wounded. The sheriff and the County Clerk thereupon formed a *posse* of citizens, proceeded to Dover, and arrested four persons suspected of participation in the assault, and believed to have uttered threats, at various times, against the county officers. Among these were two young men, named Joseph Tucker and William Hale. While the sheriff's *posse* and the prisoners, with Dodson and Hickox at their head, were on the way to Russellville, in the night of July 8th, a firing of guns took place, and Tucker and Hale were killed. The accounts of this mysterious shooting disagree. It was declared by the enemies of the county officers, that the firing was begun by friends of the sheriff, to furnish a pretext for returning the fire, and killing the prisoners. It was claimed, on the other side, that certain citizens of the county had waylaid the party, and fired upon it for the purpose of rescuing the prisoners. The former account was supported by the statements of the two prisoners who escaped with their lives, one of whom was the father of young Hale. This affair caused great excitement in the county, and the belief appears to have been quite general that Tucker and Hale were massacred at the instigation of the sheriff and County Clerk. The people very generally armed themselves, and the county officers did not dare to go to the town of Dover.

Governor Hadley went personally to Russellville, to inquire into the matter, and was assured that the people desired peace, and would aid in the enforcement of law, and that all they asked in this case was a fair judicial examination, and the treatment of all parties in accordance with law. The citizens with whom he consulted having expressed confidence in the ability and integrity of Judge May, that officer was requested to go to Pope County, and hold the necessary preliminary examinations. The Governor also commanded those who were banded together in arms to return to their homes, assuring them that the grievances of which they complained should be investigated, and justice done. Judge May went to Pope County, and had the sheriff and his *posse* arrested, on the charge of killing Tucker and Hale, holding them on bail to await trial at the next term of the court. About ten persons were also put under arrest, charged with having fired upon the sheriff's *posse*, on the night of July 8th, and about forty witnesses summoned to attend their examina-

tion. On the appointed day, the prisoners and witnesses, and about sixty other persons, appeared at the court-house, fully armed, and expressing a determination to resist the authority of the court. Under these circumstances, the examination was deferred, and the Governor issued a proclamation, on the 30th of July, in the preamble of which he made the following declarations:

I do not desire to place Pope County under martial law, or subject its citizens to the loss of property consequent upon quartering militia in the county, but the law must and shall be enforced, respected, and obeyed, and, if necessary, the entire forces of the State will be employed for that purpose. Citizens must return to their homes, lay down their arms, and attend to the daily avocations of life.

It has been represented to me that the citizens of Pope County will not lay down their arms, nor return to their homes, so long as the sheriff and clerk attempt to exercise the duties of their respective offices. The authority of your civil officers must and shall be respected. The mere fact that some of them are charged with the killing of Tucker and Hale, and that they are bound over to answer such charges, does not establish their guilt, nor do these facts, under the law, prevent them from exercising the functions of their respective offices, before trial.

I have no power or authority to remove or suspend either of them from office. A resistance to their lawful authority is not only a crime, but an act which the State government will not long tolerate.

These men are officers. I cannot help it any more than you can—I can no more get rid of them than you can. The time, however, is not far distant when you can select others, if these do not suit you; but, so long as they remain officers, they must not be disturbed by violence.

Two sheriffs of Pope County and one clerk have already been assassinated and murdered, and no attempt has been made, so far as I am advised, to bring the murderers to justice. I am satisfied that there are enough good citizens in Pope County to prevent the assassination of your present county officers, and I look to you to prevent any thing of this kind, unless you want the sins of others visited upon you.

Evil-disposed persons, backed by a venal and corrupt press, will, in the future, as in the past, advise you that your grievances are of such a character as to justify you in resisting the law, and in defying its officers.

I say to you, such men are not your friends; they seek power through your blood, and expect to luxuriate over the desolation of your homes and your firesides. The men who are now inciting you to strife are not those who must suffer the loss of life and property equally with yourselves; they are calmly and deliberately inciting you to a resistance of the laws for the sole purpose of repeating the desolation of your firesides and homes in other portions of the State and nation, as a reason why they should be placed in office; they are counselling you to your own ruin, to the end that they may gratify an inordinate ambition for greed and gain. I do not desire to use force in the enforcement of the laws, but the law must take its course, unaided by armed mobs.

The body of the proclamation was in these words:

Now, therefore, I, Ozro A. Hadley, as Governor of the State of Arkansas, by virtue of the power vested in me by the constitution and laws of the State of Arkansas, do command all persons to return to their homes and their daily avocations immediately, and thereafter demean themselves as peaceable and law-abiding citizens.

A violation of this command will result, no mat-

ter who advises you to the contrary, in placing Pope County under martial law, where it will be kept until such time as in my opinion peace and good order will follow a withdrawal of the troops.

General Bishop was appointed by the Governor to go into Pope County to see whether this proclamation was complied with. After visiting Dover and consulting with many citizens, he made a report, which concluded as follows:

In conclusion, and as I am to report also upon the "purposes" of the citizens of Pope County, with reference to your proclamation, I say that it seems generally to be complied with. I have been told, however, that this condition of things will not last; that I will not have been absent from the county a week before armed men will be moving around as formerly, in disregard of law, and especially threatening the lives of Hickox, Dodson, and Williams.

As a body, the citizens of Pope County are very peaceably inclined at present. They realize the situation their county is in, and that, if any more blood is spilled, a resort to martial law will then probably be inevitable. Confidence in each other is most needed now, and if the trials growing out of the attempt to assassinate Captain Williams, on the one hand, and the killing of Tucker and Hale on the other, are permitted to take their course; if such arrests as may be necessary can be made without resistance, and if Captains Hickox, Dodson, and Williams will be permitted to discharge their official duties, and be protected while doing so (which the people tell me shall be the case), the troubles in Pope County will cease.

Under the assurances given by the Governor and General Bishop, Mr. Hickox, Mr. Dodson, and Mr. Williams, ventured to return to Dover. They saw at once that they were objects of hatred, and heard frequent threats of violence. Fearing for their lives, they set out on the 1st of September to leave the town again, and were fired upon in the streets, Mr. Hickox, the County Clerk, being instantly killed, and, shortly afterward, John Williams, the deputy-sheriff, was shot and badly wounded.

A justice of the peace named Allen Brown, who attempted to hold an inquest over the body of Hickox, was also shot and killed, while in the discharge of that duty. When these facts were reported to the Governor, he issued the following order:

Special Order, No. 128.

HEADQUARTERS STATE OF ARKANSAS, }
ADJUTANT-GENERAL'S OFFICE, }
LITTLE ROCK, September 4, 1872. }

I, Major-General D. P. Upham having been assigned, by special orders No. 78, dated November 12, 1870, to the command of all the State Guards and enrolled militia of the State, and being advised that the enforcement of the civil and criminal law is obstructed to such an extent in Pope County, Arkansas, as to render it dangerous, if not impossible, for the sheriff to enforce the same with an ordinary posse, is hereby directed to proceed forthwith to said county of Pope with such aid as is or may be necessary to execute the civil and criminal law of the State.

II. General Upham is hereby vested with discretionary power in the use of forces, with power to call all the State Guards and enrolled militia into active service, if, in his opinion, the situation demands the same, and to use them in compliance with law under all emergencies that may arise.

III. The expense of subsisting the State Guards and enrolled militia that may be called into service under his order shall be borne by the county of Pope, and paid as provided by section fourteen of an act entitled "An Act to provide for the Enrolment of the Militia, the Organization and Discipline of the State Guards, and for the Public Defence," approved July 14, 1868.

By order of the Commander-in-Chief,
O. A. HADLEY.

EDWARD SAXTON, Capt. and Asst. Ad.-Gen.

General Upham at once issued the following circular to the citizens of the county:

DOVER, POPE COUNTY, ARKANSAS, September 20, 1872.

Many extravagant and unreasonable rumors are found to be in circulation concerning the presence of troops in the county, and the intention of the government concerning the use of the same, and the policy to be pursued respecting the arrest, trial, and punishment of parties guilty of the commission of, or participation in, high crimes in the community. Such reports have generally, up to this time, been treated as unworthy of notice.

It appearing, however, that such rumors are operating against the speedy restoration of confidence and peace in the community (which is desired above every thing else by the authorities), I will say, first, that the report in circulation that, if the guilty parties hereinbefore referred to cannot be found, other citizens are to be held responsible, and that innocent persons will be made to suffer for the guilty, is false in every respect. It is also reported that fears are entertained by parties guilty of crimes that in case of their arrest they will not be allowed a fair trial as provided by law, but that they would be summarily punished or tried by court-martial and shot. I will say, in respect to this, that no reasons for such fears exist.

The county is not under martial law. Special order, No. 148, dated Headquarters, State of Arkansas, Adjutant-General's Office, Little Rock, September 4, 1872, which has been published, shows plainly the object of the calling into active service the State forces in your county—viz., to "aid in the execution of the civil and criminal law"—and that they are to be used "in compliance with the law under all emergencies that may arise." It would seem that this alone would satisfy any reasonably intelligent mind. It is also claimed that fears are entertained that an "old-standing threat" to burn Dover is now to be put in execution.

Whether such threats have ever been made or not, I have no knowledge, but it is well known that such a rumor has been in circulation, and that it has been an "old-standing" excuse for filling the town of Dover with armed men to "protect the property" in place of applying to the proper authorities for protection, or arresting the parties guilty of making such threats,

and punishing them according to law, in such cases made and provided. No portion of the town has yet been burned, and all the force at my command, if necessary, will be used to prevent it.

The report that the State Guards of Pope County are under the immediate control of Sheriff Dodson, and are commanded by him, is also incorrect.

The several companies are officered by experienced and competent men. Sheriff Dodson is not a member of the State Guards or enrolled militia in any capacity, and, as will be seen by the letter of his Excellency Governor Hadley to Sheriff Dodson, bearing date September 4, 1872, which has also been published in connection with the Special Order, No. 128, of the same date, has no control whatever over the State troops, being only entitled to support and protection in the execution of the legitimate duties of his office as Sheriff of Pope County, and that can come only through the general commanding.

A peaceable adjustment of the difficulties surrounding the people of Pope County is desired by the administration if possible, and every means will be employed by me, and the coöperation of all good citizens is solicited to that end, but I assure you the presence of unauthorized bodies of armed men in the county under any pretence whatsoever will not be tolerated.

The fields are covered with crops of corn and cotton ripe for the harvest. I hope all will return to their homes, and those who have crops to gather will go to work in the fields and gather the crops they have labored hard to make, and I assure them they will be protected.

D. P. UPHAM,
Major-General commanding State forces.

Comparative quiet and confidence were restored to the county by this action, but the judicial investigation of these troubles has not been made.

The area of Arkansas is 52,198 square miles, equal to about 33,406,720 acres of land, and one-fourth of that amount is still owned by the United States. Its natural resources are still, in a great measure, undeveloped, but a strong impulse is likely to be given to their development by the construction of railroads through various parts of the State, which is progressing quite rapidly. In 1860 there were but 38½ miles of railroad in this State; in 1870 there were 128 miles, and State aid at the rate of \$15,000 per mile to roads having no land grants, and \$10,000 a mile to those having land grants, is given under an act of 1868 to the extent of 850 miles in all. This aid has been awarded as follows:

NAME	Length of Miles.	Awarded.	Issued.	Completed.
Memphis & Little Rock Railroad	181	\$1,200,000	\$1,200,000	181 miles.
Little Rock & Fort Smith Railroad	150	1,500,000	900,000	60 "
Little Rock, Pine Bluff & New Orleans Railroad	160	2,400,000	750,000	40 "
Mississippi, Ouachita & Red River Railroad	170	2,540,000	450,000	42 "
Arkansas Central Railroad	150	2,250,000	800,000	45 "
Kansas City & Fort Smith Railroad	100	1,500,000
Total	850	\$11,400,000	\$3,600,000	318 miles.

Among the roads in course of construction is the Cairo & Fulton, which will pass through fifteen of the most important counties of the State, connecting with the St. Louis & Iron Mountain and the Illinois Central to the north, the Memphis & Little Rock, the Little Rock & Fort Smith, and Little Rock, Pine Bluff & New Orleans, on the east and west, and with

the Mississippi, Ouachita & Red River, and the projected Texas railroads on the south. It has 1,926,400 acres of land along the 301 miles of road. The Little Rock & Fort Smith line is 160 miles long, of which 60 miles of the eastern portion are in operation. It has over a million acres of government lands in the valley of the Arkansas River, which contain some valu-

able lead-mines and coal-fields. The Memphis & Little Rock, 131 miles long, is completed and in operation, and forms the outlet of a rich agricultural district. The Arkansas Central extends from Helena, on the Mississippi River, to Little Rock, 100 miles, with a branch from Aberdeen to Pine Bluff, 50 miles in length. About one-half of this road is completed, and the rest under contract. The Little Rock, Pine Bluff & New Orleans Railroad runs from Little Rock to the Louisiana border, a distance of 135 miles. The Chicot branch diverges from the main line at Pine Bluff and terminates at Chicot on the Mississippi River, 75 miles away. The entire line is rapidly approaching completion. The Mississippi, Ouachita & Red River begins at Chicot, on the Mississippi, and runs west to Texicana, on the Red River, a distance of 155 miles in almost a direct line. About a third of the road is completed. The Iron Mountain & Helena Railroad enters Greene County from Missouri and continues to Helena. Its length is 140 miles, and its construction is well under way. Among the projected lines are the Memphis & Kansas City, passing through Jacksonport, Batesville, and Yellville, to the Missouri border at Springfield; the Memphis, Shreveport & Texas, from Memphis through Pine Bluff, Camden, and Shreveport, to the Texas line; the Little Rock & Hot Spring, from the capital to Hot Springs, 60 miles; the Kansas City & Fort Smith, from Fort Smith, on the western border, due north to the Missouri line; the St. Louis, Iron Mountain & Little Rock; St. Louis & Little Rock; White River Valley & Texas; Arkansas & Louisiana, from Little Rock to Alexandria, and thence to New Orleans; Little Rock & Shreveport; Illinois, Missouri & Texas, from Cape Girardeau, crossing the northern part of the State to Van Buren; and the Jonesboro, St. Francis & White River Valley.

Zinc mines in Sharp County are profitably worked, and the Onite Coal Company is carrying on successful operations in Pope County. There is a valuable mine of saltpetre in Yell County. The mineral resources of the State are known to be rich, but scarcely a beginning has been made in developing them.

The assessed value of real and personal property in the State is \$94,873,661.75; the county tax an average of 16½ mills, and State tax 9½ mills to the dollar.

The State Industrial University has been located at Fayetteville, in Washington County, and has all the necessary buildings completed and an excellent experimental farm. Its endowment consists of the proceeds of 150,000 acres of land granted to it by Congress, \$50,000 appropriated by the State, \$150,000 given by the county of Washington and the town of Fayetteville, and several hundred acres of land given by private individuals.

At the Deaf and Dumb Institute there are 39 males and 33 females. There are 284 deaf-mutes in the State.

ARMY, UNITED STATES.

The city of Little Rock, which occupies very nearly the geographical centre of the State, claims a population of 18,000, and is rapidly growing. It forms the centre of the railroad system, and has already manufacturing establishments of considerable extent. The assessed value of its real estate is \$8,709,475. It contains the State-prison, Asylum for the Blind, and Institute for the Deaf and Dumb.

According to the Federal census of 1870, the total number of church organizations in Arkansas is 1,371; edifices, 1,141; sittings, 264,225; property, \$854,975. The leading denominations were:

DENOMINATIONS.	Organizations.	Sittings.
Baptist.....	473	103,300
Christian.....	90	14,600
Episcopal.....	15	3,635
Lutheran.....	2	1,025
Methodist.....	533	91,300
Presbyterian.....	11	33,600
Roman Catholic.....	1	5,350
Universalist.....	1	200
Total.....	1,336	254,090

The total number of libraries is 1,181, with an aggregate of 135,564 volumes. Of these, 888, with 81,232 volumes, are private; and 293, with 54,332, are other than private. The total number of libraries in 1860 was 115, with 23,221 volumes. The total number of newspapers and periodicals is 56; circulation, 29,830; copies annually circulated, 1,824,860. There are 3 daily, with a circulation of 1,250; 1 tri-weekly, circulation 800; 48 weekly, circulation 26,280; and 4 monthly, circulation 2,000.

ARMY OF THE UNITED STATES. The expenditures of the War Department for the fiscal year ending June 30, 1871, were \$35,799,991.82, and for the year ending June 30, 1872, \$35,372,157.20, a reduction in favor of the last year of \$427,834.62. The total estimate for military appropriations for the fiscal year ending June 30, 1873, is \$33,801,378.78. The estimates of the Chief of Engineers were submitted separately, and are:

Fortifications and other works of defence.....	\$3,735,000
River and harbor improvements.....	12,302,300
Public buildings and grounds, and Washington Aqueduct.....	602,024
Total.....	\$16,639,324

All war accounts for money and property prior to 1871 have been examined and submitted to the Treasury for final settlement. The expenditures for the service of the Quartermaster's Department during the year amounted to \$12,517,681.37. There was paid for transportation by railroad \$1,800,000, of which \$800,857 was over the Pacific Railroads; by wagon, \$1,100,000; by water, \$626,373.52; by stage, \$48,975.84; for transportation animals, wagons, harness, teamsters, etc., \$924,650.64. The number of cavalry and artillery horses purchased during the year was 3,277; mules for the trains, 209; making a total of 9,720 horses, and 8,758 mules in the service. The

expenditures for clothing amounted to \$667,529.63; the amount deposited by the Quartermaster's Department in the Treasury, from sales of clothing and equipage during the year, was \$1,843,831.40, which sum was not available for current use. The changes in the uniform and dress of the army, recommended by a board of officers convened for that purpose, were, with some modifications, approved, and the new clothing is being manufactured as rapidly as possible. The uniform adopted is believed to be a great improvement. About \$370,000 were collected from the Southern railroads, leaving \$4,784,442.43 still due. The Quartermaster examined and transmitted for settlement 665 claims by loyal citizens for quartermasters' stores taken during the war, amounting to \$367,102.72.

Subsistence supplies to the amount of \$89,048.12 were issued to Indians visiting the military posts on the frontier, or in their respective nations, while subsistence stores valued at \$103,137.99 were issued to Indians to meet special emergencies. During the year the affairs of the Freedmen's Bureau were transferred to the War Department and regulations were put into execution for the speedy payment of bounty, pay, etc., due colored soldiers, properly coming under that bureau. About one-sixth of the army is located in the Southern States east of the Mississippi. The average mean strength of the army for the year was 24,101 white, and 2,494 colored soldiers. The total number of cases on the sick list was 47,575 white, and 3,514 colored, while the total number of deaths reported amounted to 367 white, and 54 colored. Desertions have decreased in number, the legislation concerning the pay of enlisted men having contributed greatly to that end.

The amount paid for pensions in the last fiscal year was \$30,169,340, an amount larger by \$3,708,434 than was paid during the preceding year. Of this amount \$2,313,409 were paid under the act of Congress of February 17, 1871, to survivors of the War of 1812. The annual increase of pensions by the legislation of Congress has more than kept pace with the natural yearly losses from the rolls. The act of Congress of June 8, 1872, has added an estimated amount of \$750,000 per annum to the rolls without increasing the number of pensioners. The whole number of soldiers enlisted in the civil war was 2,688,523. The total number of claims for invalid pensioners is 176,000, being but six per cent. of the whole number of enlisted men. The total number of claims on hand at the beginning of the year was 91,689. The number received during the year was 26,574. The number disposed of was 39,178, making a net gain of 12,604. The number of claims now on file is 79,085. On June 30, 1872, there were on the rolls the names of 95,405 invalid military pensioners, 113,518 widows, orphans, and dependent relatives, making an aggregate of 208,923 army

pensioners. At the same time there were on the rolls the names of 1,449 navy pensioners, and 1,730 widows, orphans, and dependent relatives, making the whole number of naval pensioners 3,179. There have been received, since the passage of the act to provide pensions for the survivors of the War of 1812, 86,551 applications prior to June 30, 1872. Of these there were allowed during the last fiscal year 20,126 claims, 4,845 were rejected during the year, leaving 11,580 claims pending at that date; the number of pensions of all classes granted during the last fiscal year was 33,838. During that period there were dropped from the rolls, for various causes, 9,104 names, leaving a grand total of 232,229 pensioners on the rolls on June 30, 1872. It is thought that the claims for pensions on account of the War of 1812 will all be disposed of by May 1, 1873. It is estimated that \$30,480,000 will be required for the pension service during the next fiscal year.

The Army Medical Museum continues to receive valuable contributions, which are at once properly prepared and mounted, and their histories entered in the descriptive catalogue. Memoranda and photographs have been furnished, to assist in the decision of cases of applicants for the benefits of the various acts of Congress in relation to maimed and disabled soldiers and pensioners. The first part of the medical and surgical history of the war was laid before Congress early in the year, but its distribution is yet to be ordered by that body. A constant necessity is felt for a medical corps of the full number established by the act of Congress approved July 28, 1866. There are 59 vacancies, while the number of successful candidates rarely exceeds eight or ten in any one year.

The appropriation for the manufacture of arms for 1872-'73 is limited in its application to such system of breech-loading arm as may be selected by a board of officers. "The system being once adopted," says the Secretary of War, "arms sufficient to supply the army and militia should be at once manufactured, and a large reserve should be accumulated year by year, for the exigencies of war, and, to this end, liberal appropriations will be required." Reports from the field are favorable to the use of revolvers using metallic cartridges.

Five thousand sets of new infantry equipments, combining the knapsack, haversack, canteen, cartridge-box, waist-belt, and the bayonet-scabbard into one system, were made during the year, and issued to the troops for experimental trial. An appropriation to supply the service with these equipments was recommended.

The board on heavy ordnance, authorized by the act of June 6, 1872, having made their report, measures were taken to carry out their recommendations. The procurement and trial of the guns recommended by them will probably consume the whole of the year 1873.

The work upon the coast defences and fortifications has been prosecuted with vigor, and already a large number of positions for guns and mortars of the largest calibres, to be mounted behind sand parapets, has been provided, while others are in an advanced state of construction. These works are the basis of the harbor protections, and are essential for the efficacy of the accessory defences, especially of torpedoes and channel obstructions, which form a part of our own system of defence.

The Battalion of Engineers in its reduced organization numbers 315 men. The torpedo experiments, made under the immediate direction of Major H. L. Abbot, commanding engineer battalion, have enabled the War Department to devise a plan of torpedo defence in connection with the fortifications, simple in its working, certain in its application, and effective in its results, while, at the same time, our own shipping will not be endangered.

The river and harbor works have been carried on with energy. The construction of the bridge across the Mississippi River at Rock Island has been completed, and the bridge opened for railroad and wagon use.

The duties of the Signal-Office in observations and reports for the benefit of commerce and agriculture were continued throughout the year. Stations were maintained at each of the principal lake, seaport, and river cities. The display of bulletin reports, of reports at the river stations, giving the rise and fall of the principal rivers; of the large weather-maps, showing, by changing symbols, the meteoric changes at the different reports; and, finally, at designated stations, the exhibition of day or night signals, on occasions of supposed especial danger, were regularly made. Ten additional stations were established within the United States.

A comparison of the tri-weekly forecasts, or "probabilities," with the meteoric condition afterward reported, gave an average of verifications of 69 per cent. up to November 1, 1871, and 76.8 per cent. from that date to October 1, 1872. The practical importance of this branch of the service will be seen from the fact that since its establishment no great and continuous storm has traversed the United States without premonition being given at the great majority of the points endangered. Arrangements were made for an interchange of reports with Canada, and a similar exchange is contemplated with the West India Islands. Under the act of June 10, 1872, the service, before technically limited to the lakes and sea-coasts, was extended throughout the interior, and many of the agricultural societies in the country were requested to cooperate with the chief signal-officer, and thirty-eight boards of trade and chambers of commerce communicate meteorological observations. Since January 1, 1872, statements of the changes in the depth of water in the prin-

cipal Western rivers, being in direct relation to the meteoric changes, have been daily reported from all stations established upon those rivers.

The 74 national cemeteries contain the remains of 317,962 persons. Of those cemeteries all but 16 have been permanently enclosed. The Gettysburg cemetery has been transferred to the care of the War Department. At the close of the year there were 52 superintendents of national cemeteries.

The total number of cadets at West Point Academy is 240. The number of admissions in 1872 was 95. The number of failures to master the academic course, including original rejections, was 87. There were 53 vacancies.

ASIA. The history of Asia continues to grow in importance. The wonderful transformation of Japan into a civilized country is progressing without interruption, and all the efforts made by the conservative and anti-foreign party for arresting this progress appear to be powerless. The intercourse with foreign countries is established on a firm basis; and the Government appears anxious to acquaint itself not only with the educational, but even with the religious condition of the countries of America and Europe. Already Japan may be considered as being by far the most advanced state of the non-Christian world.

The progress of China is not so rapid as that of Japan; the impotence of the anti-foreign party to prevent the establishment of friendly relations between China and the Christian powers certainly becomes from year to year more apparent. The influence of the large seaports, which accumulate immense wealth by their trade with American and European countries, in the interior, proves to be irresistible. A victory of great importance has been won by the Chinese Government over the Mohammedan rebels in the south, who, for several years, have been able to maintain an independent government. The fall of their capital appears to foreshadow their entire collapse.

Serious difficulties arising in Central Asia between the Russians and the Khan of Khiva threatened for a time a new Central Asiatic war and new complications between Russia and Great Britain; but the peaceable settlement of the difficulty postponed once more the outbreak of a war between the two great rival claimants for the supremacy in Asiatic politics.

The assassination of the Viceroy of British India by a fanatical Mohammedan, following close upon the assassination of Chief-Justice Norman, is a new and significant proof for the English that the Mohammedans are any thing but reconciled with British rule, and that ere long they may be expected to cause serious trouble.

The terrible famine which devastated Persia in 1871 continued through a part of the year 1872, and the wretched condition in which this unfortunate country has been for years,

appeared to grow worse. But in the latter part of the year several statesmen were called to the management of public affairs who encouraged the hope for an era of reform.

In consequence of a treaty between the Netherlands and England, concluded on February 5, 1871, and the additional articles agreed upon on November 2, 1871, the English Government relinquished all the reservations relative to the further extension of the Dutch rule in Sumatra which were contained in the treaty of March 17, 1824. In return, British subjects in the state of Siak-sri-Indrapoor, and in territories dependent upon it, obtain the same rights with regard to commerce and navigation as the Dutch subjects, and they will obtain the same rights in every other state which

may become subject to Dutch rule. But all their laws concerning persons of Western and Eastern descent will remain in force, as well as the provisions of the agreement of 1851.

The political changes which have occurred in Asia of late, especially the Russian conquests, and the many new explorations, have considerably modified the frontiers of the countries in the interior of Asia. Some of the countries have as yet no definite regulation of their boundary-lines. The following statement of the area and population of the divisions and subdivisions of Asia, based on the latest explorations and calculations, are as follows (Behm und Wagner, "Bevölkerung der Erde," Gotha, 1872):

COUNTRIES.	Square miles (of Subdivisions).	Square miles (of Divisions).	Population (of Subdivisions).	Population (of Divisions).
Russian Territory.....	5,944,682	10,730,000
Caspian Sea.....	178,871

ASTRONOMICAL PHENOMENA AND PROGRESS. *The Supply of Solar Heat.*—Captain John Ericsson, the distinguished physicist and inventor, continued, during the year, to contribute papers to the scientific publications of England, in further discussion of the source and permanency of solar energy. The experiments upon which his calculations are based were briefly set forth in the ANNUAL CYCLOPÆDIA for 1871. Helmholtz had estimated the shrinkage of the sun's diameter at $\frac{1}{1000}$ in the course of 2,000 years. Captain Ericsson revises the calculation, and makes the period of that amount of shrinkage 1,864 years, or 120.7 feet per day. He observes that the intensity of the radiant heat will not diminish with the diminished size of the sun. On the contrary, for a given area of the solar surface, the dynamic energy produced by a given rate of shrinking will be increased, since the mass remains the same, while the attraction is increased proportionally to the

square of the distance from the centre. But the rate will diminish with the contraction of the sphere; hence, a shrinking of $\frac{1}{1000}$ the sun's diameter, instead of occupying $1,000 \times 1,864 = 1,864,000$ years, will require somewhat more than 2,000,000 years. At the end of that period, the gravitating energy will continue to develop, as at present, an amount of dynamic energy represented by 312,000 thermal units per minute for each superficial foot; but the radiating surface, i. e., the area of the solar disk, will have diminished in the ratio of 10^3 to 9^2 . The present maximum temperature, produced by solar radiation on the ecliptic, when the earth is in aphelion, being 67.2, while the intensity of the radiant heat diminishes as the area of the radiating surface, it follows that, at the end of 2,000,000 years from the present time, the tropical solar intensity will be reduced to $\frac{9^2 \times 67.2}{10^3} = 54.4^\circ$, un-

less Prof. Tyndall's opinion is correct, that the earth, in common with the other planets, must "creep in, age by age, toward the sun." But, in that case, the pace is so slow that, in Captain Ericsson's view, his calculations are not seriously affected. He remarks that the computed diminution of solar intensity, $67^{\circ} - 54^{\circ} = 13^{\circ}$, during the next 2,000,000 years, will probably be deemed extravagant by those who do not bear in mind that the computation is founded on the assumption that a constant power is being exerted, during the stated period, capable of developing, as at present, the stupendous energy of 240,000,000 foot-pounds, in a single minute, for each square foot of the surface of a sphere whose diameter exceeds 850,000 miles, all this effect being produced, on the author's theory, by the shrinking of the sun, the intensity of its heat being gradually lowered in the process. By the same rule of estimating, he finds that the diminution of temperature during "historic times," or, say, 4,000 years since the building of the Pyramids, has not exceeded $\frac{1}{47}$ of a degree of Fahrenheit.

Elements in the Solar Spectrum.—Prof. C. A. Young, who had charge of the spectroscopic work at the Observatory in Sherman, Wyoming Territory, under direction of the United States Coast Survey, in July and August, 1872, made an important report of his labors upon the spectrum of the sun, to Prof. Peirce, superintendent of that service. In addition to the elements before quite conclusively demonstrated to reside in the chromosphere, the following seem to be positively indicated: sulphur, cerium, and strontium; and the following with a somewhat less degree of probability: zinc, erbium and yttrium, lanthanum and didymium. There are some coincidences also with the spectra of oxygen, nitrogen, and bromine, but not enough, considering the total number of lines in the spectra of these elements, or of a character, to warrant any conclusion. One line points to the presence of iridium or ruthenium, and only three lines are known in the whole spectrum of these metals. The coincidences are too many and too close in the associated spectra of iron and calcium, or iron and titanium, to be all the result of accident. Prof. Young gives a complete catalogue of all the bright lines observed by him, at Sherman, to the number of 273, and also a list of the coincidences between the observed lines of the spectra of the chemical elements. His instruments were a telescope, of $9\frac{1}{4}$ inches aperture (furnished by Dartmouth College), and a spectroscopic, automatic, with a dispersive force of 12 prisms. The approximate geographical position of Sherman is, longitude, $1^{\circ} 53.2''$ west of Washington; latitude, $41^{\circ} 0.7'$; altitude, above sea-level, 8,280 feet; mean height of barometer, about 22.1 inches.

Signor Tacchini, of Palermo, in a letter to M. Faye, says that, on the 6th of May, he

found, in the sun, some regions, of great extent, remarkable for the presence of magnesium, stretching over an arch from 12° to 168° ; and that, on the 18th of that month, he presented to the Spectroscopic Society of Palermo a design of the whole border, with indications as to the position of the magnesium, and its unaccountable predominance along the western border. On the 18th of June, the magnesium began to show itself, in the spectroscope, around the whole border, that is, the whole chromosphere was invested with vapors of the metal. Under this general ebullition, there was an absence of protuberances, while the flames of the chromosphere were very marked and brilliant, and the more brilliant the flames, the greater the amount of magnesium indicated.

Solar Outbursts and Magnetic Storms.—Royal Astronomer Airy addressed a note to *Nature*, commenting upon the supposed coincidence between a violent solar outburst, seen by Father Secchi, at Rome, and a magnetic storm, recorded at Greenwich, about the same time. Father Secchi reported having noticed the remarkable solar disturbance on July 7th, and that it lasted from $8^{\text{h}} 30^{\text{m}}$ to $7^{\text{h}} 50^{\text{m}}$ (Roman time), or nearly $2^{\text{h}} 40^{\text{m}}$ to 6^{h} (Greenwich time). Now, a magnetic storm commenced, at Greenwich, at 5, precisely, on the same day. Its indications began at that time with unusual suddenness and strength, on all the magnetic indicators, namely, the declination-needle, the horizontal force magnetometer, the vertical force magnetometer, the earth-current wire, in an approximate northeast and southwest direction, and, on the earth-current wire, in an approximate northwest and southeast direction. The disturbance lasted, gradually diminishing, to the evening of July 9th. During a part of the time, it was accompanied with aurora. Prof. Airy says: "I do not venture upon the question whether there really was any connection between the solar outburst and the terrestrial magnetic storm, but I will remark that, if there was such connection, the transmission of the influence from the sun to the earth must have occupied $2^{\text{h}} 20^{\text{m}}$, or a longer time if Father Secchi did not see the real beginning of the outburst. This, if established, would be an important cosmical fact; and, at any rate, the notification of this apparent retardation may direct the attention of observers of similar phenomena in future to a new element in their interpretation."

The Sun's Temperature.—There is the widest variance among physicists of high reputation regarding the true temperature of the sun, and every year adds some new view to the great number of theories, already totally irreconcilable. Nearly all the estimates, however far apart, are derived from observations upon radiant heat, and some of the experimenters, who employ almost identically the same apparatus, are millions of degrees away from each other in their conclusions. Cap-

tain John Ericsson, by his elaborate demonstrations, makes out the heat of the solar surface to be, at least, $4,036,000^{\circ}$ Fahr. Father Secchi puts his estimate at $18,000,000^{\circ}$ F.; and others at not far from $2,000,000^{\circ}$ F.; but Pouillet has gone to the other extreme, and makes the solar temperature from $2,662^{\circ}$ to $3,201^{\circ}$ F.; while M. Vicaire, the latest in the field, is forced to the belief that the temperature of the solar surface is entirely comparable with that of terrestrial planes, and is certainly less than $5,500^{\circ}$ F. He also goes over Father Secchi's observations, and, correcting an alleged error in the formula used by that astronomer, determines the solar heat to be $2,548^{\circ}$ F., which nearly agrees with Pouillet's result. At the meeting of the French Academy, at which M. Vicaire made his statement, he was sustained by MM. Sainte-Claire Deville and Edmond Becquerel; and M. Fizeau remarked that his conclusions were borne out by photometrical experiments, which show that the intensity of the Drummond light is 56 times less than that of the electric light, which latter is only $2\frac{1}{2}$ times less intense than sunlight, and it therefore follows (in his opinion) that the temperature of these lights cannot differ so excessively as has been supposed from the temperature of the sun.

The Sun's Rotation.—Zöllner and Vogel have measured the velocity of the sun's rotation by the spectroscope. These observations covered a period from the 2d to the 10th of June, 1872. The instrument employed was the reversion spectroscope of Zöllner, attached to the large refractor of the observatory at Bothkamp, near Kiel. The slit of the spectroscope was directed by the aid of clock-work to the receding edge of the sun, and the coincidence of the D lines in the superposed spectra effected with the utmost precision. The clock-work was then stopped, and the moment of the disappearance of the second border of the sun observed—the non-coincidence of the D lines at the second border being distinctly seen in all the observations. Other trials were made with Schröder's dispersive spectroscope, another line having been selected for the test. The non-coincidence of this line, with a fixed steel point, was distinctly observed when the light came from the second border of the sun, the coincidence for the first border having been established. By measuring the amount of displacement, Vogel found, for the motion of a point on the sun's equator, a velocity of 0.42 German mile per second in one series of observations, and 0.35 mile in a second series. These velocities are greater than those at present admitted.

Sun-spots and the Cholera.—In a paper read before the British Historical Society, in April last, Mr. B. G. Jenkins elaborately defended his theory of the relation between sun-spots and cholera-visitations. He exhibited a map representing the amount of cholera, and the number of sun-spots, for the past fifty years, for

the purpose of showing that the minima and maxima of the phenomena coincided. After a reference to the eleven-year period of sun-spots, tabulated by Prof. Wolf, from a period as far back as 1611, the author went on to say:

Now, it is a curious fact that the last year of every century, as 1800, has a minimum of sun-spots, so that the minima are 1800, 1811.11, 1822.22, 1833.33, etc. The maxima do not lie midway between the minima, but anticipate it by falling on the year 4.77 after a minimum; for example, 1800 was a minimum year, then 1804.77 was a maximum year. Now, cholera-epidemics have, I believe, a period equal to a period and a half of sun-spots. reckoning then from 1800, we get as a period and a half the date 1816.66, which was shortly before the great Indian outbreak; another period and a half gives 1833.33, a year in which there was a maximum of cholera; another, 1849.99, that is 1850, a year having a maximum of cholera; another, 1866.66, a year having a maximum of cholera; another, 1883.33, as the year in which there will be a cholera maximum. It follows from what has been already said that 1788.83 would be a year in which cholera was at a maximum. Now it is a fact that in April, 1788, there was a great outbreak of the disease at Hurdwar.

I would call attention to the parallelism of increase and decrease of these curves. I am not, however, prepared to say that sun-spots originate cholera; for they may both be the effects of some other cause, which may indeed be the action of the other planets upon the earth and upon the sun. If that be the case—and I see no reason why it should not—we may then have an explanation of the minor periods and of the large period of 56 years, which Wolf believes he has detected, and also of the minor periods observed in cholera-epidemics.

My own opinion, derived from an investigation of the subject, is that each planet, in coming to and in going from perihelion—more especially about the time of the equinoxes—produces a violent action upon the sun, and has a violent sympathetic action produced within itself—internally manifested by earthquakes, and externally by auroral displays and volcanic eruptions, such as that of Vesuvius at the present moment; in fact, just such an action as develops the tail of a comet when it is coming to and going from perihelion; and when two or more planets happen to be coming to, or going from, perihelion at the same time, and are in, or nearly in, the same line with the sun—being of course nearly in the same plane—the combined violent action produces a maximum of sun-spots, and in connection with it a maximum of cholera on the earth. The number of deaths from cholera in any year—for example, the deaths in Calcutta during the six years—1865-'70—increased as the earth passed from perihelion, especially after March 21st, came to a minimum when it was in aphelion, and increased again when it passed to perihelion, and notably after equinoctial-day; thus affording a fair test of my theory.

Sun-spots and the Vine-Crop.—Mr. Arthur Schuster communicates to *Nature* the results of his observation on the supposed connection between sun-spots and the excellence of the vine-crops. The years of minimum sun-spots coincide with good wine-years in Germany, according to the author's statement; and he adds that the gentleman who first remarked the regular recurrence of wine-years, at intervals of about eleven years, was not aware of the periodicity of the spots, and could not, therefore, have been in any way prejudiced. The table is as follows:

Minimum of Sun-spots.	Wine-years.	Minimum of Sun-spots.	Wine-years.
1784.8.....	1784	1833.8.....	1834
1798.5.....	(?)	1841.0.....	1846
1810.5.....	1811	1856.2.....	1857
1823.2.....	1823	1867.2.....	1868

Forms of Solar Protuberances.—Prof. Tacchini, of Palermo, observing solar protuberances by the spectroscope, from March 1871, to February, 1872, found that out of 2,903 protuberances only 234, or about eight per cent., have the form of a tree or of a fan—that is to say, are narrow at the base, and spread out toward the upper part, as if they were produced by volcanic eruptions, whereas, the remaining 92 per cent. have a broad base, and taper upward like a pyramid; and seem, therefore, to be due to a simple throwing up of the substances of the chromosphere. He therefore regards the general form of the protuberances to be inconsistent with the existence of a solid crust on the sun's surface. When the chromosphere is observed with large instruments—and under peculiarly favorable conditions—it does not present the appearance of a continuous level stratum, as should be the case if it were solid, pasty, or liquid, but often appears to be formed of a continuous series of very distinct flames. It looks, indeed, like a general conflagration, more or less developed, which is incessantly renewed with greater or less force, and with especial violence in particular parts, where it gives rise to the protuberances. In small instruments, on the contrary, the chromosphere appears smooth, excepting certain parts where the flames rise to an unusual height. In like manner the details of the protuberances, and especially their outlines, as observed with small instruments, are not comparable with those made with large telescopes, which must necessarily afford a higher degree of definition.

Tacchini next described certain observations which tend to show that the so-called jets, projected upward from the chromosphere, have their counterpart in a descent of matter from above, in a kind of solar rain, when a mass or cloud of luminous hydrogen suspended in the sun's atmosphere throws off filaments on both sides, which gradually descend and unite at the sun's edge, thereby forming a protuberance which exhibits the arborescent or fan-like form usually attributed to an eruptive jet. This is a new point of great interest.

The theory which attributes the solar protuberances to violent eruptions, forcing their way through a solid crust, or liquid of great resisting power, may, Tacchini remarks, appear to derive some support from the chemical composition of the protuberances. If the masses which project above the chromosphere were found to contain many materials different from those which compose the chromosphere itself, there would be good reason for regarding them as projected from the interior of the sun. And, in fact, some of the protuberances have a somewhat complex chem-

ical composition, the bright lines observed in their spectra often corresponding to magnesium, iron, sodium, titanium, calcium, barium, nickel, chromium, copper, together with eight other lines which may belong to as many different substances; in all, therefore, eighteen elements, besides hydrogen and the element provisionally named Helium which is never absent, and represents the constant material of the entire chromosphere. On August 27th last, in a single protuberance nine different substances, represented by a brilliant spectrum of twenty-four bright lines, nine of which belong to iron, were seen.

Planetary Influence upon Solar Activity.—Those distinguished investigators of solar phenomena, Messrs. Warren De La Rue, Balfour Stewart, and Benjamin Lowry, presented to the Royal Society in March last the fruits of their long and patient study of the teachings of the sun-spot observations at Kew, with relation to the influence exerted by the planets Mercury, Venus, and Jupiter. The report is as complete as could be made out of the materials. With respect to the two planets nearest the sun, they say: "If we now examine the two tables for the planets Venus and Mercury, we shall find in them indications of a behavior of sun-spots appearing to have reference to the positions of these planets, and which seems to be of the same nature for both. This behavior may be characterized as follows: the average size of a spot would appear to attain its maximum on that side of the sun which is turned away from Venus or from Mercury, and to have its minimum in the neighborhood of Venus or of Mercury." And their general conclusions are as follows:

We leave it to others to remark upon the nature and strength of the evidence now deduced as to a connection of some sort between the behavior of sun-spots and the positions of the planets Venus and Mercury. We think, however, it must be allowed that the investigation is one of interest and importance, and we trust that arrangements may be made for the systematic continuance of solar observations to such localities as will insure to us a daily picture of the sun's disk.

The influence of blank days in diminishing the value of a series of sun-observations is very manifest. We have been able to record the behavior across the sun's disk of 421 groups of Carrington's series for a total number of 885 groups, and we have been able to record the same behavior for 373 out of 544 groups observed at Kew. Thus, out of a total of 1,429 groups, we have only been able to record the behavior of 794. Nor are the records which we have obtained so perfect as we could wish, on account of blank days, which make interpolations necessary. It is therefore of much importance for the future of such researches as the present that there should be several observing-stations so placed that we may reckon on having at least a daily picture of the sun's disk.

It will be easily seen that such observations are very different from experiments which may be multiplied *ad libitum*; for in this case Nature gives us in a year or in ten years a certain amount of information, and no more; while it depends upon ourselves to make a good use of the information which she affords.

It is already universally acknowledged that we ought to make the best possible use of the few precious moments of a total eclipse; but such observations must necessarily be incomplete unless they are followed up by the equally important if more laborious task of recording the sun's surface from day to day.

Asteroids.—The known number of these minor planets has been increased during the year from 117 to 126—Prof. Watson, of Ann Arbor, Mich., and Dr. Peters, of Clinton, N. Y., especially distinguishing themselves, as usual, by success in this line of discoveries. No. 118 was found by Dr. Luther, of Bilk, and has received the name Peitho; it is of the eleventh magnitude. The first discovery of No. 119 is due to Prof. Watson, on the 4th of April, as announced in the *American Journal of Science*, but it was discovered independently by M. Henry, of Paris, on the 9th of April. M. Borelly, at Marseilles, discovered No. 120 on April 10th, and on the night following the planet was independently discovered by Prof. Peters. May 12th, Prof. Watson discovered No. 121; August 1st, Nos. 122 and 123; and August 23d, No. 124. These newly-found bodies varied from the ninth to the eleventh magnitude. The honor of discovering No. 125 belongs to M. Henry, of Paris. Its magnitude is between eleven and twelve, and the eccentricity of its orbit higher than that of any asteroid yet observed. November 25th, Prof. Watson discovered No. 126, which was quite large and bright, resembling a star of the ninth magnitude.

Lunar Objects suspected of Change.—In a report made by Mr. Birt to the British Association, he remarked that changes within the area of the lunar crater Plato had been in progress during the two years of observation, principally occurring in the appearance and luminosity of the streaks. These changes were of such a character that they could not be referred to changes of illumination, but depended upon some agency connected with the moon itself, while the color of the floor was found to vary as the sun ascended in the lunar heavens, being darkest with the greatest solar altitude. The report was accompanied with curves from which the relation of the sun's altitude to the various degrees of that observed on the floor as of cause and effect was readily deducible. These reports on the appearances of the spots and streaks indicate the strong probability that, if further observations are undertaken, definite changes of an interesting character on the moon's surface are likely to be discovered.

The Transit of Venus in 1874.—Several of the Governments of Europe are making extensive preparations for the observation of this rare phenomenon. M. Otto Struve, of Russia, announces that the total number of Russian stations will be twenty-four, but each of these will only be provided with one instrument for the transit observation itself. The principal instruments are already ordered,

and the observers nearly all selected, and they will meet in 1873, at Pultowa, to exercise themselves in the use of the apparatus. He adds:

The geographical positions of the selected stations will not be determined by the transit-observers themselves; but all stations at which the transit has been successfully observed will afterward be carefully determined by special expeditions of the general staff of the navy. For this purpose a principal line of telegraphic longitudes will be laid (probably next year) through all Siberia to Nicolajensk, with which line the other stations in that part of the empire can be easily joined, either by telegraphic or chronometric operations.

With regard to the photographic method, I can inform you that in two places—at Wilna, under the direction of Colonel Smyloff, and at Bothcamp in Holstein by Dr. Vogel—they have perfectly succeeded in taking instantaneous photographs of the sun with dry plates.

As far as I know, in Germany the preparations have not much advanced since last spring. The estimates have not yet been laid before the Reichsrath, but it is expected that this will be done early in the spring. In the mean while Dr. Winnicke has been engaged with practical experiments concerning the heliometric method. He seems to be quite satisfied with the results. Also M. Paschen and Prof. Seidel have been working on the photographic method, and Prof. Zöllner on the application of the spectroscope for the observations of outer contacts.

In a recent article on the subject, Mr. B. A. Proctor sums up the preparations made in England, under the direction of the Royal Astronomer, Airy. He says:

Nothing can surpass the care and forethought with which the instruments which are to be employed for observing the transit have been or are being prepared. Five stations are to be provided for at Oahu, Kerguelen's Land, and other distant stations. At each station there are to be three observatories, and in each observatory there is to be a telescope and a clock. But the three telescopes at each station will be different in kind, and the clocks will also be different. One telescope at each station will be what is called a transit-instrument—that is, a telescope so mounted as to turn only on an horizontal east and west axis, and therefore always to point in a north and south direction, but at any altitude that may be desired. Such is a rough description of this important instrument; but in reality all the skill of the scientific optician is called into action to give such instruments the necessary qualities. The five transit instruments prepared at Greenwich for the coming transit are all new, and are perfectly charming specimens of their kind. They are mounted on stone piers, and can be set up as they stand, so soon as they reach their several stations. The special work on which they will be employed is, the timing of the exact moment when known stars are severally due south—an observation which enables the astronomer to determine the longitude of his station. A single second of error is a matter of serious import in such observations; and, therefore, the clocks which are used with transit-instruments must be master-pieces of the horologist's art. Three new clocks, and two belonging to the Royal Observatory, are reserved for this purpose. Then there are five telescopes mounted in the ordinary manner—or, rather, mounted so as to have the same movements as ordinary telescopes; of these, one has been provided from the Royal Observatory, and four are new. Five other telescopes mounted in the manner ordinarily employed in observatories—that is, so as to follow the course of the celestial bodies from their rising to their setting with a single motion—have also been provided. Ten

clocks will be provided for the ten telescopes last referred to. These ten clocks are not required to be of the same quality as the five used with the transit-instruments; though they will all be trustworthy time-measurers. It is also unnecessary that they should be timed and rated long before the observations are to be made during which they will be employed.

The United States commissioners appointed to supervise the transit observations are Rear-Admiral Sands (president), and Profs. Newcomb and Harkness, all connected with the Naval Observatory. The congressional appropriation of \$50,000 for the purchase of instruments is in their hands. They intend to equip eight photographic stations—four in China, Japan, and (probably) in one of the islands adjacent to Japan; and four in New Zealand, Oatham Island, Tasmania, and Kerguelen Island. A meeting of all persons who will take part in the work will be held in Washington in the spring of 1874, for rehearsal and practice. The commissioners will have an "artificial Venus," making a transit over an artificial sun, at a distance of two miles, and all the observers will use, on that occasion, the same instruments which they will employ in taking note of the real transit of Venus.

The Disintegration of Comets.—Prof. Daniel Kirkwood, of Iowa, contributes to *Nature* a paper on this topic. He undertakes to present historical evidence of the gradual disintegration of periodic comets. He refers, for proof, to what is known of the comets of A. D. 389, 416, 813, 896, 1532, 1618, and 1661. Coming down to later days, he cites the bipartition of Biela's comet in 1845, and the non-appearance of the two fragments in 1865, and concludes as follows: "The comet of Halley, if we may credit the descriptions given by ancient writers, has been decreasing in brilliancy from age to age. The same is true in regard to several others believed to be periodic. The comet of A. D. 1097 had a tail 50° long. At its return, in March, 1840, the length of its tail was only 5° . The third comet of 1790, and the first of 1825, are supposed, from the similarity of their elements, to be identical. Each perihelion passage occurred in May, yet the tail at the former appearance was 4° in length, at the latter but $2\frac{1}{2}^\circ$. In short, instances are not wanting of this apparent gradual dissolution. It would seem, indeed, extremely improbable that the particles driven off from comets in their approach to the sun, forming tails extending millions of miles from the principal mass, should again be collected around the same nuclei.

The fact, then, that comets and meteors move in the same orbits, is but a consequence of that disruptive process so clearly indicated by the phenomena described. In this view of the subject, comets—even such as move in elliptic orbits—are not to be regarded as permanent members of the solar system. Their *débris*, however, thus scattered through space, and subject more or less to planetary pertur-

bation, may casually penetrate the atmosphere, producing the phenomena of sporadic meteors.

The researches of Signor Schiaparelli corroborate the theory advanced by Prof. Kirkwood. The former suggested that the force which broke up the comets was simply the unequal attraction of the sun on different portions of the nebulous mass; but other astronomers incline to the opinion that it is a cosmical force of repulsion.

See COMET (BIELA'S).

The Motions of Stars.—Dr. William Huggins has been following up his profound investigations into the motion of stars, as revealed by the spectroscope. Better instruments have warranted him in correcting some of the conclusions which he formerly gave out. He now thinks that Sirius is travelling from the earth at a rate of from 18 to 22 miles per second—instead of from 26 to 36 miles as previously announced by him. The apparent rate of motion observed in the star Betelgeux (going from the earth) is estimated at 37 miles per second. Rigel is supposed to be receding at the rate of 15 miles per second; Oastor, 40 to 45 miles per second; Regulus, 80 to 85 miles per second; Arcturus, 55 miles per second; the nebula of Orion, 5 miles per second; Alpha Lyrae, 40 to 50 miles per second; Alpha Cygni is thought to be approaching the sun at the rate of 80 miles per second; and Pollux at the rate of 32 miles per second. Dr. Huggins treated this interesting subject very fully, in a paper read before the Royal Society in June last. He thus sums up generally:

In the calculation of the estimated velocities, the wave-lengths employed are those given by Angström in his "*Recherches sur le Spectre solaire*" (Upsal, 1868). The velocity of light was taken at 185,000 miles per second.

The velocities of approach and of recession which have been assigned to the stars in this paper represent the whole of the motion in the line of sight which exists between them and the sun. As we know that the sun is moving in space, a certain part of these observed velocities must be due to the solar motion. I have not attempted to make this correction, because, though the direction of the sun's motion seems to be satisfactorily ascertained, any estimate that can be made at present, of the actual velocity with which he is advancing, must rest upon suppositions, more or less arbitrary, of the average distance of stars of different magnitudes. It seems not improbable that this part of the stars' motions may be larger than would result from Otto Struve's calculations, which give, on the supposition that the average parallax of a star of the first magnitude is equal to $0''.209$, a velocity but little greater than one-fourth of the earth's annual motion in its orbit.

It will be observed that, speaking generally, the stars which the spectroscope shows to be moving from the earth (Sirius, Betelgeux, Rigel, Procyon) are situated in a part of the heavens opposite to Hercules, toward which the sun is advancing; while the stars in the neighborhood of this region, as Arcturus, Vega, Alpha Cygni, show a motion of approach. There are, in the stars already observed, exceptions to this general statement; and there are some other considerations which appear to show that the sun's motion in space is not the only, or even in all cases, as it may be found, the chief cause of the observed proper motions of the stars.

There can be little doubt but that in the observed stellar movements we have to do with two other independent motions, namely, a movement common to certain groups of stars, and also a motion peculiar to each star.

Mr. Proctor has brought to light strong evidence in favor of the drift of stars in groups having a community of motion, by his graphical investigation of the proper motions of all the stars in the catalogues of Mr. Main and Mr. Stone.

Star-Depths.—Mr. Richard A. Proctor has delivered a series of lectures on the sidereal universe, in London. He makes the following statement (as briefly reported in the London journals) of his views upon one of the astronomical vexed questions of the day:

The lecturer stated in the outset his belief that not only are the stars not spread uniformly throughout space, but that not even the general approach to uniformity insisted upon in our treatises on astronomy in reality prevails. He would endeavor to show that there are definite regions, within which stars of many orders of magnitude are richly distributed, while around these regions are vast spaces, in which either there are no stars or stars are very sparsely strewn. The first evidence quoted in favor of this theory was the remarkable circumstance that the southern hemisphere contains about 1,000 more stars visible to the unaided eye than the northern. This peculiarity is rendered more remarkable by the fact that there is a well-marked northern rich region, as well as a well-marked southern rich region of greater extent. Now, in the British Association Catalogue, there are about 5,800 stars included within the classes visible to the naked eye. Yet when these stars are shown in a series of twelve maps overlapping each other uniformly, and each covering a space equal to the tenth part of the heavens, instead of each map showing about 560 stars, we find the north-polar map showing 700, other five northern maps containing 400, 540 (a map crossed by Milky Way), 400, 370, and 550 (another Milky-Way map); while the south-polar map contains 1,130, and other five southern maps contain 590, 890, 510, 590, and 570; the condensation in all these southern non-polar maps being markedly toward the south. The lecturer then passed to the star-gauges of the Herschels, and the principle of star-gauging; remarking that the regions surveyed by the Herschels in this manner were exceedingly limited, that the principle of the method was hypothetical, and that tested by results it was shown to be erroneous. Moreover, the elder Herschel (as Struve pointed out) definitively abandoned the principle of star-gauging. Passing to the labors of W. Struve, the lecturer remarked that while they clearly showed that the "grindstone theory" of the sidereal universe is erroneous; Struve pushed the method of average-taking too far ("to the verge of audacity") in converting a zone of the heavens 80° wide round the equator into an equatorial flat disk. The lecturer then proceeded to discuss the proper motions of the stars, showing that they also indicate that the stars are gathered into certain regions of space, and segregated from others. He pointed out that Mädler's theory of a central sun (supposed by the German astronomer to be recognizable in Aleyone of the Pleiades) is untenable, simply because the evidence which Mädler sought for only in Taurus—the concurrence of proper motions—exists in at least an equally well-marked degree in Gemini, and elsewhere in the heavens. Sir John Herschel, Prof. Grant, and others, had already pointed out that Mädler's hypothesis was based on insufficient evidence. The concurrence of colors in certain stellar groups, as of greenish-white stars in Orion, and yellowish stars in Cetus, was adduced as further evidence of the laws according to which the stars are arranged. Mr. Proctor remarked further that the variable stars

are in nearly all cases placed where star-streams or star-clusterings can be recognized, and that all temporary stars have appeared within the Milky Way, except the "Blaze Star" of 1866, which, however, occupied a portion of the telescopic extension of the Milky Way. He suggested, in explanation of this remarkable circumstance, that probably the occurrence of the outburst indicated by the appearance of a new star is associated with the fact that in the Milky Way there is a great abundance of unattached cosmical matter, downfalls of which produce the displays in question.

The Star Eta Argds.—By means of the great Melbourne telescope, the remarkable changes in the nebula around the star Eta Argds have been recently studied with a success never attained by other instruments. Mr. McGeorge, the observer, has made a series of sketches, showing the modifications in the apparent shape of the nebula. These were taken at intervals of about three months, and exhibit radical alterations in the structure of the object. At one observation, the star which Herschel saw involved in dense nebula was seen on the bare sky, the nebula having disappeared for some distance around it. The nucleus of the formation proves to be a triple star. Mr. McGeorge finds, as Lord Rosse did, that high powers, on a good night, bring out details of nebula invisible with lower powers. On one occasion he speaks of using 1,800, whose definition, he says, "was magnificent for an hour." He notices a sort of stereoscopic effect, which, particularly with the high powers, makes the Lemniscate look "like a huge snowy cave with uneven woolly sides."

In December, 1869, the spectrum of Eta Argds showed bright lines; but in January, 1871, there was no trace of them; but Mr. McGeorge thought that with a wide slit he detected absorption bands in the position of the usual nebular lines. Distinct nebulosity was then visible round the star, most condensed near it, chiefly in the direction of the Lemniscate.

It is, perhaps, unnecessary to remark that Mr. McGeorge has seen nothing in the way of colored stars at all to be likened to Kappa Crucis; one or two are reddish.

It is the intention of the Melbourne astronomers to pursue unrelentingly the study of this nebula, which seems already to have given them such results. But it is evidently a most laborious task which they have imposed on themselves. At present they are confining their attention to the vicinity of the Lemniscate, but even there the field of labor is immense, for already they have noticed three times as many stars as were seen by Herschel.

Spectroscopic Study of Nebula.—D'Arrest, in the *Astronomische Nachrichten*, gives the results of his observations on two well-known nebulae, one in Gemini and the other in Draco. The first mentioned, according to D'Arrest, belongs to the order of gaseous nebulae. Its light is almost wholly monochromatic, and is concentrated in the nitrogen line. The bright nucleus is not stellar, as had been supposed.

The other nebula is of the gaseous order also, as shown by Huggins. D'Arrest finds that its light is changeable. He concludes by calling into question the possibility of recognizing any annual parallactic displacement of this nebula. He points out that if we compare the present place of the nebula in the heavens with that indicated by Lalande, who very carefully observed the nebula in 1790, we find that, unless we adopt the improbable assumption that this star is moving on a course parallel to the sun's, and with equal velocity, we must infer that the nebula is so far off that the sun's motion has not produced a perceptible displacement of the nebula during the last eighty years. He infers that the usual annual displacement can scarcely be greater than 0.07, an arc which no instrument yet constructed could indicate.

Spectra of the Planets.—After careful spectroscopic observations of the planets, Herr Vogel announces results, briefly as follows: Mercury shows the lines C, D, E, F, and others; the red part of the spectrum being intense, while the blue and violet are faint. Venus exhibits an agreement of about 30 lines with the solar spectrum, and is strong in the magnesium lines, while the sodium lines are delicate. Mars resembles the sun in 20 of the principal lines, and Jupiter in 30. The spectrum of Uranus is characterized by absorption bands, two of which coincide remarkably with those produced by the atmosphere of the earth as seen near the time of sunset.

Observations in the Southern Heavens.—Dr. B. A. Gould, director of the observatory at Cordova, furnishes occasional information of his labors to the *American Journal of Science*. In a letter dated September 4, 1872, he says that, during the first fourteen months of his sojourn at Cordova, he had completed the survey of the entire sky south of the 10th degree of north declination, identified the stars from their catalogues, and reduced their positions to the mean equinox of 1872.0. Dr. Gould finds that, on fine nights, stars not brighter than 7.2 can be distinctly seen; while a considerable number, which have been seen and recorded, are not above the 7.5 magnitude. He has marked down some new variable stars, one of which he especially mentions, since it belongs to the northern hemisphere. It is the star in *Monoceros*, No. 507 of the Hour VI. in Bessel. Its apparent magnitude fluctuates between 6.2 and 7.3 in a period of about thirty-one days. Dr. Gould hoped that the observatory building would soon be completed, and his researches in the clear and transparent sky of Cordova enter upon an era of full activity.

Photographing Celestial Objects.—In his opening address before Section A of the British Association, Mr. Warren De La Rue gives a review of late attempts to obtain lunar photographs for purposes of measurement. Photographs of the moon are free from distortion, and therefore offer material of great value as

the basis for a trustworthy map of the lunar surface, and also for the solution of the problem of the moon's physical libration. Mr. De La Rue had seen an enlargement of a lunar photograph taken with the great Melbourne telescope, in which the primary image is 3.4 inches in diameter. He thinks that by such means measurements on the surface of the moon may be obtained more free from error than by the use of the micrometer. He highly commends the efforts of Prof. O. A. Young, of Dartmouth College, to photograph the protuberances of the sun in ordinary daylight. Prof. Young has obtained distinct reproductions of some of the double-headed prominences; and, although as pictures the impressions may be of little value, yet there is every reason to believe, now that the possibility of the operation is known, that, with better and more suitable apparatus, an exceedingly valuable and accurate record may be had.

Prof. Young employed for the purpose a spectroscope containing seven prisms, fitted to a telescope of 64 inch aperture, after the eye-piece of the same had been removed. A camera, with the sensitive plate, was attached to the end of the spectroscope, the eye-piece of which acted in the capacity of a photographic lens, and projected the image on the collodion film. The exposure was necessarily a long one, amounting to three minutes and a half. The eye-piece of the spectroscope was unsuitable for photographic purposes, and only in the centre yielded a true reproduction of the lines free from any distortion. A larger telescope, with a suitable secondary magnifier, will be required, in order to secure a more defined image.

I have hitherto spoken of the successful application of photography to astronomy; but I must point out also some cases where it has failed. Nebulæ and comets have not yet been brought within the grasp of this art, although, perhaps, no branch of astronomy would gain more if we should hereafter succeed in extending to these bodies that mode of observing them. There is theoretically, and even practically, no real limit to the sensitiveness of a plate. Similarly with reference to planets great difficulties still exist, which must be overcome before their phases and physical features can be recorded to some purpose by photography; yet there is great hope that the difficulties may be ultimately surmounted. The main obstacle to success arises from atmospheric currents, which are continually altering the position of the image on the sensitive plate; the structure of the sensitive film is also an interfering cause for such small objects. A photograph taken at Cranford of the occultation of Saturn by the moon some time ago exhibits the ring of the planet in a manner which holds out some promise for the future.

In the reproduction of stars by photography, recently undertaken by Mr. Rutherford, the objects to be secured being so minute, special precautions were found to be necessary in depicting them upon the sensitive film, so that their impressions might be distinguishable from accidental specks in the collodion plate. To prevent any such chance of mistake, Mr. Rutherford secures a double image of each luminary, the motion of the telescope being stopped for a short time (half a minute) between a first and second exposure of the plate; so that each star is represented by two close specks, so to speak, upon the negative, and is clearly to be distinguished by this contrivance from any accidental speck in the film. A map of the heavens is thus secured, very clear though delicate in its nature, but yet one upon which implicit reliance can be placed for the purposes of

measurement. Prof. Peirce aptly says: "This addition to astronomical research is unsurpassed by any step of the kind that has ever been taken. The photographs afford just as good an opportunity for new and original investigation of the relative position of near stars as could be derived from the stars themselves as seen through the most powerful telescopes. They are indisputable facts, unbiassed by personal defects of observation, and which convey to all future times the actual places of the stars when the photographs were taken."

Mr. Asaph Hall, who shared with Prof. Bond the work of measuring the photographic images, and of reducing the measurements, has very recently subjected the photographic method to a critical comparison, with a view to deciding on its value when applied to the observation of the transit of Venus. He appears, as regards its application to stellar observations, to under-estimate the photographic method in consequence of want of rapidity; but he admits that in the case of a solar eclipse, or of the transit of a planet over the sun's disk, it has very great advantages, especially over eye-observations of contacts, inner and outer, of the planet and the sun's limb, and that the errors to which it is subject are worthy of the most thorough investigation. The observation of a contact is uncertain on account of irradiation, and is also only momentary: so that, if missed from any cause, the record of the event is irretrievably lost at a particular station, and long and costly preparations rendered futile. On the other hand, when the sky is clear, a photographic image can be obtained in an instant, and repeated throughout the progress of the transit, and, even if all the contacts be lost, equally valuable results will be secured, if the data collected on the photographic plates can be correctly reduced, as will be proved hereafter to be undoubtedly possible. That the transit of Venus will be recorded by photography may now be announced as certain, as preparations are energetically progressing in England, France, Russia, and America, for obtaining photographic records. There is also a possibility of Portugal taking part in these observations; for it is contemplated by Senhor Capello to transport the Lisbon photoheliograph to Macao. There are at present five photoheliographs in process of construction for the observing parties to be sent out by the British Government, under the direction of the Astronomer Royal, Sir George B. Airy. The Russian Government will supply their own parties with three similar instruments; and I am also having constructed one of my own for this purpose and for future solar observations. All these instruments, made precisely alike, will embody the results of our experience gained during the last ten years in photoheliography at the Kew Observatory while belonging to this Association. One only of them, namely, the photoheliograph which has been at work for some years at Wilna, is of somewhat older pattern; but how great an advance even this instrument is on the original at Kew is proved by the delightful definition of the most delicate markings of the sun in the pictures which have reached this country from Wilna.

To give some idea of the relative apparent magnitudes of the sun and Venus, I may mention that at the epoch of the transit of 1874 the solar disk would, in the Kew photoheliograph, have a semi-diameter of 1965.8 thousandths of an inch, or nearly two inches; Venus a semi-diameter of 63.33 of these units; and the parallax of Venus referred to the sun would be represented by 47.85 such units, the maximum possible displacement being 95.7 units, or nearly one-tenth of an inch.

The Zodiacal Light.—Prof. C. Piazzi-Smyth, Astronomer Royal for Scotland, improved the occasion of a trip to Palermo to study the zodiacal light, which is seen with remarkable distinctness in that part of the world. The

time of the observations was March, and he had at his disposal the best instruments belonging to the Spectroscopic Society of Italy. In a paper, read before the Royal Astronomical Society, in June, after describing the careful arrangements made to secure the most favorable view, he continues:

There was the zodiacal light brilliant, so to speak, instantly recognized by all of us as being, as it should be for the vernal equinox, in latitude 38° north, and vastly brighter than it ever could be seen in any very northern city, as of 50° or 60° latitude. Upon that most visible zodiacal light, then, we directed the grand tube of the spectroscope, its slit being arranged narrow, or as most suitable to resolving the reference of blue flame-bands into lines; or, as I may add, from long Edinburgh experience, for seeing and identifying the one bright line formed by the peculiarly monochromatic light of ordinary green aurora. On looking into the eye-piece, there were all these bands of the reference spectrum, with symptoms of linear resolution, together with the lithium and sodium lines thin, as representing the fine slit, ranged across the lower part of the field; but, in the upper part of the field, where the spectrum of the zodiacal light ought to have appeared, there was nothing. To make quite sure, the instrument, carrying the reference-lamp along with it, was moved slowly, first in azimuth, and then in altitude, backward and forward, across all the brightest parts of the zodiacal light; the reference-lamp, too, was dulled, and at last altogether excluded, but still nothing whatever was seen, on looking, with the prisms, through the slit, at the zodiacal light, which otherwise was not only abundantly bright to the naked eye, but also when viewed through the same prisms, if used without any slit at all.

The only explanation, then, that is possible for the non-appearance of any spectral light, whether in lines, bands, or any thing else, when the fine slit was used, is, that the light of the zodiacal manifestation is not, as has been sometimes asserted, monochromatic light of one definite refrangibility (in which case it could only give a line as bright as the full phenomenon, and as narrow as the slit), but it is of many various refrangibilities, and spread thereby over so large a spectral range as to become weakened down to practical invisibility.

To ascertain over how great a spectral range the zodiacal light is spread, the slit was opened slowly until *something* was seen in the dark field, and then it was no line or lines, but a short portion of continuous spectrum that was indicated, becoming clearer, and rather larger too, when the slit was still further widened. Indeed, we made it at last even extravagantly wide, or approximating in breadth to the length of the said portion of continuous spectrum itself.

This portion, however, was never definite, never bounded by sharp, upright, parallel lines, as were the lines of lithium and sodium, with that broad slit; but it was shaded off gradually into darkness at each end, and had its general maximum of light nearer the less refrangible end. Moreover, it was altogether so faint, as well as undefined and indefinable at the same time, that it could never be seen certainly in conjunction with the reference-spectrum, the latter having to be excluded, and then let in again, so that the comparison of the two might be made by memory assisting the eye.

Hence he infers that the older astronomical theory of the zodiacal light being the solar illumination of infinitely small, distant particles, such as meteors revolving about the sun, whether in orbits of infra or ultra planetary ellipticity, is spectroscopically maintained, while that such solar zodiacal light has any physical connection with the essentially terrestrial accompaniment of aurora is just as eminently nega-

tived by the spectroscopes, for no two spectra can be more essentially different than those of the aurora and the zodiacal light. They are as different from one another as night from day.

The results of observations of the zodiacal light, at Rio Janeiro and various places upon the high plateau in the interior of Brazil, are given, in a note to the *Comptes Rendus*, by Mr. E. Liais. He finds that the light is visible as far as the anti-solar point of the heavens. Polariscopic observations have not enabled him to discover any trace of polarization. He has also, at various times within the last four years, studied the light, by the aid of the spectroscope, and has found that it gives a spectrum apparently continuous, though perhaps containing dark lines.

These results would indicate that the light is derived from the sun by reflection; and the absence of polarization, if certainly made out, shows that the matter reflecting the solar rays is not gaseous, but made up of solid corpuscles not endowed with the properties of specular reflection, but scattering the light irregularly. With regard to the connection between the base of the zodiacal light and the corona, he remarks that, although the light in the latter is polarized, while that of the former is not so, a fact indicating that the latter is gaseous, and the former composed of solid particles, the corona may possibly be the base of the zodiacal light, its gaseous condition being a result of its proximity to the sun, in consequence of which the solid particles are volatilized by the intense heat.

Luminous Matter in the Atmosphere.—In observations of the sun during eclipses, and also in ordinary daylight, luminous particles in large numbers are, often seen, and their appearance has given rise to many conjectures. Mr. Henry Waldner has paid much attention to the subject, and writes in explanation to *Nature*. His first acquaintance with these particles was made in directing his telescope to the sun, to observe spots, when, just as he was about getting the disk in field, he perceived a mass of luminous little bodies, apparently coming from the sun, and passing with great velocity toward the east. They emitted a white and sparkling light, and were as numerous as stars, and moved rapidly. On subsequent observation of this same phenomenon, he became satisfied that they were ice-crystals or flakes of snow floating at a distance from the earth's surface of about 4,000 metres down to 200 metres, and having an average diameter of 32 millimetres, and a velocity of two metres a second. They were seen most abundantly from April 20th to May 15th, and then again in August and September. Upon these facts the author thus speculates:

Here it may be recollected that already, in the seventeenth century, Mariotte, the renowned discoverer of the law of gas-expansion, pointed out that parheliions and mock moons are caused by ice-crystals floating in the sky; and, indeed, if we consider

the above results, we are forced to believe him. Firstly, we learned that these bodies belong to the atmosphere; we also found them in its lower strata. Their average size of 32 millimetres, their flake-like shape, their incalculable number, will also strongly convince us. But, while the minimum during the winter months might seem rather unaccountable, the chief maximum occurring in April and May, it may be remarked that from September to March the sun, although in the meridian, does not light up so strongly the rather misty sky, and that many days the sun will not appear at all. Now, referring to the chief maximum, from about April 20th to May 15th, is it not astonishing that it occurs on the very same days which, especially those of May, were at all times well known from their low temperature, and called, in Germany, "the Latins" (*Pancratius*, May 12th, *Servatius*, May 18th, etc.), and were much feared by gardeners? But, are the enormous masses of ice-crystals, found in the atmosphere during these days, the origin of its low temperature? or, does the latter favor the formation of snow-masses? I only mention the fact that, for instance, heat is absorbed when snow is melting, and would be happy to direct the attention of meteorologists, in any country, to this phenomenon, inviting contributions of facts and correspondences. Finally, the velocity of the bodies being the same as that of the clouds, their reflected magnificent white light, the irregular courses in the higher regions, where strong winds are generally blowing, their irregular or even falling movement, and small density, in the lower ones, and their very remarkable conformity of direction with simultaneously-passing clouds, will give much support to my explanation.

AURORA BOREALIS. An auroral display of remarkable brilliancy, visible throughout Europe, the British American possessions, and the Northern part of the United States, occurred on the night of February 4th. It lasted about four hours, and exhibited all the beautiful shifting forms and colors known to such phenomena. Fortunately, it was observed with great care by numerous competent persons, and we have, in the English scientific journals, a complete record of its varying appearances, and the concurrent indications. The telegraphing business in England was greatly deranged. Strong deflections, from earth-currents, were noticed on all circuits except the local ones. The duration of the currents changed from north to south at intervals of a few minutes, and varied in strength from 1° to 68° , the strength of the current being proportionate to the length of the wire. Lines running south-west and west appeared to be most affected. The French Atlantic cable felt the disturbing electric influence; the strength of the current at one time being equal to 90 Daniell cells. The wires in France were much affected, and the American telegraph-lines were disturbed in the East, West, and North, where the aurora was most distinctly seen, but not in the south. The magnetic storm accompanying this great aurora commenced in England about 2 P. M., and was at its height from 4 to 9, although the magnets were not steady again until after sunrise the next morning. The usual yellowish-green auroral line was distinct everywhere, and could be seen even when the spectroscope was directed to dense masses of cloud; and could be made out in the reflection of the light

from any suitable terrestrial object—white paper, for example. As shown in the brighter green patches of the sky, it remained visible even when the slit was so much contracted that the sodium band of a common fire would have been thinned down almost to its smallest breadth before extinction. At one period of the display, the light was so intense that, after it had been obscured a good deal by cloud, a large print could have been read without much difficulty. In a note upon this aurora, communicated to *Nature*, Prof. C. Piazzi-Smyth sums up the final mean results of a vast number of observations by members of the Scottish Meteorological Society, and presents a numerical expression for each month of the year, combining the number of times that aurora was visible with the extent of country over which it was observed, and the numbers stand thus:

January.....	29.7	July.....	0.5
February.....	42.5	August.....	12.6
March.....	35.0	September.....	36.0
April.....	27.5	October.....	49.4
May.....	4.8	November.....	32.4
June.....	0.0	December.....	28.8

It thus appears that October and February are the two months when brilliant auroras are most likely to be seen, and that, of these two maxima of the annual cycle, October has rather the advantage.

Prof. A. E. Twining gives to the *American Journal of Science* the fruits of observations of the aurora, made by himself and others, in different parts of the United States. It is shown that the maximum variation of the magnetic needle in this country occurred about the time of the maximum variation in England and in Germany. Three epochs of extreme and sudden deviation were noted, followed by as many of sudden change back again. Prof. Twining, from the data at his command, estimates the height of the aurora at 852 miles above the earth's surface. The ascertained height for a similar zone in February, 1870, was 389 miles.

Vogel attempts to identify the spectrum of the aurora with that of the air, and submits some evidence in favor of his theory. For the purposes of comparison, the author determined the wave-lengths of the positive lines in oxygen, hydrogen, nitrogen, and air; employing, for the work, Geissler tubes, the discharge being that of a weak inductorium. One auroral line appears to correspond with one of a system of lines in the spectrum of nitrogen. The lightest line in the auroral spectrum is found in the spectrum of nitrogen as a faint line. Another line exists both in the spectrum of nitrogen, and that of air. Another line corresponds very accurately with a line in the spectrum of oxygen. These, and other coincidences, lead Vogel to conclude that the spectrum of the aurora may, with great probability, be regarded as a modification of the air-spectrum, the variability of the spectra of gases, under different circumstances of temperature and pressure, being well established.

AUSTRALIA. At the beginning of the year 1872, the area and population of the British colonies in Australia were, according to the latest official accounts, as follows:

COLONIES.	Area.	Population.	Census.
New South Wales.....	308,560	501,611	1871
Victoria.....	88,451	752,287	1871
South Australia.....	380,008	188,758	1871
Queenstown.....	688,330	130,066	1871
Western Australia.....	975,394	94,785	1870
Northern Territory.....	539,531
Tasmania.....	96,315	90,336	1870
New Zealand.....	106,350	204,088	1871
Total.....	3,077,701	1,958,444	

The population, as given above, includes 859 natives in Victoria, 3,369 in South Australia, and 37,502 in New Zealand. Not included are the natives of Queensland and the Northern Territory, whose number is estimated at over 15,000.

According to official calculations, the population of Tasmania amounted in December, 1870, to 100,764; that of Victoria in December, 1871, to 752,287; and that of South Australia, in the same month, to 189,018.

The growth of most of the colonies has been and continues to be very rapid, as may be seen from the fact that Victoria, in 1836, only numbered 224; South Australia, in 1838, 6,000, and New South Wales, in 1821, 29,783 inhabitants. In some colonies the increase of population has, however, been much less marked within the last ten years than before, and great efforts are therefore made to give a new impulse to immigration. Official investigations in South Australia revealed the fact that, from 1861 to 1871, nearly 250,000 pounds sterling had been spent by the several governments of that colony in the endeavor to establish immigration on a sound and permanent footing; but that the total result thus far had been only 4,000 persons. The government of this colony, therefore, intended to abandon the present plan of paying the passage-money of the immigrants, and to substitute what is known as the "land order warrant" system. This system is designed to encourage persons of some capital to come out to the colony at their own expense, receiving on arrival land orders of the nominal value of £16 each. The Parliaments of several other colonies likewise discussed the question of immigration, with a view to making their laws on the subject more effective. The Parliament of Queensland restored the transferable land orders, with the proviso that immigrants must reside twelve months in the colony before they shall be entitled to receive their land orders, each of which is to be of the value of \$20, payable in land, and to be at the absolute disposal of its owner so soon as he shall be entitled to have it issued in his favor. Employers of labor are also to have a land order for each immigrant whom they may introduce at their own expense, and assisted immigrants are to have the right of receiving land orders on fulfilment of

the residence condition and on payment of the balance of their passage-money. The amount to be paid toward an assisted passage has also been reduced, and liberal provision has been made for the introduction of free immigrants. The Government of the colony intends to expend £50,000 on immigration during each of the next three years.

The revenue and expenditure of the colonies, in 1869, were as follows:

COLONIES.	Revenue.	Expenditure.	Public Debt.
New South Wales...	£3,442,640	£2,602,979	£9,681,130
Victoria.....	3,070,959	2,618,013	10,385,900*
South Australia....	564,639	738,160	1,944,700
Western Australia..	96,131	112,905	No debt.
Queensland.....	743,068	771,991	3,450,760*
Tasmania.....	346,467*	441,528*	1,314,000
New Zealand.....	8,517,073	8,550,859	7,380,616
Total.....	£10,793,967	£10,834,435	£34,146,096

The following table exhibits the imports and exports (inclusive of precious metals):

COLONIES.	Imports.	Exports.
New South Wales.....	£7,757,361	£7,991,038
Victoria.....	12,453,757	12,470,014
South Australia.....	2,099,793	2,419,437
Western Australia.....	222,590	304,447
Queensland.....	1,596,799	2,006,635
Tasmania.....	990,000*	830,000*
New Zealand.....	4,976,196	4,324,860
Total.....	£39,966,346	£30,146,481

The merchant navy of the colonies, in 1871, consisted of 1,740 vessels, with an aggregate of 200,106 tons. The entries and clearances in the Australian ports, in 1869, represented an aggregate of 4,500,861 tons. The greatest progress in the construction of railroads has been made by New South Wales, where the first railroad went into operation in 1850, and where the total length of railroads, in 1871, was 403 miles. Victoria, in 1870, had 271, Queensland 218, South Australia 173, Tasmania 63, and New Zealand 44 miles. In Western Australia the introduction of railroads was soon expected to take place. Bills for the construction of a "Transaustralian Railroad" were, in 1872, discussed at length in the Parliaments of several colonies.

The electric telegraph has been introduced into each of the colonies. The length of the wires, in 1871, was 5,053 in New South Wales, 8,868 in Victoria, 1,617 in South Australia, 2,182 in Queensland, and 2,777 in New Zealand; and about 15,500 in all the colonies. Telegraphic connection of all the colonies with England, by means of the submarine cable connecting Java and Port Darwin, was completed in the course of 1872. In New Zealand the completion of the telegraphic line to Auckland, at the beginning of the year 1872, gives to all the important towns and settlements of this colony the advantages of telegraphic communication. For years the work of connecting Auckland with the rest of the colony

had been embarrassed by the jealous natives, through whose lands the wires had to pass.

The cause of education is rapidly advancing, and in several colonies it is aided by "compulsion." Each has a board or council of education, consisting of a number of members appointed by the government. The system of education greatly resembles the national one of Ireland. The government provides for the establishment of common schools, and also grants aid to other schools, in case they comply with certain regulations. The following statistics are gleaned from the "Australian Hand-book and Almanac" for 1872:

New South Wales.—The number of schools is 1,304, with 82,821 scholars. Under the control of the Board of Education there are 846 schools. This class comprised 359 public, 164 provisional, and 82 half-time schools. The denominational schools in connection with the board, numbered 264. (Church of England 130, Roman Catholic 98, Presbyterian 20, Wesleyan 15, Jews 1.) There are also under the control of the board 6 orphan and industrial schools. The University of Sydney has 41 students; St. Paul's College and St. John's College each 7 students. The Deaf and Dumb Institution has 35 scholars. Toward the support of these educational institutions, £134,000 were contributed by the Government, and £49,000 received in the shape of fees and voluntary contributions. The average yearly cost of each child's education is £2 14s.

Victoria.—The day-schools, including the "common school" and private educational establishments, number 1,722, with an attendance of 151,844 scholars. There are 1,239 Sunday-schools in the colony, with an attendance of 90,092 pupils. Of these schools, 251 belong to the Church of England, 171 to the Roman Catholic Church, and 301 to the Wesleyans. There is a university at Melbourne, and several colleges, of which the principal are the Scotch, Ballarat, and Geelong Colleges, Presbyterian; Wesley College, Wesleyan; St. Patrick's College, Roman Catholic, and the Melbourne Grammar-School and Geelong Grammar-School, both Church of England. The public libraries of the colony, including the 81 Mechanics' Institutes, possess 162,767 volumes.

South Australia.—The Sunday-schools in connection with the various religious denominations number 469, with 30,580 scholars. The number of licensed schools open was 330, and the average number of scholars 16,328.

Western Australia.—The total number of schools under the Board of Education was 55, with 2,188 scholars, the average attendance being 1,569.

Tasmania.—The number of schools supported by the Government is 116; the total number of children receiving instruction 15,127. Four superior colleges, and the private schools, send up pupils every year to pass an examination for the degree of Associate of Arts, which entitles the holder, among other advantages, to

compete annually for a scholarship of £200 per annum, tenable for four years at a British university.

Queensland.—The returns for 1870 are 111 schools, under the control of the Board of Education; aggregate attendance 16,227. In case the inhabitants of a district raise by subscription the sum of £1,000, for the purpose of establishing a grammar-school, the Government contributes double the amount for the erection of the necessary buildings. As yet, only Brisbane and Ipswich have availed themselves of this grant. The number of private schools is 101.

New Zealand.—The number of public schools is 244, with an average attendance of 12,052 scholars.

The least progressive of the Australian colonies is Tasmania. The one railway of the island was, in 1872, abandoned to the Government, because it failed to pay working expenses. The ministry of the colony resigned because the Assembly rejected an income-tax, proposed to supplement an insufficient revenue; but for a time no one could be found to fill their places. An agitation is going on in part of the island for annexation to Victoria.

AUSTRIA, SOPHIA FREDERICA DOROTHEA WILHELMINA, ARCHDUCHESS OF, wife of FRANZ KARL, Archduke of Austria, and mother of the present Emperor of Austria, Francis Joseph, born at Munich January 27, 1805; died in Vienna May 28, 1872. She was a daughter of the Elector and King of Bavaria, Maximilian Joseph. At the age of nineteen, she married the Archduke Franz Karl, son of the Emperor Francis I. of Austria, by his second wife. The archduke was a man of weak intellect, and his ambitious, energetic spouse was greatly his superior in ability, and had resolved to become a power in the state. A thorough believer in "the divine right of kings," and detesting every thing which looked like popular freedom of action, she was on the alert to repress every republican movement in the empire. In 1848, when Austria, like most of the states of Europe, was convulsed by revolution, she made her sharpest strokes of policy, and, under the cover of his son's name, attained to almost absolute power. The Emperor Ferdinand (brother of Franz Karl) having abdicated, and her husband having renounced his claim to the throne, her eldest son, the Emperor Franz Joseph, then a boy of eighteen years, succeeded, by her adroit management, and she became, in the stormy period which followed, the controlling spirit in the councils of the empire, and urged on with implacable resolution the sanguinary conflict with the Hungarians, who, under the leadership of Kossuth, refused to recognize Franz Joseph, and battled heroically for independence. The ferocity with which this war was waged is laid to her charge; and it was she, although nominally the young Emperor, who appalled Europe by causing the execution of thirteen Hungarian nobles and generals on a single day. Her reactionary

policy, which was carried into every one of the governmental measures, momentarily triumphed, only, as the recent history of the Austrian Empire shows, to be reversed in after-years, when successive disasters proved the want of wisdom she had displayed. Besides the Emperor, the archduchess was the mother of three sons, the elder of whom was the unfortunate Archduke Maximilian (so-called Emperor of Mexico), whose melancholy fate in Mexico saddened her declining years. The other two sons hold positions in the Austrian Army.

AUSTRO-HUNGARIAN MONARCHY, an empire in Europe. Emperor, Francis Joseph I., born August 18, 1830; succeeded his uncle, Ferdinand I., on December 2, 1848. Heir-apparent, Archduke Rudolph, born August 21, 1858. The ministry for the common affairs of the whole monarchy was at the beginning of the year 1872 composed as follows: Count Andrassy (formerly Prime-Minister of Hungary), Minister of Foreign Affairs; Baron von Holzgethan, Minister of Finances; Baron Kuhn von Kuhnfeld, Minister of War.

The area of the total empire is 240,381 square miles; that of the cis-Leithan provinces 115,925. Total population of the whole empire, according to the last official census of 1869, 35,904,435; * of the cis-Leithan provinces, 20,394,980 (or, exclusive of the army, 20,217,531). The following table shows the population of each of the cis-Leithan provinces, according to official calculation based on the movement of population, at the close of the year 1871, as well as its area:

PROVINCES.	Square Miles.	Population.
I. Cis-Leithan Provinces (Austria proper):		
1. Austria below the Enns	7,655	2,000,609
2. Austria above the Enns	4,633	735,623
3. Salzburg	2,767	132,196
4. Styria	8,671	1,143,849
5. Carinthia	4,006	337,058
6. Carniola	3,857	465,168
7. Göriz, Gradiska, Istria, and Trieste	6,066	592,413
8. Tyrol and Vorarlberg	11,335	863,573
9. Bohemia	20,064	5,173,541
10. Moravia	8,585	2,019,890
11. Silesia	1,968	523,075
12. Galicia	30,313	5,557,662
13. Bukowina	4,036	621,976
14. Dalmatia	4,940	449,253
Total cis-Leithan Provinces	115,925	20,555,370

In 1830, these provinces had a population of 15,588,142, showing an increase, during the period from 1830 to 1869, of 29.70 per cent., or of 0.76 annually. More recently the increase has been more rapid. In 1850, the cis-Leithan provinces had a population of 17,534,950, and in 1857 of 18,224,500, showing since 1850 an annual increase of 0.81 per cent., and since 1857, of 0.91.

The population of the capitals of the several provinces of cis-Leithania, according to the census of 1869, was as follows:

* The population of each of the provinces of the empire, according to the census of 1869, is given in the AMERICAN ANNUAL CYCLOPEDIA for 1871.

CAPITAL.	Province.	Pep. in 1869.
Vienna*	Lower Austria.....	607,514
Prague.....	Bohemia.....	157,375
Lemberg.....	Galicia.....	87,105
Gratz.....	Styria.....	86,733
Brünn.....	Moravia.....	73,464
Trieste.....	Trieste.....	70,274
Czernowitz.....	Bukowina.....	34,000
Linz.....	Upper Austria.....	30,538
Laybach.....	Carniola.....	23,032
Zara.....	Dalmatia.....	20,840
Salzburg.....	Salzburg.....	20,836
Troppau.....	Silesia.....	16,608
Innsbruck.....	Tyrol.....	16,810
Klagenfurth.....	Carinthia.....	15,300

The following is a complete list of other towns which, according to the census of 1869, have more than 10,000 inhabitants:

Towns.	Population.	Towns.	Population.
Cracow.....	49,835	Tarnopol.....	20,087
Sign.....	29,827	Iglau.....	20,049
Köln.....	23,771	Dornis.....	19,163
Pilsen.....	23,681	Wiener-Neustadt.....	19,173
Reichenberg.....	22,394	Brody.....	18,890
Tarnow.....	21,779	Spalato.....	18,261

Towns.	Population.	Towns.	Population.
Kolomea.....	17,679	Castna.....	13,043

Karolinenthal.....	13,284	Leitmeritz.....	10,033
Warnsdorf.....	13,180		

The following table, which exhibits, on the basis of the census of 1869, the statistics of the social standing and occupation of the inhabitants, throws considerable light on the degree of civilization attained by the several provinces and nationalities of the empire:

PROVINCES.	Persons of Higher Education.	OCCUPIED WITH			Possessors of House and Rents.	Servants for Personal Services.	Persons without Revenue of their own.
		Agriculture and Forestry.	Industrial Pursuits.	Trade and Commerce.			
Lower Austria.....	53,359	450,398	436,493	99,597	80,196	143,508	700,806
Upper Austria.....	9,334	303,019	106,626	14,466	25,340	40,918	222,885
Salzburg.....	3,539	55,461	16,368	2,352	8,709	10,006	54,923
Styria.....	14,193	567,854	107,687	11,706	34,355	33,718	361,796
Carinthia.....	3,971	161,094	34,537	3,649	7,112	11,461	114,556
Carniola.....	4,917	225,512	33,234	4,196	7,736	15,013	173,615

Silesia.....	6,073	147,909	88,623	6,715	15,828	18,505	238,018
Galicia.....	50,137	2,521,948	188,667	85,010	27,596	145,975	2,308,883
Bukowina.....	5,317	260,330	17,903	7,812	2,723	10,330	207,466
Dalmatia.....	6,010	150,427	11,043	7,332	1,867	22,367	243,750
Total.....	608,651	7,506,395	2,397,659	394,644	435,285	617,885	8,404,063

In the number of persons of higher education are included 31,898 clergymen and nuns, 72,147 officers in active service, 7,701 military persons, 40,503 teachers, 75,642 students, 1,352 authors, 14,536 artists, 7,230 lawyers and notaries, 4,664 physicians, 8,876 surgeons, 11,759 midwives, 2,278 apothecaries, and 6,095 persons otherwise engaged in the sanitary service. Among those engaged in agriculture and forestry are, 1,784,752 proprietors, 59,243 tenants, 29,570 officers, 3,646,286 persons engaged for permanent help, 1,977,649 day-laborers, and 8,895 hunters and fishermen. The class of persons without income are thus divided: male persons above 14 years, 192,661; below 14 years, 3,067,302; female persons above 14 years, 2,006,456, and below 14 years, 8,187,644.

Although the conflicts arising out of the nationality question have assumed in no country of Europe so large dimensions as in Austria, no official census of nationalities has been taken since 1850. The careful calculations made by Dr. Ficker, in his work, "Völkerstämme der österreichisch-ungarischen Monarchie" (Vien-

na, 1869), have, however, been generally accepted as being on the whole entirely trustworthy by all writers on the subject. G. A. Schimmer, in his work, "Statistik des österreichisch-ungarischen Kaiserstaates" (Vienna, 1872), gives the number of the different nationalities in the cis-Leithan provinces as follows: Germans, 7,108,900 (85.16 per cent.); Czechs, Moravians, and Slovaks, 4,718,800 (23.84 per cent.); Poles, 2,443,500 (12.09 per cent.); Ruthenes, 2,584,600 (12.80 per cent.); Sloventzi, 1,196,300 (5.92 per cent.); Croats and Servians, 522,400 (2.58 per cent.); Magyars, 17,700 (0.09 per cent.); Italians, 587,500 (2.91 per cent.); Roumanians, 207,900 (1.02 per cent.); Israelites, 820,200 (4.05 per cent.); others, 9,800 (0.04 per cent.). As regards the several provinces, the German nationality exclusively exists in Upper Austria and in Salzburg; it also prevails in Lower Austria (Germans, 90.13 per cent., Czechs, 5.66, Israelites, 2.66, the remainder being divided among other nationalities); Carinthia (Germans, 68.85, Sloventzi, 31.15); Styria (Germans, 63.78; Sloventzi, 36.66); Tyrol (Germans, 60.41, Italians, 39.48); Silesia (Germans, 50.98; Czechs, 71.79; Israelites, 2.13). The Czechs are a majority in Bohemia (60.22 per cent.; Germans, 30.01;

* Without the suburbs; with the suburbs Vienna has 825,163 inhabitants. According to the enumeration of December, 1871, Vienna numbered, with its suburbs, over 900,000.

Israelites, 1.75), and Moravia (71.79; Germans, 25.99; Israelites, 2.13). In Carniola, the Slovenzi constitute an overwhelming majority (93.29 per cent.; Germans, 6.50). In the other provinces the nationalities are divided as follows: Littoral: Germans, 4.30 per cent.; Slovenzi, 42.01; Croatsians, 21.13; Italians, 31.01; Galicia: Germans, 8.07; Poles, 42.32; Ruthenes, 43.93; Israelites, 10.62; Bukowina: Germans, 8.60; Ruthenes, 40.00; Magyars, 1.56; Roumanians, 89.41; Israelites, 9.34; Dalmatia: Croatsians and Servians, 87.08; Italians, 12.65.

In the Austro-Hungarian monarchy viewed as a whole, the Germans constitute 25.27 per cent. of the entire population, the Czechs, Moravians and Slovacks, 18.41 per cent., the Poles, 6.86, the Ruthenians, 8.51, the Slovenzi, 3.52, the Croatsians and Servians, 8.22, the Magyars, 16.01, the Italians, 1.66, the Roumanians, 7.54, the Israelites, 3.86, all others, 0.14. Thus the German nationality embraces, if not a majority, yet a considerable plurality of the population of the monarchy.

The cis-Leithan provinces, in 1870, had 9 Catholic archbishops (7 of the Latin rite, 1 of the Greek rite, and 1 of the Armenian rite); 28 bishops (including 2 vicars-general), of whom 26 were Catholic (25 Latin rite, 1 Greek rite), and 2 Oriental Greek; 9 Protestant Superintendents; 8,496 parishes, of which 6,567 were Catholic of the Latin or Armenian, 1,427 Catholic of the Greek rite, 316 Greek Oriental, and 186 Oriental; 19,618 secular clergymen, of whom 433 were Oriental Greek, 202 Evangelical, and the remainder Catholic. The regular clergy embraced 6,060 monks and 6,001 nuns in 767 monasteries.

The universities had, in 1871, the following number of professors and students:

UNIVERSITIES.	Professors.	Students.
Vienna.....	236	4,187
Graz.....	73	828
Innsbruck.....	66	843
Prague.....	120	1,596
Cracow.....	70	563
Lemberg.....	41	994
Total.....	615	8,678

The statistics of the other literary institutions of a higher grade were, in 1871, as follows:

SCHOOLS.	Teachers.	Students.
3 Theological Faculties (1 Protestant at Vienna, 2 Catholic at Salzburg and Olmütz).....	25	808
19 Diocesan Theological Institutions (17 Latin Catholic, 1 Greek Catholic, and 1 Oriental Greek).....	135	1,847
4 Institutions of Surgery (at Salzburg, Innsbruck, Olmütz, and Lemberg).....	83	261
8 Technical Academies (2 at Prague and 1 each at Vienna, Graz, Trieste, Brünn, Cracow, and Lemberg).....	264	3,330
3 Commercial Academies (at Vienna, Graz, and Prague).....	65	2,249
3 Academies of Mining and Forestry.....	30	116
65 Normal Schools.....	2,322
32 Gymnasias.....	26,102
53 Realschulen.....	15,622
31 Realgymnasias.....	4,529

The special schools of learning had the following number of pupils:

14 Schools of Midwifery.....	661 pupils.
37 Agricultural Schools.....	1,179 "
4 Naval Schools.....	64 "
3 Mining Schools.....	190 "
7 Higher Military Institutions.....	644 "
3 Military Academies.....	715 "
1 Technical Military School.....	411 "
2 Cadet Institutes.....	316 "
5 Military Educational Houses.....	911 "

Total..... 5,031 "

The number of people's schools (Volks-schulen), in 1868, was 15,054, with 34,951 teachers. These schools were attended by 1,691,349 children, while the number of children of the legal school-age was 2,219,917. The average percentage of the children attending school is 76; it is smallest in the Bukowina (20 per cent.), Dalmatia (28 per cent.), and Galicia (80 per cent.). With regard to the denominational character of the schools, 12,080 were Latin Catholic, 1,742 Greek Catholic, 388 Evangelical, 145 Oriental Greek, and 96 Jewish; with regard to the language which prevails in the course of instruction, 6,318 are German, 8,406 Czechic, 481 Polish, 313 Ruthenian, 438 Slavonian, 25 Servian and Croatian, 1 Magyar, 1,015 Italian, 49 Roumanian, and 3,008 mixed.

The schools of repetition numbered 12,354, with an aggregate attendance of 624,117 children. The entire system of public education was reorganized by the law of May 14, 1869.

The agricultural statistics of cis-Leithan Austria embraced, according to the census of 1869, 1,367,023 horses, 11,625 mules, 31,851 asses, 7,425,212 horned cattle, 5,026,398 sheep, 2,551,473 hogs, and 913,743 beehives.

The following table shows the number of periodicals which were, in 1870, published in the several languages of the monarchy:

LANGUAGES.	Political.	Non-Political.	LANGUAGES.	Political.	Non-Political.
German.....	100	836	Magyar.....	39	91
Czechic.....	17	44	Roumanian.....	4	5
Polish.....	71	36	Greek.....	2	..
Servian.....	1	9	Hebrew.....	2	3
Croatian.....	1	12	French.....	1	1
Slavonian.....	1	10	Latin.....	..	1
Ruthenian.....	1	6			
Slovak.....	1	4	Total.....	245	878
Italian.....	11	20			

The movement of the companies for the navigation of the Danube and of the Austrian Lloyd was, in 1870, as follows:

	Danube Steam Navigation Company	Company of the Austrian Lloyd.
Steamers.....	155	64
Towboats.....	547	..
Trips.....	9,717	1,414
Passengers conveyed.....	1,590,333	804,373
Goods & baggage transported (in zollentner).....	20,292,926	5,887,698
Valuables transported (in florins).....	42,435,564	122,837,546
Revenues (in florins).....	11,328,031	10,401,321
Expenditures.....	12,373,683	9,865,851

The Austrian army, in 1872, numbered on the peace-footing 280,127 men (16,700 of whom

were officers), with 47,315 horses, and 724 pieces of ordnance. In time of war, the army embraced no less than 1,002,649 men, with 161,645 horses, and 1,680 pieces of ordnance.

The provincial Diets are composed of the archbishops and the bishops (the Diet of the Tyrol has also four clerical delegates of the *Stifte*), the rectors of the universities, the delegates of the large real estates (in the Tyrol,

only of the large landed estates of the nobility, in Dalmatia, of those paying the highest taxes), of the delegates of the towns, market-towns, and industrial places, of the delegates of the Chambers of Commerce and Trades, and of the delegates of the rural communities. The subjoined table exhibits the composition of the several Diets, and the number of delegates to the Reichsrath, which are chosen by each:

DIETS.	Church Delegates. Total.	Rectors of Un- iversities.	DELEGATES TO						Delegates to the Reichsrath.
			Large Real Estates.	Towns, Mar- ket-towns, and Indus- trial Places.	Chambers of Commerce and Industry.	Rural Com- munes, &c.	Total.		
Lower Austria.....	2	1	15	25	4	21	68	18

Dalmatia.....	2	..	10	8	3	20	43	5	

At the beginning of the year 1871 the cis-Leithan provinces were under the administration of a ministry representing the German Constitutional party (*Deutsche Verfassungspartei*). In the Reichsrath this party, however, did not control a majority, but numbered 93 out of 203 members. In the speech with which the Emperor, on December 27, 1871, opened the Reichsrath, two measures had been designated as prominent features of the Auersperg cabinet. The Government, it was said, would accede to the wishes of Galicia, in so far as they were compatible with the interests of the empire, and steps would be taken which would render the Reichsrath a completely representative body. In reply to the speech from the throne, both Houses adopted, without amendment, an address to the crown, calling its attention to the manifest increase of discontent among the subjects of various portions of the empire, arising from recent misgovernment, and particularly opposing an increase of taxation for military purposes.

On February 20th, the House of Delegates adopted, in compliance with the wish of the Government, an important supplement to the electoral law, providing that "when delegates chosen from a provincial Diet into the Reichsrath resign their seats as members of the provincial Diet, or, of the Reichsrath during the session of the latter, or when, in consequence of permanent absence, they must be regarded as having left the Reichsrath, the Emperor can order new members of the Reichsrath to be elected by the direct vote of the districts from which the members of the Diet had been chosen." The Upper House consented to this election bill on March 5th, by a vote of 70

against 10. In order to secure, if possible, a trustworthy majority in the House of Delegates, the Government, on March 15th, dissolved the Diet of Bohemia, which was entirely under the control of the opposition, and ordered elections for a new Diet, which was convoked for the 24th of April. As these elections were to have a decided influence on the political complexion of the Reichsrath, they were for the time the chief subject of discussion in cis-Leithan Austria, and were hotly contested. The vote of the large landed estate being favorable to the Government, the latter saw its expectations realized. Forty of the fifty-four members elected by the new Bohemian Diet to the Reichsrath joined the Constitutional party, which thus controlled a two-thirds majority in the Lower House of the Reichsrath, even if the Poles should not vote for it. The session of the Diet was closed on June 23d. The two great reforms, the introduction of which had been regarded as the chief task of the ministry, the substitution of direct elections to the Reichsrath for the indirect election of the delegates by the provincial Diets, and the *Ausgleich* (agreement) with the Poles, were not carried through. The ministry offered to the Poles extensive concessions, but at the same time declared that nothing would be granted incompatible with the dualistic basis of the entire empire.

All the Diets of the cis-Leithan provinces were opened on November 5th, and to each the Government submitted a bill for the establishment of friendly courts of arbitration. In the Tyrolese Diet a violent opposition was made to the Government because the latter had deprived the theological faculty of the

University of Innsbruck, all the professors of which are Jesuits, of its right to elect the rector of the university. The majority of the Diet, therefore, in union with its president, M. Landeshauptmann, refused to admit the new rector, who, in virtue of his position, is a member of the Diet, and the Government dissolved the Diet. In the Diet of Galicia there was, as usual, a conflict between the Poles and Ruthenians. The latter advocated a law introducing direct elections to the Reichsrath; but the Polish majority voted it down. In the Diet of Lower Austria a resolution was presented calling upon the Government to hasten the constitutional introduction of direct voting for members of the Reichsrath. In the Bohemian Diet a resolution was proposed in favor of the appointment of a committee for the modification of the present system of electing the Diet.

The session of the Reichsrath, which was opened on December 12, 1872, was likely to exceed in importance any previous one. In order to prevent the frequent refusal of members of the minority to attend the Reichsrath, the Government, immediately after the opening of the session, proposed a new electoral law, the principal features of which were as follows: The members of the House of Depu-

ties are no longer to be chosen by the Diets of the several provinces, but directly by the people. Their number will be increased by one hundred and twenty. The deputies to be chosen by each province will be distributed (in accordance with the law regulating the election of the provincial diets) into the four groups of—1. The holders of large real estates (or those paying the highest taxes); 2. The towns, market-towns, and industrial places; 3. The Chambers of Commerce and Industry; 4. The rural communities. In the groups of large holders of real estate, and of the rural communities, the increase in the number of deputies will be fifty per cent. For the towns and rural communities, the electoral districts will in future be arranged so that in every district only one deputy may be chosen. Every one who has a right to vote is eligible in every district of any of the countries represented in the Reichsrath. The deputies are elected for a term of six years. For the group of rural communities, they are chosen indirectly, through electors; in all the other groups, directly by the voters.

The report made by the Minister of Finances was most favorable. He expects to be able to close the financial year (1873) by a surplus of three and a half million florins.

B

BABINET, JACQUES, a French physicist and astronomer, born at Lusignan, March 5, 1794; died in Paris, October 24, 1872. He was a pupil of M. Binet at the Imperial Lyceum Napoleon, entered the Polytechnic School in 1812, and was subsequently transferred to the higher Military School of Metz, whence he graduated as sub-lieutenant of artillery. He soon abandoned a military career for that of a teacher, and was successively Professor of Mathematics at Fontenoy la Comte, at Poitiers, and at the College of St. Louis in Paris. From 1825 to 1828 he delivered courses of lectures on meteorology at the Athenæum; in 1838 he succeeded Savary at the College of France, and two years later he entered the Academy of Sciences as the successor of Dulong. He became soon after Assistant Astronomer at the Bureau of Longitudes. He was decorated with the cross of the Legion of Honor in 1831. M. Babinet possessed a high degree of mechanical genius, and invented numerous valuable instruments and machines for the facilitation of physical research; among these were an important improvement of the pneumatic machine, which has long been known as Babinet's improved pneumatic machine; a hygrometer, for measuring the absorption of liquids; a goniometer for measuring and determining the angles of refraction in transparent substances, etc. He had also devised a new method of cartography, by which he produced

what he termed homolographic maps; i. e., charts or maps in which the spaces on the earth and those on the maps preserved a fixed relation to each other. M. Babinet was a voluminous writer on scientific topics, and added very largely to the sum of human knowledge in regard to them. He published an admirable elementary treatise on "Descriptive Geometry," a valuable series of "Studies and Lectures upon the Sciences of Observation and their Practical Applications," in eight vols.; and nearly thirty memoirs, some of them of great length, on astronomy, meteorology, mathematics, theoretical and applied physics, most of which appeared first in the "Annals of Physics and Chemistry," or in the transactions of the Academy. Yet this able and accomplished physicist sometimes fell into error from too strict adherence to preconceived theories; as when, in 1866, he published an elaborate memoir to demonstrate the folly of attempting to lay a telegraphic cable across the Atlantic. It was, he declared, an absurdity, and, even if it were possible to send communications through it, it would not at the longest work more than two or three days. His memoir was hardly printed before the admirable working of the cable disproved his predictions.

BACHE, Colonel and Brevet Brigadier-General HARTMAN, Engineer Corps, U. S. A., an eminent civil and military engineer, born in Philadelphia in 1797; died in that city, Octo-

ber 8, 1872. He was a great-grandson of Benjamin Franklin, a cousin of the late Prof. A. D. Bache, and a brother of Dr. Franklin Bache. He entered the Military Academy in 1814, graduated thence in 1818, and was at once promoted as brevet captain of staff, and assistant topographical engineer. For a period of forty-seven years, without any extended leave of absence, he was constantly employed on topographical surveys and works of hydrographic and civil engineering under the direction of the War Department, and subsequently served on the Light-house Board till May 7, 1867, when he was at his own request placed on the retired list. He had risen through the various grades of engineer rank by the faithful and continuous performance of his duties, and in March, 1866, received the brevet of brigadier-general, the highest honor of his corps, for long, faithful, and meritorious services. Among his engineering works of most conspicuous merit were the construction of the Delaware breakwater, and the successful application of iron-screw piles for the foundation of light-houses upon sandy shoals and coral-reefs. But his long record is too full for a mention of even its most salient details. Bearing a name distinguished in the annals of the army and of science, he not only kept it unsullied but added to its lustre by his numerous and important services to his country, dignifying the corps of which he was an honored member by his abilities and achievements, and sustaining always the high title of a soldier and gentleman.

BADEN, a grand-duchy in Southwestern Germany, forming a part of the German Empire. Grand-duke Frederick, born September 9, 1826, became regent of Baden in the place of his imbecile brother, Grand-duke Ludwig, on the death of his father in 1852; assumed the title Grand-duke of Baden in 1856; married on September 20th to Luise, only daughter of the Emperor of Germany; heir-apparent, his eldest son, Frederick William, born July 9, 1857. The state ministry consists of Dr. J. Jolly, President (since February 12, 1868) and Minister of the Interior (since July 27, 1866); R. von Freydt, President of the Ministry of the Grand-ducal Houses of Justice and Foreign Affairs (since February 2, 1871); L. C. F. Turban, President of the Ministry of Commerce (since October, 1872); and M. Ellstätter, President of the Ministry of Finance (since February, 1868).

During the session of the Diet, which was opened on November 21, 1871, and closed on March 21, 1872, the relations between church and state were a prominent subject of legislation. An additional section to the law on public instruction was adopted, according to which members of religious orders, or of religious congregations resembling orders, are not permitted to act as teachers at any school or educational institution of the grand-duchy. The law was adopted by all votes except the eight of the Catholic and the three votes of

the democratic party. The Government was authorized, in individual cases, to exempt persons from the provisions of the law. The Diet also, for the first time, discussed the woman's rights question, Deputy Müller, of Pforzheim, advocating the principle that in all questions relating to women, and in particular to all questions concerning female schools, woman should take a part in the discussion and the adoption of the laws.

The special ministry of war was abolished on December 27, 1871, as the military convention concluded with Prussia provided for the entire consolidation of the Baden army with that of Prussia. Area, 5,912 square miles; population, according to the census of 1871, 1,461,428. The country is divided into four districts, which, in 1871, had the following area and population:

DISTRICTS.	Area, sq. miles.	Population.
Constance.....	1,686	276,263
Freiburg.....	1,887	434,787
Carlsruhe.....	996	365,706
Mannheim.....	1,398	384,672
Total.....	5,912	1,461,428

The population of the largest cities, in 1871, was as follows: Carlsruhe, 36,622; Mannheim, 39,614; Freiburg, 24,599; Heidelberg, 19,988; Pforzheim, 19,801; Rastatt, 11,559; Baden, 10,083; Constance, 10,052; Bruchsal, 9,786.

In the budget for the two years 1872 and 1873, the revenue and expenditure were estimated at 37,529,329 florins each. The general public debt, on January 1, 1872, amounted to 33,608,015 florins; the railroad debt to 123,966,416 florins. The army of Baden constitutes the larger portion of the Fourteenth Army Corps of the German Army.

BALTA, Colonel José, President of the Republic of Peru from August, 1868, to his death; was murdered by order of his late Minister of War, General Tomas Gutierrez, July 26, 1872. Colonel Balta, who had taken an active part in the various revolutions with which Peru has been afflicted for many years, and who had led a revolt in Northern Peru against the sway of the Dictator-President Prado in 1867, was elected President himself by a large majority in April, 1868, and was inaugurated August 2, 1868. His administration had been on the whole a prosperous and popular one, though there had been some small disturbances between the Peruvians and Italians resident in the country, and a serious insurrection of the Chinese coolies. But the people, or rather the politicians who rule them, are fickle, and ready for any change which will give them a hold on power. The principal complaint made against Colonel Balta was, that his administration was too progressive; too ready to adopt the views and policy of other prosperous American republics. As the time for the presidential election drew near, and he could not, according to the Constitution, be at once reelected, he had thrown his

influence in favor of the election of Dr. Arenas, who would carry out his policy. The opposing candidate was Don Manuel Pardo, and so close was the vote, the mode of choosing a president being, like ours, by an electoral college, that the election was thrown into the Peruvian Congress, and a preliminary meeting of Congress was assembled July 14, 1872, to decide the question of the presidency. Meantime General Tomas Gutierrez, Balta's Secretary of War, had been urging the President to annul the election, and by a *coup d'état* assume the power of dictator over the republic. Balta was, however, a man of too much principle to do this, and having ascertained that Congress would decide in favor of Don Manuel Pardo, his opponent, he made public his intention of resigning his office on the termination of his term, to the successor appointed by Congress. This did not suit Gutierrez, and he immediately seized and imprisoned Balta, and proclaimed himself supreme chief of the republic, placing his brothers, Sylvestre and Marceliano, in office as ministers. This usurpation was of brief duration. The President-elect fled to the foreign warships in the port of Callao for protection, but neither the people nor the soldiers would rally under Gutierrez, and four days after the usurpation commenced, under the leadership of Colonel Zavallos, a body of the people attacked and killed Sylvestre Gutierrez, the usurper's Minister of War. Hearing this, and resolved to be revenged, General Gutierrez sent his brother Marceliano to the military barracks, where President Balta was confined, with orders to kill him there and then. Marceliano shot him at once as he lay on his couch, ill, but the same night both he and his brother, the usurper, were killed, and their bodies hung the next morning, naked and disfigured, in front of the cathedral. (See PERU.)

BAPTISTS. REGULAR BAPTISTS.—In the following table is given a general exhibit of the associations, churches, ministers and members, of the Baptist denomination throughout the world:

COUNTRIES.	Associations.	Churches.	Ministers.	Members.
United States.....	880	18,397	12,013	1,489,191
North America.....	5	644	426	45,509
Europe.....	54	2,953	2,369	271,300
Africa.....	..	30	24	1,691
Asia.....	..	553	163	26,438
Australasia.....	3	135	87	5,394
West Indies.....	..	135	39	22,749
Total.....	882	22,847	15,143	1,861,427

The following are the statistics of the regular Baptist churches in the United States, as given in the *American Baptist Year-Book* for 1872. The table is arranged in the order of the proportion of members of the Baptist churches to the entire population of each State:

STATES.	Churches.	Ministers.	Members.	Ratio of Baptists to Total Population.
Georgia.....	1,964	1,100	145,264	1 to 8
South Carolina.....	639	361	75,311	1 to 9
Virginia.....	1,033	588	139,895	1 to 9
North Carolina.....	1,970	708	99,146	1 to 11
Mississippi.....	979	456	68,849	1 to 12
Kentucky.....	978	711	88,873	1 to 14
Arkansas.....	648	406	36,040	1 to 14
Tennessee.....	890	648	80,844	1 to 16
Florida.....	160	76	11,792	1 to 16
Alabama.....	1,095	639	61,735	1 to 17
Dist. of Columbia.....	17	23	7,880	1 to 18
Texas.....	794	483	39,351	1 to 21
West Virginia.....	300	159	19,947	1 to 22
Louisiana.....	387	338	30,536	1 to 23
Missouri.....	1,340	846	75,977	1 to 23
Rhode Island.....	69	69	9,550	1 to 23
Connecticut.....	119	119	19,198	1 to 25
Maine.....	267	173	19,563	1 to 35
Massachusetts.....	270	294	41,733	1 to 35
New Jersey.....	153	167	25,108	1 to 36
New Hampshire.....	86	100	8,147	1 to 29
New York.....	827	733	111,531	1 to 39
Illinois.....	986	706	60,637	1 to 42
Indiana.....	622	364	35,739	1 to 47
Kansas.....	213	117	7,772	1 to 47
Oregon.....	46	35	1,508	1 to 50
Pennsylvania.....	508	400	59,800	1 to 59
Wyoming.....	2	2	154	1 to 59
Michigan.....	385	281	19,737	1 to 60
Minnesota.....	161	114	5,341	1 to 65
Ohio.....	576	368	41,300	1 to 65
Iowa.....	352	251	19,641	1 to 67
Nebraska.....	55	33	1,606	1 to 76
Indian Territory.....	25	8	750	1 to 84
Vermont.....	109	89	8,670	1 to 93
Wisconsin.....	300	140	10,270	1 to 103
Washington.....	6	5	230	1 to 104
Colorado.....	12	10	800	1 to 123
Maryland.....	43	31	5,434	1 to 145
California.....	68	68	3,668	1 to 153
Delaware.....	8	6	725	1 to 173
Dakota.....	2	1	50	1 to 283
Idaho.....	1	..	30	1 to 748
Nevada.....	1	1	20	1 to 2,134
Arizona.....
New Mexico.....	1
Utah.....	..	1
Total for U. States.....	18,397	12,013	1,489,191	1 to 96

The churches are grouped into associations, of which the number is now 820.

The following table shows the growth of the Baptist denomination throughout the United States, by periods averaging ten years each, since the year 1770:

YEAR.	Churches.	Ministers.	Members.	Members to Population.
1770.....	77
1784.....	471	434	35,101	1 to 94
1792.....	891	1,156	65,345	1 to 63
1812.....	2,164	1,605	173,973	1 to 43
1832.....	5,320	3,618	384,926	1 to 34
1840.....	7,771	5,308	571,291	1 to 30
1851.....	9,552	7,393	770,839	1 to 30
1860.....	12,279	7,773	1,016,184	1 to 31
1871.....	18,397	12,013	1,489,191	1 to 26

The following statistics of the Baptist churches of Great Britain are given in the *Baptist Hand-Book* for 1872:

COUNTRIES	Churches.	Ministers.	Members.	Sunday Scholars.
England and Wales.....	2,459	2,031	233,088	308,763
Scotland.....	108	60	8,373	5,283
Ireland.....	37	27	1,434	1,035
Total.....	2,604	2,108	242,895	315,080

Of the 2,459 churches in England and Wales, 1,940 are in England, and 519 in Wales. The

number of members is, in England, 178,183; in Wales, 54,905. The total number of chapels or preaching-stations in the United Kingdom is 3,044.

The annual meeting of the *American Baptist Missionary Union* was held in the city of New York on the 21st of May. The American Baptist Free Mission Society, having determined to close its operations as a separate organization, had invited the Union to take charge of its work in Japan. The offer of the Society was accepted, and the members of the Free Mission Society were welcomed to full coöperation in the work of the Union. A report was made of the sixth annual meeting of the Burmah Baptist Missionary Convention, held at Maulmain, October 21, 1871. Ninety ministers, missionaries, teachers, and lay delegates, and two hundred and ninety-two natives were present. The convention had appropriated 2,150 rupees for preaching and educational purposes at the different stations. The Karen Christians of Burmah had been for a time divided into two branches, but a reunion had been effected between them. A plan for the reorganization of the Missionary Union was presented, and was designated as a proposition to be considered at the next annual meeting. It provides that the Union shall be composed of the members for life who shall have been constituted such previous to June 1, 1873, and of delegates to be chosen annually by the conventions and associations of the United States and the British Provinces, upon the following basis: Seven delegates to be chosen by each association, and one additional delegate for every four thousand members of the Baptist churches. The gross receipts of the Union for the year ending March 31, 1872, were \$212,199.10. Of this sum \$2,000 were received to be held as permanent fund; \$5,137.04 were received from the Woman's Baptist Missionary Society East; and \$2,635.54 from the Woman's Baptist Missionary Society West. The expenditures of the Union during the same period were \$228,952.17. The number of missions under the care of the Union is fourteen; of these, eight are in Asia, five are in Europe, and one is in Africa. There are in the Asiatic missions 20 stations at which American missionaries reside, more than 400 out-stations, and 435 churches. The number of persons baptized during the year was 1,902. The whole number of members in the churches was 20,318. There are also several Baptist churches in Burmah which are not under the immediate supervision of the Union. If the members of these churches are added, the entire number of Baptist members in Asia will be not less than 24,000. One hundred and one American laborers are connected with the missions in Asia, of whom 44 are men, and 57 are women. The number of native assistants is nearly 500, of whom about 80 are ordained ministers.

In the missions designated as German mis-

sions are included churches in Germany, Holland, Denmark, Switzerland, Poland, Russia, Turkey, and British Kaffraria. The report gives the number of churches in these missions as 103; stations and out-stations, 1,236; ministers and colporteurs, 270; persons baptized in 1871, 1,290; members, 19,393.

The returns from the French mission are imperfect. Eight churches reported 21 baptisms during the year, and a total of 574 members. The number of persons baptized in Sweden was 674; number of members in the churches, 14,727. No statistics were received from Spain and Greece. So far as reports had been received, the total number of members in the European missions was shown to be 28,694; number of churches in Europe and Africa, 831; of preachers and colporteurs, 394; of children in Sunday-schools, 5,244. The reports of all the missions in Asia, Europe, and Africa, give a total of nearly 1,700 stations and out-stations; 770 churches; 1,000 laborers of all classes; 8,887 baptisms; and 52,700 members.

The receipts of the *American Baptist Bible and Publication Society*, for the year ending on the last of April, were: in the business department, \$335,254.94; in the missionary department, \$51,114.01; in all, \$386,368.95. This amount exceeds the receipts of any previous year by \$54,219.86. Fifty-six colporteurs and Sunday-school missionaries were in commission during the year. They had constituted 23 churches, and organized 86 Sunday-schools. The Society publishes a paper for Sunday-schools, a series of uniform Sunday-school lessons, a paper for teachers, "helps" for Sunday-schools, and is preparing to establish a paper for infant classes. It conducts a Sunday-school mission-work in many of the States and Territories. Its executive board has appointed a Sunday-school secretary, who is to devote himself exclusively to the extension, organization, and improvement of Sunday-schools and Sunday-school missions. State Sunday-school secretaries, or missionaries, are sustained in connection with this Society in each of the following States: West Virginia, Ohio, Indiana, Illinois, Michigan, Wisconsin, Kansas, Colorado, Oregon, Missouri, Arkansas, and Kentucky; and among the colored people in Virginia and North Carolina. The Rev. W. O. Van Meter was, on the 14th of February, appointed a missionary of the Society to Rome. At the anniversary, which was held in New York in May, a plan for the reorganization of the Society was proposed. It is similar to the plan which is at present under consideration in the American Baptist Missionary Union. This plan proposes that the Society shall consist of its life-members and honorary life-members, who shall have been constituted such previous to June 1, 1873, of five delegates from each State Association or Convention, of additional delegates in the ratio of one for each ten thousand members of the Baptist churches,

and of three representatives from each of the denominational societies. The Society expressed its sympathy with the efforts of Southern Baptists to erect a meeting-house in Roma. The Executive Board were instructed to prepare and publish a history of the denomination in the United States, including its work in missionary education and in other forms of benevolence, to be issued in 1876.

In the volume of the *ANNUAL CYCLOPEDIA* for 1871 a mention was made of the negotiations for a union between the *American and Foreign Bible Society* and the late American Baptist Publication Society, now the *Bible and Publication Society*. The negotiations failed. The causes of the failure are thus explained in behalf of the American and Foreign Bible Society, by its secretary, the Rev. Dr. Gillette:

The American and Foreign Bible Society has *not* been united with the American Baptist Publication Society in Philadelphia; they, the Publication Society, refusing to accept the enabling act passed by the New York Legislature, and we failing, after application, to obtain another. The Society is now restored to its former position in the denomination that originated it in 1836, and appeals to pastors, churches, and individuals, for support in its good work.

The contributions to the *American Baptist Home Missionary Society* for the year ending in April, 1872, were \$195,650.58. Four hundred and twenty-five missionaries were employed, who organized 160 churches, and baptized 5,850 members. The work among the freedmen in the South was carried on by 107 laborers, at an expense to the Society of \$49,000. Seven schools were conducted for the education of preachers and pious teachers. The work in Mexico had been interrupted by the civil war. The assets of the Church-edifice Fund were valued at more than \$300,000. One hundred and eleven churches in twenty-four States and Territories had borrowed from it, and 53 churches had been aided in building meeting-houses. Many church-lots had been secured in new villages and cities, and arrangements had been made to secure lots in every rising town along the line of the Union Pacific Railroad. Not one dollar of the funds of the Society, says its annual report, has ever been lost by injudicious loans or otherwise. At the anniversary meeting a proposition was introduced for the re-organization of the Society, and was referred to the next annual meeting. It is similar in character to those already noticed in connection with the Missionary Union and the Bible and Publication Society, and has in view the same general object. This object is to make the annual meetings of the Societies assemblies of delegates rather than mass meetings, as they have heretofore been. The attendance of members at the annual meetings has become inconveniently large, so as to tax severely the hospitalities of the people with whom the societies meet. It is hoped, by the adoption of the new plans of organization, to reduce the size of the bodies so that they may be more easily accommodated.

A National Baptist Educational Convention, called by the National Baptist Educational Commission, met at Philadelphia on the 28th of May. One hundred and twenty-one delegates were in attendance from twenty-one States, one Territory, and the District of Columbia, representing sixty different institutions. The Hon. Francis Wayland, on being elected president, announced the purpose of the convention to be the consideration of means by which the standard of denominational education in the United States might be revised, and its methods improved. The secretary of the National Commission communicated the proposition of that body to surrender its functions to the National Convention, and made known the results of its operations, to the time of this meeting. The commission was at first limited in its scope, being intended for New York and New Jersey. It soon became evident, however, that there was a demand for a national organization. A convention national in character was accordingly held in Brooklyn, New York, in 1870, and was followed by others in the following year at Worcester, Mass., Chicago, Ill., Richmond, Va., and Marion, Ala. These conventions have already been noticed in the *ANNUAL CYCLOPEDIA*. It was thought that the cause of education had been perceptibly advanced by them. The three days of the session of the convention were occupied in the discussion and adoption of a constitution for a permanent body, and in the reading of papers on topics pertinent to the interests of education. These topics were as follows: "Institutions of Learning, established by Christian Denominations, considered with reference to Present and Probable Systems of Public Instruction;" "How, and to what Extent, may Colleges established for the Education of Young Men, and adapted to that End, be made by the Teaching which they offer, and by the Apparatus of Instruction, to serve without Damage to that Original Purpose, in the Education of Young Men?" "Methods and Uses of Classical Studies;" "Organization in Educational Work;" "Education a Development in Christian Life, the Supplement and Support of all Evangelization, and therefore due, in its higher Practical Forms, to the Whole Body of the Ministry and the Laity;" "Causes which hinder the Increase of the Ministry;" "What is a Theological Education?" "The Moral Elements of the Teacher's Art;" "Methods and Limits of Beneficiary Aid;" "Relative Claims of our Educational Institutions and our Benefactions;" "The Place of Theological Science in the Sciences comprised in a Liberal Education;" "On limiting the Number of our Institutions by our Power to make them strong."

The following are the more important details of the constitution which was adopted for the permanent organization:

ARTICLE I. This association shall be styled the American Baptist Educational Commission.

ART. II. This Commission shall have for its object

the promotion of education and the increase of the ministry in the Baptist denomination. It shall perform its work by forming centres of counsel and co-operation; by collecting and diffusing information in respect to the cause of education as connected with the Baptist denomination; by inducing and fostering the organized action of the denomination in behalf of its institutions of learning and the education of its youth; by endeavoring to awaken and sustain a profounder interest in the increase and education of the ministry.

It may perform its work further by collecting and appropriating funds for nourishing and sustaining, during periods of special exigency, unendowed or inadequately endowed institutions of higher learning in States or Territories requiring exterior aid, and may receive and hold in trust moneys for the endowment of such institutions of learning, given under conditions, until such conditions permit their transfer to the institutions for which they are designed. It shall not take part in the work of raising endowment funds, except by advising the institutions how to proceed, so as not to interfere with each other, or make unreasonable demands on the friends of education.

ART. III. This Commission shall be composed of the subscribers to the original five years' fund of the Commission, and, for the time being, of the members of the present National Baptist Educational Convention, and hereafter as follows:

1. Of delegates from incorporate institutions of learning, whose boards of control are wholly or chiefly of the Baptist denomination. Colleges or universities, having under-graduate classes or schools, and conferring degrees, theological seminaries and educational societies of one or more States, may each send two delegates. Academies or preparatory schools may each send one delegate.

2. Of delegates from Baptist State Conventions, or General Associations, and from Baptist State Pastoral Conferences. Each such Convention, General Association or Pastoral Conference, may send two delegates.

3. Of persons or associations paying money into the treasury of the Commission, to promote its purposes, as follows: Any person paying \$50 annually shall be a member while so paying; any educational association formed to aid the purposes of the Commission, paying into its treasury not less than \$100 annually, may appoint a delegate.

ART. IV. The officers of this Commission shall consist of a President, two Vice-Presidents, a Recording Secretary, a Treasurer, an Executive Committee of ten, whose seat shall be at New York, and four Advisory Committees of twelve each, whose seats shall be respectively at Boston, Chicago, Richmond, and Nashville. These officers, when sitting together, shall constitute the Board of Councillors. This Board of Councillors shall appoint a Corresponding Secretary.

Provision is also made in the constitution for triennial meetings to be held, and for annual meetings of the Board of Councillors, for which arrangements shall be made by the Executive Committee.

The income of the *Baptist Historical Society* for 1871 was \$399.60. The Society received during this year, chiefly by purchase in Europe, 419 volumes, 328 pamphlets, and 87 likenesses. It has now in its library about 6,000 volumes, 13,000 pamphlets, and 718 likenesses.

The Second Baptist National Sunday-school Convention was held in Cincinnati, November 20th, 21st, and 22d. Twenty-one States were represented by 458 delegates. J. L. M. Curry, of Virginia, was President. A large number of papers was read on topics appropriate to the object of the convention. Among the

most noticeable were one by Dr. Jeffrey on conversion, one by the Rev. M. B. Wharton, of Kentucky, on church-membership. Dr. Jeffrey did not demand that children should be members of the church, but thought they ought to be. Mr. Wharton said: "Taking the conversion of the children for granted, I remark that it is clearly our duty to receive them. The practice of Pedobaptists, instead of influencing us to hesitate, should tend to facilitate the reception of children by us." One of the resolutions expressed the conviction that, on the one hand, every member of the Church should, if possible, be in the Sunday-school; and, on the other, every member of the Sunday-school should attend the preaching of the Word. The statistical report showed 9,069 schools in the United States, 84,763 officers and teachers, 642,504 scholars, and 10,842 baptisms. It was stated that, including those among the colored population, there was probably a total of 12,000 schools and 1,000,000 scholars.

The *Southern Baptist Convention* met at Raleigh, N. C., May 9th. The Rev. J. P. Boyce, D. D., presided. The Board of Foreign Missions reported that the receipts for the year had been \$31,861.22. The three principal missions under their care are in Liberia, China, and Italy. The Liberian mission has six stations, at which seven missionaries are laboring. The three principal stations connected with the Chinese mission are at Shanghai, Canton, and Shantung. To these are attached thirteen American missionaries and assistant missionaries, two native pastors, twelve native assistants, and 308 members. The stations of the Italian mission are at Civita Vecchia, Bari, Bologna, Modena, and La Tour. The Rev. Dr. W. N. Cote superintends the work, and has four assistants. The number of church-members connected with this mission is 271. The Board called attention in their report to the necessity of procuring a building for a church at Rome. Assurances were given that, if \$20,000 could be secured toward this purpose, a corresponding amount would be given by the Baptists in the North. The \$20,000 asked for were subscribed during the session of the convention. The Board of Domestic and Indian Missions reported receipts of \$38,378.66, or \$6,791 more than those of the previous year. This Board had employed 177 missionaries, who reported 5,028 persons baptized by themselves and others laboring with them, and 2,579 persons converted but not yet baptized. The strength of the work among the Indians has been largely increased. Many of the missionaries had devoted their labors entirely to the colored people, with prosperous results. A wearing away of the prejudices of color was noticed as one of the fruits of this work.

The principal Indian missions of the Board, says the report, are among the Creeks and Seminoles speaking the Creek language, of the

former of whom there are 13,000, and of the latter about the same number. A special want among them is schools. The Council of the Creek Nation have offered 640 acres of land and \$10,000 in money, with \$75 per year for each scholar educated, to any denomination who will found a permanent school there. Measures were recommended to found in the Creek Nation, as such a school, an Orphans' Home, on the plan of an industrial school; or, if this shall be found inexpedient, then to devote the funds raised for this purpose to the establishment of a select school.

The receipts of the Sunday-school Board were \$14,240.65. It publishes a paper, *Kind Words*, a library of fifty volumes, lesson and question books, etc. An improved interest in Sunday-schools was remarked. The debate on a motion to continue the Board revealed a nearly equal division of opinion in the convention on the subject. The motion prevailed by a small majority. The trustees of the theological seminary at Greenville, S. C., reported that they had determined to remove the institution as soon as a suitable location should be found elsewhere. It was considered desirable to place it where it would not interfere with any other institution. Propositions had been received from Louisville, Ky., Nashville and Chattanooga, Tenn., and Atlanta, Ga.; but they were not so matured at the time of the meeting of the convention that a final choice could be made then. It was considered desirable that at least \$300,000 should be provided by the State and place to which the seminary should be removed. The matter was left open till the meeting of the Board of Directors in August. The Board met at the appointed time, and decided to establish the seminary at Louisville, Ky.

A letter and resolutions were read in the convention from the Baptist Union of Great Britain and Ireland, in response to a resolution adopted at the previous meeting of the convention, expressing sympathy with the position assumed by the Baptists of the United Kingdom, in coöperation with other non-conformist denominations, in favor of the dissolution of the connection of Church and state.

The *Consolidated Baptist Convention* is an organization of colored Baptists. Its thirty-second annual meeting was held in St. Louis, Mo., in October. Its published report gives the number of churches as 38; of church-members, 9,457. The treasurer's receipts for the year ending on the 1st of October, 1872, were \$43,315.03. The sum of \$37,029 is reported as having been "raised generally by local agents and auxiliaries," and as having been expended in the same manner. The convention have property in Hayti which is valued at \$2,000.

The *English Baptist Union* meets twice a year, in the spring and in the fall. The spring meeting of 1872 was held at Exeter Hall, in London, in April. Forty-three new church

organizations had been formed during the preceding year, sixty new chapels built, and forty-seven chapels enlarged. The total amount of expenditure on church-buildings in the same time was £130,000. Eighty-two ministers were inducted to the pastoral office. From reports presented at this meeting it appeared that forty-three congregations were sustained by lay agency alone. It was shown that this feature of the denominational polity had been largely developed within a few years past. The number of church-members reported at this meeting was 234,395; a net increase of 9,720 was shown from the previous year.

The autumnal meeting was held in Manchester in October. A paper was read on the progress of the Baptist churches in England during the present century. By this paper it was shown that, in 1801, there were in England 417 Baptist churches; in 1871 there were 1,940. The increase was nearly fivefold, or in the ratio of 21 to 100 in seventy years. During this time the population of the country had increased about threefold; so that the increase of churches had exceeded the growth of the country in population. This excess of increase appears still larger when reckoned by the number of members. "At the beginning of the century the average number of members in each church was probably 60 or 70. In 1841 the average number of members in 714 churches reporting to the Baptist Union, was 110; in 1860, the average in 1,012 churches was 121; and, in 1871, the average in 1,496 churches was 129." Counting the aggregates in 1801, there were about 30,000 members, and every 270th man or woman of the whole population was a member of a Baptist Church. In 1871, with nearly 180,000 members, every 120th man or woman was a member of a Baptist Church.

The action of the Non-conformist Conference on the separation of Church and state was laid before the Union at its autumnal meeting. The following resolution was adopted as the response of the Union to it:

Resolved, That this Union, being thoroughly convinced that the establishment by law of the Churches of England and Scotland involves a violation of religious equality, deprives those churches of the right of self-government, imposes on Parliament duties which it is incompetent to discharge, and is hurtful to the religious and political interests of the community, and that it ought, therefore, to be no longer maintained, urges on all its members the desirableness of earnest efforts to place these views fully before the nation, and especially of forming in their own districts local non-conformist associations, and otherwise promoting the principle of full and complete religious equality.

The English Baptist Union, at its autumnal meeting, adopted a scheme for the settlement of denominational disputes by arbitration. It provides for the appointment annually, by the Union at its autumnal sessions, of a standing committee of five members, "of whom three shall not be stated ministers," who "shall undertake the reference of any dispute cogniza-

ble by law, arising within or respecting any church in the Baptist Union, which shall be duly submitted to it by the parties." It is further declared that the award of the Board shall be final. It is, however, provided that the reference of disputes to the arbitral committee shall be "wholly voluntary."

Seventh-Day Baptists.—The General Conference of the Seventh-Day Baptists met at Southampton, Peoria County, Ill., September 11th. The letters of 62 churches were read. Four churches were admitted to the conference. The committee appointed by the previous General Conference to procure and publish essays, discussing the subject of communion, reported that they had essentially failed of the object of their appointment. They had invited articles on both sides of the question, as involved in the doctrines of "close" and "open" communion. Only two papers had been formally submitted to them, although a few others had been published in the *Sabbath Recorder*. A new committee was appointed to present a paper to the next conference. The year 1872 being the bi-centennial year of the foundation of the denomination, provision was made for the publication in book-form of the essays, which the previous conference had ordered, prepared in reference to that event, together with a concise account of the bi-centennial celebration, its origin, and its purpose. Provisions were made for raising a memorial fund of \$100,000, for educational and other denominational purposes. A Sabbath-school department was formed. A committee was appointed to obtain from the Legislature of Illinois legislation more favorable to "sabbath keepers" in the care of common-school meetings. The Tract Society reported its receipts to have been \$4,028.07. The Missionary Society had 16 missionaries at work in the home-field on the Western frontiers.

Albion Academy, Albion, Wis., has property worth \$50,000, upon which is some indebtedness, and an endowment of \$4,075 and lands. Milton College, Milton, Wis., reported its income less than its expenses. Alfred University, N. Y., reported receipts at \$9,641.50, and expenses at the same amount.

The Board of Missions reported that they had employed seventeen missionaries in the home-field, through whose agency two hundred or more persons had been baptized, and not less than fifty had been "converted to the sabbath." The Board has under its care a mission at Shanghai, China, with which a native pastor is connected. The receipts of the Board for 1872 promised to be less than usual, on account of the greater attention given by the churches to other objects.

III. SIX-PRINCIPLE BAPTISTS.—"The Rhode Island and Massachusetts General Baptist Yearly Meeting of the Ancient Order of the Six Principles of the Doctrine of Christ and his Apostles" is now divided into two bodies. Each meeting claims to be the regular one. The

meetings for 1872 were held in different places in Rhode Island. They are represented to have been "earnest and successful religious meetings, more largely occupied with Christian conference than with any other exercise." The reports do not give the statistics, nor even the number of churches. The best estimate gives some seven or eight churches to each branch.

IV. GENERAL BAPTISTS.—The one hundred and third annual meeting of the association of General Baptists in England was held at Nottingham, commencing June 23d. The President, Rev. J. Clifford, in his inaugural address, spoke strongly against the Church Establishment. A vote of thanks was offered for the address, and it was ordered to be printed. The association offered welcome to ministers and members of other churches. The secretary's report stated that all the returns had not been received, but, taking them as they stood, it appeared that the churches had 20,970 members against 20,628 last year, and that 1,024 had been baptized, against 889 the previous year. 79 churches had raised £1,641 for foreign missions; 44 churches had raised £421 for home missions; 43 churches, £270 for the college; and 80 churches, £2,288 for Sunday-schools. No new churches were received into the association.

V. MENNONITES.—The subject of emigration to the United States has been agitated among the Mennonite colonists near Berdiansk, Russia. These people, who now number about 40,000 souls, emigrated from Prussia several years ago, under the promise of the Russian Government that their cardinal doctrines of non-resistance should be respected, and that they should be exempted from military service. They have since complained that this promise was not kept according to their expectations, and have thought of looking for a home in America. A number of young men of their community came over during the summer, and visited the States and Territories of the Mississippi Valley. Some of them returned in the fall, prepared to make a favorable report. The Government of Canada has offered the colonists very liberal terms to induce them to settle in that country. It does not appear that any formal organization exists to promote the emigration. The movement is described as spontaneous and voluntary on the part of the several families, but the sentiment in its favor is so widely diffused in the community that the emigration, if it take place, is expected to be general.

BAVARIA, a kingdom in South Germany. King, Louis II., born August 25, 1845; succeeded his father, Maximilian II., on March 10, 1864; heir-apparent, his brother Otto, born April 27, 1848. Count von Hegenberg-Dux (appointed in 1871) having died in 1872, the ministry was composed toward the close of the year of the following members: Prime Minister, A. von Pfretzschner (appointed September, 1872); Minister of Finance, L. Berr;

Minister of War, Lieutenant-General S. Baron von Franckh; Minister of Public Worship, J. von Lutz; Minister of the Interior, S. von Pfeufer; Minister of Justice, Dr. J. H. Fäustle; First President of the Chamber of the Reichsräthe (First Chamber), Baron T. Schenk von Stauffenberg; Second President, Baron von Schrenk; First President of the Chamber of Deputies, Baron von Ow; Second President, Count von Seinsheim-Grünbach. The area of Bavaria is 29,292 square miles; the population, according to the census of 1871, was 4,861,402, against 4,824,421 in 1867. The kingdom is divided into eight Regierungsbezirke (administrative districts), the population of which in 1871 was as follows:

DISTRICTS.	Area.	Population.
Upper Bavaria.....	6,560	841,579
Lower Bavaria.....	4,154	602,005
Rhenish Palatinate.....	2,293	615,104
Upper Palatinate and Ratisbon.....	3,720	497,980
Upper Franconia.....	2,712	540,968
Middle Franconia.....	2,917	583,417
Lower Fran. and Aschaffenburg.....	3,342	586,123
Saabia and Neuburg.....	3,664	562,888
Army of Occupation in France..	11,264
Total.....	29,292	4,861,402

The population of the largest cities in 1871 was as follows: Munich, 169,478; Nuremberg, 82,929; Augsburg, 51,284; Würzburg, 40,008; Ratisbon, 29,324; Bamberg, 25,748; Fürth, 24,569; Baireuth, 17,887.

In the budget for the 11th "financial period" (embracing the years 1872 and 1873) the annual revenue and expenditure were estimated at 74,969,635 florins each. The public debt, in December, 1869, amounted to 425,175,354 fl., 163,413,300 of which were railroad debt. The Bavarian army, according to the treaty of November 23, 1870, regulating the entrance of the kingdom into the German Empire, constitutes two army corps of the army of the German Empire; in times of peace under the exclusive administration of the King of Bavaria, it is in time of war under the supreme command of the Emperor.

The Government of the kingdom remained throughout the war in the hands of a ministry which favored abroad the continuance of friendly relations with the German Empire, and at home the principles of the Moderate Liberal party. A ministerial crisis occurred after the death of the Prime-Minister, Count Hegenberg-Dux, in the beginning of September. The leaders of the Conservative and "Particularist" party, which holds the opinion that Bavaria in entering the German Empire made too great sacrifices and that the Government should now be chiefly intent upon maintaining the rights of the Bavarian crown, gained sufficient influence on the King to induce him to intrust to Herr von Gasser the mission of forming a "Particularist" ministry. The crisis lasted during about three weeks, and ended in a failure of the entire scheme and the appointment of the Minister of Finance,

Herr Pfretzschner, as Prime-Minister. Herr Pfretzschner is known to be a supporter of the imperial policy and a member of the National Liberal party.

In the Bavarian Diet the conflicts between the "Patriots" (Catholics and Conservatives) and the National Liberals continued. Although the Patriots were believed to have a small majority in the Second Chamber, they suffered a number of defeats. Thus the Chamber declined (by a tie vote of 76 and 76 votes) to support a complaint of the Bishop of Augsburg against the state ministry for allowing a parish priest who had joined the Old Catholics to remain in his office. On questions relating to the consolidation of the German Empire, a sufficient portion of the Patriotic party supported the proposition of the Government, to strengthen the connection of Bavaria with the empire. Thus a law for the supply of horses in the case of the mobilization of the army, which was opposed by the Ultra-"particularists," passed the Second Chamber by a vote of 88 against 85, showing the Government that it could obtain a two-thirds majority whenever it was necessary to fulfil its obligations toward the Imperial Government. The King also authorized new regulations for the Bavarian Army which are to make its organization more conform to that of the remainder of the Imperial Army. These went into effect on April 1st. The Diet adjourned on April 29th.

The Old Catholics of Bavaria made great efforts to perfect their organization, and in July, at their request, the Archbishop of Utrecht (of the Old Catholic or Jansenist Church of Holland) visited a number of congregations, and administered the sacrament of confirmation to about 400 children. Nearly every important town of the kingdom has now its congregation, but the number of priests is still very small. A general assembly of delegates from all parts of the kingdom was held in Munich, to regulate the organization of the congregations on a firm basis.

The failure of the so-called Dachauer banks in November created a profound excitement. These banks had been patronized by many prominent members of the Patriotic party and of the clergy, and even the name of the Pope must have been used to induce the Catholic people to make deposits in these banks, for the *Osservatore Romano* found it necessary to declare that the Pope had never had any thing to do with them. As the promise of large interest, added to the patronage of the heads of the party, had induced a very large portion of the lower classes of Bavaria to prefer these banks to all others, the number of sufferers was very large.

BEAL, ABRAHAM, a Christian reformer and philanthropist, born in Chatham, Kent, England, about 1808; died in Brooklyn, N. Y., February 25, 1872. He was from an excellent family in England, his father having been for many

years High-Sheriff of the county of Kent, and many of his relatives among the gentry of the county. At an early age his great, sympathizing heart seems to have been affected by the condition of the unfortunate and the prisoner. When but eighteen years of age, he walked thirty-three miles to defend and obtain the release of a young man unjustly imprisoned. Very soon after his marriage and establishment in business in London, he became convinced of the great injury which intemperance was causing to the interests of working-men, and he devoted himself with the most earnest zeal to the propagation of the doctrines of temperance, or rather of total abstinence. The temperance cause was less popular then in England than in this country, and he encountered much opposition and some serious persecution. In his efforts to rescue intemperate men from imprisonment and punishment, with a view to their more thorough reformation, he was led to make his appearance at the courts as their advocate; and soon acquired the title of "the Prisoner's Friend." In 1848, he emigrated to the United States, where a part of his family had preceded him. He commenced business here, but his heart was still with the prisoner, and the wretched victims of intemperance, and it was not long before he was in attendance upon our courts and endeavoring to aid those who were unjustly imprisoned or condemned. He made himself very thoroughly familiar with the criminal laws of New York and other States, not to enable any hardened offender or deliberate villain to escape its penalties—for to these he was uniformly a stern and severe accuser and judge—but to pluck, if he might, as brands from the burning, those who had been unjustly accused, or who had through ignorance or sore temptation, and not from vicious intent, violated the laws. In 1868, soon after the death of the lamented Isaac T. Hopper, Mr. Beal was offered and accepted the position of General Agent of the New York Prison Association, and for more than eighteen years he had been the indefatigable and sympathizing friend of the prisoner. More than ten thousand prisoners released, pardoned, or their sentences suspended through his active agency, were restored to society, and became good, respectable, and many of them honored citizens. Thousands of discharged prisoners reformed from their evil habits were by his efforts provided with situations, where they could and did earn an honest livelihood. Thousands of drunkards, too, were led by his urgent appeals and his unwearied efforts to sign the temperance pledge, and, if they fell into temptation again, to renew the pledge till they could once more stand up as free men. Realizing, also, that, without a radical reform of the heart and moral nature, there could be little hope of permanent reformation of the outward life, he was, in the highest sense, a preacher of righteousness, and great was his success. In this

great and good work he wrought so wisely and prudently as to win the confidence of all whose confidence was desirable. The judges of the criminal courts trusted him implicitly. They knew that he investigated every case thoroughly and honestly, and if Mr. Beal suggested that a prisoner should be discharged, or that sentence should be suspended, they were ever ready to do it, because they knew that he would not abuse their confidence. The Governors, in whom, in New York, inheres the pardoning power, were always greatly influenced by his reports. Every case presented to them was very thoroughly investigated, and all the evidence *pro* and *con* clearly presented. In the record of pardons published by Governor Hoffman nearly a year ago, the sentence occurs over and over again, "at the recommendation of Abraham Beal, Esq., Agent of the New York Prison Association," and the record of pardons, by those Governors who had preceded him, would tell the same story. He had great influence with the Presidents of the United States in cases which came within their jurisdiction. And it should be said to his honor that this influence was never abused. Often was he offered large sums of money by the friends of wealthy scoundrels, if he would only put his name to petitions for their pardon, but, though he was poor, their proffers roused his indignation as nothing else could. At one time some friends of one of these cormorants who had amassed a vast fortune by fraudulent contracts with the Government, and who had come to grief through Secretary Stanton's watchfulness, came to Mr. Beal's office, and pleaded with him to sign a petition for his pardon. "No!" he said, "I cannot do that. I don't believe his sentence is so severe as it should be." "But," said one of them, drawing near to him "Mr. Beal, you stand in your own light. You can have forty, fifty thousand dollars, if you will sign this paper!" Instantly his face was aflame, and turning to his clerk, he said "J—, show these people down-stairs!" But his philanthropy was not confined to prisoners. All the poor and wretched shared his sympathy, and his bounty, even to his own continual impoverishment. To the immigrant who found himself penniless and a stranger in a strange land, he was peculiarly tender; in hundreds of cases he procured situations for immigrants, or, failing in doing so, or finding them incapable and longing for their old home, obtained for them a return-passage. These favors were not only done without thought of fee or reward, but it was very seldom the case that he was not out of pocket from thirty to a hundred dollars by them. He was for many years an efficient officer of the New York Port Society; and so wide and beneficent had been his labors for good that, whenever he visited adjacent States, he was always surrounded at once by those who desired to show their gratitude to him for rescuing them from sorrow and

shame. His zeal and earnestness in his work continued to his last hours; in a momentary delirium, but a few moments before his death, he imagined himself conversing with a prisoner, and said: "My friend, I am a dying man; I cannot do any thing for you; you must apply to the Governor."

BELGIUM, a kingdom of Europe. King, Leopold II., born April 9, 1835; succeeded his father, Leopold I., on December 10, 1865. Heir-apparent, the brother of the King, Count Philip of Flanders, born March 24, 1837; married April 25, 1867, to Princess Maria of Hohenzollern-Sigmaringen; has one son, Baldwin Leopold, born June 8, 1869. The ministry appointed on December 7, 1871, is composed as follows: President, B. T. Count de Theux de Meylandt; Minister of Foreign Affairs, G. B. T. C. Count d'Aspremont-Lynden; Minister of Finances, T. E. X. Malou; Minister of the Interior,

C. Delcour; Minister of Justice, T. O. A. de Lantsheere; Minister of Public Works, F. D. V. Moncheur. The Minister of War, Lieutenant-General Guillaume (appointed July 2, 1870), resigned in December, 1872, and his portfolio was provisionally intrusted to the Minister of Foreign Affairs. Mr. Russell Jones was accredited minister resident of the United States at Brussels, July 14, 1869, while Belgium is represented at Washington by its minister resident, Mr. M. Delfosse (appointed January 1, 1865).

The area of Belgium is 11,878 square miles, with a population, according to the official calculation of December 31, 1870, of 5,087,105 inhabitants.

The public debt of Belgium, on May 1, 1871, amounted to 715,986,114 francs.

The development of Belgian commerce during the period from 1854 to 1870 is illustrated by the following table (value in francs):

YEAR.	IMPORTS.		EXPORTS.	
	Total.	Special.	Total.	Special.
1870.....	1,760,300	920,800	1,521,800	660,100
1869.....	1,712,300	903,600	1,490,500	691,600
1868.....	1,620,600	864,400	1,408,600	656,600
Annual { 1864-1868.....	1,428,700	765,400	1,361,500	618,900
Average { 1854-1864.....	891,400	476,800	840,700	427,100

The following table shows the movement of shipping in 1869 and 1870:

YEAR.	TOTAL.		LOADED.		IN BALLAST.	
	Ships.	Tons.	Ships.	Tons.	Ships.	Tons.
Arrived { 1870.....	5,658	1,575,293	4,945	1,539,305	713	85,988
{ 1869.....	5,411	1,470,222	4,636	1,395,636	775	74,636
Cleared { 1870.....	5,406	1,584,018	2,645	874,617	2,761	659,396
{ 1869.....	5,326	1,456,925	2,816	915,307	2,510	541,758

Among the arrivals in 1870 there were 866 vessels, with 101,428 tons, under the Belgian flag; among the clearances 858 vessels, with 98,919 tons.

The budget for 1871, as approved by the Chambers, fixed the revenue at 178,124,000

francs, and the expenditures at 169,695,455 francs. The standing army numbers, according to a decree of April 5, 1868, 100,000 men in time of war.

The exports and imports of Belgium in 1869 and 1870 were as follows (in francs):

COUNTRIES.	IMPORTS.		EXPORTS.	
	1869.	1870.	1869.	1870.
France.....	223,800	223,100	257,600	230,900
Netherlands.....	134,300	141,400	81,500	82,900
German Customs Union.....	102,500	107,300	108,900	128,200
Hanse Towns and other countries of Central Europe.....	13,800	18,700	12,500	10,700
England.....	145,900	158,800	128,600	146,100
Russia.....	46,000	43,400	22,500	22,100
Sweden, Denmark, and other countries of Northern Europe.....	13,800	17,600	2,700	4,600
Southern Europe.....	29,900	26,200	44,500	31,700
Europe.....	718,300	744,300	658,600	656,600
America.....	175,300	166,700	31,900	30,600
Asia.....	5,400	7,400
Africa.....	4,700	2,000	900	2,900
Total.....	908,600	920,800	691,600	690,100

The merchant navy numbered as follows:

END OF YEAR	SAILING VES'LS.		STEAMERS.		TOTAL.	
	Vessels.	Tons.	Vessels.	Tons.	Vessels.	Tons.
1870.....	55	20,648	12	9,501	67	30,149
1869.....	67	23,961	12	8,762	79	32,723

Of railroads, there were in January 1, 1871:

	In operation.	Constructing.	Total.
State Roads.....	539	34	573
Private Roads.....	1,257	118	1,375
Total.....	1,796	152	1,948

The aggregate length of the telegraph-lines, on January 1, 1871, was 2,692 miles; of telegraph-wires, 8,774 miles. The number of bu-

reaux in 1870 was 445, which forwarded 1,998, - 412 dispatches.

Of post-offices, there were, in 1870, 427.

The arrival of the Count de Chambord at Antwerp, February 14, 1871, and the consequent gathering of prominent Legitimists from all parts of France, created an intense excitement and riotous demonstrations. Large crowds of persons opposed to the legitimist principles assembled near the residence of the count, and a number of violent disturbers were arrested by the authorities. On February 24th the Mayor of Antwerp issued a proclamation, calling upon the citizens to have some respect for the Count de Chambord, and announcing that ample measures had been taken to suppress any disorder. The excitement against the count and the Legitimists continued, however, undiminished. A meeting of citizens, held on February 24th, adopted resolutions, protesting, in forcible terms, against the sojourn of the count, and the gendarmes charged and dispersed several gatherings. The count, therefore, requested his friends to refrain from visiting Antwerp, and left the city himself on February 17th. The subject was also in the meanwhile discussed in the Second Chamber, a liberal deputy declaring that a pretender had arrived in Antwerp to conspire against France, and that the Government therefore should be very careful in its action. The Minister of the Interior replied that the count was no conspirator, and that the Government had given him no sign of sympathy. The total number of French Legitimists who visited the count was estimated at 5,000; among them was Bishop Dupanloup, of Orleans, and Dukes Rohan and Tremouille. In March, the Chamber of Representatives had a very animated discussion on the question, whether Belgium should, as the Catholic party demanded, retain an accredited minister with the Pope. The Liberal party insisted upon the abolition of the office, but the Chamber, on March 6th, by a vote of 63 yeas to 32 nays, decided to maintain it.

The elections for members of the Chamber of Deputies for the provinces of Antwerp, Brabant, Western Flanders, Namur, and Luxembourg, were held on June 11th. In Brussels the thirteen Liberal candidates were reelected by a majority of about 3,000 votes. There were three tickets in the field, a Liberal, which received from 6,420 to 6,606 votes; a Catholic, receiving 3,071 to 3,421 votes; and a Flemish, at the head of which was the celebrated writer, Hendrick Conscience, receiving from 140 to 199 votes, a clear proof that the Flemish question as yet awakens in Brussels no political interest. The total number of Deputies elected in the five provinces was 63; of whom, in the last session of the Chamber, 21 had been Liberals and 42 Catholics; at the new election 19 Liberals and 44 Catholics were returned. This result increased the Catholic majority in the Chamber of Deputies from 18 to 22 (71 Cath-

olics against 51 Liberals). The Minister of Justice, De Lantsheere, being elected in Dixmude, all the members of the ministry, with the exception of the Minister of War, have a seat either in this Senate or in the Chamber of Deputies.

On July 1st, the municipal elections were held throughout the kingdom, on the basis of a new electoral law adopted during the last session of the Legislature. The interest shown in these elections was generally very considerable; nearly everywhere the different sections of the Liberal party united against the Ultramontanes. In nearly all the large cities the former were successful; in Brussels the Catholics did not even put up a ticket, and the administration of the Liberal mayor, Anspach, one of the most decided opponents of the Catholic party, continues therefore without opposition. In Liege, Ghent, Mons, Tournay, and even in Malines and Louvain, the Liberals either gained or retained the ascendancy; in Namur and Bruges the two parties are now about equally represented. The chief victory of the Liberal party was won in Antwerp, where, nine years before, the popular opposition against the fortifications proposed by the Liberal Cabinet, Frère-Orban, had caused the success of the Catholic party, and it had since remained in power. Now, the opposition of the merchants to the location of the commercial buildings, which the present Catholic ministry, contrary to the wishes of the merchants, intends to erect on the left bank of the Scheldt, has put an end to the Catholic administration, and reinstated the Liberals in power.

There were, in the course of the year 1872, several strikes of considerable dimensions among the laboring-classes, attended, as in former years, by much turbulence and disorder. In the coal district of Borinage no less than 10,000 men were, in July, on a strike, and troops were sent from Brussels and Mons to preserve peace.

BENNETT, JAMES GORDON, a noted and remarkable journalist, for fifty years engaged in the profession, the founder and for thirty years editor and proprietor of the *New York Herald*; born at New Mill, near Keith, Banffshire, Scotland, in 1795; died in New York City, June 1, 1872. His parents were Roman Catholics of French descent, and James was brought up a believer in the doctrines of the Roman Church. He was "a liberal Catholic," as he characteristically described himself, "just believing as much of their mysteries and dogmas as I deem compatible with the Scriptures and common-sense, and tolerating the form and ceremony of worship as a mere matter of taste, no way essential to Christian belief." He went to school in his native place until he was fourteen years of age. Then he was sent to Aberdeen to study for the priesthood. Two or three years of seminary life convinced him that he had mistaken his vocation. He had read the poems of Byron as fast as they were published,

as well as those of Scott and the Lake School of poets, and wrote very fair sentimental poetry himself. But the book which seems to have exerted the greatest influence upon his subsequent career was the Autobiography of Benjamin Franklin, then just published in Scotland. This seems to have determined him to emigrate to this country. Without money or friends, or even a definite purpose, he sailed for America in April, 1819, to seek his fortune, and landed at Halifax. He had less than twenty-five dollars in his purse, and knew no better way of earning more than by teaching book-keeping. Halifax had no use for the young Scotchman, and, after a few months of hardship, he made his way along the coast to Portland, and thence embarked for Boston in a schooner. He wandered hungry about the streets for two days without food, looking for work. His first employment was as salesman in the shop of a man named Wells, and afterward as proof-reader in the publishing-house of Wells & Lilly, then the publishers of the *North American Review*. When the firm went into bankruptcy, he came to New York, about 1822, and found work as an occasional contributor to some of the newspapers. Journalism, however, in those days was a beggarly resource for occasional contributors; and hence we find him accepting gladly the offer of Mr. Edmund Morford, of Charleston, to become Spanish translator and general assistant in the office of the Charleston *Courier*. He did not remain there very long, though he always expressed a great liking for Charleston and its people. Having returned to New York about 1824, he advertised a "permanent Commercial School," to be opened at 148 Fulton Street; but he had so few pupils that it proved temporary instead of "permanent." He next commenced a course of lectures (which were very poorly attended), at the Old Dutch Church in Ann Street, on Political Economy; and, these resources failing, he again turned to the newspapers, as reporter, paragraphist, poet, and general-utility man. In 1825 he bought the *Sunday Courier* on credit; but he made nothing with it, and soon gave it up. The next year he became connected with the Democratic *National Advocate*, and, when that journal, having changed hands, advocated the election of John Quincy Adams as against Jackson, he left it, and joined the late M. M. Noah, as associate-editor of the *Enquirer*, succeeding W. G. Graham, who had been killed in a duel. The new associate was at that time, and ever afterward, a non-resistant on principle, with supreme contempt for the cowardice of the duellist. He began to interest himself strongly in party politics. He joined the Tammany Society. That cynical spirit, which was so conspicuous in his writings during his whole subsequent career, was already a characteristic of his style. He looked at all great movements, all conflicts of principle, from the point of view of an outside ob-

server, who found it for his business interests to espouse either one side or the other, but had no real sympathy with either. In 1828 he was in Washington as correspondent of the *Enquirer*, and it was in this capacity that he made his first decided hit in his chosen profession. Reading Horace Walpole's letters in the Library of Congress, he was inspired to attempt a little newspaper correspondence in a somewhat similar vein, and the *Enquirer* soon appeared with a series of lively personal letters, sketching prominent characters, without, however, offensive freedom, and tickling the public appetite with what was then a new sensation. The letters attracted notice, and were extensively copied. Mr. Bennett's earnings at this time, from correspondence, poems, police reports, paragraphs, leading articles, and miscellaneous sketches, ranged from five to twelve dollars a week. The *Enquirer*, at his suggestion, was consolidated soon afterward with another paper, and the result was the *Courier and Enquirer*, which, under James Watson Webb, became the leading American newspaper of the time. For three years Bennett was Webb's most efficient assistant. But on August 18, 1832, the *Courier and Enquirer* abandoned Jackson for Nicholas Biddle; the positive editor and his equally obstinate assistant quarrelled, and the paper lost the services of Mr. Bennett; "and in losing him," says Parton, "lost its chance of retaining the supremacy among American newspapers to this day." He had not yet learned, however, the difference between a newspaper and a political organ; so, when he left General Webb, he started a cheap party-paper of the old style, devoted to the support of General Jackson and Martin Van Buren. It lived only thirty days. Then he carried the wreck of his savings to Philadelphia, and placed them in a Jackson paper called the *Pennsylvanian*. He appealed to the party for help, and they refused it. "Van Buren has treated me in this matter," wrote he, "as if I were a boy—a child—cold, heartless, careless, and God knows what not." He gave up the venture, and returned to New York. He endeavored to get employment on the *Sun*, but failed. It was a fortunate thing for him that Van Buren had given him nothing, and that the *Sun* rejected him; for he resolved now to trust no more to politicians, and the fruit of this resolve was the *Herald*. The first number appeared on the 6th of May, 1835, "price one cent, and for sale everywhere." It was started without capital. Two young printers, named Anderson and Smith, agreed to print it, and share the profits or losses. The firm name was James Gordon Bennett & Co. Another printer, of his own name, refused to accept a half-interest in the project, preferring to work at a salary, and so continued for thirty-four years to serve the journal which he saw grow from nothing into a magnificent property. The publication-office and editorial room was a deep cellar at No. 20

Wall Street, where Bennett transacted all the business of the little concern: received advertisements, sold copies of the paper, and wrote all the articles, reports, and paragraphs, behind a deal board. The late William Gowans, bookseller, wrote the following description of a visit to the office, soon after the paper was established: "The proprietor, editor, and vender, was seated at his desk, busily engaged writing, and appeared to pay little or no attention to me as I entered. On making known my object in coming in, he requested me to put my money down on the counter, and help myself to a paper; all this time he continuing his writing operations. The office was a single, oblong, underground room; its furniture consisted of a counter, which served also as a desk, constructed from two flour-barrels, perhaps empty, standing apart from each other about four feet, with a single plank covering both; a chair, placed in the centre, upon which sat the editor, busy at his vocation, with an inkstand by his right hand; on the end nearest the door were placed the papers for sale." It was a small four-page sheet, sold for one cent. There was very little news, for Bennett had no money to spend in collecting news; but it was bright, sharp, insolent, personal, concise, and novel. Readers stood aghast at the boldness of this unknown Scotchman, who violated all the proprieties which newspapers had been accustomed to respect, and attacked private character with such reckless freedom and such wicked good-humor. The paper soon became popular. It offended all parties and all creeds. It was denounced from the Catholic pulpits for blasphemy. It shocked the sense of decency of all respectable Protestants; and of course people bought it out of curiosity. Bennett had no assistant in writing it. He rose at five in the morning, and worked in his room until eight. Then he sat in his cellar until after noon, selling papers, writing advertisements for customers whose education had been neglected, and preparing copy for the printers. At one he went out into the streets to pick up news and gossip. From four to six he was again at his counter, and the evening was spent gathering materials for reports in the next day's paper. He could not have gone through these sixteen or seventeen hours of drudgery had not his vigorous constitution been strengthened by the abstemious and regular habits by which his life was always marked. At the end of five weeks, the paper was gaining headway, but still he did not meet expenses. He now thought of telling the public every day what had been done in the stock market the day before. The money article, now such an important feature of every leading newspaper, was then unknown. The first ever published in the United States appeared in the *Herald*, June 13, 1835. At the end of the third month, the receipts equalled the expenditures, and Mr. Bennett hired his first reporter. The next month the printing-office

was burned, and Anderson and Smith, discouraged, abandoned the enterprise. But the *Herald* was "raked out of the ashes," and reestablished, on August 31, at No. 202 Broadway, with Bennett as sole proprietor, and the printer of his own name almost his sole compositor. Thence the office was removed, October 12th, to No. 148 Nassau Street, "a remarkably pious, theological, and religious neighborhood," says the *Herald* of that date, with the Bible Society, Tract Society, Dr. Spring's Church, and Arthur Tappan's Antislavery Society, for surroundings. At this time Bennett advertised, editorially, for a business partner, and explained briefly how the *Herald* had been established, and its condition and prospects. The statement is a revelation of character as well as a history of the paper. "Heretofore," he says, "I have done every thing myself. I have written my own editorials; for I employ, at five dollars a week, no Peter Simple" (alluding to Dr. Townsend, an editor of the *Star*, who had just before assaulted him for his personal allusions to his colleagues). "I have written my own police-reports—I have written my own Wall-Street reports—I have written my own squibs, crackers, and *jeux d'esprit*. I have been my own clerk and accountant, posted my own books, made out my own bills, and generally attended to the business in the office. Now, as the business of the *Herald* is rapidly increasing, I should like to get some competent business person to become connected with me as a part owner and proprietor, one who would devote the whole of his time, as I do mine, to the business of the office. I will venture to say, without any boast, that for the last six months I have written more matter for the press, and collected more facts of every kind, than any three editors in this city. But, in addition to this labor, the business concerns of such an establishment as the *Herald* are a little more than one man can do. I would, therefore, like to have a business partner, in whom I could place entire confidence, and, if he could bring into the concern capital sufficient to make certain improvements, enlargements, etc., we could make the *Herald* in less than a year surpass every paper in the city, and yield a clear annual income of from \$12,000 to \$20,000." In seven years he had, unaided, made the income of the paper \$100,000, and for many years past it has been ten or fifteen times the highest expectations of 1835.

After its reestablishment, the *Herald* had a struggling but not doubtful existence. Its total cost for an edition of 2,000, which it attained in September, 1835, was fifty dollars a day. It contained only local news, the chief topic of interest being told in detail, the minor news condensed but never omitted. The great fire of December 16, 1835, gave the struggling journalist an opportunity to display his peculiar talents in this direction, and for many weeks after the fire the *Herald* was filled with accounts of the appearance of the ruins, the

incidents of the conflagration, the struggles of merchants to retrieve their losses, and the rebuilding of the burned district. Of the edition of December 21st, miserably illustrated, 50,000 copies were printed. So absorbing and profitable did this work prove, that Bennett abandoned—to find greater room for his descriptions—a burlesque which he begun and promised to continue from day to day, of the Congress reports which the *Courier and Enquirer* was publishing a day ahead of all competitors, through the Pony Express which Gen. Webb had established to “beat the mails.” This method of relating in detail, and in familiar style, events of purely local interest was a new revelation in journalism, and Bennett found that it repaid him handsomely. Shortly after, in 1836, when Helen Jewett was mysteriously murdered, he employed the same system and described the scene of the murder, the life of the woman and her surroundings, with a faithfulness of detail which would put to shame the *Police Gazette*s of the present day. He did not hesitate to relate in like manner the several castigations which he suffered, nor even five years later to describe his own marriage (June 6, 1840), in the same grotesque style.

In 1841 the income of the paper was at least \$100,000, and the circulation about 20,000 copies. The office was removed the same year to Nassau and Fulton Streets. From that time until the war, the *Herald* gradually increased in circulation and value as a property. During the civil war its circulation more than doubled. Of one issue, during 1864, no less than 132,000 copies were sold. It employed, in addition to its regular force, 63 war correspondents, at an expense for four years of \$525,000. Its annual expenditures for correspondence and the collection of news have been, for years, something immense, and altogether disproportioned to its payment for editorial and critical matter. It was as a collector of news that Mr. Bennett shone conspicuous. He had an unerring judgment of its pecuniary value. He knew how to pick out of the events of the day the subject which engrossed the interest of the greatest number of people, and to give them about that subject all they could read. He had a method of impressing the importance of news upon others in his employ, which inspired many who served him to energetic action, some of them in a remarkable degree. But he never tolerated defeat. He once refused to pay the expenses, including one item of a horse killed, of a correspondent who was one day behind the *World* correspondent, and added, in the half-humorous, half-satirical manner in which he habitually indulged, that “a horse which couldn’t beat the *World* wasn’t worth paying for.” He never questioned or examined the account of reporters who were in advance of their rivals, and frequently paid contributors double rates for welcome news when in ad-

vance of contemporaries. He once gave a reporter twenty-five dollars for a news-telegram of three words, for which a bill of one dollar had been rendered. At another time, he ordered one hundred dollars to be paid to a contributor for an article of six columns, which had been already contracted for at eight dollars a column, adding by way of explanation to the editor, “He may have something else as good.” In this instance, his judgment was confirmed, and several valuable contributions (relating to the secret history of the civil war) followed from the same pen. He developed the capacities of journalism in a most wonderful manner. His one object was the success of the *Herald*; all aims and efforts tended to that one end, which he sought regardless of means or consequences, and he cared for no good opinion save his own. “Since I knew myself,” he wrote as late as 1856, when his success was fully confirmed, “all the real approbation I sought for was my own. If my conscience was satisfied on the score of morals, and my ambition on the matter of talent, I always felt easy. On this principle I have acted from my youth up, and on this principle I mean to die. Nothing can disturb my equanimity. I know myself.”

Nothing could be truer than this; in the passage he has told his whole character. He was strictly temperate and virtuous. He had neither low habits nor idle hours. He never drank, even at dinner, and nothing stronger than claret was ever displayed on his table. The impression prevails that years ago he withdrew from work on his paper, but this is a great error. No exchange editor in the profession was so close and constant a reader as he of the great papers of the country down to within a few months of the close of his life. Files of the principal journals were sent to him daily, and all were religiously read. He often clipped passages for insertion in the *Herald*, but generally for texts for editorials or special articles, and when he visited the office it was to unpack his mind of the suggestions stored there by reading the exchanges. He seldom gave an editorial writer more than the suggestions for an article, leaving him to fill up the details. He required his editorial writers to meet daily for consultation and the distribution of topics. When another person presided, the several editors made suggestions; when Bennett himself was present the editors became mere listeners, and wrote, as it were, at his dictation. In nothing more did his personality display itself than in these meetings, and his manner of “consulting his editors,” by directing them what to do, and disregarding suggestions from any one! Frequently, when a writer expressed his views on a subject, Mr. Bennett amused himself by ordering him to write, taking precisely the opposite view.

In personal appearance, Mr. Bennett was, in many respects, remarkable. He was considerably over six feet in height, and down to

within a year or two he walked erect and straight as an arrow, and with the stately tread of an old soldier. He was slight of figure, but strong limbed, and the strength of his arms was something remarkable. He was very fond of physical exercise, and generally employed the early hours of dawn in running, in Highland fashion, around the walks at his Fort Washington home.

BOLIVIA, an independent republic of South America, lying between lat. 10° and 24° S., and lon. $57^{\circ} 25'$ and $70^{\circ} 30'$ W., bounded north-east by Brazil, from which it is partly separated, southeast by the river Paraguay, south by the Argentine Republic and Chili, and west by the Pacific Ocean and Peru. Bolivia, however, claims that portion of the Gran Chaco comprised between the rivers Paraguay and Bermejo, which would extend its southern limits to $26^{\circ} 53'$ S. The republic is divided into nine departments, which, with their areas in square miles, capitals, and population, in 1865, are as follows:

The departments are subdivided into 87 districts, and these into 45 provinces. No official survey of the country has ever been made; but the above areas are, with the exception of that of the department of Beni, according to a map of Bolivia published in 1859 by Lieutenant-Colonel J. Oндарза. Behm gives only 535,747 square miles as the total area; but the former is probably more correct. The population consists of native whites, for the most part descendants of the Spanish settlers, mestizoes or cholos (mixed white and Indian), mulattoes, zambos (mixed Indian and negro), Indians in a domesticated state, and savage Indians. Of the last there are about 250,000, which, added to the figures of the table, gives a total population of 2,081,585, rather more than one-fourth of whom are whites. The aboriginal is by far the most numerous element of the republic; it forms in the province of La Paz nine-tenths of the population; in that of Tarija it is five times as numerous as the white. Of the many aboriginal tribes still existing in Bolivia, the most noteworthy are the Aymaras, or Aymarus, Quichuas, Moxos, and Chiquitos. The first two, once united under the dominion of the Incas, speak languages of kindred origin, while in their customs and manners little dissimilarity is noticeable. The Aymaras dwell chiefly in La Paz, although some are met with in Oruro, and the Quichuas inhabit the coast, the valley of the Desaguadero,

and the northern and eastern portions of the republic. Most of these Bolivian Indians have embraced Christianity and fairly entered upon the career of civilization. The language of the Chiquitos is copious and flexible, and remarkable for possessing a special vocabulary for the use of females. The Spanish creoles are most numerous in the mining districts and in Cochabamba; immigrants into the country since the separation from Spain have chiefly settled in these places and in La Paz. By the provisions of the Constitution of Bolivia, drawn up by Simon Bolivar in 1826, and considerably modified in 1828, 1831, and 1868, the whole executive power is vested in a President, elected for a term of four years. The legislative authority rests with a Congress of two Chambers, the Senate and the House of Representatives, both elected by universal suffrage. The President appoints a Vice-President to assist him in his functions, and also a ministry, divided into the departments of the Interior, Justice, Finance, War, and Education and Public Worship. The ministers are liable to impeachment before Congress. The seat of the executive government, formerly at La Paz, was transferred to Oruro in 1869.

The President is Don Adolfo Ballivian, elected in November (1872); Minister of the Interior and Foreign Affairs, Dr. C. Corral; Minister of Finance, etc., Don J. S. Garcia; Minister of War, General J. Sanjine; and Minister of Justice and Public Worship, Dr. M. Terrazas. Archbishop and Primate of the Republic, Dr. S. J. Puch y Solona (1861). There are four bishoprics, namely: La Paz, vacant; Santa Cruz de la Sierra, F. X. Rodriguez (1870); and Cochabamba (titulary bishop), F. M. del Granado.

The standing army is composed of 51 generals, 359 commanding officers, 654 subaltern officers, and about 4,000 men. The cost of the army is about \$2,000,000 annually.

The commerce of Bolivia is limited to the importation of cotton goods, hardware, furniture, jewelry, and silks, in exchange for Peruvian bark, guano, copper-ore, tin, borax, furs, hides, woollens, and wool hats. To facilitate the development of trade, the port of Cobija has been declared free.

The total imports, in 1871, amounted to \$6,000,000; and the total exports to \$5,000,000. In 1859 the export of calisaya-bark through the Peruvian ports of Arica and Islay amounted to \$158,970; and from January to November, 1860, to \$228,850. The internal trade reached in 1868 about \$50,000,000. The State mint at Potosi coins annually about 2,250,000 pesos in silver. In October, 1872, the National Assembly adopted a law permitting the exportation of silver in bars from June 1, 1873, subject, however, to an export duty of 50 c. per mark, and 20 c. per oz. for gold. An export duty of 4 per cent. is still paid on good money. A very large trade is carried on with coca leaves, used, with lime, for mastication

by the Peruvian and Bolivian Indians: over \$60,000,000 change hands annually in the traffic in the republic.

The following table shows the extent of the commerce with Great Britain from 1866 to 1870, inclusive:

YEARS.	Exports.	Imports.
1866.....	899,275	64,535
1867.....	700,315	19,365
1868.....	816,795	17,175
1869.....	635,365	26,050
1870.....	619,605	2,690

According to the budget of 1867, the last which has been published, the receipts amounted to 4,529,345 pesos, and the expenditure to \$1,957,275, which constitutes a deficit of 1,427,930 pesos. The revenue is chiefly derived from customs duties, mines, and other state property, and a land-tax levied upon the Indian population, and forming almost one-half of the total receipts.

The republic receives annually from Peru 506,250 pesos as compensation for duties collected on goods landed at the Peruvian port of Arica *in transitu* for Bolivia. The receipts at the custom-house of Cobija, the only port of importance in Bolivia, were 135,882 pesos in 1867.

Bolivia has a larger population than Chili or the Argentine Republic, whose stocks stand at 95 to 100 in the money market; and while the debt of Peru is (according to the *Money Market Review*, July 6, 1872) 15s. 9d. per head of population, that of Bolivia is only 1s. 1d. In short, though Bolivia is one of the largest of the South American republics, her debt is the smallest, being only about \$10,000,000 in 1872. In 1862 it was merely nominal. In 1873 a new loan was negotiated in England of £1,700,000, at 68 per cent., payable in 25 years, at par. This loan is guaranteed by the general revenues of the republic, and by a first charge on the entire customs dues collected on imports into Bolivia through the Amazon River. The Government engaged to make arrangements for the receipt and remittance of the customs dues, to the satisfaction of the bond-holders; and, as a further security, the National Bolivian Navigation Company and Madeira & Mamoré Railway Company have entered into deeds hypothecating their net profits. It is to be borne in mind, however, that if Bolivia's national debt is small in comparison to that of the sister republics, her commerce and industry are likewise at a low ebb, as compared with those of the other South American countries, and, in the way of developing her material resources, little has as yet been done that should require the investment of large sums. But a happier era has at last been inaugurated: Bolivia has awakened from the lethargy which so long paralyzed the best energies of the nation; and the first impulse toward the moral and material progress of the country has been given. The late President

Morales, in his message to the representatives of the Constitutional Assembly of 1872, gave a flattering account of the improved state of the country in general, and in the departments of the Government since the fall of the Melgarejo administration.

A highway, preparatory to the full navigation of Lake Titicaca, was determined upon. The construction of a railway from La Paz to the frontiers had been resolved upon, and the works were to commence without delay; and another railway, from Mejillones to Caracoles, at the expense of the state, was contracted for, and to be finished in three years. A telegraph-line between the two last-named places, and an iron mole capable of admitting alongside it a steamer of 4,000 tons, were to be finished in a like period of time. A Lima house had undertaken to build a railway from Tarapacá to Oruro; American enterprise had penetrated into the republic, and the navigation of the Bolivian branches of the Amazon was regarded as an accomplished fact, the rapids of the Madeira being avoided by a railway; the whole of this great undertaking was due to the energetic efforts of Colonel Church. A steamer, the *Explorador*, was already plying on the river, and would, it was expected, soon be followed by others. A road from Apolo to Madidi was to be made, from which, among other benefits, would be derived that accruing from the relation the road would bear to the navigation in the north of the republic, the subjection and civilization of the many savage tribes in the forests, and the opening up to commerce the varied natural products of that region. Two new territorial districts, those of the Mamoré and the Chaco were created, and in process of organization, and will one day form two departments. The town of Caiza is to be the capital of the Gran Chaco district. In March a geographical commission was appointed to investigate the documents relating to the limits with Brazil, Paraguay, and the Argentine Republic. A branch of the Cobija National Bank was established in La Paz.

General Quintin Quevedo was proposed by one party as candidate for the presidency of the republic.

As it was certain that Cobija would fall into decay when the railway was opened at Mejillones, it was decided to give sites for building in the latter port to people from Cobija who chose to move thither, poor families being assisted with money. Railways were in contemplation to place La Paz and Cochabamba in communication with the nearest tributaries of the Amazon. Laborers were flocking to Caracoles, and all finding employment; the town by the middle of the year consisted already of twenty-four blocks of 300 feet, besides a number of different kinds of lodgings; water was plentiful. All the examinations at the Caracoles silver-mines continued favorable. Assassinations were of daily occurrence at Antofagasta, but the Bolivian authorities in-

terfered and social order was reestablished. An ancient copper and gold mine, known by the name of the original discoverer, Narango, was again discovered, and found to contain 20 per cent. of the precious metal. By supreme decree of June 7th, foreigners living in Bolivia were exempted from service in the National Guard.

A conspiracy against the Government, by Quintin Quevedo, for the purpose of reinstating the old Melgarejist party in power, was discovered and frustrated on the 20th of June. On the 23d of August Augustin Morales was elected constitutional President of the republic. For some months before and after the election, unfriendly sentiments existed between the President and the Congress, that body persistently refusing to sanction the President's scheme to possess himself of the valuable Aullagas mines. On the 24th of November, the President, in a state of intoxication, left a banquet in which he had been celebrating the second anniversary of the downfall of Melgarejo, and proceeded to the halls of Congress for the purpose of using his personal influence, in the hope of obtaining his desired end. Seeing that his endeavors were in vain, he sought to intimidate the members of the House by the presence of troops; a similar attempt was made on the following day, when Morales declared the labors of the legislature at an end. In the evening, while Morales was in his palace, still under the influence of passion and wine, his nephew, La Fayé, entered and read aloud a letter in which it was stated that one of the President's aides-de-camp designed to arrest him that very night. On hearing this, Morales, losing all further control of his rage, flew to an adjoining apartment where his aides were in waiting, called them traitors, and addressed them in a tone so violent and so insulting as to render necessary the interference of his daughter and nephew, who implored him to desist. All was in vain: blows, epithets, and invectives, were showered upon the officers, until La Fayé, infuriated by the outrage, shot Morales with a revolver, inflicting a wound of which the latter died after a lapse of two hours. Don Adolfo Ballivian was selected as President in his place, and with the downfall of the tyrant the country became more tranquil; the apple of discord was cast out, and opposing interests conciliated. Morales met his fate in the same apartment in which Melgarejo had assassinated Belzú.

Bolivia and Brazil are strengthening their good relations, inaugurated a few years back by the treaties concluded by Señor Lopez Netto, through the appointment of a resident minister at Rio Janeiro. One thousand Bolivians were, in December, at work on the Madeira Railway in Brazilian territory.

BOND, Rev. THOMAS EMERSON, M.D., a Methodist clergyman, physician, and journalist, born in Baltimore, in 1813; died in Harford County, Md., August 18, 1872. He was the son of Rev. Dr. Thomas E. Bond, who was

also a Methodist minister, physician, and journalist; and inherited his father's talents as well as his professional occupations. Whether Dr. Bond passed through a full collegiate course or not, we are not informed, but he early became a local Methodist preacher, and studied medicine and took his degree in one of the Baltimore medical schools. His father was at that time editor of the Baltimore *Christian Advocate and Journal*, and in the office of that paper young Bond first took his lessons in journalism. For some years previous to his father's death in 1856, he had been his efficient assistant in both his editorial and professional labors, and was distinguished for his vigor, humor, and sarcastic power, as a writer, and his ability in conducting a religious journal. In 1860, pending the difficulties which culminated in the late war, he joined the Methodist Church South, and gave his fine abilities to the cause of the South. After the close of the war, he was one of the originators of the *Episcopal Methodist*, the organ of the Southern Church, but subsequently severed his connection with that paper, and established another journal in the same interest. After publishing that for a short time, he consolidated it with the *St. Louis Southern Christian Advocate*, which was published simultaneously in Baltimore and St. Louis, and of which he was associate editor. For some time before his death, Dr. Bond suffered from cancer in the stomach. He was an earnest and devoted friend, and in all the relations of life was highly esteemed for his integrity and unwavering adherence to the cause and principles which he believed to be right.

BOWRING, Sir JOHN, K. C. B., LL. D., an English poet, publicist, philologist, and diplomatist, born at Exeter, England, October 17, 1792; died in London, November 22, 1872. He was descended from a Puritan family, and was himself a dissenter. He was a pupil and disciple of Jeremy Bentham, who made him his literary executor, and whose works he published in twenty-two volumes royal 8vo, with an added volume of his memoirs. Mr. Bowring possessed a wonderful facility for the acquisition of languages, and his poetical faculty made the national poetry of the different nations whose languages he had acquired very attractive to him. His translations of the Russian, Batavian, Spanish, Polish, Hungarian, Servian, and Bohemian national songs and lyrics, the greater part of them prepared before his thirtieth year, gave evidence alike of his learning, his poetical abilities, and his unwearied industry. But he was as deeply interested in political and politico-economical science (the result of his studies with Bentham) as in poetry and linguistics. He was a contributor to the *Westminster Review* from its establishment in 1824, and from 1825 to 1830 its editor. He visited Holland in 1828, and his letters from that country, which appeared in the *Morning Herald*, and were soon afterward

translated into Dutch, procured for him the degree of Doctor of Laws from the University of Gröningen. Soon after, he was appointed by the British Government a commissioner to inquire into its commercial relations with several of the European states. He visited for this purpose France, Switzerland, Italy, Egypt, Syria, and the states of the German Zollverein, and his reports in relation to these countries possess great and permanent interest. He was a Member of Parliament for the borough of Clyde, from 1835 to 1837, and from Bolton from 1841 to 1849, and took an active part in the business of the Commons, introducing and promoting many important measures connected with the revenue and commercial affairs of Great Britain. He was an earnest advocate of free trade, although the Government which conferred so many appointments and honors upon him was not then so much in favor of that policy as it has been since. In 1849 he was appointed British consul at Canton, and superintendent of trade in China; and in 1854, after receiving in the mean time the honor of knighthood, he was promoted to be Governor of Hong-Kong. In 1855 he proceeded on a special mission to Siam, and concluded a treaty with the two kings of that country. He had charge of the European affairs of the Hawaiian Government for some years, and in 1861 was sent abroad by the British Government to report on the state of the commercial relations between Great Britain and the new kingdom of Italy. The published works of Sir John Bowring, aside from the collected edition of Bentham's *Works and Life*, in twenty-three volumes, already alluded to, were: "Specimens of the Russian Poets," two vols., 1821-'23; "Matins and Vespers, with Hymns," 1823 and subsequently (several of his hymns are among the choicest lyrics of our English hymnology); in conjunction with H. S. Van Dyk, "Batavian Anthology," 1824; "Ancient Poetry and Romances of Spain," 1824; "Specimens of the Polish Poets," 1827; "Servian Popular Poetry," 1827; "Poetry of the Magyars," 1830; "Czeskian Anthology, being a History of the Poetical Literature of Bohemia," 1832; "Minor Morals for Young People," three vols., 1834-'39; "Reports on the Commercial Relations between France and Great Britain," two vols. folio, 1835-'36; "Reports on the Statistics of Tuscany," etc., 1837; "Observations on the Oriental Plague, and on Quarantines," etc., 1839; "First Lessons on Theology, for Children," 1839; "Manuscript of the Queen's Court, with other Ancient Bohemian Poems," translated, 1843; "Decimal Coinage," illustrated, 1854; "Decimal Systems in Numbers, Coins, and Accounts," 1854; "The Kingdom and People of Siam, with a Narrative of the Mission to that Country in 1855," two vols., 1857; "A Visit to the Philippine Islands in 1858," 1859. He also published a collection of his poems and some religious works.

BRACE, JOHN PIERCE, a distinguished teacher and journalist, born in Hartford, Conn., in 1798; died in Litchfield, Conn., October 18, 1872. He was educated at Williams College, whence he graduated in 1812, and, after devoting several years to the study of the three learned professions, he took charge of the Litchfield Academy, then just opened, where he remained until 1832, when he became principal of the Hartford Female Seminary, where his niece, Miss Catharine E. Beecher, had already become distinguished as a teacher. In these two institutions Mr. Brace trained many young ladies who have since become leading women in society, charities, or literature, throughout the land; among them, Mrs. H. B. Stowe, Mrs. Isabella B. Hooker, Mrs. Cyrus W. Field, Mrs. Cornelius Du Bois, of New York, Mrs. Wilson of Brooklyn, Mrs. Marshall O. Roberts, the missionaries Mrs. Bliss and Mrs. Van Lennep, of Hartford, Mrs. McCullough, the wife of the United States Secretary of the Treasury, and numerous others. No other teacher in the United States has ever had so many influential and intelligent pupils. After teaching for many years, Mr. Brace entered the editorial profession, and was for a number of years the editor of the *Hartford Courant*, and gave to that paper a higher literary reputation than it had previously enjoyed. Mr. Brace's acquirements were vast and multifarious. He was fitted thoroughly in the studies of the three professions—law, medicine, and theology—and could have entered any one with honor. His knowledge of ancient and modern history was both wide and minute. In mineralogy he had made extensive researches and collections; in botany, he was a correspondent of De Candolle and other European botanists, and his valuable herbarium will be found a treasure-house of collections. Even in out-of-the-way subjects of investigation, such as heraldry, astrology, deciphering cryptograms, and musical composition, he was singularly well versed. But these vast and varied acquirements were all most willingly consecrated to the service of his pupils. For the past nine years he had been living in quiet and comfort on the old homestead in the village of Litchfield, enjoying the treasures of his ample library, and the society of friends and pupils who gratefully remembered "the faithful teacher." Mr. Brace published very little in a collected form: several monographs on mineralogy and botany; a volume of lectures to young converts; a learned but humorous work entitled "Tales of the Devil;" and two novels, "The Fawn of the Pale-Faces," and another story of early New-England life. His great work, and one which will be imperishable in its results, is the thorough mental training he imparted to those who, in their turn, have become the lights of the present age.

BRAZIL (*Imperio do Brazil*), a country of South America, and the only empire in the New World, extending from lat. 4° 30' N. to

88° S., and from lat. 35° to 78° W. It is bounded north by the United States of Colombia, Venezuela, British, French, and Dutch Guiana, and the Atlantic Ocean; east by the Atlantic; south by Uruguay, the Argentine Republic, and Paraguay; and west by Bolivia, Peru, Ecuador, and the United States of Colombia. Thus it is seen that the empire borders upon all the South American states, save Patagonia and Chili. It occupies more than two-fifths of the South American Continent, and has, after Russia, the most extensive contiguous territory of any government on the globe. The line of division at the extreme northwest has not been definitively drawn; but, including the tract annexed to the empire by a recent treaty with Bolivia, it covers an area of about 8,900,000 square miles. Paraguay ceded in 1872 to Brazil, as a war indemnity, a long-disputed territory comprised between the Paraguay and Paraná Rivers, north of the Apa and Icatim. This territory has an area of 1,000 geographical square miles, and costs Brazil at the rate of \$85 per acre, or \$225,000 per square league; nearly 40 times as much as the best lands in the United States or Australia can be had for. Its greatest breadth is 9,470 miles, and its greatest length 2,600. The empire is divided into 20 provinces, and one neutral municipality (*município neutro*), which, with their areas, population in 1871, and capitals, are as follows:

PROVINCES.	Area, sq. miles.	Population.	Capital.
Amazonas.....	696,700	00	Nanua.
Gro Par.	460,000	00	Belém.
Maranhão.....	163,000	00	São Luís.
Piauí.....	94,500	00	Theresia.
Ceará.....	42,694	00	Portaleza.
Rio Grande do Norte.	18,000	00	Natal.
Parahiba.....	31,500	00	Parahiba.
Pernambuco.....	57,368 1.	00	Recife.
Alagoas	31,304	00	Maceió.
Sergipe.....	13,340	00	Aracajú.
Bahia.....	233,394 1.	00	São Salvador.
Espírito-Santo.....	14,049	00	Victoria.
Rio de Janeiro.....	96,609	00	Nicaroy.
São Paulo.....	93,347	00	São Paulo.
Paraná.....	72,000	00	Caritiba.
Santa Catharina.....	23,280	00	Desterro.
São Pedro.....	72,336	00	Porto Alegre.
Minas Geraes.....	230,000 1.	00	Ouro Preto.
Goyas	264,000	00	Goyas.
Mato Grosso.....	551,575	00	Cuyabá.
Município Neutro.....	236	00	Rio de Janeiro.
Total.....	8,900,000	9,912,000	

The population of Brazil has been variously estimated at different periods, since no facility exists for computing it with absolute accuracy, and no regular census has been taken. Some authorities set down the population as high as 12,000,000, while others admit no more than 7,000,000, but the foregoing table is regarded as the nearest approach to accuracy at the present time. There are in the empire more than 200,000 nomadic Indians, not included in the above figures. The population of Brazil is made up of a mixture of whites, aborigines, and Africans. The early settlers, rarely accompanied by women of their own

country, intermarried with the Indian women, from which union sprang the *mamelucos*, or mestizos; and at a later period with the negro women imported as slaves, producing the mulattoes. An extensive intermixture also took place between the blacks and the Indians, whence originated the *cafuzos*. The *mamelucos* and *cafuzos*, with the civilized and the savage Indians, and the Africans, compose perhaps two-thirds of the whole population, the remainder being whites. The African element is most numerous in the central-coast provinces and Minas Geraes; the Indian predominates in the northern provinces; while the large cities of the seaboard are chiefly descendants of Europeans. It is a curious fact that, spite of the superabundance of suitable and fertile regions for the establishment of colonies in Brazil, almost all the colonial nuclei have been formed in districts either mountainous and of limited fertility, else subject to periodical inundations, or far removed from highways, navigable rivers, and seaports. There are a few, but very few, exceptions; but, altogether, colonization in the empire has not so far justified the sanguine expectations and predictions of the instigators of the scheme. A number of the colonies (there were fifty in 1869, with about 40,000 settlers), which are mostly in the central and southern provinces, have, in spite of all difficulties, flourished and become independent of state direction; others are still under the jurisdiction of the Department of Agriculture. Over 1,000 of the 1,168 immigrants from Hamburg to Brazil, in 1871, were Germans. The number from the same port in 1873 was about 3,000.

The Government is constitutional and hereditary: Emperor, Dom Pedro II., born December 2, 1825; proclaimed April 7, 1831; regency from the latter date till July 28, 1840; crowned July 18, 1841; married September 4, 1843, to Theresa Christina Maria, daughter of the late King Francis I. of the Two Sicilies.

Minister of the Interior, Dr. J. A. Corrêa de Oliveira, Deputy; Minister of Justice, Dr. M. A. Duarte de Azevedo, Deputy; Minister of Foreign Affairs, M. F. Corrêa, Deputy; Minister of War, J. J. de O. Junqueira, Deputy; Minister of Marine, J. D. Ribeiro do Luz, Senator; Minister of Agriculture and Public Works, Baron d'Itatua, Senator; and Minister of Finance, Viscount do Rio Branco, Senator, Councillor of State, President of the Council of State and of the Tribunal of the National Treasury. The Council of State is composed of the following members in ordinary: the Princess Imperial, Donna Isabel; Prince Gaston d'Orleans, Count d'Eu; Viscount de Abaeté; Viscount Sapucahy; Viscount São Vicente; Viscount do Rio Branco; J. T. Nabuco de Araujo; Baron do Bom Retiro; Baron de Muritiba; and members extraordinary: Senator F. de Salles Torres Homem; D. Leite Ribeiro; Senators Baron das Tres-Barras; C.

Carneiro de Campos; Duke de Calças; and P. P. de Negreiros Sayão Lobato. President of the Senate (58 life-members), Viscount de Abasté; Vice-President, Baron das Treze-Barras, President of the Chamber of Deputies (123 members for four years), Councillor J. J. Teixeira, Junior; Vice-Presidents, J. M. d'Araújo Goes; Councillor A. J. Henriques; and L. O. de Fonseca.

The army is composed of a special corps of 641 men; 21 battalions of foot: 16,168 men; 5 regiments of horse: 4,152 strong; and one regiment of artillery of 5 battalions, and one battalion of engineers: 4,326; total, 25,282 men. The police force numbers 6,110; 1,110 of whom in Rio de Janeiro. The National Guard is made up of an active force of 522,094 infantry, horse, and artillery; and a reserve of 89,147 men of all arms; making a total strength of 611,241.

The navy comprises: steamers, 18 iron-clads, 27 corvettes, 2 gunboats, and 7 transports; with 33 sail-of-the-line, with an armament of 316 guns; 2 ships without armament, 2 frigates, 2 corvettes, 1 transport, 1 school-ship, and 1 brig for midshipmen. There are in the navy 18 general staff-officers, 545 first-class officers, 142 second-class officers, 101 sanitary corps, 234 accountants, 152 engineers, 3,268 imperial and 2,616 apprentice marines, and 62 boys: in all 8,428. By decree of March 27, 1872, a credit extraordinary of \$1,031,125 was opened to the Ministry of Marine for arsenals, lights, etc.; and a supplementary credit of \$857,481 for the naval force of the empire, and for unforeseen and extraordinary expenses.

The chief article of export from Brazil is coffee, supplying four-fifths of the consumption of the United States, and more than half of the consumption of the world. Among the other products sent in large quantities to foreign countries are cotton, sugar, cacao, hides, horns, tobacco, India-rubber, diamonds, etc. The principal imports are cotton and woollen fabrics from Great Britain, wrought and unwrought iron from various countries; wines from Portugal, Spain, and France; agricultural implements, hardware, lard, flour, timber (pine), petroleum, biscuits, coal, ice, ham, soap, boots and shoes, etc., from the United States. The value of the total exports and imports for the three years 1868-'69 is shown by the following table, from which it appears that the exports exceeded the imports during that period by the sum of \$46,600,000:

YEARS.	Exports.	Imports.
1868-'69.....	\$73,000,000	\$71,750,000
1869-'70.....	93,650,000	70,300,000
1870-'71.....	101,350,000	53,350,000
Total.....	\$272,000,000	\$225,400,000

The entire quantities of coffee, sugar, cotton, hides, and horns, exported from 1867 to 1870, inclusive, are as follows:

Exports to the United States from 1867 to 1871, inclusive.

ARTICLES.	1867-'68.	1868-'69.	1869-'70.	1870-'71.
	lbs.	lbs.	lbs.	lbs.
Cotton.....	24,350	28,386	25,800
Sugar.....	10,467,741	23,632,921	24,145,331	21,552,000
India-rub- ber.....	5,550,200	4,442,900	5,274,304	5,722,195
Coffee.....	169,293,171	205,473,604	169,412,456	267,472,709
Cacao.....	65,571	11,177	1,205
Horn-hair.....	393,151	972,345	741,004	983,293
Wool.....	1,441,966	2,055,250	2,387,097	2,539,512

Value of Imports from the United States from 1867 to 1871, inclusive.

YEARS.	U. S. PRODUCTS.		Trans- shipped.	Total.
	American Bottoms.	Foreign Bottoms.		
1867-'68...	2,085,411	2,619,613	197,859	5,842,883
1868-'69...	2,805,297	2,102,395	156,514	6,070,079
1869-'70...	2,068,191	2,719,170	110,465	6,817,846
1870-'71...	2,366,089	2,546,398	149,787	6,069,154

Of the 2,209,456 sacks of coffee exported in 1870, the United States took 1,378,654. In the first half of 1871 were shipped 1,252,656 sacks, 645,749 to the United States; and the same country took 371,266 out of a total of 625,429 sacks exported during the first half of 1872. From these figures it results that the coffee exports to the United States alone during the first six months of 1871 were greater than the total exports of that article to all countries in the corresponding period of 1872. In the year ending September 30, 1872, Brazil furnished 866,000 of the 4,773,000 bales of cotton consumed by Europe.

The value of the exports to Great Britain for 1870 was \$30,637,240; that of the imports, \$26,834,170; and the value of the British cotton manufactures imported in 1869 was almost exactly covered by that of the raw cotton exported to the United Kingdom during the same period. The cotton-crops were remarkably large in the principal cotton-growing provinces.

From a comparison of the trade returns of several years, it is observed that one-fourth of the exports goes to England and about one-fifth to the United States, the remainder being divided between France, Portugal, Germany, and the Argentine Republic.

In Alagoas the direct foreign trade is in-

creasing rapidly; 80 foreign vessels entered Maceió in January and February, to load.

The foreign trade of Bahia for 1871 amounted to \$20,542,858: imports, \$9,915,205; exports, \$10,627,623. The port movements in the empire in 1870 were as follows:

Entered.	8,540 sea-going vessels with an aggregate of.....	1,446,000 tons.
	4,908 coasters, with an aggregate of.....	1,001,000 tons.
Cleared.	3,315 sea-going vessels, with an aggregate of.....	1,500,000 tons.
	4,994 coasters, with an aggregate of.....	1,198,000 tons.

A line of clippers between Genoa and Rio Grande do Sul was organized in 1872, with vessels of 500 tons burden, but of light draught to suit the bar of the latter port.

The Guanabara Fishery Company, with a capital of \$300,000, in 100 shares at 25 per cent. first call, has been organized for the purpose of supplying Rio de Janeiro with fish brought alive in steamers provided with suitable tanks.

The expenditure of the empire from 1855 to 1859 was as follows:

1855-'56.....	\$30,120,000
1856-'57.....	20,187,100
1857-'58.....	25,877,500
1858-'59.....	26,859,000

After the Paraguayan War commenced, the expenditure increased as given below:

1864-'65.....	\$43,943,290
1865-'66.....	60,980,929
1866-'67.....	60,556,783
1867-'68.....	75,523,870
1868-'69.....	82,905,708
1869-'70.....	73,189,858
1870-'71.....	53,966,047

The amount to be disbursed in 1872, for emancipation annuities, was estimated by the Minister of Finance at \$500,000; and that for 1902, when slavery is to cease, at \$8,000,000.

About one-fifth of the ordinary revenue is derived from land, license, and other taxes, such as that on transfer of property, etc.; more than one-half proceeds from duties, export as well as import, the former being 13 per cent. on coffee, and 9 per cent. on all other articles. From 1865 to 1870, when deficits were of frequent occurrence, these were covered by loans made, and bonds and paper money issued by Government, and treated in the finance accounts as extraordinary receipts. The total receipts for the financial year 1864-'65 were \$29,788,838; and for 1871-'72, \$46,884,316. The expenditure in 1871-'72 was:

Ministry of the Interior:	
Civil List.....	\$699,735
Legislative Chambers.....	875,680
Sundries.....	1,488,645
	\$2,564,060
Ministry of Justice.....	1,718,764
Ministry of Finance.....	19,712,587
Ministry of Foreign Affairs.....	408,909
Ministry of War.....	6,316,653
Ministry of Marine.....	4,434,186
Ministry of Commerce, Agriculture, Public Works, etc.....	6,004,258
	\$41,154,423
Total.....	\$41,154,423
Receipts in 1871-'72.....	\$46,884,316
Expenditures in 1871-'72.....	41,154,423
Surplus.....	\$5,729,894

The revenue has been steadily increasing since 1864, at the rate of 75 per cent. approximately; while the increase of the ordinary expenditure in the same period has not exceeded 20 per cent.

The indebtedness of Brazil to England in 1862 was \$25,000,000, the foundation of which had been laid by loans to cover old charges of the colonial times, the war of independence, that with Uruguay, payments of indemnities to foreign nations, and to cover deficits originating from year to year; and in 1872 the amount reached \$300,000,000, exclusive of railway guarantees; being an increase of \$275,000,000 in ten years. A loan of \$15,000,000 was contracted in February, 1871.

In 1872 the following were the constituent elements of the

NATIONAL DEBT.	
Foreign debt.....	\$300,000,000
Home debt, at 4, 5, and 6 per cent.....	140,228,480
Debt prior to 1837.....	178,587
Orphans' funds and deposits.....	12,496,778
Paper money *.....	75,539,061
Total.....	\$528,443,796

The issue of the 4½ per cent. loan in 1860 amounted to \$6,865,000; of that sum \$2,266,500 were redeemed on June 1, 1870, leaving \$4,598,500 still to be reimbursed by the operation of the accumulation sinking fund.

Besides the general receipts of the empire, there are the provincial and municipal receipts. The former amount to \$11,500,000; the latter to \$2,500,000.

There are in Brazil 19 banks, and innumerable private banking-houses. Chief among the former are the Bancos do Brazil, da Bahia, de Campos, Commercial do Rio de Janeiro, do Maranhão, do Rio Grande do Sul, do Pará, and the English of Rio de Janeiro, limited, London and Brazilian, Brazilian and Portuguese; the Banco Rural e Hypothecario, and the bank of Mauá & Co. Two new banks were put on the Rio Exchange in 1872, the Commercial Bank of Pernambuco, and the Mercantile Industrial, with capitals of \$3,000,000 and \$10,000,000 respectively, in \$100 shares. The Sociedad Economica de Consumo, having for its object the establishment of cheap shops, has a capital of \$150,000.

Public education has not yet reached a high point of development in Brazil; but numerous schools have been established of late in the provinces; and the Government at last seems disposed to spare neither money nor energy in strengthening and developing a system on which the future greatness of the nation so immediately depends. There are at present in the empire 4,437 schools; 3,603 being public, and devoted to primary and secondary education, and 834 private schools. The number of secondary schools is in the proportion of one for every 18 primary; and there are twice as many schools for males as for females. The average annual cost of each

* We do not vouch for the accuracy of this amount.

school is \$467; and the whole of the public schools cost annually \$1,581,000, or about 17 per cent. of the average annual revenue of all the provinces. Each of the latter has one private primary school for every five public; and one school for every 2,404 inhabitants of all classes and colors; and these schools are each attended by an average number of 305 children. The total number of scholars enrolled is 133,950, of whom 125,867 receive primary, and 8,083 secondary education. These figures show a marked improvement as compared with the returns of former years: in 1868 only 107,483 children attended school in the whole empire, or 26,467 less than at the present time. There are two faculties each of law and medicine maintained at the expense of the Government: the Imperial Academy of Medicine has an annual subsidy of \$1,000. To the foregoing should be added an Imperial College of Pedro II., and 29 private establishments, in which a thorough course of education is given; the Historical and Geographical Institute, with a subsidy of \$3,500 per annum; Academy of Fine Arts; Conservatory of Music; Lyceum of Arts and Professions of the Society for the Propagation of the Fine Arts; and a school for the blind; as also 11 seminaries for the education of clergy, subsidized by the state; a School of Agriculture; two military, one naval, one preparatory, one normal, and some other schools. The whole educational system is under the jurisdiction of the Minister of the Interior, and the control of the General Assembly. The English merchants of Rio de Janeiro subscribed \$6,500 in 1872 for the establishment of a gymnasium for the use of the English-speaking youths of that capital. Besides the libraries attached to the various public scientific and literary establishments, there are in Rio de Janeiro 11 public libraries, chief among which is the Gabinete Portuguez, possessing 50,000 volumes, and being visited on an average by 2,314 persons yearly. By the provincial law of December 26, 1871, the creation of libraries in all the cities of the provinces of Rio de Janeiro was authorized; and there are libraries in most of the other provinces in the empire. There is a Dramatic Conservatory, and other institutions for the promotion of literature, art, and science. The Astronomical Observatory of Rio de Janeiro was the object of important modifications in 1872.

Save in the immediate neighborhood of the capital and other large cities, the want of adequate highways is still sensibly felt, and notably impedes the development of trade and industry, especially in the landlocked provinces. There are, nevertheless, a few exceptions to this rule; and the Department of Agriculture and Public Works is devoting unremitting attention to this all-important subject. Railways are fast multiplying in all the coast provinces; those already established are in process of extension, and new ones are projected.

Bills for the construction of some dozen lines were passed by the legislature in the course of 1872; and telegraphs are united to all the railways in order to facilitate the service of the lines. A project is at present on foot to extend the railway net-work of the central provinces from the capital to the city of Pará in one direction, and to Rio Grande do Sul in another; so that, perhaps by the end of 1874, the traveller can proceed by rail from the Amazon to Uruguay almost without change of train. One line of special importance is shortly to be built, for the transportation of coal from the Candiotia mines to the coast in Santa Catharina.

The following table comprises the Brazilian railways existing before 1872, with their respective lengths, and the receipts and expenditures in 1870. The first three are subsidized by the Government:

LINES.	Miles.	Receipts.	Expenditures.
São Paulo.....	87	\$1,143,596	428,968
Bahia.....	80	158,189	123,447
Pernambuco.....	80	424,400	263,360
Dom Pedro II.....	140	2,312,908	1,072,831
Cantagallo.....	21	126,019	84,665
Mauná, or Petropolis.....	11	250,581	91,582
Total.....	419	\$4,418,573	\$2,118,533
Total in 1868.....		3,214,869	1,062,375
Increase.....		\$1,204,014	\$456,148

The deficit in the Bahia line is attributable to continual outlays for repairs, and to a serious diminution of traffic that year, during the meagre productions of the province caused by the drought, and the disease in the sugar-cane the year before. The most important of the above lines is the São Paulo, from Santos to Judiah, and deserving of especial notice, from its flourishing condition and brilliant future, due to the wealth and prosperity of the province which it traverses. A railway was opened in Alagôas, on October 1st, from Maceió, the capital, to the interior; up to the end of the year the carrying powers of the company were taxed by the abundant traffic. A petition was presented to the Rio Grande legislature for a 90 years' privilege of a railway from Pelotas to the São Lourenço colony. The Bebadouro Railway bill passed the Pernambuco Legislature; and the Central Railway Company contracted to complete the Rua da Villa branch from Lazaro to Soledade. There were, at the end of 1872, nearly 1,600 miles of telegraph in operation, and the works had commenced on a line from São Pedro to Rio Grande do Sul. But the grandest telegraph scheme hitherto attempted in the empire is that of a submarine cable from Rio de Janeiro to Lisbon, the concession for which was given August 16, 1872, to the Baron de Mauá, conditional on his uniting forces with a Portuguese concession under date of May 16, 1864. A line of telegraph, from the southern frontier to São Matheos, had been completed as far as Victoria; the clearing and preparation of that portion of the

line cost \$10,140; and the provincial government contributed \$5,088 in money and \$6,668 in posts toward defraying the expenses of construction.

Street-cars, of which there are numerous lines in Rio de Janeiro and Bahia, and some other cities, have largely contributed to the development of trade and industry, and been productive of a marked social revolution. The Brazilian women, until lately kept in a more than Turkish seclusion, and never seen abroad save in the company of father, brother, or husband, are now constantly met with in the horse-cars, entirely unaccompanied.

The navigation of the Araguaya is now an established fact: a steamer plies regularly between Pará and Goyaz, the capital of Minas Geraes. A new survey of the Amazon was made at the end of the year, at the expense of Government, and the steam communication on that vast river is to be notably extended. Indeed, Brazil is exploring all her great rivers, and establishing upon them, slowly it is true, a regular system of navigation; so that in a few years the interior of the empire, so long shut out from the world, will be opened to commerce and commercial industry. On the one hand, the British have replaced the former Brazilian company in the management of steaming on the Amazon; on the other, American enterprise is penetrating the Madeira and Mamoré, opening up communication by steam, and substituting the locomotive for the steamboat wherever natural obstructions present insurmountable impediments to navigation.

On the 8th of January died the Viscount d'Albuquerque, formerly President of the Council of State, and afterward leader of the party opposed to the emancipation of slaves. Ratifications of the peace treaty between Brazil and Paraguay took place March 26th, and the text of the treaty was published on the 2d of April. Its more important points are as follows:

ARTICLE 3. The Government of the Republic of Paraguay will recognize as debt of the said republic:

1. The amount of the indemnity of war costs (\$360,000,000), incurred by his Majesty the Emperor of Brazil, and of the losses caused to the public property, which will be treated of in the special convention treated of in article four.

2. The amount of the losses and damages caused to persons and citizens of said state. This indemnity will be fixed according to article 5.

ART. 4. A special convention, which will be held, at the latest, within two years, will fix benevolently the quantum of the indemnities treated of under the first number of the preceding article, in view of official documents; will settle the mode of payment, and the quotas of interest and amortization of the capital; and will designate the revenues which shall be applied to their payment.

ART. 5. Two months after exchanging the ratifications of the present treaty, a mixed commission, composed of two judges and two umpires, shall be appointed, to examine and settle the indemnities resulting from the causes mentioned under the second number of article three.

This commission shall meet in the city of Rio de Janeiro or Asuncion, as may be agreed on by the two Governments.

In cases of disagreement between the judges, one of the umpires shall be chosen by lot, and he will decide the question.

Should it occur (what is not expected) that one of the high contracting parties fail, for any motive whatever, to appoint the commissioner and umpire within the terms stipulated above, or, after appointing them, do not, if it becomes necessary to substitute them, substitute them within an equal time, the commissioner and umpire of the other contracting party will proceed to the examination and settlement of the respective reclamations, and their decisions shall bind the government whose mandatories are wanting.

ART. 6. The term of eighteen months is fixed for the presenting of all the claims which are to be judged by the mixed commission spoken of in the preceding article, and after the expiration of the term no other claim will be received.

Debts of this origin will be paid by the Paraguayan Government, as they become settled, in bonds at par, drawing 6 per cent. annual amortization.

ART. 7 binds both parties to put into force at once in their respective jurisdictions the clauses relating to the river navigation of the Paraguay, Paraná, and Uruguay.

ART. 8. The navigation of those rivers, from the mouth to the ports qualified therefor by the respective states, is free to the commerce of all nations.

ART. 9. The liberty of navigation for all flags, treated of in the preceding article, does not extend to the tributaries (save special laws or stipulations to the contrary) nor to the navigation between port and port of the same nation.

Each state may thus reserve to its own flag one or other of these navigations, but it will be free to the citizens and subjects of other riverain states to load their goods in the vessels employed in the said interior or coasting-trade.

ART. 10. Ships-of-war of the riverain states will also enjoy liberty of transit and entry in all the course of the rivers opened to merchant-vessels.

Ships-of-war of non-riverain nations may come only to where in each riverain state they may be permitted, and the concession of one state shall not extend beyond the limits of its territory, nor in any way bind the other riverain states.

ART. 11 provides that merchant-vessels in transit on those rivers shall be subjected to no onus or obstacle, nor to any law or regulation not agreed upon by all the riverain states. Vessels for ports of any riverain state will be subject to the private laws of that, while within a river section wherein one or both banks belong to that state.

ART. 12 provides for extra places where vessels may call for repairs, fuel, etc.

ART. 13 declares ships-of-war exempt from all dues and formalities.

ART. 14 provides for a uniform navigation and police regimen, to be made by mutual agreement of all the riverain states.

ART. 15 provides for the free transit of the rivers in time of war, except as to contraband of war and ports effectively blockaded.

ART. 16 declares that both states adhere to the declaration of the Paris Congress of April 16, 1856.

ART. 17. The Government of his Majesty the Emperor of Brazil confirms and ratifies the engagement contracted by articles 8 and 9 of the treaty of May 1, 1865, which he made with the Argentine Republic and the Oriental Republic of Uruguay.

Consequently, he binds himself to perpetually respect, on his part, the independence, sovereignty, and integrity of the Republic of Paraguay, and to guarantee it during the term of five years.

ART. 18 provides that, in case of disputes, both countries will recur to the good offices of a friendly nation before resorting to hostilities.

ART. 19 declares that this treaty does not prejudice the special stipulations of the Brazilian treaties with Argentina and Uruguay.

ART. 20. The Government of his Majesty the Emperor of Brazil may, by agreement with the republic of Paraguay, keep in the territory of the republic, even after the date of the present treaty, what part of his army he may consider necessary to the proper execution of the agreements entered into.

In a special convention will be fixed the number of the forces, the time of their stay, the mode of satisfying the cost incurred, and any other needful conditions.

ART. 21 provides for the mutual surrender of prisoners of war.

ART. 22 provides for the surrender of all Brazilian deserters, his imperial majesty promising not to execute any of them.

In the treaty of limits, article 1 declares that the boundary between both states is:

The bed of the Paraná from the mouth of the Iguaçu to the Salto Grande das Sete Quedas. From these falls the line runs along the highest divide of the Serra de Maracajú to its termination; thence, as nearly as possible in a straight line, along the highest ground to the Serra Amambahy, following the highest divide of the serra to the principal source of the Apa, and down the river to its junction with the Paraguay.

All the streams flowing to the north and east belong to Brazil, and those to the south and west to Paraguay.

The island of Fecho dos Morros (in the Upper Paraguay) belongs to Brazil.

ART. 2 provides for the appointment, within three months after ratification, of a joint boundary commission to mark the boundary where needed.

A third treaty provides for the mutual extradition of criminals not natives of the surrendering state, and specifies the offences. Political offenders are exempt from extradition.

A fourth treaty, of friendship, commerce, and navigation, equalizes the civil status of Brazilians and Paraguayans respectively, with that of the citizens of the other country. Free trade in national products is to be allowed between Paraguay and Matto Grosso.

On the 31st of March, their Majesties the Emperor and Empress returned to the empire, after an absence of ten months. In the month of April, an epidemic fever, which had been travelling along the Lower Amazon since 1858, extended its ravages until one-third of the population of some towns was attacked; and in Maranhão the Berberi epidemic, which made its appearance in 1871, continued, though with less virulence, a change of air being in most cases sufficient to bring a cure or relief. At Parahiba, the yellow fever, after having subsided, reappeared at the end of March among the shipping. On shore pernicious fever was common. An unknown epidemic visited three towns, carrying off 13,000 out of 18,000 inhabitants.

A new Cabinet was formed on the 20th of April. The Chambers were reopened May 3d, on which occasion the Emperor, in his speech, promised various reforms, especially in the mode of elections, recruiting the army and the National Guard. Senator Ribeiro da Luz was appointed Minister of Justice on the 19th of the same month, and on the 21st the Chamber of Deputies adopted, by 50 votes against 49, a motion of the opposition. The Emperor on the following day dissolved the House, and ordered new elections for the 18th of September. About the same time, the Rio

Grande Hydraulic Company was chartered, with a capital fixed at \$200,000, and power to raise it to \$250,000. The object of the company is to supply the city of Rio Grande with potable water.

The traffic on the São Paulo Railway was frequently interrupted by land-slides, which seriously damaged the road.

An insurrection of fifty slaves took place, on a plantation some thirty miles from Rio de Janeiro, whence a body of police was sent, who succeeded in capturing one-half of the number in two or three days, and the remainder in about a week.

The elections for members of Congress began in August, and were attended with much agitation and disorder, especially in the northern provinces; the troops were called out, and some bloodshed ensued.

A decree was issued during the course of the year, granting permission to the Presbyterian congregation of Rio de Janeiro to incorporate and hold real estate, with demise to the New York Presbyterian Missionary Society, in case of the dissolution of the congregation. The decree was hailed with almost universal approbation.

A definite contract with the Brazilian Navigation Company, for the transportation of the northern mails, was signed on the 25th of September by the Director-General of Mails, and by the representatives of the company. By the terms of the contract, the headquarters of the company were to be transferred from New York to Rio de Janeiro. Half the capital has been subscribed in the empire, and the vessels fly the national flag; so that, to all intents and purposes, this enterprise is Brazilian. The Beaton contract for the introduction of immigrants was assented to by the imperial Government, with some amendment, however; the obligatory number of immigrants is reduced to 5,000, and the Coffee Estates Company, formed in London for carrying the contract into effect, will now receive £6 per adult on embarkation, and 120 milreis—\$60—on his arrival in Brazil, together with free transport on subsidized steamers and railways. The company will likewise receive an annual bonus of \$15,000 for a term of five years. This contract, by far the most liberal yet granted, proves how earnest the Brazilian Government is, in its wish to secure foreign population.

The discovery of coal on the Amazon, near the port of Manaus, the seat of management of the Amazon Steam Navigation Company, attracted considerable attention, and it must eventually prove of immense advantage to steam-navigation, when steamers commence to ply between Bolivia and Brazil *via* the Madeira. In anticipation of the success of the latter enterprise, the formation of a new Brazilian province in the basin of the Madeira was spoken of.

The result of the general elections was the return of 83 Ministerial Conservatives, 24 pro-

slavery Conservatives, 10 Liberals, and 5 Deputies of unascertained political complexion: total, 122. So great a reduction in the Liberal ranks of the Deputies was regretted, as the Liberals are the advocates of general reform, and would, if in strength, have assisted the proposed improvement of the election laws: those returned are exclusively from the two great provinces of Rio Grande do Sul and Minas Geraes, and the small one of Ceará. The large majority of the ministerial party indicates how completely the empire has accepted and is prepared to carry out the principle of gradual emancipation, and to support the policy of careful and temperate reform.

A railway was talked of to connect the provinces of Minas Geraes and Rio de Janeiro by a junction with the Dom Pedro II. line; and a branch to connect the São Paulo line with the same metropolitan railway was likewise under contemplation; while surveys of lines, from the termini of both Pernambuco and Bahia railways to points on the San Francisco Rivery, were contracted for.

The journals of Rio de Janeiro teem with announcements of concessions and privileges for every imaginable purpose; many of which are simply devices of speculators to launch companies for their private gain, or futile visions of projectors; but they, nevertheless, indicate a tendency toward material improvement, and a readiness on the part of Government to assist the nation in all useful undertakings. Several new orders and titles were conferred by the Emperor during the second half of the year. A controversy which arose toward the close of 1871, between the Brazilian and Argentine Governments, seemed for a time likely to remain unsettled without appeal to arms. Brazil, after the Paraguayan War was terminated, made treaties concerning boundaries and a war indemnity with Paraguay without the intervention of either of the other members of the triple alliance treaty of May 1, 1865. Against that movement the Buenos Ayres Government protested, and a note from the Argentine Minister of Foreign Affairs, Dr. Tejedor, gave great offence in Rio de Janeiro, and war seemed inevitable. But General Bartolomé Mitre, the Argentine envoy extraordinary, assured Dom Pedro's Cabinet that no offence was intentionally offered in Dr. Tejedor's note, an assurance which was corroborated by another note to that effect from the latter minister himself. This explanation being accepted, friendly negotiations were begun, which terminated in the restoration of cordial relations between the two countries, and the mutual decision that the Argentine Republic, following the example of Brazil, should settle boundary questions by separate treaty with Paraguay.

Strikes had penetrated into Brazil, and were suspending industry at the foundries in Bahia.

In Rio Grande do Sul the public-spirited Baron de Mauá was making arrangements for

planting an agricultural colony on a part of his estate, and reorganizing a vast establishment for preserving and exporting meat.

New coal-fields, easily workable, are said to exist in the province of Santa Catharina.

BROWN, DAVID PAUL, an eminent and eloquent lawyer and author, of Philadelphia, born in Philadelphia, in January, 1795; died there, July 11, 1872. He received a very thorough classical and literary education, studied law, was admitted to the bar in 1816, wrote largely for periodicals, and published several dramas, which were put upon the stage with very good success. He soon, however, devoted himself to his profession, and was for many years the ablest criminal lawyer in Philadelphia. His eloquence and his thorough knowledge of criminal law made him very popular in all important cases. Throughout his whole career, he retained his strong attachment to literature, and he was greatly in demand as an orator on public occasions. Mr. Brown was a zealous advocate of antislavery principles, at a period when there was a strong opposition to them in Philadelphia. His published works were: "Sertorius, a Tragedy;" "The Prophet of St. Paul's, a Melodrama;" "The Trial, a Tragedy;" "Love and Honor, a Farce;" "The Forum, or Forty Years' Full Practice at the Philadelphia Bar," 4 vols., 8vo, 1856-'59; and "Speeches and Orations of David Paul Brown," 4 vols., 8vo, 1859.

BROWN, JOHN PORTER, an American diplomatist and Oriental scholar, for about forty years connected with the U. S. embassy to Turkey, born in Chillicothe, Ohio, in 1814; died of heart-disease in Constantinople, Turkey, April 28, 1872. He went to Turkey in 1832, accompanying his uncle, Commodore Porter, who was in that year appointed the first American minister to the Porte, and whose son is now admiral of the United States navy. Although then only eighteen, Mr. Brown had already served for some years as a midshipman in the American Navy, but, possessing a rare linguistic talent, he applied himself at once to the study of Oriental languages and literature, and with such success that for many years he has been regarded as one of the most accomplished Orientalists in Turkey. Within a twelvemonth of his arrival, he was able to discharge the duties of assistant dragoman, in 1836 was promoted to the post of first dragoman, and, in 1858, secretary of legation, which he held till his death. During this long term of service, he represented his Government nine times as *chargé d'affaires*; first, in 1843, during a vacancy in the legation, and, for the last time, during the recent interval between the departure of Mr. McVeagh, and the arrival of Mr. Boker, the present minister. One of these *interregna* was rendered memorable by the incident of Kosztá, the Hungarian refugee, who, in 1853, was seized by the Austrian authorities at Smyrna, and rescued some days after, by Captain Ingraham,

of the United States corvette Dale, which then happened to be lying in the bay. As Koszta, before going to Smyrna to take passage for the States, had given the usual notice of intended citizenship at the Pera legation, he claimed American protection on being arrested. But the Austrian consul at once sent him on board an Austrian frigate in the harbor, and, thereupon, Captain Ingraham applied to Mr. Brown for instructions, which the latter gave in two words: "Take him." On receipt of this pithy order, the commander of the Dale gave the Austrian captain three hours to deliver up his prisoner, and, in the mean time, prepared for action. Half an hour before the time expired, Koszta was given up to the French consul, and by him to Captain Ingraham, who sailed just in time to miss a couple of Austrian line-of-battle ships, which entered Smyrna Bay the next day. For his pluck and decision on this occasion, Mr. Brown's fellow-citizens of Ohio presented him with a massive service of plate, and Mr. Webster, then Secretary of State, also warmly approved his conduct. His long residence was, of course, broken by several visits on leave to the United States—his home sympathies and associations with which Mr. Brown kept up with singular freshness to the last. Besides the publication of two locally well-known works—one a very learned "History of the Dervishes," and the other a translation of Patriarch Constantine's "Ancient and Modern Constantinople," with very valuable notes and appendices—the deceased gentleman was a frequent contributor to the American newspapers and magazines. Mr. Brown had been the local head of the Masonic order, in Turkey, since the departure of Sir Henry Bulwer (Lord Dalling and Bulwer), whom he succeeded in 1869, as District Grand-Master for Turkey. In this office, as, indeed, in his private relations, the extent of his practical philanthropy was only equalled by its modesty, neither counsel nor pecuniary help being ever refused by him in any deserving case. In general society, his courteous and kindly manner made him a universal favorite, while in public life he was equally esteemed and respected by all who knew him. Of his integrity, nothing more need be said than that he has died poor, leaving to his widow and adopted son little beyond the heritage of a name on which not even forty years of Levant official life have left a stain. Not alone the American colony, therefore, to which his loss will be great, but Turks, Armenians, Greeks, and Europeans of nearly every nationality, will hold in kindly and respectful remembrance the name of John Porter Brown.

BROWNELL, HENRY HOWARD, an American author, poet, and soldier, born in East Hartford, Conn., in 1820; died there October 30, 1872. He was from an eminently gifted family, his father, Dr. Pardon Brownell, and his uncle, the late Bishop of Connecticut, being especially distinguished for intellectual ability. He was

educated at Trinity College, Hartford, and, we believe, studied law, but his tendency to literary pursuits was so strong that he never attempted the practice of the law to any extent. His tastes were poetical, and his wide and thorough culture aided his genius in giving scope to his poetic fancies. A little volume of lyric poems, published by him as early as 1850, gave evidence of rare power and brilliancy. For a time he turned his attention to other fields of literary labor, which, if less inviting, yet offered a fairer prospect of remuneration. He wrote a history of the War of 1812, giving special prominence to the naval portion of the war, and two or three other books of a somewhat similar character. At the opening of the late war, his whole soul was absorbed by it; he entered first the army, and then the navy, as a volunteer, was a participator in the naval battles of the Gulf, and the Lower Mississippi, and became the intimate friend and private secretary of that noble hero, Admiral Farragut. He was with Farragut at that famous fight in Mobile Bay, and his poem, "The Bay Fight," which subsequently gave the title to his volume of war lyrics, was the finest descriptive poem of the war. Mr. Brownell had the dramatic power of Robert Browning, in a large degree, and a rare humanity which softened and rendered beautiful all the creations of his fancy, all the transcripts of his large and varied experience. He was a *genre* poet; he caught his inspiration directly from common things, and rendered them enduring and sublime in the spirited and picturesque forms in which he embodied them. As the war grew in dignity and scope, so grew his poems. He never annoyed the world with a too frequent enunciation of the *quorum pars fui*, but it was evident that he always wrote of what he knew, and what he had seen. He wrote in strong, broad *American*; sometimes his language was not gracious, but it had meaning; even the rough expression of the tyro soldier bent into poetic form under his facile pen.

BRUNSWICK, a duchy of the German Empire. Duke, Wilhelm, born April 25, 1806, assumed the government in 1831, his brother, the reigning Duke Karl, having been declared by the German Confederation incapable of governing. Area, 1,400 square miles; population in 1871, 311,819. Capital, Brunswick, with a population, in 1871, of 57,883. In the budget for the financial period from 1870 to 1872, revenue and expenditure were estimated at 7,196,400 thalers each. Public debt, in December 1871, 12,765,768.

As Duke Wilhelm, his brother, as well as the dethroned Duke Karl, is without heirs and already sixty-six years of age, it is the common expectation that at his death the ducal line of Brunswick will become extinct. In 1871 the Diet of Brunswick requested the Government of the duchy to take, conjointly with the Diet, all the necessary steps for guarding the interests of the country in the case of a sudden

GENEALOGY OF THE HOUSE OF BRUNSWICK, HANOVER, AND GREAT BRITAIN.

ERNEST THE CONFESSOR (d. 1546),

Duke of Brunswick-Luneburg.

FRANCIS OTTO (d. 1599), Duke of Brunswick-Luneburg.	HENRY (d. 1595), Duke of Brunswick-Luneburg-Dannenberg.	WILLIAM, Duke of Brunswick-Luneburg.
JULIUS ERNEST (d. 1650), Duke of Br.-Luneburg-Dannenberg.	AUGUSTUS (d. 1666), Duke of Br.-Luneburg-Wolfenbüttel.	ERNEST II. (d. 1611), Duke of Br. Zelle.
RUDOLPHUS AUGUSTUS (d. 1705),	ANTHONY ULRICH (d. 1716), Duke of Br.-Luneburg.	CHRISTIAN LOUIS (d. 1666), Duke of Brunswick and Prince of Luneburg.
	FREDERICK ALBERT I. (d. 1687), Duke of Brunswick.	CHRISTIAN WILLIAM (d. 1705), First Elector of Hanover.
	CHARLES (d. 1730), Duke of Br.-Luneburg-Wolfenbüttel.	GEORGE I. (d. 1727), Elector of Hanover and King of Great Britain.
	CHARLES WILLIAM FREDERICK (d. 1807), Duke of Br.-Luneburg-Wolfenbüttel.	GEORGE II. (d. 1760), Elector of Hanover and King of Great Britain.
	FREDERICK WILLIAM (d. 1815), Duke of Br.-Luneburg-Wolfenbüttel.	FREDERICK LOUIS (d. 1751), Prince of Wales.
	CHARLES, Duke of Br.-Luneburg- Wolfenbüttel.	GEORGE III. (1820), Elector of Hanover and King of Great Britain, 1760, King of Hanover, 1814.
GEORGE IV. (d. 1830), King of Hanover and Great Britain.	WILLIAM I. (d. 1837) (IV. of Great Britain), King of Hanover and Great Britain.	ERNEST AUGUSTUS (d. 1851), King of Hanover.
	VICTORIA, Queen of England.	GEORGE V., Ex-King of Hanover.
EDWARD ALBERT, Prince of Wales.	ALFRED, Duke of Edinburgh.	ERNEST AUGUSTUS, Ex-crown-prince of Hanover.
	ARTHUR.	
	LUDWIG.	

vacancy of the throne, and to apply to the Imperial Government of Germany for a guarantee of their measures. In a rescript dated May 9, 1871, the state ministry of Brunswick replied that a legal uncertainty as to the right of succession did not exist, and that the fundamental laws of the country up to 1832, and the family agreements, were now, as before, valid. The ministry denied that the situation was in any way changed by the dethronement of the Guelphic house of Hanover, and only thought it desirable that provisions should be made for the temporary administration of the duchy, in case the lawful successor should be prevented from entering at once upon the government. It proposed, therefore, that the Diet should appoint a committee which might further discuss the important question with the Government. The Diet then proposed to the Government to ask the German Emperor, in the case of a vacancy of the throne, to take charge of the Government of the duchy to the time when the lawful successor of the present duke would be installed. The Diet and the Government were unable to agree upon any further steps. In December, 1872, the Government officially notified the Diet that according to the will of the duke, and the family laws of the ducal house, the ex-King of Hanover, or his son, would inherit the duchy. The organ of Prince Bismarck at once severely attacked the decree of the Brunswick Government, and at the close of the year 1872 the Brunswick succession question was considerably agitating the diplomatic world. It was believed that the Prussian Government would favor the suc-

cession of one of the sons of Queen Victoria to the vacant throne.

BULKLEY, HENRY DAGGETT, M. D., a physician and author of New York City: born in New Haven, Conn., April 20, 1808; died in New York City, January 4, 1872. He was fitted for college in his native city, and graduated from Yale College, in 1831. He was engaged in mercantile pursuits in New York City for six or seven years after graduation, and then returned to New Haven to study medicine under Dr. Knight. He received the degree of M. D. in 1830, and soon after went to Europe for further advantages, and spent some time in the hospitals of Paris, studying cutaneous diseases. He began practice in New York City in November, 1832, and his clientage, which was early a large one, continued to increase until his decease. He was especially an authority in cutaneous medicine, and one of the first in the country to lecture on these disorders, delivering several courses of lectures in the College of Physicians and Surgeons, and the first to establish a dispensary in New York City for their treatment. Besides his connection with several other dispensaries, he was appointed in 1848 attending physician to the New York Hospital, which position he held until his death. He occupied at different times the presidential chairs of the New York Academy of Medicine, the New York County Medical Society, etc. In 1846 and in 1852 he published editions of Caze- nave and Schédel, on "Diseases of the Skin," and in 1851 edited Gregory on "Eruptive Fevers."

C

CALIFORNIA appears to advance in material prosperity, and the condition of her affairs shows a marked increase and expansion.

The number of immigrants, for permanent settlement within her boundaries, is considered as less by far than her climate and the vastness and variety of her resources seem to entitle her to. No State in the Union is better known abroad as a place inviting immigration, although this knowledge is connected chiefly with her mines of precious metals. This scantiness of immigration, as compared with the almost steady tide pouring into other States of the Union, less favored by Nature, is attributed to a want of care on the part of the State herself, as she has not appointed Special Commissioners for that purpose, nor agents, to reside at the proper ports.

Within an area embracing 120,000,000 acres, or about four times as much as the State of New York there are, in California, some 40,000,000 acres of arable land; of which, according to the report of the Surveyor-General, 2,670,671 acres were under cultivation in 1870. This number was increased to about 2,800,000 in 1872.

Mining, agriculture, and the raising of sheep for wool, are the chief objects of industry in the State. The product of the mines this year, owing to an abundant supply of water, which allowed them to be more extensively worked, and new ones started, is set down at \$25,000,000. This is considerably more than during several preceding years. This interest, which engrossed the attention of the people in the State almost exclusively at first, and continued for many a year to be their chief occupation, has steadily declined since the opening of the mines in Nevada, though these also are mostly worked on account of people residing in San Francisco. They regard the gold-crop gathered in both places as one. The yield in Nevada, whose population is reckoned at 41,886, has been increasing of late in very remarkable proportions. From \$13,000,000 in 1869, it grew to more than \$25,000,000 in 1871, and is set down at \$40,000,000 in 1872.

The wool-crop, in 1872, is placed at 25,000,000 pounds; and its return in money at \$10,000,000.

Agriculture, properly so called, is very extensively pursued in its several branches, and assuming each successive year vaster dimensions, both in the raising of fruit-trees and small grain, above all of wheat. Besides furnishing the people with a supply for home consumption, there are considerable quantities left for export.

The grape-crop, in 1871, when a large number of new vines came into bearing, was better than in the previous year; though it was injured to a very great extent by frost and grasshoppers. These two seem to be the greatest dangers threatening the grape in California. The quantity destroyed by them in 1871 was estimated equal to the yield of 600,000 gallons of wine. The value of the surplus of wine for export, from the vintage of 1872, is estimated at \$1,000,000.

The "California Vine Growers' and Wine and Brandy Makers' Association" held a meeting at Sacramento, near the close of February, 1872, when the Committee on Statistics submitted the following figures of the production in the State for the four years next preceding:

1868, Wine, gallons,	1,884,000
" Brandy, "	253,848
1869, Wine, "	2,636,000
" Brandy, "	168,811
1870, Wine, "	3,800,000
" Brandy, "	157,080
1871, Wine, "	6,000,000
" Brandy, "	300,000

The committee estimate the wine of 1872 at thirty cents per gallon, the brandy at \$1.50, and say that table-grapes were sold to the amount of \$600,000, making a gross yield to the vineyardists of \$2,700,000, exclusive of grapes wasted, or used for home consumption. The price of the wine and brandy to consumers out of the State is three times as much as the grape culturists receive.

The raising of wheat surpasses in extent all other agricultural products in the State. In 1863 she had no wheat for export, but, to supply the wants of her people, imported considerable quantities from Chili. Crops sufficient for home consumption, and more, were subsequently obtained, and the largest of any previous year was that of 1870, when the export amounted to 6,000,000 sacks. In 1872, which has been a very good season, the surplus wheat for export has reached 12,000,000 sacks; the amount of money to be realized from its sale being estimated at from \$20,000,000 to \$24,000,000.

There are three wheat-farms in the San Joaquin Valley, with areas respectively of 86,000 acres, 28,000 acres, and 17,000 acres. On the largest of these farms the wheat-crop for 1872 is reputed to be equal to an average of forty bushels to the acre, the yield running up on some parts of the farm to sixty bushels. The product of this farm for the year is 1,440,000 bushels. The boundary on one side of this farm is about seventeen miles long. At the season of ploughing, ten four-horse teams

were attached to ten gang ploughs, each gang having four ploughs—or forty horses, with as many ploughs, were started at the same time, the teams following in close succession. Lunch or dinner was served at a midway station, and supper at the terminus of the field, seventeen miles distant from the starting-point. The teams returned on the following day. The wheat in this immense field was cut with twenty of the largest reapers, and thrashed and put in sacks. It would require over forty ships, of medium size, to transport the wheat raised on this farm to a foreign market. Even the sacks required would make a large expenditure in the surplus of money of most farmers. Touching the product of the two other farms, the average is not much below that of the first. There are thousands of tons of wheat which cannot be taken out of the valley before winter, and must remain over as dead capital, or, what is nearly as undesirable, will only command advances at heavy rates of interest.

The raising of cotton has begun to engage the attention of agriculturists in California; some portions of which are said to be well adapted to its growth. It was estimated that about 1,000 acres-of land were devoted during the year to the culture of this plant.

Notwithstanding its copious rains, California is subject to drought. With a view to counteract its injurious effects by the employment of artificial means, and thus facilitate the operations of agriculture, a law was enacted by the Legislature, providing for and regulating irrigation. The provisions are applicable to all the counties, except four, in the State; the substance of the act being summarily as follows: "It authorizes the formation of irrigation districts to which one system of irrigation is applicable, and authorizes the appointment of trustees, the assessment of benefits, the levying and collection of taxes, and the condemnation of water needed for the district. It recognizes irrigation as a public pursuit, and gives it the benefit of the use of the public treasury. Fresno, Tulare, Kern, and Yolo Counties, are excluded from the operations of the act."

The aggregate amount of all the industrial products of California for this year, allowing \$20,000,000 of the gold-crop in Nevada to be on her account, was estimated at \$80,000,000, against \$61,000,000 in 1871, and \$53,000,000 in 1870.

The means of transportation for passengers and merchandise within the State and connecting with those without, as also along the coast, are furnished by several railway lines which, chartered separately at the time of their construction, are now merged into one corporation, owned, it is said, by three persons. This company keeps also a number of steamers on a water-route of many hundred miles. A list giving the names of the said railways, and showing their capital stock and amount actually paid in, as taken from the reports of the

proper officers and the sworn statements of the heads of the company, presents the following results :

Central Pacific Railroad Company.		
Total capital stock.....	\$100,000,000	
Actual amount paid in.....		\$54,333,190
California Pacific. Total capital. \$12,000,000		
Actual amount paid in.....		12,000,000
San Francisco & Northern Railroad.		
Capital stock.....	\$88,600,000	
Amount actually paid in.....		300,000
Southern Pacific Railroad. Capital stock.....		
	\$70,000,000	
Amount actually paid in.....		8,404,900
Sacramento Valley Railroad. Capital stock.....		
	\$1,000,000	
Amount actually paid in.....		336,500
Stockton & Visalia Railroad Company. Capital stock.....		
	\$5,500,000	
Actually paid in.....		71,833
Stockton & Copperopolis Railroad. Capital stock.....		
	\$1,500,000	
Actually paid in.....		4,800
San Pablo & Tulare Valley Railroad. Capital stock.....		
	\$3,750,000	
Actually paid in.....		15,030
Terminal Railway. Capital stock, \$4,000,000		
Actually paid in.....		27,500
Northern Railroad Company. Capital stock.....		
	\$8,400,000	
Actually paid in.....		21,060

Total cash actually paid in..... \$75,964,773

Since these statements were made, more of their capital stocks have been paid in, to swell this amount to the round sum of.... \$80,000,000
To this add amount of bonded and floating debt, as above..... 112,000,000

Total cost as per above statement..... \$192,000,000

The earnings and expenses on five of the roads in 1871, as stated in their reports, were as follows :

	Earnings.	Expenses.
Central Pacific.....	\$8,000,000	\$3,351,000
California Pacific.....	800,000	1,172,000
San Francisco & Northern.....	150,000	128,000
Southern Pacific.....	650,000	500,000
Sacramento Valley.....	120,000	124,000
Total.....	\$9,720,000	\$10,265,000

The expenses of the Central Pacific Railroad, as above set down, are said "not to include the interest due to the Government;" which would show it to be in arrears to the amount of the interest above the excess of the expenses over the earnings.

The length of roads built and in complete working order within the State in January, 1872, as compared with the extent of her superficial area, was in the proportion of one mile of railway for every 204 miles of area.

From the report of the Assembly's Committee on Railroad Fares and Freights, published in February, 1872, it appears that the rates per mile, charged by the railroad for the transportation of merchandise to different points of destination, are remarkably various, although the starting-place is the same: "The rate on ordinary merchandise from San Francisco to Modesto is 3.9 cents per ton per mile; to Marysville, 3.15 cents; to Sacramento, 2.6 cents; to Colfax, 4.22 cents; and to Truckee, 7.3 cents. Intermediate rates vary from three to 15 cents, which is the maximum allowed by law."

On the Sierra Nevada the charge for transporting freight is seven times as much per mile as in the valleys, owing to the extraordinary additional expense which the company must sustain for working that part of the road, and for the frequent repairs of all sorts to be made on the tracks worn out by the immense strain. A train of cars which requires one locomotive to run on a level, takes five to be dragged up the mountain-side.

The taxes paid on the railroad property in the State amounted in 1871 to \$132,290.04. Of this sum, \$90,773.86, or more than two-thirds, represent the taxes on property located in only five counties intersected by the main line of the Central Pacific Railroad, namely, the counties of Alameda, Nevada, Placer, San Joaquin, and the county and city of Sacramento.

The contest about Goat Island, which had been carried on for some time between this powerful corporation and the citizens of San Francisco (the former endeavoring to get possession of the island, and locate there the terminus of their roads, the latter striving to prevent the realization of their design), was renewed in the present year with increased energy and determination. Seeing the importance attached to the matter, the vigorous means employed by each to carry their point, and the excitement prevailing among them, this contest, and the meeting of the parties for an amicable adjustment of their differences, and its result, may perhaps be regarded as the greatest event of 1872 in California.

Goat Island is in the midst of the bay of San Francisco, at nearly an equal distance from that city and its opposite shore at Oakland. It is the property of the Federal Government, and used as a military station. The railroad company, regarding the island as a desirable place for their operations, resolved to locate on it the terminus of their roads, and join it by a bridge to San Francisco. They therefore caused a bill to be introduced into the Lower House of Congress giving them a grant or lease of the island for that purpose. This demand and project were met by the citizens of San Francisco with decided opposition, both because they held the company bound to locate the terminus of the road within the city, as a condition on which they had contributed to aid in its construction, and because, upon the judgment of experts, the building of the contemplated bridge from Goat Island to San Francisco must necessarily obstruct the free passage of the tide-water, and seriously injure, and in time destroy, the present harbor.

The bill was not finally acted upon at the session of 1871. It was taken up again in 1872, and its passage urgently pressed in behalf of the company, a large number of influential persons outside and within the House strenuously working for it; prominent among whom were the representatives from California. The excitement in San Francisco was

then intensified to the highest degree; the grounds of opposition to the measure were the company's attempt to break the compact, the injury to the harbor from the intended bridge, and chiefly the apprehension that the location of the terminus at Goat Island would cause it gradually to grow into a city, whither would also be transferred a large proportion of the business now transacted in San Francisco.

This apprehension seems not to have been ill founded. Within six weeks after the introduction of the bill at Washington, in March, the market value of real estate in San Francisco declined 25 per cent., and it was anticipated that, in case of its passage by both Houses of Congress, the depreciation would reach 75 per cent.

On the 6th of April, 1872, a number of citizens met and appointed a committee of seven, enjoining them to select, from among the prominent residents of San Francisco, one hundred persons belonging to every department of trade, to be organized into a committee representing the citizens, "for the purpose of considering the interests of San Francisco in respect to railroads, etc., and report a form of organization at a future meeting." The meeting took place at the Chamber of Commerce on the 17th of the same month, when the Committee of Seven presented their report. This document contained a list of 148 names of well-known residents, unanimously selected; organized them into an association to be styled "The Committee of One Hundred;" nominated their officers, consisting of a president, two vice-presidents, a secretary, and a treasurer; and proposed the names of twenty-nine members to act as an executive committee, "whose duty should be to arrange and execute the business of the association, and whose acts should be subject to the approval of the general committee." The president, vice-president, secretary, and treasurer, were *ex-officio* members of the Executive Committee. This report was unanimously adopted by the association at the said meeting. It also adopted by acclamation the following preambles and resolutions, setting forth the causes of the organization and the purpose intended to be accomplished by its action:

Whereas, The Central, Western, and Southern Pacific Railroad Companies have received enormous grants of land and subsidies of bonds and money from the Federal Government, from the State of California, from various counties of the State, and from the city of San Francisco, which grants and subsidies were more than sufficient for the entire construction and equipment of said roads; and—

Whereas, This State and city have given to said railroads large subsidies and valuable grants of land within this city, with the intention and understanding that the said roads should make their western terminus within the city of San Francisco, and upon the tract of land granted for the purpose in Mission Bay; and—

Whereas, The said companies have obtained large grants of land on the opposite side of the bay, in front of Oakland, and have directed the entire railroad system of the above lines, and all the rail-

roads of this coast, toward said last-mentioned point, in disregard of the conditions of the said compact; and—

Whereas, The said companies have been, and are now, making strenuous efforts to obtain from the Federal Government a grant or lease of Goat Island, lying in the bay of San Francisco, midway between this city and the Oakland shore, for the purpose of a terminus of all the lines aforesaid, in spite of and against the expressed wishes of this city, and in defiance of the damage and danger to the harbor and commercial interests of this port, as conclusively demonstrated by scientific investigations and the judgment of eminent engineers:

Resolved, That the city of San Francisco has a right to expect, and does expect, of said railroad companies a strict compliance with the terms and conditions of the compacts made by said companies, to wit: the actual and immediate location of the terminus of said roads (now merged into one ownership) upon the sixty acres of land in Mission Bay, in this city, and the actual and immediate abandonment, on the part of said companies, of any construction or proceeding having in view the fixing of such terminus at any other point whatsoever.

Resolved, That the citizens of San Francisco believe that the said companies should withdraw from Congress immediately all claim, demand, or request, for any grant, lease, or privilege of using, or connecting said roads with Goat Island, and at once cease all further construction of wharves, piers, or slips, in the channel of this bay or the terminus of their present Oakland wharf or elsewhere.

Resolved, That in case the said companies shall decline, refuse, or omit to comply with this reasonable request, it is the right, the duty, and the purpose of the citizens of San Francisco to take all lawful measures for maintaining their rights in the premises, and to prevent the said wrongful acts of said companies.

Resolved, That, if the city of San Francisco should be compelled to resort to legal tribunals to assert and maintain her rights as against said companies, it would be proper and just that the grants and subsidies conditionally made to said railroads be annulled and set aside.

Resolved, That it is to the interest of San Francisco and of the said companies that there should be complete accord and harmony of action between them; and that, to facilitate and aid the requirements of commerce, this city should not be, and will not be, governed by any hostile or unfriendly feeling toward said companies, but should continue to be liberal and accommodating, only demanding in return, on the part of said companies, the same prompt and exact compliance with agreements as would be demanded of and accorded by this city.

Resolved, That it eminently concerns the whole Pacific coast, and especially the city of San Francisco, that another railroad, connecting the Atlantic with the Pacific, and traversing a route free from danger of obstruction and delay by severities of winter, and having its terminus in San Francisco, should be constructed as soon as possible; and that this city and the adjoining counties should contribute liberally to aid such an enterprise.

Resolved, That the Executive Committee of this association be instructed to act upon and carry out the spirit of these resolutions, and to take such measures for so doing as in their judgment may be most efficient.

Resolved, That a copy of these resolutions be sent to Leland Stanford and to every member of Congress, and to the Mayor of St. Louis, and to the president of the Atlantic and Pacific Railroad Company.

The Committee of One Hundred then prepared a memorial to Congress, which was signed by twenty-five thousand residents of

San Francisco, representing, it was said, not only "all the prominent business-men of the city," but "nearly all the voters of every class."

In the United States Senate, both of the members from California were opposed to the granting of Goat Island to the railway company.

In the Lower House of Congress, the bill granting the island to the company had been called up, and on the 22d of April it was finally put to the vote and passed.

The Committee of One Hundred, while firm in the determination of using all the means in their power to prevent the ultimate success of the said bill in Congress, thought it expedient to endeavor amicably to adjust the matter, if possible. They deputed five of their number as a special committee, styled "The Committee on Municipal Legislation," to treat with the railroad company. The company favorably responded to their overtures.

After repeated conferences held by the Special Committee with Mr. Leland Stanford, who acted in his own name, and in the name of his co-partners, a definitive arrangement was agreed to. A full report of this negotiation and its result was prepared and signed by three of the five members of the Special Committee on the 14th of August, 1872, and submitted by them to the Executive Committee on the 23d, at a meeting held for that purpose.

The report recommended the adoption of this agreement, by showing the benefits accruing to San Francisco from a realization of the objects contemplated in its several articles, as follows:

ARTICLE I. The abandonment of the demand for Goat Island destroys the availability of Oakland and its water-front as a terminus for railroads, and the contemplated cession of the island to this city, for hospital purposes exclusively, would, if acquiesced in by Congress, effectually remove forever the possibility of future railroad aims in that direction. The cession of the island to San Francisco, for such use, would, in our estimation, be worth at least a million dollars.

ARTICLE II. The construction of the proposed shore-line of road to Niles, commencing at Mission Bay, and its completion within eighteen months, would, in the expenditure of three million dollars, give great activity to labor and skilled industries, and reestablish, by its anticipated speedy completion, the confidence in the future of this city.

The commencement of the construction at Mission Bay would require the expenditure of more than a million dollars, in the building of the first ten miles, where great difficulties are to be overcome; and the payment of the proposed subsidy being made by law, on completion of each five miles, and then only proportionate to the entire length of the road, the amount to be received by the companies for this ten miles would be little over one-half the cost of construction, thus insuring the completion of the remainder.

ARTICLE III. The modification of the sixty-acre tract is believed to be an improvement upon the present system of streets, the blocks being arranged by rectangular lines, with the exception of those fronting on Fourth Street, which is, and probably will continue to be, an important artery to the southern districts of the county. The concession of the

market-places was assented to for the reason that, as the city holds them only to be disposed of for railroad or commercial purposes, and, as they would be practically inaccessible to any other contemplated railroad, their pecuniary or other value to the city would be small, and, if not disposed of by the city, might, by some repealing act of the Legislature, be placed beyond her power to control.

By this article, the injustice of which the railroad companies have reason to complain, in the prohibition of access to the water-front, is removed by the extension of their two hundred-foot strip along the westerly line of China Basin, thus affording them the needed approach to deep water, and reducing the area of the basin by only about four acres.

ARTICLE IV. Relating to the issuing of two million five hundred thousand dollars of bonds to aid in the construction of the work, is regarded as liberal to the companies, but believed by the committee to be far less than the pecuniary benefits to be gained by the city under the provisions of the agreement.

ARTICLE V. The right of the city to grant the use of the lands south of Mission Bay, donated by the State to the companies for right of way, and extending to San Bruno Point—ten miles—will enable San Francisco to assist some other company with a grant of roadway that would be costly to obtain by purchase. The same privilege is secured for the use of the bridge across the bay.

ARTICLE VI. Stipulates for the permanent location of the terminus of the roads in Mission Bay, and that the main business of the Southern Pacific road, which has diverged at San José toward Oakland, shall be done over the new line. This will be greatly beneficial to San Francisco in fixing the location of that business at the point required by the mercantile interests of the city.

ARTICLE VII. Provides for railroad facilities to trade and commerce along the entire city front. This was demanded by the committee as an act of justice to that portion of the city remote from Mission Bay, and upon which burdensome expenses for drayage would be imposed if the Mission Bay lands were to be made the only point for receiving and delivering freight. Its advantages, though not immediate (being subject to future but necessary modification of the water-front line), will be none the less beneficial, and will, we think, be admitted by all.

The committee has endeavored, in this negotiation, to serve fully the interests of San Francisco, and, while demanding such concessions from the railroad companies as were important to secure, has aimed to be just to both parties.

This report is respectfully submitted for your consideration, with the hope that the terms agreed upon will be found satisfactory to your body and worthy to be recommended to the people of San Francisco.

ALFRED WHEELER, Chairman.

F. W. WATERMAN,

TYLER CURTIS,

Committee on Municipal Legislation.

Dated SAN FRANCISCO, August 14, 1872.

Two among the members of the Committee of Five, regarding the amount of subsidy to be granted to the railway as too large, did not sign the report of their colleagues, but presented the following minority report:

The undersigned, members of the Committee on Municipal Legislation, while agreeing to many of the suggestions contained in the report made this day by said committee, have declined to sign the same, for the reason that, in their opinion, the concessions proposed therein to be made by the railroad companies are not commensurate with the amount of the subsidy proposed to be given to the said railroad companies.

J. C. MERRELL,

WILLIAM SHERMAN.

SAN FRANCISCO, August 14, 1872.

The majority report was approved by the Executive Committee, and the proper steps taken to execute its provisions by both parties. Subsequently, in 1873, the contest was revived, the details of which will be stated in the next volume.

While opposing the Central Pacific Railroad Company in reference to the location of their terminus on Goat Island, the Committee of One Hundred took steps for the construction of some competing line to connect San Francisco with the Eastern States. Their object was, to guard the people against exactions to be feared from a monopoly, and to avoid the delays occasioned by the natural obstacles to the progress of trains on that route in winter. In accordance with one of their resolutions, they met in the beginning of May, and appointed a Committee of Three to proceed to the Eastern States, and collect reliable information concerning the affairs of the Atlantic & Pacific Railroad Company, with a view to bring about a connection of the city of San Francisco with the city of St. Louis, Missouri, by a continuous line along the thirty-fifth parallel. The commissioners, finding the condition of the company satisfactory, conferred with its managers, and also with the municipal authorities of St. Louis upon the subject of their mission. The result of their inquiries and action was an arrangement entered into between the city of San Francisco, the city of St. Louis, and the Atlantic & Pacific Railroad Company, to continue the said line to San Francisco.

Enthusiastic meetings were held in favor of this line to accelerate its construction; but the enthusiasm seems to have then subsided, further investigations having produced a distrust in the scheme.

No general election for State officers took place in California during the year; but the presidential campaign has afforded occasion for action to the political parties.

A Republican Convention was held at Sacramento on the 25th of April, and delegates were nominated to the Philadelphia Convention. It also adopted the following resolutions unanimously:

Resolved, That we have a firm and abiding faith in the principles of the Republican party, and point with pride to its achievements, believing that the party which brought order out of chaos, saved and preserved the nation, is alone worthy of administering its affairs in the future.

Resolved, That we fully and heartily indorse the wise, patriotic, just, and economical Administration of U. S. Grant as President of the United States; and that our delegates to the National Convention are hereby instructed to use all honorable means to secure his renomination, he being the unanimous choice of the Republican party of the State of California.

Resolved, That the delegation from California to the National Convention at Philadelphia vote as a unit for a candidate for Vice-President.

A Democratic State Convention assembled at San Francisco on the 20th of June, nomi-

nated delegates to the Baltimore Convention, and adopted the following resolutions:

Resolved, That the best interests of the nation require a change in the administration of the Government, and all good citizens should disregard the prejudices and differences of the past, and unite in one grand effort to restore the Government to its original purity.

Resolved, That we earnestly condemn and protest against the machinations, tyranny, extravagance, and corruptions of the Administration of U. S. Grant, which, for lobbying schemes and building up monopolies, has no parallel in the history of our country.

Resolved, That we fully recognize the patriotism and pure motives of the Liberal Reform Republicans, and trust that such action may be taken at the Baltimore Convention as will result in the hearty cooperation of all parties opposed to the present Administration, and that we recommend to the consideration of the National Democratic Convention the principles enunciated in the platform of the Cincinnati Convention.

Resolved, That, having an abiding confidence in the wisdom and patriotism of the Democratic National Convention soon to be assembled at Baltimore, we pledge ourselves to give the nominees of that convention a hearty support.

Resolved, That we leave our delegates to the National Convention free and untrammelled, believing that wise counsels and devoted patriotism will govern their action.

Upon the reading of the report submitted by the chairman of the Committee on Resolutions, one of the members of the convention said: "I move that all that part of the report of the Committee on Resolutions pertaining to endorsing the Cincinnati, or any other Republican platform, be stricken out." The chair declined to entertain the motion, saying, "It comes up on the question, whether the report shall be adopted or not." The third resolution passed with the same vote as the others.

The Republicans met also in convention at San Francisco on the 2d day of August, when they nominated a full electoral ticket, and adopted the following platform:

Resolved, That the Republican party of California, in convention assembled, heartily indorse the declaration of principles embodied in the platform of the National Convention of the Republican party, adopted at Philadelphia, and pledge themselves to the cordial and united support of the standard-bearers there selected for President and Vice-President of the United States.

Resolved, That in U. S. Grant we recognize the patriot, soldier, and statesman, under whose leadership the Union was preserved, and whose record as a soldier is fully equalled by his wise and prudent administration of national affairs, by which peace has been restored and the Union cemented, the debt and taxation greatly reduced, and the national flag respected throughout the world.

Resolved, That in Henry Wilson we hail the true friend of labor, whose whole career has illustrated that the Republic recognizes true merit in her sons, who, by their ability, honesty, and worth, commend themselves to the confidence of the people.

Resolved, That General U. S. Grant and Henry Wilson, by their course in civil life, and by their public and official acts, have proved themselves to be the true, fast, and firm friends of labor and reform.

Resolved, That the party claiming to be the followers of Jefferson and Jackson, that enunciated the doctrine of "principles, not men," having by the indorsement of Greeley and the Cincinnati platform, made an unconditional surrender of all that was left

of its political principles, it only remains for the National Republican party to consign it, with its unholy coalition, to political oblivion forever.

Resolved, That the Republicans need no "new departure," and have no faith in that so-called liberal reform which involves the desertion of true and tried leaders, or abandonment of the principles of republican government and the rights of man.

Resolved, That we fully concur in the opinion of Horace Greeley, that General Grant never has been beaten and never will be, and propose to "fight it out on this line" until November, when said prediction will be fully realized by the verdict of the American people.

The German citizens of San Francisco held two mass meetings on the 17th and 23th of August, in favor of the Republican candidates for President and Vice-President. Both meetings were reported as having been very largely attended, enthusiastic, and addressed by numerous speakers. The meeting of the 17th gave expression to its political sentiments in the following preamble and resolutions:

Whereas, The German-born citizens of our country most ardently desire the welfare, prosperity, and perpetual continuance of this republic—their adopted fatherland—and the preservation of our own free political institutions, as well as our peaceful and happy relations with all foreign countries; and, whereas, the great National Republican party has, by the abolition of slavery and the adoption of the amendments to the Constitution, established a republic in its real meaning, free and equal to all men; and whereas, we recognize the services of those who remained true to these Republican principles in war, as well as in peace, who defended these principles with the sword as well as the pen, and who caused our beloved new fatherland to be to-day united, free, great, and mighty; and whereas, in the event of the election of Greeley and Brown, we consider the rights and liberties of the people endangered by the introduction of, to us, distasteful temperance and Sunday laws: therefore, be it

Resolved, By the German-born citizens of San Francisco, here assembled—

1. That we accept with pleasure and pride the platform of the great National Republican party, as presented to the people by the Philadelphia Convention; and we recognize in the nomination and election of Grant and Wilson the future preservation of our adopted fatherland.

2. That we denounce the alliance of discontented Republicans with Democrats and secessionists, as unnatural, and portending danger to our republic.

3. That we pledge ourselves to use, during the coming campaign, all our energy, and all honorable means, to defeat a party supported by such elements as Tweed, the New York Tammany, Jeff Davis and secessionists, and drifting to anarchy and increase of the national debt.

4. That we now organize a German-American Grant and Wilson Club for the coming campaign, and for the purpose of uniting all German-born Republicans of our State; and we, therefore, earnestly invite every German, having the interest of his adopted fatherland at heart, to join and aid us, by word and deed, in this just and noble cause.

A new apportionment of the State, for election purposes, was proposed to the Legislature at the session of 1872, and defeated. This result was condemned, it is said, by all the Republican and independent press in the State, with one exception. It was characterized as unjust, and as brought about by fraud and the employment of other undue means. In San Francisco it was asserted that, by the present

system, their representation in the State Legislature was less than their due proportion.

The State Asylum for the Insane is overcrowded. In order to supply the deficiency of room, three commissioners were appointed to select a proper site whereon to erect a building for a branch asylum. They decided to locate it on a spot situated about a mile and a half from the town of Napa, and bought for that purpose a tract of 207 acres of land, at a cost of sixty dollars an acre. The selection was regarded as an excellent one for the purpose intended, and the price of the land moderate.

The instruction of youth seems to be carefully attended to in California, and with marked success.

The Territory of Arizona, in the welfare of whose inhabitants the people of California feel great interest, has been frequently subject to depredations and massacres at the hands of the Apache Indians. The commission of these outrages was repeated in the beginning of 1872. Under these circumstances, the Legislature of California, at its session, thought proper to act on that matter, and both Houses, without a dissenting voice, passed the following preamble and resolutions:

Whereas, We are fully assured that the following statements are true:

That the inhabitants of the Territory of Arizona are now, and for years past have been, the victims of the most cruel outrages at the hands of the Apache Indians.

That hundreds of them, including women and children, have been murdered by these savages within the last few years.

That neither homes nor property in that Territory, outside its principal towns, are safe from savage incursion.

That in but exceptional places can any high-road be travelled without great danger.

That many of the citizens of our own State, while there on business, have fallen victims to these Indians.

That at no time in the history of that Territory have the Indians been more hostile, or the lives and property of the people less safe, than within the past two months.

That the nation is rich enough to afford and strong enough to enforce protection to its people living in its own territory and under its own flag, as well as those abroad in other lands.

That, for the murder of the fewest number of its citizens, who have been slain by these savages in Arizona in any two months in the last two years, the United States Government would have declared war against every power in Europe, had its citizens been so murdered there, for want of proper protection from European powers.

That the feeling and belief is universal on the part of the people of this State, and, we believe, of the Pacific slope, that, when General Crook was sent to Arizona, he was the right man in the right place.

That he is as humane as energetic, and, if allowed sufficient means, and given the discretion to which his experience in the management of Indian affairs entitles him, and not interfered with in his operations, he will in a brief period arrest this reign of terror and blood, and give security to the long-suffering people of this Territory; and—

Whereas, We do most seriously believe that in all the land no such prompt and efficient measures are required for the protection of our people as in the Territory of Arizona: therefore, be it

Resolved, By the Senate, the Assembly concurring:

1. That it is the duty of the Government of the United States to give the most prompt and efficient protection to the people of Arizona against the Apache Indians; that all attempts to treat with or otherwise appease them, until they are made to feel the power of the Government, will prove futile in the future, as they have in the past, and must result only in encouraging these savages to continue deeds of carnage.

2. That in no other way can this protection be so promptly and efficiently extended to our suffering brethren in Arizona, as by furnishing General Crook with ample means, and by giving him the largest discretion in the course to be pursued toward the savages.

3. That the President of the United States be and he is hereby urged and implored to prevent further interference with the military operations of General Crook, otherwise than by aiding his designs, until these savages are subdued, and the people of Arizona are made secure in their life, homes, and property.

4. That his Excellency the Governor of this State be requested to telegraph these resolutions and the preamble to the same to the President of the United States; that he cause to be sent copies of the same to each of the Senators and Representatives in Congress of the Pacific States and Territories, and to each of the Governors of the same; and that our Senators in Congress be instructed, and our Representatives be requested, to urge upon the Government at Washington such action in the premises as is indicated by these resolutions.

The total vote of the State, at the presidential election in November, was 95,861; of which President Grant received 54,044; Mr. Greeley, 40,749; and Mr. O'Connor, 1,068. For members of Congress the vote was as follows:

District I.	11,309
"	10,808
" II.	1,066
"	12,808
"	12,619
" III.	894
"	12,105
"	14,088
"	989
" IV.	10,391
"	9,012
"	1,879

According to the Federal census of 1870, the total number of manufacturing establishments in California was 3,984, using 604 steam-engines, with 18,493 horse-power, and 271 water-wheels, with 6,877 horse-power. The total number of hands employed was 25,392, of whom 24,040 were males above 16, 873 females above 15, and 479 youths. The total capital employed was \$39,728,202; wages, \$13,136,723; materials, \$35,851,193; products, \$56,594,556. The total number of church organizations was 643; edifices, 532; sittings, 195,558; property, \$7,404,235. The leading denominations were:

DENOMINATIONS.	Organizations.	Sittings.
Baptist	60	19,775
Christian	30	6,280
Congregational	40	11,975
Episcopal	45	12,085
Jewish	7	2,610
Methodist	134	43,095
Presbyterian	79	21,795
Roman Catholic	100	68,540

The total number of libraries was 1,617, with an aggregate of 474,299 volumes. Of these, 673, with 314,674 volumes, were private;

and 744, with 159,625 volumes, other than private. The total number of newspapers was 201, with a circulation of 491,908; copies annually circulated, 47,472,756. There were 33 daily, with a circulation of 94,100; 4 tri-weekly, circulation 9,500; 4 semi-weekly, circulation 2,700; 140 weekly, circulation 298,603; 1 semi-monthly, circulation 300; 12 monthly, circulation 82,200; 2 quarterly, circulation 4,500.

CARAFÀ, MICHAEL HENRY, an Italian musician and musical composer, born in Naples November 28, 1785; died in Paris July 26, 1872. He received his first instruction in music at the College of La Nunziatella, and subsequently entered the Conservatoire of Loretto. He was in the army of Joachim Murat, attained the rank of captain of hussars, and was in the Russian campaign of 1812. After the restoration of the Bourbon branch at Naples, Carafa retired from military service, and resumed his career as a composer. His first work was "Il Vascello d'Occidente," at the Fondo, Naples, in 1814, followed by the "Gelosia Corvetta" in 1815, "Gabiella di Vergi" in 1816, "Iphigenia in Tauride" in 1817, and in subsequent years, "Adele di Lusignano," "Berenice in Siria," "Elizabetta," and "Gli due Figari," all brought out in Italy. In 1821 he went to Paris, and at the Opéra Comique produced "Jeanne d'Arc," succeeded by the "Solitaire" in 1822, the libretto by Planard. The "Solitaire" was the most popular of his operas. Scribe and Mélesville supplied him with the libretto of the "Valet de Chambre" in 1823. In the following year "L'Auberge Supposée" appeared. His next venture was at the Académie Royale de Musique, in 1825, with "La Belle au Bois Dormant." He composed for Naples, "Tamerlane;" for Rome, "La Capriciosa ed il Soldato" and "Eufemio di Messina," and "Abufar" for Vienna. In 1825 he had "Il Sonnambulo," for Milan, and in 1826 "Il Paria," for Venice. He then ceased to write for his native country, and in 1827 his three-act opera, "Masaniello," was represented at the Opéra Comique in Paris, which work, full of beauty as it was, was extinguished by Auber's "Muet de Portici." His prolific pen did not, however, cease; "Violetta" and "Jenny" followed. In 1829 he set Sir Walter Scott's romance, "The Bride of Lammermoor," for the Italian Opera in Paris, and in this "Nozze di Lammermoor" Madame Sontag was the Lucia. He selected another of Scott's novels, "La Prison d'Edinbourg," for the Salle Favart in 1833. The music allotted to Effie and Jenny Deans was much admired, and there was a fine finale to the second act. His other operas were "L'Orgie," "Le Livre de l'Ermite," "L'Auberge d'Auray," "Une Journée de La Fronde," "La Grande Duchesse;" his last opera was "Thérèse," in 1838. He composed, at the request of Rossini, some ballet music, when the French version of "Semiramide" was produced at the Grand Opéra-house, for the sisters Carlot-

ta and Barbara Marchisio. Oarafa was naturalized in 1834, and was the successor of Lesueur as Member of the Institute. He was also named Professor of Composition at the Conservatoire. His operas had the defect of not being original, but he has left some charming compositions, and he wrote well for the voice.

CARTWRIGHT, PETER, an eccentric but useful Methodist preacher and author, born in Amherst County, Va., September 1, 1785; died at his home, near Pleasant Plains, Sangamon County, Ill., September 25, 1872. His father was a soldier in the Revolutionary War, and about 1790 removed with his family to Logan County, Ky. In his autobiography he thus describes the condition of affairs in the rude district where his boyhood was passed: "When my father settled in Logan County, there was not a newspaper printed south of Green River, no mills short of forty miles, and no schools worth the name. Sunday was a day set apart for hunting, fishing, horse-racing, card-playing, balls, dances, and all kinds of jollity and mirth. We killed our meat out of the woods, wild, and beat our meal and hominy with a pestle and mortar. We stretched a deer-skin over a hoop, burned holes in it with the prongs of a fork, sifted our meal, baked our bread, ate it, and it was first-rate eating too. We raised, or gathered out of the woods, our own tea. We had sage, bohea, cross-vine, spice, and sassafras teas, in abundance. As for coffee, I am not sure that I ever smelled it for ten years. We made our sugar out of the water of the maple-tree, and our molasses too. These were great luxuries in those days. We raised our own cotton and flax. We water-rotted our flax, broke it by hand, scouted it; picked the seed out of the cotton with our fingers; our mothers and sisters carded, spun, and wove it into cloth, and they cut and made our garments, bedclothes, etc. And when we got on a new suit thus manufactured, and sallied out into company, we thought ourselves '*so big as anybody*.'" The Methodist preachers had just begun to make "circuits" in that section, and Rev. John Lurton obtained permission to hold public services in Mr. Cartwright's cabin whenever he touched there on his rounds. After a few years a conference was formed, known as the Western Conference, the seventh then in the United States. In 1801 a camp-meeting was held at Cane Ridge, at which nearly two thousand persons were converted. Peter was then a wild, wayward boy of sixteen, fond of horse-racing, card-playing, and dancing. He was soon convicted of his sinfulness, but resisted the good influences which surrounded him for some time, plunging more recklessly than ever into his wild and wicked life, until, after a night's dance and debauch at a wedding some miles from his father's house, he felt deeply convicted and began to pray. He sold a race-horse he had, burned his cards, and gave up gambling, to which he was greatly addicted, and, after

three months' earnest seeking, he, too, was converted. He immediately started out to preach as a "local," but was soon (in 1803) received into the regular ministry, and ordained an elder in 1806 by Bishop Asbury. He had done effective work about sixty-seven years. In 1823 Mr. Cartwright removed from the Cumberland district and travelled through Illinois in quest of a home, settling the year following in Sangamon County, at that time peopled only by a few hardy and enterprising pioneers. After a few years he was elected to the Legislature, wherein his readiness at reply and resolute spirit made him the victor in many contentions into which he was drawn. He soon retired from politics and ever afterward devoted himself exclusively to the duties of his ministry. He attended annual conferences with almost unfailing regularity for a series of years, and was always a conspicuous member. Year after year he attended camp-meetings, finding his greatest happiness in the good fruits which followed his preaching. He was a delegate to numerous general conferences, and retained his interest in the spread of religion to the last. He was, from a very early period, a zealous opponent of slavery, and was rejoiced when the Methodist Episcopal Church was rid of all complicity with it by the division in 1844. He was for more than fifty years presiding elder in the Church, which he saw rise, from 72,874 members when he joined it, to nearly one million and three quarters when he left it to receive his reward. He was a powerful preacher and a very laborious pastor. He was quaint and eccentric in his habits, and in his style in the pulpit and out, and was possessed of a fund of humor and humorous experiences which always gained favor and popularity wherever he went. He was for many years contemporary with Bishop Asbury. His "Autobiography," published in 1856, is, we believe, his only published work, except some pamphlets long since out of print.

OATLIN, GEORGE, an American artist and author, born in Wilkesbarre, Luzerne County, Pa., 1796; died in Jersey City, N. J., December 22, 1872. After he had received a good academical education, his father sent him to Reeves's Law School, in Litchfield, Conn. There young Catlin remained for two years, bending all his energies to the mastery of law. Then he proceeded to Philadelphia, where he practised in his profession two years; but, notwithstanding his legal studies, he had for several years devoted his leisure moments to the art of painting, for which he had always entertained a passionate admiration, long before he left his father's roof. Art was his idolized profession. So strong did his passion for art become that he finally abandoned the law, and came to New York, where he was soon engaged in the painting of portraits and miniatures. In 1829, being then thirty-three years old, Mr. Catlin had his attention called to the fact that the pure American race was disap-

pearing before the march of civilization. He, therefore, resolved, if possible, to rescue from oblivion the types and customs of the unfortunate Indians. From that moment dated the commencement of his life-study, to which he clung through the remaining years of his existence, in good or evil fortune. In 1831 Mr. Catlin, though discouraged by his friends and by the Government, accompanied Governor Clark, of St. Louis, then Superintendent of Indian Affairs, in a Western tour among the Winnebagoes and Menomonees, the Shawnees, Sacs, and Foxes, and with these interviews began the series of his Indian paintings. After the close of the "Black Hawk War," he visited Black Hawk and five of his warriors, prisoners, at Jefferson Barracks, where he painted their portraits. In the following year he descended the Missouri River, from the mouth of the Yellowstone to St. Louis, in a canoe, with two men, a distance of two thousand miles, steering it the whole way with his own paddle; and in that campaign visited and painted the Mandans, Crows, Blackfeet, K'nisteneux, Assiniboins, Minataries, Riccarrees, Sioux, Puncas, and Iowas. During these voyages he was the correspondent of the *New-York Spectator*. These letters and others, written during subsequent trips to the West, were collected and published in 1841, the volume being entitled "Catlin's Life among the North American Indians." The artist's anxiety to procure faithful and complete portraits of all the Indian celebrities, and of representatives of every well-known or obscure tribe, led him into many dangers, and he travelled thousands of miles in a bark canoe and on horseback. He visited nearly every State in the Union, and was, doubtless, the best-informed man in the world on Indian life and customs. He married and went to Europe in 1840, taking with him his collection of paintings, which he exhibited in London for three years. He afterward went to Paris, where his wife suddenly died, leaving three daughters who are yet living, while the French Revolution turned him out "neck and heels," as he expressed it in his book. In 1852 he sailed to Venezuela, and for several years was employed in exploring the innermost parts of South America, interviewing scores of tribes of wild Indians. "Last Rambles in North and South America," from his pen, is a graphic description of his life in the wildernesses of those countries. He also wrote a little book entitled "Lifted and Subsidied Rocks of America," based on his observations made during his travels. A very valuable work, "North American Folio," containing twenty-five plates of hunting-scenes, was published by him in London. He also prepared, some years since, a little volume entitled "Keep your Mouth Shut; or, The Breath of Life." His books possess very considerable merit, and his paintings, though, perhaps, not ranking among the highest specimens of the limner's art, are yet of great value

as faithful portraits of a fast-departing race, and views of landscapes, which, under the progress of civilization, are already undergoing a rapid transformation. They will be of incalculable worth by-and-by in an historical point of view. His works descriptive of Indian life, and his adventures among the tribes both of North and South America, are also valuable, both for their graphic delineations of the Indian character and their unswerving fidelity to real life. In the autumn of 1871, his collection, comprising five hundred portraits and landscapes, was exhibited in New York city, and a movement has been set on foot by the artist's friend, Gen. J. G. Wilson, for its purchase and preservation in the Central Park.

CENTRAL AMERICA (CENTRO-AMÉRICA) comprises five independent republics: Guatemala, Honduras, San Salvador, Nicaragua, and Costa Rica. In the city of La Union, Republic of San Salvador, Central America, on February 17, 1872, the ministers plenipotentiary of four of the Central-American States, Guatemala, Costa Rica, Honduras, and San Salvador, united in conference, with a view to establish the bases of the union of the Central-American States, conformably to the desires of their respective governments; to protect in an effectual manner the interests of Central America, and of each one of the high contracting parties; preserve and maintain peace between them, and within each of the republics, as the best means of insuring prosperity at home and respect abroad; to extend and sustain republican principles, guarantee the autonomy of Central America, and the integrity of its territory against the aggressions and pretensions of all foreign powers, and to defend the sovereignty of each one of the States, and, finally, to promote every branch of progress, moral, intellectual, and material. The representatives, having duly conferred together upon the various subjects of their important mission, agreed upon certain stipulations, the chief of which were as follows:

ARTICLE I. The Central-American Republics engage to preserve intact the autonomy and integrity of the Central-American territory, so that none of the Governments, for any motive or pretext, shall make any sale, cession, or alienation whatever, which might affect the sovereignty or diminish the respective territory; nor admit annexation to, or the protectorate of, any government or foreign power. In this resolution are not comprehended voluntary territorial arrangements by whom it may concern, provided always that these be with Spanish-American States; but, should any of the republics be violently deprived of her rights, it shall be the duty of the other Central-American States to assist in an efficacious manner toward revindication, making common cause with the State aggrieved.

ART. II. No other form of government than the republican shall ever be established or permitted in Central America.

ART. III. The preservation of peace in the Central-American Republics is one of the strictest duties of their respective governments and peoples, and all disputes which may arise between them, no matter what may be the motives thereof, shall be settled by the mediation of the other Governments that had no

part in the question. In case of non-agreement, the matter will be submitted to the arbitral judgment of the Central-American authority about to be established, or to a tribunal of arbiters composed of the representatives of the neutral Central-American Governments. The infringement of this principle shall be considered as a crime of treason against the Central-American Union.

Art. IV. Rebellion in Central America, against the lawfully-constituted authorities, is a treasonable crime against the Central-American Union.

Art. V. The duration of the presidential term shall be uniform in all the Central-American Republics, without immediate reelection, or any extension whatsoever. All infractions of this principle will be violations of the national pact.

Art. VI. No one can be a slave within Central-American territory. Should a Central-American come to possess slaves in a foreign country, he thereby loses his nationality and the protection of the laws of Central America.

Art. VII. Central America guarantees to all its inhabitants the imprescriptible rights of public meetings, associations, petitions, liberty of printing, of writing, of instruction, and of industry, conformably to the respective laws of each republic.

Art. VIII. Every citizen of any of the Republics of Central America may acquire the rights of citizenship in all the others by expressing his wish to do so before any government authority; and such petition shall not necessarily deprive him of his primitive citizenship.

Art. IX. The right of asylum is recognized for immigrants or political exiles of all nationalities, in all the Central-American Republics; with some restrictions, however, tending to protect the interests of the Government of the exile's country. The extradition of political offenders is prohibited.

Art. X. Literary, academical, and military titles, conferred in one of the Central-American Republics, shall be recognized in the others.

Art. XI. The civil and criminal legislation and procedure shall in future be the same in all Central America, save the modifications required in each particular State.

Art. XII. Confiscation is abolished in Central America.

Art. XIII. Property is inalienable; and entails cannot hereafter be established in the Union.

Art. XIV. Weights and measures shall be the same in all Central America, as well as the weight and alloy of coin, which shall follow the decimal system for gold coins and for those of silver above the value of twenty-five cents.

Art. XV. The plan of official primary instruction shall be uniform in all Central America, being at the same time gratuitous, compulsory, and conformable to republican and evangelical principles.

Art. XVIII. All questions of boundaries, existing or that may arise in the future, between the Republics of Central America, shall be judged and decided upon definitively by the national authority or by the collective tribunal of the three States, if the parties interested cannot arrange amicably between themselves.

Art. XIX. As material ties to establish, foster, and develop the union of Central America, the following are declared to be national undertakings and will be carried out, viz.:

1. The establishment of a line of telegraphs, which, starting from the port of Colon, in Colombia, cross the territory of Central America, to the frontier of Mexico. That part of the telegraph to be formed by a submarine cable between Colon and Port Limon, in Costa Rica, shall be paid or subventioned in equal parts by the five Central-American Republics.

2. The construction of a national highway to open communication between all the capitals of the Central-American Republics, the quality and condi-

tion of said road being optional with each State within its respective territory. The cost of construction and repairs of this national road shall be paid by each one of these States in proportion to the territory traversed by said road.

3. The establishment of mail-steamers on the coast of the Pacific, which, leaving Punta Arenas, or any other port in Costa Rica nearer to Colombia, shall arrive at Port Champerico or any other in Guatemala nearer to the coast of Mexico, touching at the intermediate ports of the Central-American coast. The expenses of the establishment and management of the aforesaid line of steamers shall be borne in equal parts by all the Republics of Central America, the use and management thereof being dependent solely on the Central-American national authority.

4. The excavation of an interoceanic canal by way of the river known as the San Juan of Nicaragua, which will be proposed by the Central-American authority or by representation in common of all the States, shall be paid for by subscription or by shares among all the Latino-American Governments, but, should these be unable to furnish the necessary funds, subscription or share lists shall be opened to all the other Governments of the world, for the purpose of forming a universal transit, but whose neutrality and keeping shall be exclusively in the hands of the Central-American Governments. It is declared from now henceforth that the duties of transit shall be agreed on by a Congress of Plenipotentiaries of all the nations contributing, so that a tariff shall be established, making a difference between and in favor of the subjects of those nations that have contributed to the undertaking, and those that have not. This association once formed, the contributing Governments shall acquire the right, as has been said, of dictating regulations for the preservation and administration of the canal, and the distribution of the net profits. Central America will exercise over said canal jurisdiction and political sovereignty, guaranteeing to all Governments the neutrality and universality of the route.

Art. XX. In consequence of what has been agreed on in the preceding articles, the Governments signing this treaty engage to convoke a National Central-American Congress to frame laws in conformity with the bases and stipulations laid down, developing and arranging them, and providing for the creation and maintenance of the national authority which shall give them force. This Congress will consist of three principal representatives and an equal number of substitutes for each State.

Art. XXI. This Central-American Congress shall have no power to pass any law which would augment or diminish the obligations which the present pact imposes on each one of the republics taking part therein; but may convoke another National Congress, to be held after the expiration of four years at least, or eight years at most, for the purpose of altering the bases of union according to the common wants and conveniences which experience may have shown to be necessary.

Art. XXII. Besides the functions above enumerated, the Congress will issue laws for the interior, indicate the place of residence of the national authority to be established, decree the budget for the nation as well as its dependencies, agree on the means to carry out the enterprises which are proposed by Central America, authorizing, if needed, the national authority to negotiate, either at home or abroad, a Central-American loan, sufficient to realize them; and, finally, to determine the amount of military force necessary for the security and honor of the National authority and the preservation of order in the population of its residence, which force shall not, however, exceed one hundred men.

Art. XXIII. All the expenses declared in the budget, common to the Central-American nationality spoken of in this treaty, shall be paid by all the Governments of Central America in equal parts; as also

the cost of the guard of honor of the national authority.

ART. XXIV. The Central-American Congress will meet in the city of La Union, of Salvador, three months after the exchange of credentials of this pact, and a minority of its members united may dictate the means for obtaining the presence of the others, but the Congress cannot be held with less than four-fifths of its members present. The travelling and daily expenses of the latter shall be determined and paid by their respective Governments.

ART. XXV. In the place appointed for the residence of the national authorities about to be established, there shall not exist any other armed force than that subject to its orders; the republic in whose territory it is located engaging itself to have no military jurisdiction over said territory.

ART. XXVI. The Central-American Governments oblige themselves to carry out the stipulations of the present convention in those points which are, or may be, deemed essential for the preservation of peace in Central America.

ART. XXVII. Even before the exchange of ratification of credentials, all the Governments oblige themselves to preserve the peace and avoid disputes by employing conciliatory measures; but, if these should not be sufficient, each one of said Governments has full liberty, while such is in prosecution, to act as it thinks proper without forfeiting the right to carry out, when the time comes, the union stipulated in the agreement.

ART. XXVIII. All and each of the Central-American Republics oblige themselves to lay down, sustain, and fulfil all and each of the principles and stipulations contained in the present pact; any breach of it shall be made the subject of the arbitral and collective judgment of the Governments or of the national authority, which obliges itself to fulfil and cause to be fulfilled.

ART. XXIX. The Governments of the Republics of Central America, after the exchange of the ratifications of this treaty, are under obligation to make the latter known to foreign Governments with whom they are or may be in relations.

ART. XXX. The exchange of ratifications of this treaty shall take place in the city of La Union, of Central America, within three months from the date of the signing thereof, or before if possible.

ADDITIONAL ARTICLES.

ART. I. Capital punishment for political crimes is abolished in Central America; and there shall be established as soon as possible, on one of the islands of the Central-American coast, a general penitentiary for the reception of such criminals as any one of the several Legislatures may send thither.

ART. II. The representative of the Government of the Republic of Nicaragua not having been present at this Congress, the minister plenipotentiary of Costa Rica will visit the city of Managua, and present to that Government the present pact for the purpose of obtaining the adhesion of that Government, in which case its effects will be equal over all Central America. In case she refuses, the stipulations contained in Article XIX., concerning the establishment of telegraph-lines, a national highway, and interoceanic canal, shall remain without effect.

In witness of the above stipulations, we, the aforesaid ministers plenipotentiary, sign five copies of the same tenor in the city of La Union, of Central America, under the date aforesaid, and in the fifty-first year of the Independence of Central America.

R. RAMIREZ, J. J. SAMAYOA.
MAXIMO ARAUJO, MARTIN MERIDA.

(For further details, see COSTA RICA, GUATEMALA, HONDURAS, NICARAGUA, and SAN SALVADOR.)

CHEMISTRY. *Ozone*.—Prof. Croft, of the Toronto College, describes in the *Canadian*

Journal his accidental production of ozone in the evaporation of syrupy iodic acid over sulphuric acid. When the acid began to crystallize, the air in the jar which covered the drying-dish developed a strong smell of ozone. In all cases the solution had been boiled down to thin syrup, so that no trace of chlorine or nitric acid could possibly remain to act on the ozone-paper. It was only when the crystallization set in freely that the ozone was evolved to a marked degree. It is suggested that this ozonification of the air arose from a partial deoxidation similar to that which produces ozone when hypermanganates are decomposed; but Prof. Croft gives reasons for not accepting this explanation, and does not himself attempt to account for the phenomenon.

M. Houzeau has experimented upon the proportion of ozone met with in pure country air, at a height of two metres above the ground. Taking the specific gravity of ozone at 1.658 (according to Sorét), he ascertains that country air contains a maximum of $\frac{1}{100,000}$ of its weight, or $\frac{1}{1,000,000}$ of its bulk of ozone. As regards the origin of the ozone, he supposes it to be due to atmospheric electricity, constantly acting in the manner of a huge-sized condenser, between the soil and the clouds.

A simple apparatus for the production of ozone, with electricity of high tension, is described by Prof. A. W. Wright, in the *American Journal of Science*. It may be used in connection with any electro-machine. The author says:

If this discharge is made to take place in an enclosed space through which air or oxygen can be driven, the ozonizing effect of the electricity is heightened, and can be utilized. The apparatus which I have employed, and which has afforded very satisfactory results, consists of a straight glass tube about 20 centimetres long, and having an internal diameter of 2.5 centimetres, the two ends being stopped with corks covered on the inner side with a thin coating of cement to protect them from the action of the ozone. Through the axis of each cork is inserted a glass tube of about 5 mm. calibre and 7 centimetres in length, having a branch tube inserted perpendicularly at the middle, and long enough to permit a rubber tube to be slipped upon it. The outer ends of the tubes themselves are closely stopped with corks, through which are passed straight, thick copper wires, carrying suitable terminals at their inner ends, and bent into a ring at the others. They are fitted so, as to make tight joints, but to allow of motion in order to vary the distance between their inner ends. One of these wires carries a small ball; the other terminates in a disk with rounded edge, set perpendicularly to the axis of the tube, and so large as to leave an annular space of some 2 or 3 millimetres breadth around it. The gas is admitted through one of the branch-tubes and escapes from the other, after having passed through the whole length of the tube.

In using the apparatus, the wires must be connected with the poles of the machine in such a manner that the disk becomes the negative terminal, as this arrangement gives the greatest degree of expansion and diffuseness to the current. On turning the machine and adjusting the ball and disk to a proper distance, a nebulous aligrette surrounds the latter, quite filling the interval between it and the wall of the tube, while the part of the tube between the disk and ball is crowded with innumerable hazy streams

converging upon the positive pole, or simply causing the latter to be covered with a faint glow. A current of air or oxygen sent into the tube must pass through this, and ozone is very rapidly produced, and in great quantity. The condensers are of course not used with the machine when this apparatus is employed.

M. Widemann, a distiller, of Boston, claims to apply ozone for the removal of fusel-oil from whiskey—the volatile oil disappearing, after contact with ozone, in about twenty minutes. He writes to the *Mechanics' Magazine* that during the past year he was applying this process (undescribed) to 800 barrels of whiskey of 40 gallons each, daily. Adding water to Indian-corn whiskey, and subjecting it to the same process, he transforms it into vinegar, for pickling purposes, and at a factory in White Plains, N. Y., was making 90 barrels, of 40 gallons each, of this vinegar, per day.

Fluorescence.—In a series of papers contributed to *Poggendorff's Annalen*, Hagenbach has given his extensive researches on this subject. The following are his main conclusions: All the rays of the spectrum are capable of exciting fluorescence. As to the extent of fluorescence in the spectrum, there are cases (as that of fluor-spar) in which it only begins in the violet after G; and others (as chlorophyl) in which it is spread over the entire spectrum. No fluorescent substance was met with which did not fluoresce in the neighborhood of the line H. It was proved that, where rays excite fluorescence, a corresponding absorption takes place; also that the rays called forth are never more refrangible than the exciting rays. These proportions were first laid down by Stokes. The question whether fluorescence in the solid state implies fluorescence in a state of solution, and *vice versa*, must be answered differently for different substances. Some substances fluoresce in the solid state, and not at all in solution; some greatly in the one state, little in the other; some show strong fluorescence in both states; some fluoresce little in the solid state, and greatly in solution; some fluoresce only in solution. Herr Hagenbach considers it probable that phosphorescence and fluorescence are phenomena differing in degree only, not in kind; though further data are necessary to the elucidation of this. He finds much similarity between the fluorescence spectra and many of the spectra of phosphorescent substances.

Atoms and Molecules.—Dr. S. D. Tillman discusses in the *American Chemist* the much vexed question of the indivisibility of atoms, and makes out an apparently strong case for the atomic theory. Conceding, however, that atoms are indivisible and indestructible in the present order of things, he does not regard that fact as precluding the supposition that the atom may be a cluster of smaller particles held together by a powerful affinity, which, when counteracted, would leave them free to move within a given sphere, and he suggests that the relative position of such particles may

modify the combining capacity of the atom. Moreover, the normal position of such particles may determine not only the peculiarities of elemental spectra, but produce other effects not dependent on the amplitude of atomic oscillations, thus favoring the inference that the atom itself is a receptacle of force. Dr. Tillman thus summarizes the present evidence in support of the atomic theory:

1. **Atomic Weights.**—Elements combine in extremely minute parts, according to the law of definite and multiple proportions. The atomic weight of an element is either its equivalent weight, or a multiple of it; as such multiple cannot be divided by reactions, its weight must conform with the atomic number. Whatever changes of position the combining weight of an element may undergo in a series of molecular metamorphoses, that is to say, however many times it may be displaced and replaced in chemical combinations, it invariably retains its characteristic weight. This invariability of weight is an essential property of the atom.

2. **Atomic Volumes.**—Gases unite in equal volumes or multiple volumes. If hydrogen be taken as unity, the density of each elementary gas is identical with the weight of its atom. The atomic volume, determined by dividing the atomic weight of a body by its specific gravity, has been the means of revealing many interesting relations among compounds of similar structure, and among many containing different components and of unlike structure.

3. **Atomic Heat.**—It has been shown by experiment that quantities of each element conforming with its atomic number have the same capacity for heat, excepting only carbon, boron, and silicon; these, it is believed, will yet be found to conform to the law that the specific heats of all atoms are the same. This law is regarded as a direct confirmation of atomic weight.

4. **Molecules.**—According to the atomic theory, chemical forces are brought in equilibrium when atoms combine and form a molecule. Every gas and every vapor undecomposed has a density proportional to its molecular weight. All known molecular combinations and combining proportions are in accordance with the atomic doctrine. Decomposition by electrolysis affords some evidence that the constituent parts of a molecule which are simultaneously separated are proportionate to atomic weights.

5. **Atomic Combining Capacity.**—The modern doctrine of types and substitutions is solely based on the individuality of the atom, without which the whole fabric of typical structures must fall.

6. **Isomerism.**—The fact that bodies containing the same elements, and in precisely the same proportions, exhibit different properties, has been thus far accounted for, only on the supposition that atoms are differently arranged in each body. These differences in arrangement depend not only on the relative position of atoms, but also on the order as to time in which they combine; for two or more atoms having such precedence over others as to combine first may, by that means, form a radical of such permanence as to play the part of an atom. Aside from the question of radicals, we may ascertain the number of different bodies which can be formed from the same number of different atoms by an application of the mathematical law of permutations.

7. **Homogeneity.**—The uniformity of structure and appearance of any element or chemical combination of elements furnishes the most palpable proof of the identity in size and shape of those definite parts which we designate as molecules. This homogeneity is retained under different degrees of pressure, thus making it apparent that molecules are not only identical in structure, but that they approach and recede in precisely the same manner under the same conditions.

Use of Carbolic Acid.—The value of carbolic acid as a disinfectant has been severely attacked of late. The *English Mechanic* prints an article declaring carbolic acid far inferior to common chloride of lime. The effect of the former is short, and it does not destroy the vitality of infectious germs. The writer completely disinfects apartments by stopping up all the openings, and placing in different parts of the room several plates containing common salt and a little vitriol. A chlorine vapor is evolved, and the seeds of infection are destroyed. This opinion of the inferiority of carbolic acid is not shared by most authorities, though all agree that its odor is highly offensive. To overcome this objection, Prof. Church prepares the acid for use in the following way: He pours one pound of the best commercial article of carbolic acid into two gallons of distilled water (cold), not permitting the whole of the acid, however, to enter into solution. The watery solution is siphoned off and filtered, and then placed in a tall cylinder, and powdered common salt added to it, till the salt will no longer dissolve. After a while, the most of the carbolic acid will be found floating on the top of the water, and may be skimmed off for use. At ordinary temperatures, the acid thus prepared has a faint, pleasant odor, like that of geranium-leaves.

The Prevention of Putrefaction.—Dr. F. Crace Calvert reported to the Royal Society in February his laborious investigations of the relative power of various substances to prevent putrefaction, and also to develop proto-plasmic and fungus life. To carry out his experiments, small test-tubes were thoroughly cleansed, and heated to dull redness. In each were placed .26 grammes of a solution of albumen, containing one part of white of egg and four parts of pure distilled water, and to this was added 1.11, or 0.026 grammes of each of the substances whose action he desired to study. The operation was kept up for periods ranging from 39 to 80 days, in a room the temperature of which varied from 12.5° C. to 15.5° C., and each day a drop was taken from each of the tubes, and examined with a microscope having a magnifying power of 800 diameters. In order the better to show the influence of the antiseptics used, he examined two specimens at the same time, one of which was kept as above described, and the other in the open air. A marked difference was observed in the result, the one kept in the open air becoming impregnated with animal life in less than half the time required by the other, while as many vibrios were detected in the former class of tubes in 6 days as were developed in 30 days in the latter. Over 30 substances, among the acids, alkalies, phosphates, sulphocarbonates, and chlorides, were experimented upon. The following is a tabular statement of the results, in which the substances are grouped according to their chemical nature:

SUBSTANCES TESTED.	Days required for Development of	
	Pungi.	Vibria.
I. STANDARD SOLUTIONS.		
Albumen kept in laboratory for comparison.....	18	13
Albumen exposed outside laboratory....	None.	5
II. ACIDS.		
Sulphurous acid.....	21	11
Sulphuric acid.....	9	9
Nitric acid.....	10	10
Arsenious acid.....	18	22
Acetic acid.....	9	30
Prussic acid.....	None.	9
III. ALKALIES.		
Caustic soda.....	18	24
Caustic potash.....	16	26
Caustic ammonia.....	20	24
Caustic lime.....	None.	13
IV. CHLORINE COMPOUNDS.		
Solution of chlorine.....	22	7
Chloride of sodium.....	19	14
Chloride of calcium.....	18	7
Chloride of aluminium.....	21	10
Chloride of zinc.....	53	None.
Bichloride of mercury.....	81	None.
Chloride of lime.....	16	9
Chlorate of potash.....	19	17
V. SULPHUR COMPOUNDS.		
Sulphate of lime.....	19	9
Protosulphate of iron.....	15	7
Bisulphite of lime.....	18	11
Hyposulphite of soda.....	18	11
VI. PHOSPHATES.		
Phosphate of soda.....	17	13
Phosphate of lime.....	23	7
VII.		
Permanganate of potash.....	22	9
VIII. TAR SERIES.		
Carbolic acid.....	None.	None.
Cresylic acid.....	None.	None.
IX. SULPHOCARBOLATES.		
Sulphocarbonate of potash.....	17	18
Sulphocarbonate of soda.....	19	18
Sulphocarbonate of zinc.....	17	None.
X.		
Sulphate of quinine.....	None.	25
Picric acid.....	19	17
Pepper.....	None.	8
Turpentine.....	43	14
XI.		
Charcoal.....	21	9

Dr. Calvert also undertook a series of experiments, substituting gelatine for albumen, continuing these for a period of 47 days. Vibrios appeared in 2 days in the standard gelatine solution, and bacteria after 4 or 5; and, during the whole time of the experiment, life was far more abundant than in the albumen solution. A distinct putrid smell was emitted after 26 days. With bleaching-powder, it took 20 days for life to appear, instead of 7 as in the case of albumen, while at no time during the 29 days which remained was life abundant. No putrid odor was emitted, but a mouldy one could be detected on the thirtieth day. With chlorine solution, vibrio-life was only observed after 40 days, no putrid or mouldy smell being given off at any time. Arsenious acid

presented a marked difference in its nature in the two solutions; for, although, with albumen, 22 days elapsed before vibrios were present, and 18 before fungi appeared, animal life was exhibited in gelatine after 2 days, and at no time did any fungi exist.

Preservation of Meat and Vegetables.—A new process of preserving alimentary substances is described by the inventor, M. Sace, in a communication to the French Academy, accompanying specimens of meat and vegetables so prepared. The food to be preserved is placed in a barrel, with layers of powdered acetate of soda, in the proportion of one-fourth by weight. In winter the temperature must be raised to 20° C. After 24 hours, the barrel must be turned, and, after 48 hours, the process is complete, the salt having absorbed the water of the meat or vegetables, which may then be headed up in the pickle, or dried in the air.

If the barrels are not full, they are to be filled up with brine of one part acetate of soda in three parts water. The pickle is evaporated down to half its bulk, crystallizing and regenerating for use one-half the salt employed. The mother-liquors form an excellent extract of meat, representing three per cent. of the total weight, and must be preserved and poured over the preserved meat, when prepared, so as to restore the original flavor of the fresh meat, of which it is otherwise bereft by the retention of the potassic salts in the pickle. For cooking, the preserved meat must be steeped for from twelve to twenty-four hours, according to size, in tepid water, containing 10 grammes of sal-ammoniac per litre. This salt decomposes the acetate of soda contained in the meat, forming salt, and also ammoniacal acetate, which causes the meat to swell, and restores to it the odor and acid reactions of fresh meat. The bones also yield an excellent soup. By adopting the precaution of simply removing the intestines, animals, etc., may thus be preserved whole. Fish, poultry, and game, have been so treated, with excellent results. Meat may be dried in a stove, losing one-quarter in weight thereby, in addition to one quarter lost in pickling; but, in general, fish cannot be dried at all. Vegetables are similarly prepared, losing generally five-sixths of their weight; before salting, they should be heated until they lose their rigidity. In twenty-four hours they may be pressed, and dried in the air. For use, they must be steeped for twelve hours in fresh water, and then boiled as if fresh. Potatoes must be steamed before salting. Finally, all food thus prepared must be kept perfectly dry, as the salt absorbs moisture from the air.

Cheap Saline Disinfectants.—After discussing the respective merits of a variety of disinfectants for common use, Mr. Sidney W. Rich gives the preference, on some accounts, to chloride and sulphate of iron, because they have all the action of the corresponding alumina salts, and, besides, they possess the power of absorbing the sulphuretted products of decomposition. The latter fact places them at the top of the list in respect of efficacy. There is one objection, however, to the use of the iron salts: that, when employed in large quantities for ordinary purposes, the iron itself is likely to be injurious to the vegetation with which the fluid or other matter may ultimately come in contact. The very best results, the

author thinks, are to be obtained from a solution containing hydrochlorate of alumina with a small quantity of chloride of iron. The hydrochlorate of alumina will serve to do the general work of a disinfectant and antiseptic, while the iron salt will absorb the sulphuretted compounds which arise from the decomposition of some kinds of organic matter.

Arsenic in Paper-Hangings.—Among the papers in the Third Annual Report of the Massachusetts Board of Health, is one by Dr. F. W. Draper, on the evil effects of the use of arsenic in certain green colors. He pays much attention to the employment of the poison in the manufacture of wall-paper. He shows that arsenical paper-hangings include those well-defined varieties known as unglazed, satined, and flocked. These comprise all grades, from the costliest to the cheapest, and vary from the plainest surface to the most elaborately-figured designs. In some there is a small coating of the poisonous article, loosely applied, either for a perfectly undecorated paper or to serve as a ground on which to impress the figures. In others, any isolated or small patterns of foliage contain the green pigment. Of all the kinds, those which have the unglazed surface are most likely to do harm, since in that class, the color is only moderately adherent, and is removed by the slightest friction. The glazed papers are less open to this objection, because the process which gives the polish tends also to fix the pigment more securely. From such a surface the green dust would not escape readily until after long wear, or by frequent dusting, abrasions in the glazing were produced. The flock-papers occupy an intermediate place between the two other varieties. The wool constituting the flock is generally of a dark-green color, from vegetable dyes; and if the arsenical pigment is used, it is found in the ground-tint on which the flock is laid, or in the green figured foliage formed in the intervals. The flock, as primarily prepared, is not poisonous; but it may become so, since it is easily detached from the paper, and may bear away with it particles of the subjacent color. Various analyses have proved that the quantity of poisonous color in wall-paper is frequently from fifty to sixty grains per square foot. In one specimen seventy grains, and in another nearly a drachm, were obtained. Taking the average of the result, it appears that a room of ordinary dimensions decorated with arsenical paper-hangings would hold on its walls considerably more than a pound of poisonous coloring-matter, containing half its weight of arsenic. The author remarks as follows upon the effects of this pigment and the health of persons occupying rooms so prepared:

Does the presence of this pigment, in such large amount, on the walls of rooms habitually occupied by day or night, exert any deleterious influence on the health of the occupants? Can an agent, avowedly very poisonous when swallowed, become disengaged in any way, directly or indirectly, from the

surface to which it is but loosely attached, and contaminate the atmosphere to such a degree as to produce, by slow but continuous absorption, unmistakable symptoms of injury! There will be those who, through incredulity or from motives of interest, will cite cases of perfect immunity under such conditions, and will maintain that the brilliant color is inert, even granting the presence of arsenic, and that there is nothing in the paper-hangings in question to arouse alarm or suspicion. The alleged cases of illness from this cause ought rather, they say, to be attributed to bad ventilation and other abuses. Nevertheless, when the many-recorded and well-authenticated instances of impaired health, including a considerable number which have terminated fatally, are examined impartially, little room is left for scepticism. The cases are too numerous and too unequivocal to be thrown aside, and constitute a mass of evidence which cannot well be refuted. It will be unnecessary to cite a great number of these cases here. The columns of the medical and of the general press of the last ten years contain the histories of numerous instances.

He then cites a few of the latest or most remarkable cases, in which the arsenical wall-paper caused serious injury to the health of persons. Each case was thoroughly investigated, and no room was left for doubt that the arsenic had done the mischief. Upon removing the paper, or changing the apartment, the evil symptoms ceased to be manifested. All green paper-hangings are not necessarily poisonous; some may derive their color from other pigments than the arsenite of copper; only the chemist's tests can determine which of the papers contain arsenic.

Mr. J. Wallace Young, of Glasgow, referring to Dr. Draper's paper, writes to *Nature* concerning some pigments other than greens which contain arsenic. He says:

The pigments were of French manufacture, and said to be used in calico-printing, and were sent here for trial, and rejected for two reasons: 1. Because of the large quantity of arsenious oxide present; 2. Because colors equally good could be obtained on calico by other methods, without the use of that dangerous substance and at less expense. The names were as follows:

Bright scarlet pigment.—Contained alumina, arsenious oxide, and uric acid.

Scarlet ponceau.—Contained carbonate of lime in addition to above ingredients.

Dark green.—A preparation of aniline green and arsenious oxide.

Chocolate and catechu pigment.—Both contained arsenious oxide.

Now, as these lakes were very brilliant, I have no doubt they would be found suitable for paper-hangings. The arsenious oxide is not at all necessary for the production of the lake, but is used, I believe, solely for the purpose of giving body to the pigment.

My object in writing is, to warn chemists of the necessity of examining for arsenic the bright scarlets, reds, and other pigments found in paper-hangings, as well as the greens.

Logwood Test for Alum in Bread.—The *Chemical News* of May 17th contains a communication from Mr. John Horsley, giving his process of detecting the presence of alum in bread. He makes a tincture of logwood by digesting for eight hours two drachms of freshly-cut logwood-chips in five ounces of methylated spirit in a wide-mouthed vial and filters

it. Then he makes a saturated solution of carbonate of ammonia in distilled water. A teaspoonful of each solution mixed with a wineglassful of water in a white-ware dish forms a pink-colored liquid. Bread containing alum immersed in this for five minutes or so, and placed upon a plate to drain, will, in an hour or two, go blue on drying; but, if no alum is present, the pink color fades away. If, on drying, a greenish tinge appears, that is an indication of copper, as carbonate of ammonia produces that color, but never a blue.

As a counter-check for iron, a piece of moist blue-colored bread may be drenched with a few drops of glacial acetic acid, when that containing iron is bleached of a dirty-white color, but with alum a rose-pink or slight buff color will be observed. Or it may be tried another way, thus: Take a piece of the bread in its plain state, and, having digested it in dilute acetic acid for an hour or so, press out the liquor and filter; then put in a lump of carbonate of ammonia, and, when all effervescence ceases, add to the clear liquor a few drops of solution of sulphide of potassium or sodium. If iron is present it will be indicated by a dark color, there being no color produced with alum; but the addition of a little tincture of logwood immediately reveals it. The alumina may be estimated quantitatively thus: Take, say, one-quarter of a pound of crumb-bread, digest it in a clean basin with some dilute acetic acid, and allow it to stand a few hours; then break up the mass and pass the liquor through a glass percolator, the rim being covered with calico, repeating the percolation two or three times till the liquor is clear. Throw in a lump of carbonate of ammonia to saturation, and add tincture of logwood in excess, when, if alum is present, a dark-blue color will be produced, with a flocculent blue precipitate on standing a while. Collect this precipitate on a filter, wash it off into a dish with dilute nitric acid, and evaporate the red liquor to dryness. Collect the residue in a small Berlin crucible and ignite it at a red heat, when a white powder will be obtained consisting of alumina, with possibly a little lime; treat this with liquor potassæ, to dissolve out the alumina, mix with a little water, filter, and boil with carbonate of ammonia to obtain the pure alumina.

Aniline Colors.—Of aniline black, M. Rhe-meck declares that a swatch of cotton dyed faintly black with that article, forms a good test for acids and alkalies, and can be used alternately for either without losing its color. If colored green by an acid and washed in distilled water, it may be blackened again by a very faintly alkaline liquid, such as common spring-water. He has analyzed the aniline black known in commerce as lucas black. The sample was a black paste, formed by the drying up of a liquid. On filtering and washing the powder, there remained, evidently, muriate of nigraniline. In the filtrate and washings were found ammonia, iron, copper, lime, and a little aniline. The liquor was dark and acid. Its acidity is due to hydrochloric (muriatic) acid, with a trace only of sulphuric. The mixture is therefore probably muriate of aniline, chloride of copper, chloride of iron, and chloride of calcium. In consequence of this great acidity it damages the fibre, and, a large part of the material being already combined, the result is deficient in body. The hydrochloric

acid used in the preparation of aniline black should be from iron, or the color has a gray tint.

The *Mechanics' Magazine* speaks very highly of Nicholson blue for wool-dyeing. It differs from all the other aniline colors in the fact that it is not, like magenta, aniline violet, etc., the soluble salt of a base insoluble in water, but is a base soluble in water of itself, yet capable of forming, in union with acids, colors and insoluble salts. The base is in itself colorless and very pale. To obtain a dye, the base already fixed on a fibre must be united with an acid. This is effected by passing the dyed wool through an acid-bath. Thus, for ten pounds of wool, a very dilute solution is prepared by boiling one to one and a half ounce of the dye in pure water; a color-bath is next prepared, at a hand-heat, in which one and a half to two ounces of borax must be dissolved. An equivalent quantity of the carbonate of potash or soda may be used instead. The borax serves to neutralize any traces of acid existing in the water or the wool to be dyed (possibly also to prevent the working on of certain impurities which may be present in the dye). The solution of Nicholson blue, previously well filtered, is next added. The goods, previously saturated with water, are next entered and kept constantly in motion, while the temperature of the bath is very gradually raised to the boiling-point. They are then taken out, worked well in water at a hand-heat, and passed into the acid-bath, which for ten pounds of wool should contain ten ounces of sulphuric acid. Here they are worked till the color is fully developed.

The beautiful red-coloring matter called saffranine is to a great extent superseding catharinine for dyeing silk and cotton. To prepare it, heat in a suitable vessel a mixture of two parts nitrite of aniline and one part arsenic acid, for five minutes, to a temperature of 80° to 120° Cent. The contents of the vessel are then thrown into boiling water and neutralized with chalk. The liquid takes a pure, beautiful red. It is allowed to settle, and passed through a woollen filter. It is then precipitated with common salt, which is dissolved in the solution to the extent of five times the weight of the nitrate of aniline employed. After some time the saffranine precipitates, and is collected on a filter, allowed to drain, and pressed, when it is ready for use or sale. Nitrite of aniline is easily obtained by passing a current of nitrous acid through a solution of aniline. Starch and nitric acid are heated in a retort, when nitrous acid is given off. This acid, sufficiently washed, is introduced into a mixture of aniline, water, and common salt. The complete conversion of the aniline is indicated by the clear, light-brown color passing into a deep chestnut. It is repeatedly washed in water, and then used.

Platinum-Black.—The usual methods of obtaining platinum-black are attended with much

trouble. Prof. J. Lawrence Smith informs the *American Chemist* of a new process of making the article. He first reduces the platin-chlorides of the alkaline by hydrogen in common street-gas. Then the mass is treated with water to wash out the chlorides of the alkalies thoroughly; the residue is dried at a temperature not exceeding 220° F., when it is ready for use. The operation can be readily conducted in a capsule of porcelain or platinum; the platin-chloride is introduced, and covered with a circular piece of mica a little smaller than the wide diameter of the capsule, with a hole in the centre, through which the tube conducting the gas is introduced. The capsule is then heated by any convenient arrangement by which a temperature not exceeding 400° or 500° F. is obtained, at which temperature it can be maintained with a little management; a small Bunsen burner with a rosette can be used. If the temperature be too high the platinum-black will not be as good as that made at a lower temperature. Washing the platinum-black, after the chloride is taken out, with a solution of caustic potash or soda, and subsequently washing with distilled water, may improve the product.

Commercial Chloral.—Edward R. Squibb, M. D., a manufacturing chemist of Brooklyn, N. Y., sends a valuable paper to the *Chemical News*, containing his practical observations upon the new and powerful agent, chloral. He finds that the finest specimens of chloral crystallize between 118.4° F. and 123.8° F.; those which crystallize at the higher temperature having the most anhydrous chloral, and those which crystallize at the lower temperature having an excess of water. Accurately hydrated chloral crystallizes at about 118.4° F. to 120.2° F. The large crystals contain the most watery liquid in their solutions, and therefore soonest deliquesce. They keep best in an imperfectly-stoppered, wide-mouthed bottle. Small granular crystals which form from the melted chloral, when carefully under-hydrated, are the best form for convenient practical use. An important test of quality for commercial chloral is its boiling-point. Chloral should not begin to boil fairly below 203° F.; if it does, it is too much under-hydrated, and therefore too liable to decomposition; and it should boil down to one-half steadily at 206.6° to 208.4° F. If it boils off above the latter point, the indication is that it is over-hydrated and deliquescent. In conclusion, Dr. Squibb remarks that, while several of the grades of chloral now to be found in the market are worthy of confidence, they are by no means uniform, but are improving in this respect. The enormous scale upon which it has been made in Germany, and the difficulty of reducing this scale to meet the reaction which fatal cases of poisoning in popular use have caused, have overstocked and very much depressed the market; and it is to be feared that some of this overstock may become decomposed before

it can be consumed. The quality should therefore be closely watched, and as soon as a parcel is found to be strongly acid it should be rejected. The test of acidity, by means of a glass rod, wet with solution of ammonia, held near the mouth of the bottle, though useful, is not entirely trustworthy, and is hypercritical, since the vapor of anhydrous chloral, whether of itself or by slight decomposition from air contact, produces a cloud with ammonia.

Artificial Butter.—The Victualling Department of the French Navy some time ago caused experiments to be made upon the artificial production of butter, as a substitute for the real article, which easily becomes rancid. It was observed that cows, kept on a very scanty diet, continued to give milk, although in very much smaller quantity, and that such milk always contained butter; this suggested that the butter was due to the absorption of the fat contained in the animal tissues, which was converted into butter under the influence of the milk-secreting glands. This led to experiments on the splitting up of animal fats, and further, to the following process for making butter artificially: Best fresh beef-suet is first mechanically cut up, by means of circular saws fitted to a cylinder, and is next placed in a vessel containing water, carbonate of potassa, and fresh sheep's stomachs previously cut up into small fragments; the temperature of this mixture having been raised to 45°, the joint influence of the pepsine of the stomachs and heat causes the fat to be separated from the cellular tissue: the fatty matter floating on the top is decanted, and, after cooling, submitted to very powerful hydraulic pressure; the stearine is used in candle-making, and the semi-fluid oleomargarine is used for making the artificial butter in the following manner: 50 kilos. of the fat are poured, along with 25 litres of milk and 20 litres of water, into a churn, while there are added 100 grms. of the soluble matter obtained by soaking for some hours in milk from cows' udders and milk-glands; a small quantity of annatto is also added, and the operation of churning then proceeded with. The butter thus obtained is well washed with cold water, and, if required to be kept for a long time, melted by a gentle heat, to eliminate all the water. According to reports of sanitary committees, as well as of the authorities of the Victualling Department of the French Navy, this artificial butter is really an excellent substitute for genuine butter, and can be exposed for sale if the vessels are marked to distinguish the artificial from the genuine butter.

New Method of obtaining Potassium.—The *American Chemist* prints a note from Prof. A. E. Dolbear, relative to a new and convenient mode of obtaining potassium, which had hitherto only been procurable by the reduction of the carbonate of potash mixed with charcoal, heated to a high degree, in iron retorts. Prof. Dolbear dissolved some white stick caustic

potash of commerce in water, and treated it with sulphuretted hydrogen in the way adopted for making potassium-sulphide. The solution was evaporated until it was solid when cool, when the yellowish mass was mixed with more than its bulk of iron filings and chips, and the whole put into an alembic for distillation. The heat of a furnace was applied till the alembic was of a bright red heat, and the products of distillation were received in common coal-oil. The product was rather small, as some of the potassium-vapor decomposed the heated vessel; nevertheless the potassium showed itself, when the oil was poured off and the residuum turned upon water, by its characteristic ignition and flame. The reaction is simple, and may be thus represented: $K_2S + Fe = FeS + K$.

He did not have conveniences for experimenting upon this on a scale large enough to test its comparative value; it needs some special arrangements of protected vessels, as it violently attacks common crucibles, porcelain, and glass. The materials used for thus obtaining it are of the required cheapness, and the iron sulphide product can again be used to furnish sulphuretted hydrogen for another quantity. The author thinks it probable that sodium can be obtained by an analogous process.

Researches on Alcoholic Fermentation.—The eminent French chemist, Prof. J. Dumas, lays down the following laws of Nature in the process of alcoholic fermentation, as observed by himself: "No chemical movement excited in a saccharine liquor can convert sugar into alcohol and carbonic acid; the simple fermentation of a saccharine liquor and yeast may be regulated like any other chemical reaction; the duration of the fermentation is exactly proportionate to the quantity of sugar contained in the liquid; fermentation proceeds more slowly in the dark and *in vacuo*; no oxidation takes place during the fermentation; sulphur is converted into sulphuretted hydrogen by the fermentation; neutral gases do not modify the fermentation-inducing action of yeast; acids, bases, and salts, can exercise an accelerating or retarding, disturbing or destructive, action on fermentation, but the accelerating action is more rarely observed; very dilute acids do not affect fermentation, but acids in larger quantity completely destroy it; the same applies to alkalies; carbonated alkalies only impede fermentation when they are present in, or added to, the fermenting liquid in large quantity; earthy carbonates do not interfere with fermentation; neutral salts of potassa and of some other bases exert no influence upon the process; silicate of potassa, borate of soda, soap, sulphites, hyposulphites, neutral tartrate of potassa, and acetate of potassa, may be applied for the physiological analysis of ferment and for studying its mode of action."

Distillation by Cold.—This is the name of a process by which the author, Mr. D. H. Smee,

proposes to detect and estimate the presence of ammonia and other organic impurities in the atmosphere with greater ease and precision than it can be done by any other method. A glass funnel eight or nine inches long is closed at the pointed end, supported on an ordinary stand, and filled with ice. Condensation of the watery vapor of the atmosphere takes place; the dew collects into drops, which trickle down the outside of the funnel, and at last fall from the point, under which a small receiver is placed to catch them. The total quantity of liquid collected in a given time is measured, and the ammonia determined by Nessler's test. By the method of distillation by cold, the author found it possible to distil many substances which are decomposed at a high temperature. Thus many delicate odors of flowers were distilled by placing the flowers under a bell-glass sufficiently large to cover the funnel containing the ice. The odors were found to be more rapidly and completely abstracted by placing a dish with a little ether under the bell-glass at the time of distillation. He gives the results obtained in 107 experiments, together with the atmospheric conditions prevailing at the time. The experiments were made in a garden, in a bedroom, in hospital-wards, in the open country, etc. A few of the numbers obtained are here given by way of example:

Fluid collected in Minima.	Ammonia in Grains per gallon.	Source.
150	1.9713	Erysipelas.
120	0.1791	Garden.
55	6.6807	Drains.
90	2.1000	Bedroom.
..	2.9563	Stables.
150	0.0936	Victoria Park.

Improved Carbonate of Potash.—In France carbonate of potash is made from the residues of molasses after fermentation, but the product has been found to be injured by the presence of the cyanide of potassium. In trying to destroy this, the manufacturers formed a carbon of the nature of graphite, which blackened the carbonate to a gray shade, rendering it unmarketable. By using a new arrangement of furnaces this difficulty is now overcome. The furnaces are calcining furnaces, and are constructed rather differently from our carbonating furnaces. The working-door is exactly opposite the fire-hole, and the fire escapes through a flue at the top, just above the working door inside. After a certain time the salt gets to that point that it will be impossible to destroy the cyanides, so as to burn out the carbon completely, without fluxing the salt at the same time, because the carbon would be there as graphite, and it is quite impossible to burn it out at a temperature at which the carbonate of potash does not fuse. When it has arrived at that stage the furnace-man fills his furnace with a thick smoke. He then suddenly opens the working-door, which is right opposite the fire, and thus burns the smoke throughout the

furnace; and it appears as if by a kind of infection, perhaps by the local heat produced right through the salt itself, the cyanide is completely destroyed, and also the graphite burnt off. The product coming from this process is a most beautiful white carbonate of potash of great strength.

Nitrification.—M. Houzeau has been analyzing the soil about Tintah, a town situated in the delta of the Nile, where a process of nitrification has for a long time been going on. The deep soil of the mounds there is dug up for manure, and the surface-soil is also rich in the same property. Both soils are of deep guano-yellow color, inodorous, tasteless, and neutral to test-paper, contain ammoniacal salts and nitrates, and yield a red ash free from carbonates. The surface-soil contains a good deal of straw, and some green organic matter, soluble in alcohol, while the deep or ancient soil contains only a little straw, and a very little greenish-yellow organic matter; the recent soil has 13.276 per cent. of moisture, and the older, 10.719 per cent. Both soils were dried at 110° C. per analysis:

	Recent Soil, per cent.	Ancient Soil, per cent.
Organic matter.....	9.915	4.838
Clay, silica, oxide of iron, mag- nesium, phosphate of iron.....	84.083	89.605
Soluble chloride equivalent to chloride of sodium.....	5.147	4.590
Sulphate of calcium.....	0.015	0.139
Nitric acid of the nitrates.....	0.171	0.949
Ammonia (already formed).....	0.089	0.365
Nitrogen of the organic matter....	0.630	0.124
Total.....	100.000	100.000
Total nitrogen.....	0.606	0.670

From this table it is seen that in the ancient soil half the organic matter has disappeared, and that the quantity of the nitrogen has not changed, but that the quantity of the nitrate of ammonia has increased tenfold at the expense of the organic matter.

This investigation exhibits the process of nitrification in the absence of alkaline bases. Had these been present, as the editors of the "*Annales de Chimie et de Physique*" point out, the ammonia would, no doubt, have been also converted into nitrates.

Iron in the Blood.—Experiments, made by Dr. Boussingault, upon the constituents of blood, have led to the following determinations, thought to be more exact than any previously obtained, with regard to the proportions of iron: 100 parts of fibrine contain 2.151 of mineral matter, and 0.0466 metallic iron. 100 parts of the blood-globules contain 1.325 mineral matter, and 0.350 iron. 100 parts of albumen contain 8.715 mineral matter, and 0.0863 iron. 100 parts of human blood contain 0.8 fibrine, 7.0 albumen, 12.7 globules, 1.0 mineral matter, and 79.0 water. 100 parts of cows' blood contain 0.4 fibrine, 7.4 albumen, 10.5 globules, 1.0 mineral matter, 80.7 water. The large quantity of iron met with in the blood-globules is due to the hematosine, which, when separated from defibrinated blood, is of a deep-brown color, insoluble in

pure water, but soluble in water which has been rendered slightly alkaline. 100 parts of hematosine contain 10.750 of mineral matter, wherein are 6.88 metallic iron, equal to 9.043 peroxide of iron, leaving 1.707 other mineral matter. Further research exhibited the presence of lime and phosphoric acid in the ash of hematosine, which (the ash) was found to consist, in 100 parts, of 84.121 peroxide of iron, 13.512 phosphoric acid, and 2.986 lime. 100 parts of hematosine consist of 89.25 organic matter, 9.04 peroxide of iron, 1.45 phosphoric acid, and 0.82 lime.

The Explosion of Detonating Compounds.—In his researches on gun-cotton and nitro-glycerine, Prof. Abel advanced the hypothesis that explosion takes place in detonating compounds, on the production in most of a certain kind of mechanical action depending on their properties and constitution. On this theory, the heat developed in explosion of the priming is not capable of producing the noticeable change necessary to instantaneous decomposition. MM. Champion and Pellet have made this theory the subject of direct experiments, which are reported in the *Comptes Rendus*. The following is an abstract of their statement:

First Experiment.—Two glass-tubes were joined by a paper band; giving a total length of 2.40, and 13m. internal diameter. In each extremity was placed a little paper boat holding 0.03 grains of iodide of nitrogen. The iodide at one end being exploded by a heated wire, that at the other immediately exploded also. Gradually increasing the length of the tube, it was found possible to explode the same weight of iodide in this way at 7 metres distance. M. Barbe has experimented similarly with dynamite, but he attributes the explosion to the pressure of air caused by expansion of gas. To examine this alleged influence, a small pendulum, consisting of an elder ball suspended by a silk thread, was placed 50 centimetres from one extremity of the tube, and the iodide at the farther end was exploded. The slight shock given to the pendulum was like what would be given it by blowing into the tube with the mouth. By diminishing the quantity of iodide, the ball could even be kept from striking the upper surface on explosion taking place. If the tubes are separated by an interval of 5 or 6 millimetres, explosion in the above manner does not take place, unless the quantity of the compound is very much increased. The direct explosion need not be produced within the tube. A little nitro-glycerine or fulminate of mercury exploded before the mouth of the tube will produce the same effect.

Second Experiment.—Some iodide of nitrogen in a moist state was attached with gold-beater's-skin to the strings of a double-bass; when it was sufficiently dry, the strings were sounded with the bow. The iodide on the lower strings did not explode. That on the string giving the highest note exploded, on the slightest application of the bow. When the latter string was relaxed till it gave a natural, no effect was produced by the vibrations. When the sound was again raised several notes, explosion took place. There appeared to be an inferior limit in the number of vibrations necessary, and this was estimated about 60. By putting the two farther removed strings in unison, the explosion caused in the lower induced explosion in the other. No superior limit could be determined in the number of vibrations causing explosion.

Third Experiment.—Metallic plates appeared to give the same results as stringed instruments. Two Chinese tam-tams were tried, one having a diame-

ter of 56 centimetres, and giving very grave sounds; the other 47 centimetres, and giving high metallic sounds. Small quantities of iodide of nitrogen were attached by membranes to the centre, the circumference, and the intermediate parts. On sounding, the larger instrument caused no explosion; the iodide on the other exploded when the vibrations had acquired sufficient amplitude.

Fourth Experiment.—Two parabolic mirrors, of 50 centimetres diameter, were placed opposite each other at a distance of 2.50 m. In the focus of one of them was placed a piece of paper, having attached to it (by gold-beater's-skin) a few centigrammes of iodide of nitrogen. Another portion of iodide (similarly attached) was placed between the mirrors. In the focus of the second mirror, a large drop of nitro-glycerine was exploded; the iodide then exploded in the first mirror, while the other portion of iodide was not affected. In these experiments, they remark, the heat, produced by the explosion of the nitro-glycerine, having been concentrated in the other focus, caused the explosion of the iodide. According to M. Berthelot, one kilogramme of nitro-glycerine exploding in a confined space gives 19,700,000 calories; while gunpowder exploding in open air gives only 644,000 calories. The quantity of nitro-glycerine that was necessary to explode the iodide in the above conditions was 0.03 grains, and represented 591 calories (allowing the detonation to correspond to that produced in a confined space). The quantity of powder giving the same number of calories is 0.9 grains; one gramme of powder was then exploded in place of the nitro-glycerine, but the result was *nil*; and it required 8 to 10 grammes of powder to produce the heat necessary to explosion of the iodide in the other focus.

Newly-found Substances.—Acridine is the name given to a new derivative from anthracene, by its discoverers, MM. Graebe and Caro. They obtain it by the following process: The semi-solid portion of coal-naphtha, boiling between 300° and 360° F., is heated with dilute sulphuric acid, bichromate of potash is introduced, and a brown precipitate appears, which can be dissolved in boiling water. Upon filtration and cooling, this solution yields orange crystals of the chromate of the base, and the free base is yielded up after warming the crystals with ammonia. Acridine melts at 107° F., and distils at a point above 360°, is insoluble in cold water, and slightly soluble in boiling water, but easily dissolved in alcohol, ether, and the bisulphide of carbon. Its dilute solution give a beautiful olive color by reflected light. It takes its name acridine from its irritating action on the skin and mucous membrane. The discoverers do not mention any useful purpose to which it may be applied.

M. Morin has succeeded in separating a substance, which he calls galactine, from animal organisms—sometimes constituent element, sometimes morbid product. It is found in the blood and the gastric juices, also in liquids produced by disease. It closely resembles gelatine, to which it may be transformed by the prolonged action of water or heat. Galactine is soluble in water, but not in alcohol, and may be precipitated by a solution of tannin. In nutritive qualities, it is thought to rank with albumen, fibrine, and caseine.

CHESNEY, General FRANCIS RAWDON. D. O. L., British Army, a distinguished and

gallant officer, the pioneer of the overland route to India, born in Ballyrea, in the north of Ireland, in 1789; died at his country-seat in Ireland, January 30, 1872. He was named Francis Rawdon after his sponsor, the late Marquis of Hastings. He was educated at the Royal Military Academy, Woolwich, and obtained a commission in the Royal Artillery in 1805. Having seen some active service in 1815, he became captain, and in 1821 was sent to Gibraltar, where, after the death of his wife and daughter, he offered his services to the Government to cross the African Desert to solve the problem of the origin of the Niger, but they were not accepted. In 1827 and 1828 he went over the great battle-fields of Napoleon in France, Italy, and Germany, and afterward carefully examined the battle-fields of the East. In 1829 Captain Chesney sailed for Constantinople, intending to assist Turkey in her struggle with Russia, and on his arrival found that the preliminaries of a hollow peace had been signed at Adrianople. After examining the fortresses and positions occupied by the contending armies, Captain Chesney obtained an extension of his leave of absence for the purpose of visiting Asia Minor, Greece, and Egypt, with a view to the solution of the problem of a regular steam communication with India. He sailed down the Red Sea to Cossier, and reported the practicability of a steam voyage in twenty-one days between Bombay and Suez, and of five more between Suez and Alexandria. After having made these explorations, he went on a journey through Palestine, Arabia Petraea, and across the Arabian Desert to El Kaim, whence the great river was followed to Ana. The result of this expedition was a large map and a memoir forwarded to Sir R. Gordon from Shuster, in June, 1831, describing about eight hundred miles of the river Euphrates. In 1835-'36 Captain Chesney accomplished, though only after encountering great difficulties and dangers, from shipwreck and the perils of the desert, his descent of the Euphrates, from its source to its outlet, and afterward led an expedition across the heart of Arabia from the Mediterranean to the Indian Ocean, returning to England in 1837. He commanded the artillery in China, as brigadier-general, in 1843-'47, held the command of the artillery in the south of Ireland from 1848 till 1852, and was created an honorary D. C. L. of Oxford in 1851. The question of the practicability of the overland route to India for the transport of mails and merchandise has long been decided, and General Chesney has had the honor not only of opening another route to India, but of introducing commerce and civilization into regions which they have never before penetrated. In 1850 he published his "Survey of the Euphrates and Tigris," containing full details of his expedition, of which he had contributed an abridged account to the *Journal of the Geographical Society*. In 1852 he published

his "Observations on the Past and Present State of Fire-arms, and on the probable effects in War of the New Musket;" in 1854, "Narrative of the Russo-Turkish Campaigns of 1828-'29;" and in 1865, a "Critical Review of the Battle of Gettysburg." He attained the rank of major-general in 1855—a tardy acknowledgment of his great services; in 1860 he was promoted to be lieutenant-general, and in 1866 was raised to the rank of general, though without its usual accompaniments of knighthood and investiture with the order of the Bath.

CHILI (REPÚBLICA DE CHILE), an independent state of South America, extending from latitude 24° to 56° south, and between longitude 70° and 74° west; and bounded north by Bolivia, east by the Argentine Republic and Patagonia, south by Cape Horn, and west by the Pacific Ocean. Area, 182,223 square miles; to which may be added 115,590 square miles, the area of that part of Patagonia claimed by the Government. The territory of the republic is divided into fifteen provinces and one colony, which, with their population, in 1870, are as follows:

Provincia.	Population.	Provincia.	Population.
Aconcagua.....	124,178	Maule.....	211,567
Arauco.....	87,677	Nuble.....	126,819
Atacama.....	83,343	Santiago.....	374,078
Chiloé.....	63,968	Talca.....	107,413
Colchagua.....	153,096	Valdivia.....	27,980
Concepcion.....	155,382	Valparaiso.....	144,954
Cochimbo.....	150,098	Magellan Colony..	729
Curicó.....	100,300		
Llanquihue.....	43,348	Total.....	1,973,438

President, F. Errazuriz, September 18, 1871; Minister of the Interior, E. Altamirano, September 18, 1871; Minister of Foreign Affairs, A. Ibañez, December 9, 1871; Minister of Religion and Instruction, A. Cifuentes, September 18, 1871; Minister of Finances, R. Barros Luco, April 12, 1872; Minister of War and Navy, A. Pinto, September 18, 1871.

Archbishop (Santiago), R. V. Valdivieso; Bishops: La Serena, M. Orrego; Concepcion, J. H. Salas; San Carlos de Chiloé, Fr. de Paula Solar.

The army consists of 1,400 foot, 712 horse, 804 artillery, 6 generals, 38 lieutenant-colonels, 54 majors, 141 captains, 256 lieutenants: total, 3,916 men and 540 officers; 165 of the latter belonging to the National Guard. The latter comprises 30,542 foot, 21,300 horse, 245 artillery, and 2,149 officers.

The navy is made up of 10 vessels, with 39 cannon and 121 marines. In January, 1872, an appropriation of \$2,200,000 was made for increasing the naval force of the republic; and it was decided that one small ship-of-war and two iron-clads should be purchased. There are in the navy 1 counter-admiral, 19 captains, 40 lieutenants, 88 midshipmen, 1 battalion of artillery, 400 strong, commanded by 1 colonel, 1 major, 4 captains, and 19 lieutenants; besides which there is at Valparaiso a battalion of marine artillery, with 6 captains, 24 lieutenants, and 910 men.

By far the greater part of the foreign trade is with Great Britain. The imports consist chiefly of cotton and woollen fabrics; linens, silks, paper, perfumery, leather, wines, and brandy; nankeens, tea, sugar, tobacco, spermaceti, candles, oil, etc. From Peru and Central America are received dyes, coffee, pearls, sugar, cacao, tobacco, cotton, rice, salts, and spirits; and from Brazil and the Argentine Republic, maté or Paraguayan tea, and also European goods.

The imports for 1870 were as follows:

Countries.	Value.
Great Britain	\$12,760,000
France	6,050,000
Germany	2,690,000
United States	1,980,000
Peru	1,470,000
Uruguay	80,000
Argentine Republic	820,000
Bolivia	160,000
Brazil	550,000
Central America	170,000
Other countries of America	400,000
Belgium	670,000
Various European States	350,000
Total	\$33,100,000

These figures do not include the value of goods received *in transitu*.

The articles most extensively exported are copper, silver, wheat, flour, barley, hides, and wool. The following table shows the total value of the exports for 1870:

Countries.	Value.
Great Britain	\$16,450,000
Peru	5,220,000
Uruguay	940,000
Argentine Republic	80,000
Bolivia	820,000
Brazil	100,000
Central America	80,000
United States	350,000
Other American countries	270,000
France	1,780,000
Germany	190,000
Belgium	20,000
Other European countries	10,000
Total	\$36,360,000

To the above totals may be added, perhaps, \$200,000 for imports from Asia, etc., and about \$800,000 for exports to countries not enumerated in the table; so that the whole foreign trade of Chili for 1870 may be recapitulated as follows:

Imports	\$33,100,000	
.....	200,000	
		\$33,300,000
Exports	\$36,360,000	
.....	800,000	
		27,060,000
Total		\$55,360,000

The ordinary receipts of the Government amounted, in 1871, to \$11,788,500, and the ordinary expenditures to \$12,542,493, showing a deficit of \$753,993. The deficit in 1869 reached \$2,481,443; in 1870 it was \$2,464,484.

The various sources of the national revenue, with the amounts produced by each, were, in 1870, as follows:

Customs duties	\$6,433,183
State railways	1,607,521
National monopolies	1,407,949
Real-estate tax	649,539
Alcabala (exchange duties)	367,501
Patent rights	347,012
Post-office	160,815
Sale of Mejillones guano	91,500
bundries	467,462
Total	\$11,537,781

The following table shows the expenditure for the year 1872:

Ministry of the Interior	\$2,620,894
Ministry of Foreign Affairs	112,363
Ministry of Justice, Religion, and Instruction	1,750,023
Ministry of Finance	4,893,558
Ministry of War and Navy	3,137,568
Total	\$12,514,306

The national revenue in 1862 was \$14,000,000; in 1872 it reached \$37,500,000, showing an increase of \$23,500,000 in ten years. The following were the elements of the national debt on the 1st of January, 1871:

HOME DEBT.	Capital.	Interest.	Amortization, 1870.
Debt at 3 per cent.	\$3,216,200	\$97,852	\$45,550
Debts at 6 per cent.	2,585,400	216,128	116,200
Railway loans at 6 per ct.	2,965,000	195,700	110,000
Other debts, from 3 to 6 per cent.	7,945,149	335,144
Total	\$16,731,749	635,024	\$271,750
FOREIGN DEBT.			
Loan of 1842, at 3 per ct. ..	\$1,915,500	58,965	50,000
Loan of 1848, at 4 " ..	6,455,000	294,300	85,000
Loan of 1870, at 5 " ..	5,013,000	263,175	50,500
Loan of 1867, at 6 " ..	9,363,000	575,280	225,000
Loan of 1866, at 7 " ..	5,096,500	366,590	140,500
Total	\$37,843,000	\$1,548,310	\$651,000
Total national debt in January, 1871	\$44,574,749	\$2,383,334	\$822,750

The port movements in 1870 were as follows:
Entered: 5,091 vessels, with an aggregate of 2,510,000 tons.

The merchant-navy in 1871 comprised 75 vessels, of 15,870 tons measurement.

There were, in the republic, at the end of 1872, the following railways completed from Santiago to Curicó.

	Kilometres.
From Santiago to Curicó	185
From Santiago to Valparaíso	164
From Caldera to San Antonio	150
From Ovalle to Tongay	68
From Coquimbo to Las Cardas	62
From Pabellón to Chafarillo	43
From Carrizal Alto to Carrizal Bajo	40
From Llaillai to San Felipe	29

Total in operation 761

The following lines are in course of construction: From Talcahuano to Chillan, 180 kilometres; from San Fernando to La Palmilla, 80 kilometres; and from San Felipe to Santa Rosa de los Andes, 15 kilometres. The lines from Santiago to Curicó and from Santiago to Valparaíso are almost exclusively the property of the state, as will also be the lines at present in process of building.

But few telegraph-lines exist hitherto in Chili; but several have been projected, and are in course of construction.

In July, 1872, a transandine line, connecting Santiago and Buenos Ayres (the capital of the Argentine Republic), was opened to the public service.

About the close of 1871 an exclusive privilege was granted to Carlos D. Gibbs, for the introduction of a new method of illumination by means of purified naphtha.

The President of the republic decreed that in every one of the Catholic cemeteries a space should be set apart for the interment of dissenters, who will be buried according to the rites of their respective churches. This measure was denounced by the press as unconstitutional, and against the canonical laws, as depriving the Church of a portion of her property, and devoting it to the sepulture of the bodies of her declared enemies.

In January, 1872, a bill was presented to Congress conceding to one C. D. Ramirez, as discoverer of guano at Magellan's Straits, the right to remove and sell 3,000 tons of that fertilizer from the islands of Santa Magdalena and Cuarto Maiter, for the sum of \$8,000, within the space of one year. A controversy was likely to arise between Chili and the Argentine Republic respecting the Straits territory, the discovery of guano having already caused much noise in the Argentine press, which is clamoring for the Government to examine the question of sovereignty.

About the beginning of the year an offer was made to the Brazilian Government to construct a railway, eighteen hundred miles in length, across Brazil, for £10,000,000. The object proposed to be realized was the union of this line with another to cross Peru, and thus put Rio Janeiro in connection with Lima. The councillor Manuel da Guncha Galvão reported favorably on the subject.

The Chilean Government announced its intention of applying to that of the United States for permission to send on board their ships-of-war a few Chilean youths destined for the naval service, as has been done with respect to the English men-of-war.

Large deposits of coal were discovered in Cobquecura, in the department of Itata.

By virtue of an act of Congress passed in February, the Government was shortly to call for tenders for the construction of a mole in the port of Valparaiso, the cost of which was not to exceed \$400,000.

The Council of State approved of the bills passed by Congress for the navigation of the river Valdivia, and the construction of the Huasco & Vallenar Railway.

A measure was adopted by the Legislature in March, by which religious instruction would no longer be obligatory in private educational establishments, and a spirited discussion was maintained in the periodical press concerning the expediency of that act.

Some of the principal inhabitants of the department of Elqui, which contains a population of 18,000, petitioned the Government to

raise the town of Vicuña to the rank of a city, and the petition was granted.

At the port of Tres Montes, in the island of Guaitecas, in the archipelago of Chiloe, an establishment has been commenced for the purpose of preserving shell-fish, among which the white muscle, which grows so large and fine on this coast, is perhaps the best; \$25,000 were already invested in the enterprise, and it was the intention of the proprietors to invest in it \$25,000 more.

The President of the republic visited the city of Valparaiso in the early part of the year, for the purpose of inspecting in person the different institutions in that city, with a view to the promotion of the material and intellectual progress of that part of the state.

On the 4th of March died, at his country-seat, the General of Division, Don Manuel García, aged 70 years, forty-three of which had been spent in the service of his country; he had lived in absolute retirement from public affairs since 1862, when he ceased to occupy the position of Minister of War and the Navy, in the discharge of which functions he gained much honor. He particularly distinguished himself in the war of independence; and his uprightness and bravery throughout his long military experience elicited universal admiration and esteem. He was several times deputy, and twice minister of state, in which latter capacity his determined and patriotic spirit enabled him on numerous occasions to render signal service to his Government. Another hero of the independence died at Santiago about the same time as General García, at the advanced age of 130 years.

Some idea of the mineral wealth which still abounds in the district of Copiapó may be gathered from the fact that one steamer took from the port of Caldera alone upward of \$9,000,000 worth of gold, silver, and copper.

It was decided that the Caracoles Railway should have Mejillones for its terminus.

The appointment of Señor Don Benjamin Vicuña Mackenna as Intendente of Santiago, in March, was universally hailed with satisfaction. It was now to be hoped that a new era of enterprise and prosperity would dawn upon Santiago. Señor Mackenna is acknowledged to be a man of talent as well as energy. Having returned from abroad shortly before his appointment to his new post, he is undoubtedly imbued with the spirit of enterprise of other lands, and will not fail to see that that wealthy and beautiful city requires many radical improvements.

The streets of Iquique were shortly to be lighted with gas, a twenty-years privilege for which had been granted by the Government.

Several important coal-mines were discovered along the Gulf of Arauco, particularly on both banks of the Carampangue River, near its mouth, where important labors were in prosecution with a view to their working. The coal is considered not inferior in quality

to what has already been worked in the territory. From these discoveries there will accrue not only a profit to the country in general, but a saving to the national treasury, coal being in great demand, for which reason people have had to contract for it at Lota at the rate of \$7 per quintal. According to report, in one single vein five feet in height and about 150 *cuadras* in superficial extent, there are estimated to be 4,000,000 tons.

At Santiago it is in contemplation to form a joint-stock company for the exportation of *quillay*-bark, great quantities of which have been exported for some time back. The new company may cultivate it in this country, establishing new industries and rendering it more productive.

The exportation of silver and copper from Coquimbo during 1871 was as follows:

To England.—217 kilos bar-silver; 217½ ditto fine silver; 14,141,539 ditto regulus; 1,708 ditto copper-ore; 37,490 ditto argentiferous copper-ore; and 110,102 ditto silver-ore.

To France.—69 kilos fine silver.

To Peru.—2,502 kilos bar and ingot copper.

The total value, according to the tariff, is \$4,179,520. The duties paid amounted to \$82,193.16, and the municipal dues to \$112.01.

Congress was opened June 1st, by the President. Among the measures first submitted was one for making vaccination compulsory.

Messrs. Sanchez & Cox have made a proposal to the Government to grant them permission to bring to Chili 5,000 immigrants, possessed of sufficient capital to purchase 450,000 hectares of cultivable land, at or near to Nacimiento, at the rate of \$1 per hectare. In other words, they solicit permission to pay into the national exchequer, during a period not exceeding ten years, the sum, in hard cash, of \$450,000! In exchange for their services, Messrs. Sanchez & Cox demand for themselves 1,000 hectares of land for every 100 colonists they procure, and, for the colonists, exemption from import duty on their effects, exemption from taxes for fifteen years, and a free school to every 500 colonists.

The Santiago correspondent of the *Patria* says that an agent of the house of Rothschild has purchased the Santiago & Valparaiso Railway, and also offered to construct the proposed new line between Valparaiso and Santiago, *via* Melapilla.

The Banco Nacional de Bolivia was declared legally incorporated.

125 tons of ore from Caracoles produced in London an average of over \$10,000 per ton.

An exclusive privilege was granted, for a term of eight years, for the introduction into Chili of an apparatus for the carriage of passengers and goods, by metallic cables affixed to posts, or, in other words, a kind of aerial railway.

President Errazuriz, in his message to Congress, referring to the treaty with Spain, said:

The treaty of armistice and indefinite truce which,

with the mediation of the Government of the United States, was signed at Washington, on April 11, 1871, between the representatives of the allied republics on the one part, and the representative of Spain on the other, has been already ratified by the respective Governments, with the exception of that of Peru, to which was conceded an extension of time, to enable it to obtain the approbation of the Congress which is about to assemble in that republic.

The refusal of Spain to make us the reparation due for her excesses has postponed to an indefinite period the celebration of peace, but the truce entered into has removed the obstacles that the former state of affairs opposed to the security of allies and neutrals, and which was the principal cause that induced us to celebrate that treaty.

With respect to the settlement of the boundary question between Chili and the Argentine Republic and Bolivia, the President spoke hopefully, as follows:

Questions of limits with the Argentine Republic and Bolivia continued to be discussed with all the temperance and moderation which our right and the friendly and fraternal bonds that link us to those countries require; and I hope that in a short time the difficulties now standing in the way of the celebration of definite and mutually satisfactory arrangements will be overcome.

The late troubles and disputes concerning the burial of Protestants, or of those outside the pale of the Roman Catholic Church, have suggested the necessity of the following measure, namely: That in all Catholic cemeteries there be set apart a portion of ground for the reception of the bodies of those to whom the Church denies ecclesiastical burial, and that the cemeteries that may be constructed in future, with their fiscal or municipal moneys, shall be laical or common.

The justice of the latter determination cannot be denied. The money of all ought to be employed in the service of all. But, as some time must elapse before laical cemeteries exist in all our towns, it is necessary to order the separation of the part of which I have spoken, in the Catholic cemeteries. By this measure the repetition of past conflicts will be avoided, and the legitimate interest of all consulted.

The remainder of the message is devoted to indicating measures of social reform.

The opening of Congress was signalized by the presentation of several very important measures. Among them may be mentioned a bill for legalizing civil marriages; one for abolishing the privileges of the clergy (*privilegium clericale*); one for authorizing the President of the republic to enter into contracts with private individuals for the introduction of immigrants; one for the abolition of flogging; one for a new assessment of landed property; one for the abolition of the tobacco monopoly; and another for the repeal of the duty on foreign coal.

The fiscal revenue for 1871 was \$11,788,500.83.

A vast number of subjects of public necessity were laid before Congress after the opening of the session in June; and both Chambers seemed to rival each other in activity and determination to discharge the duties imposed upon them.

Señor Reyes presented a bill to the Senate for the formation of a new plan of the city of Santiago, with a view to widen the streets,

beautify it, and improve its sanitary condition; and another concerning marriage among dissenters. The non-Catholic residents of Valparaiso expressed, in a memorial to Congress, their approbation of Señor Reyes's bill for the reform of the articles of the civil code relative to marriages between dissenters, declaring that they prefer civil marriage to being married by a Catholic priest.

The President asked the permission of Congress to close contracts relating to the colonization of lands belonging to the Government.

In the Chamber of Deputies the business was larger, and a number of projects were proposed, some of which were of considerable importance. Among the latter was one for a reform of the electoral laws, which, if adopted, would justify the claim of Chili to the sovereignty of the people. Another, worthy of mention, was for the abolition of flogging, and suggested by the cruelty with which that punishment had been inflicted in several instances during the year.

The Council of State approved a bill authorizing the President of the republic to appropriate a sum not exceeding \$50,000 to the construction of such works as may be necessary to improve the navigation of Maule bar, which is the port of Concepcion.

Much interest was excited by the publication of the sentence of the Judge of the Court of Appeals, Señor Ugarte Zonteno, for the flogging of José Rei, who died from the effects of the infliction. The judge condemned the chief of police, Don Diego Peralas, to the penalty of death; the acting-surgeon, Don Juan N. Favres, to ten years' imprisonment in the penitentiary, forbidding him at the same time to exercise his profession; and the jailer, Guillermo Silva, for the crime of perjury in the same case, to ten years' confinement.

Mr. Studdy Leigh presented a petition to Congress, stating that the obstacles no longer existed which had hitherto prevented the laying of a submarine telegraph-line to connect South America with the United States and Europe. Within eighteen months, at the very latest, the company now engaged in laying telegraphic lines in various parts of the world will devote its whole attention to the submersion of the cable through the Pacific and Atlantic.

The subscriptions of the port of Valparaiso for providing accommodation to the sick through the prevailing epidemic—small-pox—amounts to \$18,000, and it was expected that the fund would reach at least, for Valparaiso alone, the sum of \$27,000, independently of the sums given by the municipality. Liberal subscriptions had been raised for the sufferers. In Santiago they amounted to \$19,504. The directory of the National Bank sent to the intendente a donation of \$2,000. The artillery barracks were transformed into a huge lazaretto. A joint-stock company, with a capital of \$100,000, was formed, for the purpose of establishing drug-stores in Valparaiso, and

such other places as the shareholders might decide upon. The company was called "Drogueria y Botica Nacional."

The Chilean Minister of Finance approved of the articles of association of the new bank called "Banco Sud-Americano." The capital to commence with is \$500,000, and five per cent. to be kept as a reserve.

An attempt was made to form a company for the purpose of constructing a railway from the Palmillos to Port Rapel, or some other post near to Rapel.

The Intendente of Valparaiso addressed a note to the Minister of Marine, recommending, in view of the increase of the navy, the construction of a dry dock in some convenient place in the archipelago of Chiloé. From the report of the Minister of Finance, it is seen that the receipts of the custom-house in 1871 show, as compared with 1870, a falling off of \$495,276.22. The first five months of the present year show an increase of \$356,205.81, as compared with the corresponding period of last year. The net profits of the Estanco in 1871 amounted to \$711,624.85, a decrease, as compared with the previous year, of \$62,959.13.

A new joint-stock company was formed, called *La Empresa*, with a capital of \$600,000, for the purpose of working several mines at Caracoles. Among the large transactions in mining property that took place during the year was the purchase, by the wealthy firm of Escobar, Ossa & Company, of the mines of Don Federico Verela, at Chañaral, for the sum of \$1,200,000. Messrs. Watson & Meiggs, of Valparaiso, and Don Marcial Martinez, of Santiago, obtained a privilege from the Bolivian Government for the construction of a railway from Mejillones to the celebrated silver-mines at Caracoles, in Chili. The price, including stations, rolling-stock, wharf at Mejillones, water-condensers, etc., was to be \$40,000 per mile. The total length will be about 100 miles. The works were to be commenced six months after the date of the contract, under a penalty of \$200,000; and the line to be finished in three years and a half, under a penalty of \$5,000 a month, the Bolivian Government to pay to the contractors a like sum for each month of delay beyond that time. Payment is to be made in bonds issued at 80; but, if the price should at any time exceed 90, the excess is to be equally divided between the Bolivian Government and the contractors. The contractors oblige themselves to place the bonds at 7½ per cent. interest, with an accumulative amortization of 2 per cent. It is understood that the construction of the line was intrusted to Mr. Joseph Hill.

The National Agricultural Society distributed a considerable quantity of tobacco-seed, for the purpose of testing the capabilities of Chilean soil for the cultivation of this plant. The Chili Congress was interrupted up to the end of August. Fears of the epidemic—small-pox—was said to be the reason why a quorum could not be obtained.

A rupture of diplomatic relations took place between the Bolivian Minister, Dr. R. Bustillos, and the Chilean Government, toward the end of the year; but friendly sentiments were afterward reestablished between the two countries.

An International Exhibition was inaugurated at Santiago in September. Among the measures to be taken into consideration by Congress at the close of the year, during an extraordinary session, was the petition of Messrs. Clark & Company, soliciting an exclusive privilege for a period of twenty years for working a railway line that shall cross the Andes and connect the State lines with the provinces of San Juan and Mendoza.

The value of the commerce between Chili and the Transandine provinces, in 1871, was \$1,412,198. Sixty thousand head of cattle are yearly imported from the Argentine provinces. The yearly number of passengers by this line it is calculated would be 90,000. The line of steamers of the Compañía Sud-Americana was to be extended as far as Callao not later than January, 1878. The first of the new steamers to arrive in Valparaíso will probably inaugurate the extension of the line to Callao.

A proposition of the Peruvian President to impose an import duty on nitrate of soda created a feeling of uneasiness in Chili. It was alleged by well-informed persons that, if the measure was sanctioned by Congress, Iquique would be ruined.

A subscription was opened for the purpose of defraying the cost of an expiatory column, and a small chapel also, to be erected on the site occupied by the ill-fated church of La Compañía, in Santiago. The Hon. J. P. Root, United States minister, addressed a letter to the Minister of Marine, thanking him, in the name of the United States Government and in his own, for the assistance rendered at Punta Arenas to the survivors of the crew of the American vessel *Golden Hyde*. A postal convention, between Chili and the United States of Colombia was approved. There were exported from Lota, in July and August, for foreign parts, 2,086 tons of coal, 619,146 kilos. bar copper, and 40,000 fire-bricks.

A joint-stock company was about to be established for the construction of a telegraph-line between Caldera and Lota, communicating with all the principal intermediate towns upon the coast. According to published reports, from the 15th to the 22d of September, there arrived at Santiago, over the Southern Railway, 8,375 persons, being at the rate of 2,000 persons daily. This shows the interest which the late exhibition has excited throughout Chili. The enterprising Intendente of Santiago, Señor Vicuña Mackenna, decided upon two other exhibitions: one, in December, was to be of flowers produced by plants or seeds fecundated and grown in the open air, and of flowers the product of hot-house plants or seeds; the other, from March to April, 1878, will be of fruits and vegetables.

The National Society of Agriculture, an indefatigable toiler in behalf of the agricultural interests of Chili, was preparing to send a collection of various agricultural products to the great exhibition to be opened at Vienna on the 1st of May, 1878.

A company was to be formed at La Serena, for the construction of a railway from that city to Elgin; and the Copiapó Railway Company are to extend their line to the Cordillera. Considerable interest has been awakened concerning the development of the carboniferous deposits of the republic, in consequence of a recent and unexampled advance in the price of coal. Successful explorations have been made in the south, and numerous companies formed for the purpose of working the seams that have been hitherto discovered.

CHINA,* an empire in Eastern Asia. The present name of the Emperor is Tung-Khih (signifying "United Order"). At first the name Kee-tsiang had been adopted for the new government, but it was subsequently changed. The Emperor was born in April 21, 1856, and has ruled since August 21, 1861.

The area of China proper is estimated at from 1,294,000 to 1,548,000 square miles; of China and its dependencies at about 4,700,000 square miles. The population of China proper is about 420,000,000; of the dependencies, Mantchooria has 3,000,000; Mongolia, 3,000,000; Thibet, 11,000,000; Corea, 9,000,000; aggregate population of the dependencies, 26,000,000; population of the empire and its dependencies, 446,000,000.

The army is said to consist of 678 companies (of 100 men each) of Mantchoos; of 211 companies of Mongolians, of 106,000 Chinese, all cavalry, and 500,000 native infantry. To these must be added 125,000 irregular militia; total, 820,000. The soldiers when not in active service carry on a trade in their own houses, and China has, therefore, not a regular army like the countries of Europe and America.

The customs returns show the following amount of duties paid:

Duties paid in Haikuan Taels (1 Tael equal to \$1.52) at 8 Francs.

DUTIES.	1870.	1871.
Import duties.....	3,569,350	3,847,969
Export duties.....	5,160,938	6,384,563
Tonnage duties.....	207,815	304,798
Duty paid by coasting trade.	449,214	569,058
Duty on home productions..	158,631	209,718
Total taels.....	9,545,948	11,216,146

The following is the official report of the foreign commerce of China in the years 1869 and 1870—the commercial tael at \$1.43. It embraces a list of the countries with which a trade was carried on, with the imports from and the exports to these countries; also the trade at each of the open ports:

* See AMERICAN ANNUAL CYCLOPEDIA of 1871 for an account of the Council of State.

The following table shows the articles of import and export in 1870-'71, and their respective values :

IMPORTS.	Tons.		EXPORTS.	Tons.	
	1870.	1871.		1870.	1871.
Opium.....	93,780,000	99,360,000	Tea.....	30,260,000	40,120,000
Cotton goods.....	22,040,000	29,800,000	Silk, raw.....	21,270,000	25,260,000
Woollen goods.....	6,500,000	4,770,000	Silk goods.....	2,040,000	2,550,000
Cotton, raw material.....	4,000,000	3,270,000	Various.....	6,100,000	6,280,000
Metals.....	8,230,000	2,440,000			
Various articles.....	7,110,000	7,950,000			
Total tons.....	69,290,000	78,180,000	Total tons.....	61,680,000	74,860,000

The movement of shipping, in all the Chinese ports (arrivals and clearances), was as follows :

FLAGS OF	1869.		1870.		1871.	
	Ships.	Tons.	Ships.	Tons.	Ships.	Tons.
Great Britain.....	6,727	3,032,290	6,577	3,125,590	7,160	3,820,891
America.....	4,165	2,748,515	4,547	3,004,716	4,600	3,197,643
Germany.....	2,387	666,366	1,304	870,607	1,420	429,747
France.....	213	109,173	194	79,824	277	135,829
Siam.....	202	66,122	141	63,705	113	45,456
Netherlands.....	134	60,954	276	81,547	203	50,791
China.....	432	29,696	469	29,999	474	30,012

Various.....	72	22,058	59	15,652	112	39,486
Total.....	14,602	6,842,072	14,136	6,907,523	14,968	7,381,557

The majority of the people are attached to the religion of Fo (Buddha); next to it the religions of Confucius and Lao-Tse have the largest number of adherents. The Buddhists have numerous monasteries, which have endowments sufficient to maintain their occupants in more or less comfort. Morning and evening service is chanted in Sanscrit, which neither the priest nor his hearers understand. The monasteries afford shelter to travellers, and the inmates are strict vegetarians, for the destruction of life is hateful to Buddha. They are celibate, and they shave the entire head, instead of only the crown. Personally, they seem little respected, but command some consideration in virtue of their office. The people are rather prone to believe evil of them, and still more so of the nunneries. But, if ignorant, lazy, and dirty,

the monks seem at least harmless members of society; they are civil to visitors, and quite tolerant of foreign heretics. They are, moreover, innocent of political intrigue, which is a monopoly of the *literati*.

The Mohammedans belonging to the Chinese Empire number from 1,500,000 to 3,000,000, chiefly in Chinese Toorkistan, and the south-western province of Yunnan. In both parts of the empire the Mohammedans have been for more than ten years in a state of insurrection against the Chinese Government, and have for years maintained independent states.

The population of the English colony of Hong-Kong, according to the official census of 1871, was 124,198; namely, 5,931 Europeans and Americans, 2,823 Indians, and others of mixed blood, and 115,444 Chinese. These num-

bers include the military establishment, and the crews of ships in the harbor; and allowance must be made for the circumstance that many of the Chinese evade enumeration, suspecting that there may be some covert design in view in taking a census. The resident European and American population is 2,736; 869 of them British, 1,367 Portuguese, 170 Germans, 133 Americans, and 60 French. Mr. Stewart, inspector of Government schools, reports that the number of scholars taught in those schools in 1870 was 1,190 boys and 111 girls, the cost being nearly £3,000. The central school had an average attendance of 237, and the school-fees for the year amounted to \$1,701. Nearly all the first class, and many boys in the second class, were married. The inspector says that their extreme docility makes a school of Chinese boys a disciplinarian's paradise. His annoyance is, that, in case of a marriage or a funeral in the family, nothing less than a month's absence is thought sufficient. The school holidays are now fixed to suit the two most important Chinese holidays—viz., the new year, and the tomb-festival. The boys work hard, stimulated by the desire for respectable and lucrative employment. The failures at the annual examination, by obtaining less than a third of the total number of marks assigned, are few. In the course of the year, 95 boys left the school. Of these, 40 are in business as interpreters, clerks, assistant *compradores*, etc. The village schools, supported or aided by the Government, are purely Chinese schools, using Chinese books alone. Many of the people are in extreme poverty, and the majority of the children do not attend any school at all. The inspector says that, if education were made compulsory, the extreme poverty of many of the people in the villages and in boats would throw on the Government the onus of clothing and feeding as well as educating the children. He adds that this is not peculiar to Hong-Kong; in the villages on the main-land only a fraction of the children attend school.

In the province of Tien-Tsin, disastrous floods again occurred, spreading distress and ruin over a large tract of country. According to the opinion of all the geologists who have visited the country, there is no longer any doubt that the gradual upheaving of the northeast of China, which has long been suspected, and to which the change in the course of the Yellow River some years back is attributed, is throwing out all the natural provisions for the drainage of that wide region, and the accumulated waters of the heavy rains of the summer months, unable to pass away by their accustomed channels, break out annually in disastrous floods in the autumn, lasting throughout the winter. Unless the foreign ministers at Peking induce the native Government to avail itself of the resources of Western science in discovering the direction in which new channels should be cut, and to apply themselves with energy to carry out the plans competent engineers could

devise for doing so, it is feared that the doom of the country round Peking is pronounced.

The Emperor of China was married at Peking, on October 16th. There was no public ceremony outside the palace, except the procession to bring the bride thither, and the whole affair passed off very quietly.

The Panthay or Mohammedan rebels in the western province of Yunnan attracted unusual attention, from the fact that their ruler Suleiman sent his son Hassan as a special messenger to the courts of Europe, in order to establish friendly connections. Sultan Suleiman, who has now, for several years, been able to maintain a complete independence, is described as an intelligent and energetic man, who has gained the confidence of his people to a high degree. He resides at Talifu, and rules with the assistance of four military and four civil mandarins. To the former certain districts are assigned, but every matter of importance must be laid before the Sultan, who, before giving his decision, consults the civil mandarins. As soon as Suleiman appeared to have established his rule on a firm basis, Major Sladen was sent out by the Government of British India, in order to explore this territory. In his report, Sladen states that he had an interview with Suleiman, and that the latter expressed to him his wish to enter into commercial relations with the Western countries. The Sultan was, moreover, represented by the English press of India to be desirous to open a good commercial and military road between Burmah and Yunnan, and to secure the support of England in his struggle for maintaining the independence of his kingdom. The English authorities appeared to be anxious to smooth the way for the establishment of friendly relations, and already have opened two steamship lines between Rangoon and Mandalay, the capital of Upper Burmah and Bhamo, the ancient emporium of the caravan road to Yunnan, where the Dutch formerly had as many as 1,550 factories. In connection with these lines, another between Rangoon and Glasgow has been opened, and thus England is fully prepared to enter into commercial relations with Western China. In order to complete the alliance between Great Britain and Yunnan, the Sultan, probably at the suggestion of the English Government itself, resolved to send a grand embassy to England. The embassy consisted of Prince Hassan, the son, and Prince Yussuf, the nephew of the Sultan, an interpreter, and five high dignitaries. The embassy is intrusted with a letter from the Sultan to the Queen, in which the latter is asked for her patronage and support. The embassy travelled by land to Mandalay, which journey lasted one month; then visited Calcutta and Bombay, and from there paid a visit to Constantinople, where they arrived on October 7th. Accounts from Constantinople state that the prince recognized the Sultan of Turkey as caliph, and head of the orthodox Mohammedans.

The agitation of the natives against the foreigners, and, in particular, against the French and English, continued also throughout the year 1872. The English minister, Mr. Wade, was even insulted in the streets of Peking, and consequently presented to the Chinese court a memorial summing up all the complaints of the foreigners, and demanding satisfaction. Prince Kung recognized the justice of the remonstrances, and promised redress.

The treaty between China and Japan, which was negotiated in the latter part of the year 1871, was kept very secret by both Governments, and the representatives of the foreign powers were led to suspect that it embraced a defensive and offensive alliance directed against the foreign powers; for, in the latter part of the year, it was reported that Japan demanded a modification of the treaty.

CHRISTIAN UNION (THE). The Fourth General Council of the *Christian Union* of the United States met at Woodhull, Henry County, Ill., on the 30th of May. Twenty-six delegates were present from the States of Iowa, Illinois, Missouri, Indiana, and Ohio. A standing committee, appointed at the previous General Council, to meet commissioners from the Quadrennial Convention of the Christian Connection North, reported that they had not been notified of the appointment of any commissioners on the part of the Christian Connection, and that no meeting had been held, and added: "Therefore no official action has been taken. We have been ready and anxious for the consummation of union with all who follow Christ, but not at the cost of Christian liberality and the loss of our unsectarian vantage-ground." A similar committee, who were appointed to confer with commissioners from the Christian Connection South, reported: "We have taken no action in the premises, further than an informal correspondence with a few prominent brethren of said Christian Connection, who have represented their organization as willing to unite, on the conditions of our adopting their articles of religion, rules of order, and organic nomenclature. Conceiving that union, upon such conditions, is not desirable to any of the independent, creedless churches in this Union, and in consideration of the fact that the union we seek is not the amalgamation of sects, or the establishment of any creed, other than the Bible; and, as our chief object is to develop the unity of the Spirit, in striving to promote and intensify esteem and affection among all the true disciples of our Divine Master, we would respectfully submit that the union indicated by the Christian Connection South is not such as would be acceptable on the part of this body." An address on fraternal relations was adopted. It states that the members of the Christian Union "do not propose any interference with the doctrines, peculiarities, or conscientious predilections of Christians for their own modes of worship or external rites," that,

in their confederate and conciliar relations, they "seek the meeting together of Christians whose sympathies and labors are earnestly directed toward the unity of all God's children who recognize the one head and master of the Church of Christ;" that it is their desire, in their councils, "to confine the worship and business thereof to the momentous and vital points in which there is an avowed agreement; that the oneness of our faith and agreement in the Gospel of Christ may be exhibited, without associating with it other and minor objects, which might, by dividing attention, prevent the importance of union in fundamental objects from being duly recognized;" and that they "recognize the ground of such union to reside in the supreme importance of the points in which all Christians are and must be agreed."

The churches connected with the Union in the different States were represented as generally in a prosperous and peaceful condition. The Council chose a board of missions, and appointed a general missionary. The next meeting of the General Council will be held at Wesley, Montgomery County, Ind., in May, 1874.

CHURCH OF GOD. The Tenth Triennial General Eldership of the Church of God in North America met at Mount Carroll, Ill., on the 20th of May. Delegates were in attendance from the East Pennsylvania, West Pennsylvania, East Ohio, West Ohio, Indiana, Michigan, Southern Indiana and Illinois, Illinois, Iowa, and Kansas and Missouri Elderships. The German eldership was represented by letter. The regular business of the session related chiefly to the publishing interests, the newspapers, and missions, of the Church. The publishing interests and papers, though not extensive, were found to be well established and prosperous. The Board of Missions, which was organized in 1869, had conducted missionary work successfully in Kansas and Nebraska, Iowa, Missouri, among the freedmen, and at special points in the Central States, and had founded two funds of \$1,000 each. The most important missionary work had been conducted at Chicago, for the use of which a property, valued at about \$20,000, had been accumulated. Several efforts had been made, between 1854 and 1866, to establish a denominational school, but all had failed. The General Eldership was visited by a fraternal delegate from the Free-Will Baptist General Conference, who proposed, on behalf of that body, that the Church of God should take an interest in Hillsdale College, a denominational school of the Free-Will Baptists at Hillsdale, Mich., by endowing a professorship, and designating a professor. The offer was accepted; a professor was chosen; arrangements were made for paying his salary, and for permanently endowing his chair, by the sale of scholarships, and a visiting committee to the college was appointed. Three frater-

nal delegates were appointed to attend the next General Conference of the Free-Will Baptists. It appeared that some irregularities had taken place in one of the Annual Elderships in designating the name of the Church in the Eldership titles. In view of this fact, the General Eldership directed that the singular form of the word *church* should always be used. The preservation and perpetuation of the German Eldership were recommended. Permission was granted for the organization of an eldership in Maryland. Measures were taken for the collection of material relating to the early history of the Church, particularly to the labors of John Winebrenner, its founder. The Board of Publication were advised to publish annually a Church almanac. The next meeting of the General Eldership will be at Smithville, Ohio, on the last Wednesday in May, 1875.

CLEVELAND, Rev. CHARLES, widely known as "*Father Cleveland*," a missionary to the poor in the city of Boston and its vicinity for more than fifty-five years, born in Norwich, Conn., June 21, 1772; died in Boston, June 5, 1872. He lived in Norwich till he was twelve years old, when he became an inmate of the family of an uncle who resided at Salem, Mass. His surroundings at that place incited a fancy for a seafaring life, which, however, a single voyage to the Cape of Good Hope effectually banished. After having passed through a mercantile apprenticeship of two or three years, he was appointed deputy-collector at the Salem Custom-House, which position he retained until 1802. Removing to Charlestown in the same year, he became a clerk in the employ of Mr. Henry Higginson, with whom he remained until seven years later, when he commenced business for himself in Boston as a stock and exchange-broker at No. 21 State Street. This occupation he continued until 1822, when the firm of Cleveland & Dane, of which he was the senior partner, was formed. Their shop was at No. 43 Market Street, since changed to Cornhill, where they dealt, as the Directory of the year informs us, in "English goods," a style of commodities that would now be classed under the head of drygoods. In 1829 the partnership was dissolved, and Mr. Cleveland resumed his old employment as a broker at No. 40 State Street. Here he continued for four or five years, and until he finally abandoned all labors but those of charity. In September, 1816, the Society for the Moral and Religious Instruction of the Poor, in the formation of which he was one of the prime movers, was organized at his house. He applied himself at once to the work of collecting funds for the erection of a mission-house for the use of this Society, which, through his exertions, was finally built, and was dedicated in May, 1821. Nine years later he entered upon the duties of a missionary to the poor of Boston, being associated with Revs. Ethan Smith and D. D. Rossiter. He was not as yet a formally-authorized clergyman, but in

1835 he received a license to preach from the Harmony Association at Upton, and on the 10th of July, 1838, he was ordained as an evangelist. From that time until his final sickness he was incessantly employed in charitable undertakings, his field extending throughout the whole city, and his strength being the only limit to his efforts. Throughout all the districts where poverty and wretchedness abound his familiar step was heard, and his liberal bounty and words of comfort and cheer lightened the sufferings and smoothed the path of innumerable despairing souls. He was at one time or another intimately connected with all the benevolent institutions with which the city abounds, and has contributed in no small degree to their success. His work was, however, independent of them, and he was not formally accredited by any. He had a long list of wealthy and influential gentlemen, who were in the habit of placing in his hands a certain fixed sum annually. These he called his "patrons," and he published a report each year of the way their benefactions had been disposed of. This custom of furnishing a report he had kept up for a great number of years, the last, that of 1871, being the thirty-eighth. His domestic relations were very happy. He was married for the first time, when twenty-six years of age, to a lady with whom he lived in unbroken sympathy and affection until her death, which occurred forty-three years after. At the age of sixty-nine he again married, and this second partner he also survived, although she was his companion for twenty-seven years. She died in November, 1869. Her death was a severe blow to him, and it was soon followed by another scarcely less trying—the loss of his son, Prof. Charles Dexter Cleveland, LL. D., of Philadelphia, who was cut off in the vigor of his powers and at the summit of his usefulness. Through all his trials he preserved a hearty interest for the class whom he affectionately termed "my poor," and his care for them was never relaxed. He was widely known by all conditions of society, and universally respected. No man, it is probable, ever lived who had done so much to create a fellow-feeling between the favored and the unfortunate in respect to worldly possessions, and to build up a mutual interest. His decease was caused as much by old age as by sickness. He suffered but little, and calmly passed away, leaving a host of sincere mourners to sorrow for his departure.

COLOMBIA (UNITED STATES OF), an independent republic of South America, lying between latitude 1° 37' south and 11° 25' north, and longitude 69° 30' and 83° west. It is bounded north by the Caribbean Sea; east by Venezuela and Brazil; south by Ecuador; west by the Pacific; and northwest by Costa Rica. The territory of the republic is divided into nine States, which, with their areas and population (1870), are given in the following table:

STATES.	Area, Square Miles.	Population.
Antioquia.....	22,790	265,974
Bolívar.....	27,087	225,080
Boyacá.....	33,349	423,874
Cauca.....	257,451	425,078
Cundinamarca.....	79,845	409,603
Magdalena.....	26,950	85,355
Panamá.....	31,931	220,542
Santander.....	16,298	425,427
Tolima.....	18,476	220,631
Total.....	514,102	2,880,633

Rather less than 1,000,000 of the total population are whites; the rest being divided between mestizos of various degrees, according to the predominance in them of the European, the African, or the Indian type. The population of the capital, Bogotá, is variously estimated from 40,000 to 60,000, probably nearer the former than the latter. President of the republic, Manuel Murillo Toro, from April 1, 1872, to March 31, 1874; Minister Secretary of the Interior and of Foreign Affairs, Dr. Gil Colanje; Minister of Finances, Dr. S. Camacho Roldán; Minister of the Treasury and National Credit, General J. Trujillo; Minister of War, R. Núñez; Procurator-General, Dr. R. Gomez; Archbishop of Bogotá, J. A. Arbelaez. The chief magistrate of the State of Panamá is no longer called Governor, but has the title of President, the presidential chair being at present occupied by General Neyra. Secretary of State, J. Mendoza; Governor of the city of Panamá, J. Soza; Procurator-General, Dr. M. Iturralde; Commandant-General of the Army, General G. Neyra. The strength of the army of the republic, in time of peace, is 1,420 men; in time of war, each State furnishes a contingent of one per cent. of the population.

The total value of the commerce for the year ending September 30, 1870, was \$14,387,772, divided as follows:

EXPORTS.	
To England.....	\$1,849,000
To France.....	1,491,000
To Germany.....	2,730,000
To the West Indies.....	223,000
To the United States.....	608,000
To Venezuela.....	
To Peru.....	1,333,000
To other countries.....	
Total.....	\$3,234,000
IMPORTS.	
From England.....	\$2,891,889
From France.....	1,472,422
From Germany.....	168,502
From the West Indies.....	211,326
From the United States.....	407,234
From Venezuela.....	213,690
From Peru.....	26,571
From other countries.....	663,188
Total.....	\$6,058,772

The following table shows the receipts for the financial year 1870:

Net Customs Receipts.....	\$1,481,923
Salt Monopoly.....	758,829
Panamá Railway.....	250,000
Mint.....	29,213
Postal Service.....	51,223
National Property.....	26,600
Public Lands.....	6,817
Sundry Receipts.....	185,613
Total.....	\$1,807,864

According to the President's message, April 4, 1872, the national debt was composed of the following elements:

FOREIGN DEBT.	Nominal Capital.	At the Present Rate.
Old Debt.....	\$14,887,350	\$2,819,077 = 19 per cent.
New Debt.....	2,887,000	1,360,450 = 35 per cent.
Suspended Debt.....	14,699,000	1,317,465 = 9 per cent.
HOME DEBT.	\$33,362,350	\$5,496,992
Tot. Nat. Debt.....	9,899,710	\$2,667,521

Thirty-seven and a half per cent. of the customs receipts is applied to the interest and principal of the foreign debt, and ten per cent. to the home debt. Besides ten per cent. is applied to pay foreign indemnities. The law of April 21, 1872, authorizes the Government to negotiate with the foreign creditors for the transformation of the total foreign debt into a debt of \$7,000,000 at five per cent.

There are at present but two railways in the republic; that of Panamá, about 48 miles in length, and that from Sabanilla to Barranquilla, 18 miles long. The number of passengers carried by the first, in 1867, was 85,076. Some other lines are projected, or in process of construction, as will be seen hereafter. There are telegraphs along the two lines already mentioned, and a submarine cable from the port of Aspinwall to that of Kingston, Jamaica. As the Colombian Government was anxious to have a railway built from Bogotá to the Lower Magdalena, General Hurlbut, the United States minister, proposed to that Government to guarantee the construction of the same to an amount not to exceed \$10,000,000; that is to say, the constructing company should be guaranteed by the United States interest at six per cent. on all sums expended by them up to \$10,000,000, for fifteen years. In return, the United States were to have the privilege of opening, free of rents and charges, the long-projected Inter-oceanic Canal. At the beginning of the year the public press entered extensively into the subject of the necessity for peace and liberty of discussion, in opposition to the Church authority, who, as a body, are opposed to the latter.

It was expected that Bogotá would soon be lighted with gas.

Dr. María Mallarino, formerly President of the republic, died January 6th.

Various representations were made to the Legislative Chambers by merchants of note in Océuta, claiming the intervention of the General Government for the opening of the road of Sardinata, which would afford communication with foreign markets.

The relations with Venezuela were characterized as in the highest degree shameful and humiliating. The vexations to which Colombians were subjected for the mere use of the waters which lead to the ocean were equivalent to a prohibition; while Colombia, on the other hand, to the injury of its own interests, had frankly opened its territory to Venezuela, in order that it might supply the State of

Tachira and a great part of Casanare and Mérida.

The House of Representatives rejected, by 14 votes against 7, the contract between the National Government and Messrs. Saravia and Duran, for the opening of a road from San Agustín, in the State of Tolima, to San Sebastián on the Cauca.

In the Senate, at the session of February 2d, the following secretaries were voted for: Señor Aquileo Parra, Secretary of the Treasury; Señor Florencio Vezga, Secretary of the Interior and Foreign Relations; Señor Manuel Abello, Secretary of War; Señor Ramon Santo Domingo Vila was black-balled for Secretary of the Treasury.

The Senate declared that "the political conduct of Citizen Eustorgio Salgar, as President of the Union, had satisfied, as far as the present circumstances of the country permitted, all parties. The administration which terminates will be held as the happiest in the annals of Colombia." A copy of the resolution, duly signed and authorized, was sent to Señor Salgar, "in testimony of the national esteem which he gained as first magistrate of the republic."

In the House of Representatives, Señor M. A. Arango asked for the collection of the acts in force issued by the Provisional Government, relative to a convention celebrated for the settlement of accounts with Mexico, as well as the documents which refer to the claims of ancient Colombia, known as the "claims for the cacao of Maracaibo."

The telegraph-line between Bogotá and La Mesa is in working order. The English engineers destined to survey the north road were to commence their labors in April.

In Bolívar, a merchant of Barranquilla exported to Europe 800 tierces of raw sugar, in cakes, known as *panela*. The tobacco of Carmen was in demand. The industry of the State was becoming rapidly developed. The production of sugar and *panela* increases at a rapid rate, the value of that exported being not less than two millions and a half annually. The financial and political condition of the State of Boyacá was not satisfactory. The public roads were bad, and the money advanced for them by the national Government had somehow disappeared; public instruction was at a stand-still, and there was no money to pay the teachers. Tolima was occupied, both Government and people, with the schools and roads of the State.

An important law was passed in April, in reference to the foreign debt of the republic. The following is a summary of it:

ARTICLE I. The Executive power is hereby authorized to enter into arrangements with foreign creditors for the purpose of converting the foreign debt, conformably to the Convention of Paris, of March 21, 1871, into a new debt to the amount of \$7,000,000, with an interest of 5 per cent. per annum.

ART. II. The Executive has the power of appropriating, for the payment of the interest of the new

debt, the branches of the Federal income which it may deem convenient. It can also arrange the manner and time of said payments, so as to give complete security to creditors in regard to the fulfilment of the new agreement.

ART. III. If the Executive power cannot come to any general agreement for the conversion and amortization of the foreign debt, according to the terms of this law, it can also convert the debt, in the terms of Article I, partially, or as a whole, within and without the Union, at the following rates: The new debt active, to the extent of 40 per cent; the old debt active, to 24 per cent; the deferred debt, 14 per cent. The Government bonds of the foreign debt obtained in this way will, like the others, go into circulation toward the collection of the interest, and to the reduction of the debt on account of the republic, in conformity with the existing agreement, until the entire conversion of the debt has been effected.

ART. IV. While the income of the Federal Treasury is not sufficient to meet the expenses of the public administration, the Executive power can reduce to a minimum of \$800,000, guaranteed by Article IV. of the convention now existing, the sums appropriated to the payment of interest, and the amortization of the foreign debt. The difference between those \$800,000 and that produced by the 87½ per cent. of the rents of the customs, applied to the foreign debt, shall be carried by the general Treasury to the account of deposits, to be faithfully paid over as soon as the causes mentioned in this article cease.

ART. V. The agreement made by the Executive in accordance with the cases of the present law, shall be definitive, and not require the further sanction of Congress. Given in Bogotá, this 21st day of April, 1872.

The balance of £72,100, the value of the foreign debt bonds emitted in 1845 and 1861, is by Congress declared to have been cancelled.

The House of Representatives, among other matters, voted an additional credit of \$50,000 in case of war with Venezuela, Brazil, or Ecuador.

A memorial, signed by numerous influential citizens, was presented to Congress, petitioning that body to cause the Indians of the Goajiro Peninsula to be instructed and civilized, in order that they might be united politically and socially with the rest of Colombia.

The Congress of 1872 passed the following bills: The law prohibiting pearl-fishery with diving-machines; a law reforming that of June 10, 1870, respecting the custom-house of Cúcuta; a law designating places of detention, and punishment of violators of the constitution and national laws.

The Senate on the fourth day (February 6th) proceeded to verify the ratification of the act reformatory of the constitution establishing a federal district. There were eight votes affirmative and one negative. The former were of the States of Antioquia, Bolívar, Boyacá, Cauca, and Tolima, and the latter the State of Cundinamarca.

The following resolution, dictated by Senator Carlos Holguín, was agreed to: To recommend to the Executive power the active prosecution of the suit against the house of James S. Hermann, his trustees or legal representatives, to make effective the guarantee given for the North American steamer "Uncle Sam,"

in case the transaction referred to in the law of the 2d of June of last year be not verified.

The following law was passed concerning the Panama Railroad:

ARTICLE I. In the event provided for in section 7th of Article I. of the legislative decree of August 15, 1867, with respect to the Panama Railroad, the Executive power shall exact the strict fulfilment of the stipulations of Article XXIX. of the contract to which said legislative decree refers.

ART. II. The Panama Railroad being turned over to the republic, in fulfilment of the aforesaid stipulation, the Executive power shall dictate the necessary dispositions to secure its good management, while it endeavors to celebrate a contract to rent said railroad to an individual or company, national or foreign, which gives guarantees of fulfilling the conditions which the Executive power thinks fit to exact.

ART. III. To this effect the Executive power shall publish tenders in Europe and America, six months beforehand, of the day of the celebration of the contract, and shall endeavor to have inserted into said contract all stipulations required for the interests of the republic. The contract entered into must have the sanction of Congress before it can be valid.

Bogotá, April 29, 1872.

The President of the Colombian Union, on the 7th of May, convoked Congress by decree to hold extraordinary sessions, beginning on the 8th, for the purpose of finishing affairs of a general character still pending, and any others that might be presented to it by the Executive power.

The message sent by the President to Congress in sessions extraordinary, among other matters, recommended a bill to be brought forward for the construction, on account of the Union, of an interoceanic road from the bay of Buenaventura on the Pacific, crossing the valley of Cauca, and descending the Magdalena to the Atlantic. But that which concerns Panama more particularly is the section between Buenaventura and the river Cauca, which, by opening up a communication with the valley of Cauca, would bring the valuable exports of that fertile valley by way of the Panama Railroad.

The Bogotá poor-house was to be closed in May, for want of funds.

President Murillo dismissed, as unnecessary, the guard stationed at the government palace.

A few immigrants had arrived from the Canary Isles and from Alsatia.

General dissatisfaction reigned in those parts of the republic bordering upon the lake of Maracaibo (the whole of whose waters belong to Venezuela), caused by the onerous duties levied by the Venezuelan Government upon Colombian merchandise entering or leaving the republic by that lagoon, which forms the natural and easiest outlet for the productions of those regions which are separated from the Magdalena by the Central Cordilleras. The Colombian Government had remonstrated with that of Venezuela on this subject. "Colombia," says the Bogotá press, "has at her disposal two ways of remedying the evil: diplomacy, which is the best, or building a road

through her own territory to fluvial or maritime ports of her own." It would, however, be found cheaper to keep peace with Venezuela by admitting her claim to moderate protective imports, than to try to make a railway across the Andes to the Magdalena River. It was a grand oversight that Colombia did not secure for her citizens the right to one-half of the Maracaibo waters; but it is not too late, nor is Venezuela in a state at present to dictate the law to the United States of Colombia, above all in a question of limits and the vexatious abuse of her citizens. The legation about to be sent to Caracas will be adequate to the mission with which it is intrusted by the nation. In 1871 Venezuela received by way of transit duty on effects introduced into Colombia, and exports by the same route, the value of \$148,372.98. The importations and exportations into Colombia, by the port of Los Cachaos, produced to Venezuela in 1871 \$656,293. The conviction is that, if a railroad were constructed between Oñota and the Magdalena, in ten years there would be exported no less than 240,000 bags of coffee, while the above \$656,293, Venezuela dollars, would remain in Colombia.

Public works and public instruction were equally prosperous in Boyacá and Santander. In the month of March there were 11,494 children attending the schools. Bolívar was chiefly occupied with the advancement of its agriculture; and the State of Magdalena with the consideration of its water and road communication.

A numerous meeting of Catholics was held in Zapaquirá, to resolve what should be done in view of the recent law of Cundinamarca, which excludes religion from the public schools. A proposition to found schools, essentially Christian, at the expense of Catholics, was adopted. A collection was taken up, which gave \$400 toward that object, which is considered, besides, to be the most dignified rebuke to the Government.

Six curates were to be sent, at the expense of Government, to the territory of Casanare, each to establish and direct a school for primary education; \$3,600 per annum were appropriated from the national Treasury to defray the expenses of the missions.

Society in Bogotá was reported to be in a state of continual alarm; and assassinations were becoming frequent.

A railway from the port of Buenaventura, on the Pacific, to the river Cauca, in the State of that name, was contracted for.

Dr. N. R. Oheyme, a distinguished physician of Bogotá, died at that city, in July. The *Tradicionista* states that he came to South America about the termination of the War of Independence. Bolívar and the other heroes of that time were his particular friends. He had been suffering for some time back with a painful disease, which ended his life at the age of seventy-three years. The Government or-

dered that at his funeral the honors due to a medical officer of the Army of Independence should be shown to his remains.

A firm of Barranquilla, in June, entered into a contract with the Government of New Granada to lay a submarine cable from Aspinwall to Carthagena and Santa Martha.

The epidemic called the *lomba*, which closely resembles the yellow fever, had been raging for several months in Carthagena, but was not very fatal. There had been 5,500 cases, only 800 of which proved fatal.

The Aspinwall and Jamaica cable (date, November 27th) was still silent, as it has been since the 5th of November. It probably will not be repaired for some time. Sir Charles Bright, who has charge of this cable, is at variance with the West India Cable Company. No tariff for through business has yet been agreed upon, nor will any be fixed until the trouble between the managers is settled.

The conduct of business on the West India Company's lines (the cable from Cuba to Kingston, Jamaica, etc.) is stated to be very unsatisfactory to the public.

A revolution broke out in the State of Cauca, December 18th. General Mosquera, the existing President of Cauca, was determined to sustain at any sacrifice his party—the Liberals—in power, and place, as his successor, a candidate of his own selection in the presidential chair, regardless of the wishes of the people. The constituent assembly or convention, which had been called for the consideration of needed reforms in the State, laid aside its legitimate work, and took up that of designating who should be the next President of the State. The body soon divided into parties, each of which had its own candidate for the high office. Messrs. Palan, Trojillo, and Payan, were the names respectively selected, but none of them suited the views of Mosquera, who, in opposition, named General Peregrino Santacoloma, formerly President of the State of Panama, and ever a most devoted Liberal, to be his successor. Mosquera made a speech in support of his own candidate, and denounced the other three, against whom he threatened to "make all kinds of sacrifices, even to the loss of life," rather than that any of them should succeed him. General Santacoloma being the first Designado to exercise the presidential power, it only required a well-managed *coup d'état* to place him permanently in the chair of the first magistrate, and secure to General Mosquera two years more for carrying out his views. The Conservative party opposed this move of General Mosquera, and the Liberals had taken up arms in defence of their rights, the Church, in the person of Bishop Pasto, heading the revolution, that prelate being dissatisfied that the management of the schools had been taken out of the hands of the priests. General Santacoloma had taken the field against the revolutionists of Pasto, who were marching on Buqueres,

Obando, and Barbacoas. It was rumored that an engagement had occurred.

In Panama, the government put up at public auction the right to sell ice, which has been hitherto a government monopoly. The cession is for five years, and the price restricted to fifteen cents a kilogramme.

Politics on the Isthmus were in an unsettled state, not so much from any contemplated struggle between Liberals and Conservatives, as from divisions in the Liberal party itself.

There was a great inundation of the city of Bogotá, caused by the overflowing of two of the small rivers that run through it. Several lives were lost, and property damaged to the value of \$150,000. This is the first inundation since the establishment of the city at the time of the conquest.

COLWELL, STEPHEN, an American publicist, political economist, and philanthropist, born in Brooke County, Va., March 25, 1800, died in Philadelphia, January 15, 1872. He was educated at Jefferson College, Pa., whence he graduated in 1819, studied law, and was admitted to the bar in Virginia in 1821, practised his profession for some years in Pittsburg, but about 1830 removed to Philadelphia, and became an iron-merchant. Fond of study, and especially of investigating knotty questions of finance, political economy, social science, and ethics, he soon commenced publishing his views. His first published work was a pamphlet, "Letter to Members of the Legislature of Pennsylvania, on the Removal of Deposits from the Bank of the United States by order of the President," over the signature of "Mr. Penn," 1834; in 1850 he published an able essay, entitled "The Relative Position in our Industry of Foreign Commerce, Domestic Production, and Internal Trade," by Jonathan B. Wise. In 1851 a new work appeared from his pen, which attracted much attention and some sharp criticism; it was entitled "New Themes for the Protestant Clergy;" two reviews of it were published, to which he replied in "Hints to a Layman," and "Charity and the Clergy," both published in 1853. In 1852 he published "Politics for American Christians," and an elaborate article in the *Merchants' Magazine*, on "Money of Account," and subsequently (in 1857) discussed the subject still further in the *Bankers' Magazine*. In 1855 appeared a very able essay on the "Position of Christianity in the United States, in its Relations with our Political System and Religious Instruction in the Public Schools;" and, in 1856, "The South; a Letter from a Friend in the North with Reference to the Effects of Disunion upon Slavery." He edited the same year, with preliminary essays and numerous notes, "Frederick List's Treatise on National Economy;" and in 1858 published a large and valuable work, entitled "The Ways and Means of Commercial Payment." At the commencement of the late civil war, Mr. Colwell was

earnest in the support of the Union, was one of the founders and an active member of the Union League of Philadelphia, and by purse, pen, and voice, sought to further its work. He was also an associate of the Sanitary Commission, and did good service in caring for the soldiers. After the war, he was appointed by the Government one of the commissioners to examine the whole internal revenue system, and suggest such modifications as might lighten its burdens and increase its efficiency, and to this work he devoted much time and labor. He was connected with most of the prominent literary, scientific, and benevolent institutions of Philadelphia, and was a liberal giver to all objects of benevolence. He had accumulated a large and very valuable library, which was especially full on political and social science, and this he bequeathed to the University of Pennsylvania, with an endowment for a professorship of Social Science.

COMET (BIELA'S). About the close of 1872 news was received in England of the rediscovery of Biela's comet by Mr. Poyson, the government astronomer at Madras. This comet, which has a period of about six and three-quarter years, had not been previously seen since 1852. At that time it appeared in the form of two distinct comets, as also it did on the occasion of its return in 1846, before which time it was a well-defined single object. In 1859 Biela's comet was invisible—supposed to be lost to observation in the sun's light. It was not found in 1866, and then the impression obtained that in some way it had been dissipated or destroyed. Subsequently, the distinguished astronomer M. Schiaparelli advanced and ably sustained the theory that meteoric showers are phenomena caused by the passage of the earth through cometic matter. This theory, generally accepted by physicists, is now confirmed in the most striking manner, as follows: Calculations showed that Biela's comet, if in existence, would cross the orbit of the earth November 27, 1872. On that particular day occurred a great star-shower, especially visible over a large part of England. The champions of M. Schiaparelli's theory ascribed the magnificent meteoric display to the fact that the earth on November 27th had actually passed through the tail of Biela's comet. At a meeting of the Royal Astronomical Society, Mr. Hind, superintendent of the *Nautical Almanac*, pointed out how closely the phenomenon of the shower accorded with the theory. A Continental astronomer, M. Klinkerfues, followed up the subject. It occurred to him that since the earth had passed through the train of the comet, the actual track pursued by the comet was indicated; and, after some calculations, he sent this dispatch to Mr. Poyson at Madras: "Biela touched earth on 27th; search near Theta Centauri." In November and December that constellation is not visible to advantage except in the Southern Hemisphere. Mr. Poyson did as

requested, and, surely enough, in December he found what appeared to be a comet in the region pointed out. It presented a circular aspect with a bright nucleus and a faint but distinct tail, about as long as a fourth part of the moon's apparent diameter. At the date of our advices Mr. Poyson had not rendered a full and clear report of his observations; but there was no doubt that he found a comet on the track where Biela's, as calculated, should have been. Nothing is said of a companion comet (the half of the original one) which was first seen in 1846. This reported rediscovery of Biela's comet confirms most remarkably the theoretical considerations by which the star-shower of November 27th had been attributed to collision with the comet's tail. The radiant point of the shower was in Andromeda, and it had been calculated that Biela's comet would overtake the earth in that constellation. The following is from the pen of a well-informed writer in the *Cornhill Magazine*, prepared before the news of Mr. Poyson's good luck had reached England:

It thus appears certain that the display of November 27th was a shower of Bielan meteors. But the reader may desire to have some evidence showing that this is not an after-thought, but in accordance with ideas expressed before the display took place. It may be well, therefore, to mention that, in the *Monthly Notices of the Astronomical Society* published on October 24, 1872, a month before the star-shower, there appeared a list of 182 meteor-streams, among which is one (No. 120), whose date is set at November 30th by the Italian observers, Schiaparelli and Zesiola, while our English meteor students set it down for November 25th; and not only is the radiant of this shower set in Andromeda, but the remark is appended that the shower is "supposed by D'Arrest and Weiss to be connected with Biela's comet." Then, in the same number, but in another article, Prof. Herschel invites astronomers to be on the watch for a display of Bielan meteors, mentioning that "the date of the earth's passage through the comet's orbit now falls in the end of November."

But the actual appearance of the shower, so soon after Biela's comet had passed, combined with the perfect agreement between the movements of the meteors and the position of the comet's path, must be regarded as rendering certain that which before had been but highly probable. Those who witnessed the display of November 27th may be perfectly assured that they were then watching the fall of bodies associated with one of the most interesting of all the comets ever studied by astronomers. The collision so dreaded in 1832 was in 1872 actually in progress; the process of dissipation commenced in January, 1846, was illustrated and, perhaps, carried to a further stage last November; and, lastly, the disappearance of Biela's comet becomes explicable when we perceive of what slight materials the comet's train is formed. During the five hours of the display the earth tunneled a path (as it were) through this train—a path a quarter of a million miles long, and having a circular section nearly 8,000 miles in diameter; and yet, in this enormous tabular section of the train, having a volume of about twelve millions of millions of cubic miles, there were but some thousands of scattered shreds of matter, so minute as to be unable to penetrate our atmosphere. Melted and vaporized high in the more tenuous regions of the atmosphere, these small bodies doubtless sank in the form of an insipid powder to the surface of the earth, occupying many days, perhaps, in their descent.

COMMERCE OF THE UNITED STATES.

The general commerce of the country, for the fiscal year ending June 30, 1872, shows the sum of \$640,837,540 in foreign imports (gold value), being an increase of \$98,848,832 on the total imports for the same period in 1870-'71. For the fiscal year ending June 30, 1872, the total exports amounted (gold estimate) to \$501,164,971, being a decrease of \$11,879,802 from the total exports of the previous fiscal year. Re-exports for the same period—up to June 30, 1872—foot up \$22,769,749, or less by \$5,690,150 than those for the fiscal year preceding. The value of foreign goods in warehouse, June 30, 1872, was \$122,211,266, as compared with \$68,824,855, June 30, 1871—a difference of \$53,386,411.

Annexed are summaries of the last two fiscal years:

PERIOD.	Imports.	Domestic exports, specie values.	Re-exports.
Twelve months ending June 30, 1872.	\$640,837,540	\$501,164,971	\$22,769,749
Twelve months ending June 30, 1871.	541,498,708	513,044,273	28,459,899

The following were the respective amounts of the foregoing, which consisted of merchandise, and of specie and bullion:

Fiscal Year ending June 30, 1872.

ARTICLES.	Imports.	Domestic exports, specie values.	Re-exports.
Merchandise.	\$626,593,634	\$493,306,781	\$15,690,455
Specie and bullion.	14,243,906	7,858,240	7,079,294

Fiscal Year ending June 30, 1871.

ARTICLES.	Imports.	Domestic exports, specie values.	Re-exports.
Merchandise.	\$519,593,634	\$493,899,017	\$14,421,370
Specie and bullion.	21,905,074	84,805,256	14,038,529

The respective amounts of the foreign commerce of the country, carried in American and foreign vessels, and in cars and other land-vehicles, stand thus:

Fiscal Year ending June 30, 1872.

VESSELS.	Imports.	Domestic exports, mixed values.	Re-exports.
American.	\$177,233,808	\$461,819,669	\$6,733,463
Foreign.	445,417,979	381,620,692	12,811,255
Land vehicles.	17,684,455	6,379,187	3,725,983

Fiscal Year ending June 30, 1871.

VESSELS.	Imports.	Domestic exports, mixed values.	Re-exports.
American.	\$163,235,710	\$180,694,659	\$9,753,604
Foreign.	368,080,844	376,475,609	16,325,323
Land vehicles.	15,187,354	5,417,384	2,890,779

From these tables it appears that, of our total foreign trade for the fiscal year ending

June 30, 1872, carried in vessels, about 71 per cent. was in foreign bottoms, while, in 1871, it was a little over 68 per cent. The number and tonnage of vessels which entered and cleared at United States ports are as follows:

Fiscal Year ending June 30, 1872.

VESSELS.	ENTERED.		CLEARED.	
	Number.	Tons.	Number.	Tons.
American.	10,921	2,711,366	10,493	2,661,834
Foreign.	18,647	7,091,843	18,749	7,048,691
Total.	29,568	10,803,209	29,242	10,710,525

Fiscal Year ending June 30, 1871.

VESSELS.	ENTERED.		CLEARED.	
	Number.	Tons.	Number.	Tons.
American.	10,715	2,742,740	10,573	2,745,945
Foreign.	19,406	6,266,444	19,393	6,151,587
Total.	30,121	10,009,184	29,966	9,897,532

Full comparative tables of commerce at the port of New York for the year 1872 are given by the *Journal of Commerce*. The total imports for the year are over \$482,000,000, exhibiting a gain of more than \$47,000,000 on the imports for 1871. The relative totals of these imports for the last ten years are thus tabulated:

Foreign Imports at New York.

Goods entered directly for consumption, and the total entered for warehousing, are included under "Dutiable." The specie and bullion mostly came in transitu to foreign ports, and the greater part appears again included in the exports. The following are the tables of monthly summaries for five years:

Foreign Imports entered at New York during the Years 1869, 1870, 1871, and 1872.

ENTERED FOR CONSUMPTION.

ENTERED FOR WAREHOUSING.

WITHDRAWAL FROM WAREHOUSE.

FREE GOODS.

The subjoined table, giving the monthly withdrawals, completes the exhibit of the warehouse movement. This movement was quite irregular, owing to the storing of goods at last made free by changes of tariff and the withholding of others, to take advantage of reduction of duties. The largest portion of these consisted of tea, coffee, sugar, and other articles of general merchandise.

Imports at the port of New York for the last three years are thus classified :

Classification of Imports at New York.

	1870.	1871.	1872.
Dry goods.....	\$109,496,533	\$132,480,777	\$126,631,612

Specie.....	11,864,644	6,348,606	5,594,208
Total imports...	\$248,200,032	\$384,862,300	\$471,846,426

The monthly cash receipts for duties in each of the last three years are :

Receipts of Customs at New York.

The general statistics of commerce at the port of New York are completed by the following series of tables showing the export movement monthly for the past four years. The figures are given chiefly in paper currency. The shipments of gold are mostly counted at their tale value, but all others, with unimportant exceptions, are reckoned at their market value in paper money at the time of shipment :

Exports from New York to Foreign Ports during the Years 1869, 1870, 1871, and 1872.

TOTAL EXPORTS.

The total foreign trade of New York is usually about two-thirds of the imports and about 40 per cent. of the exports of the whole United States.

A quarterly summary (herewith given) of the exports hence to foreign ports is exclusive of specie and bullion, includes reshipments of foreign products, but is chiefly made up of domestic produce and manufactures:

Exports from New York to Foreign Ports, exclusive of Specie.

CONGREGATIONALISTS. The National Congregational Council held at Oberlin, Ohio, in November, 1871, had appointed a committee to confer with the directors of the American Home Missionary Society, and arrange some plan by which the churches in the West might participate more directly in the work of the society. Early in January, a conference was held in New York, at which a plan was agreed upon, substantially as follows:

1. The general conference or association of each State is to organize a home missionary society in that State.
2. By this State society an executive committee of three is to be appointed in each district conference; this committee to act as the agency of the American Home Missionary Society, and, coöperating with the superintendent of missions employed by that society in each State, to have a general oversight of the work within its own boundaries.
3. The chairmen of these several district committees constitute a State Board of Home Missions, to which the general oversight of the work in the State shall be committed, and by which the State superintendent of missions shall be nominated, the society at New York commissioning and sustaining him.
4. The superintendents and the executive committees are to labor for an increase of contributions, and to avoid, if possible, any conflict with other denominations.
5. Each State society is to have a treasurer, who is to keep an accurate report of the collections in the State, and who is to account to the parent society for the money received.
6. More efficiency and enterprise in occupying the frontiers are promised.
7. As soon as the churches in the several States are able to support the work within their boundaries, their State societies will be merely auxiliary to the parent society, and will transmit to that society only their surplus funds.

The collections for the American Home Missionary Society during the year ending May 1, 1872, were \$294,566, being \$11,000 more than the collections of any previous year. The gifts to the society exceeded those of any previous year by \$48,500. The society during the same year supported nine hundred and sixty-one missionaries in twenty-nine States and Territories. Six thousand three hundred and fifty persons were added to the missionary congregations. Eighty-four churches were organized, and forty-six churches attained a condition of self-support. The increase in the number of missionaries over those of the previous year was twenty-

one; the increase in the number of congregations was fifty-four.

The Woman's Board of Missions has more than two hundred auxiliaries and about one hundred mission circles, which are situated in different parts of the country, from Canada to California. It supports thirty-six missionaries and about thirty Bible women, and maintains eleven school-houses in India, Turkey, and China. The "Home" at Constantinople is in successful operation. Connected with it are a seminary and a dispensary, the latter in charge of a competent woman-physician. The total receipts of the society for 1871 were \$51,103; its expenditures were \$46,235.

The receipts of the American Congregational Union for the year ending May 1, 1872, were \$78,124.09; its disbursements to aid in building churches and for necessary expenses, \$69,005.58, leaving a balance in the treasury of \$9,118.71.

The receipts of the American Board of Commissioners for Foreign Missions, for the year ending October 1, 1872, were \$428,693.40. The expenditures were as follows:

COST OF MISSIONS.	
I. Zulu Mission.....	\$39,135 41
Gaboon Mission.....	18,999 35
Mission to European Turkey.....	76,069 43
Mission to Western Turkey.....	21,380 61
Mission to Central Turkey.....	31,774 50
Mission to Eastern Turkey.....	39,444 19
Mahratta Mission.....	41,901 98
Madura Mission.....	19,118 43
Ceylon Mission.....	15,071 43
Foochow Mission.....	26,911 60
North China Mission.....	18,730 07
Mission to Japan.....	20,128 43
Sandwich Islands Mission.....	10,573 43
Micronesia Mission.....	11,870 44
North American Indians, Dakota.....	\$381,634 22
Total.....	10,363 40
II. Cost of Agencies.....	5,084 92
III. Cost of Publication (above receipts).....	13,930 81
IV. Cost of Administration.....	
Total Expenditures.....	\$416,698 49

For missions in "nominally Christian lands," \$17,180.70 were received, and \$9,920 were expended upon the same.

The following is the general summary of the missions of the Board:

MISSIONS.	
Number of missions.....	16
Number of stations.....	77
Number of out-stations.....	445
LABORERS EMPLOYED.	
Number of ordained missionaries (7 being physicians).....	180
Number of physicians not ordained.....	7
Number of other male assistants.....	5
Number of female assistants.....	192
Whole number of laborers sent from this country.....	334
Number of native pastors.....	94
Number of native preachers and catechists.....	242
Number of school-teachers.....	419
Number of other native helpers.....	189
Whole number of laborers connected with the missions.....	944

THE PRESS.	
Pages printed, so far as reported.....	7,947,870

THE CHURCHES.	
Number of churches.....	173
Number of church-members (so far as reported).....	9,019
Added during the year (so far as reported).....	919

EDUCATIONAL DEPARTMENT.

Number of training and theological schools.....	12
Number of boarding-schools for girls.....	30
Number of common schools.....	463
Number of pupils in common schools.....	15,480
Number of pupils in training and theological schools and station classes.....	394
Number of pupils in boarding-schools for girls.....	541
Other adults under instruction.....	807
Whole number of pupils.....	17,122

The report of the Board, dated October 1st, characterized the past year as one of steady and healthful growth in all departments of the work. In the old fields, except in Eastern Turkey and Japan, it had been impossible to enlarge the work, for want of the necessary men, beyond what could be done by the native agency in occupying new points within the limits of existing stations. Prof. Julius H. Seelye, of Amherst College, had been commissioned by the Board to spend a few months in Bombay and its vicinity, to test the possibility and practicability of reaching the educated class of India. An earnest effort was made to establish a new college in Central Turkey, in addition to the three colleges formerly established through the agency of the Board, namely, the Robert College at Constantinople, the college at Beirut, in Syria, and the college at Jaffa, in Ceylon. Two hundred students were enrolled at Robert College. The college at Jaffa was opened during the year with a class of twenty students.

The annual meeting of the American Missionary Association was held at Racine, Wis., October 30th. The receipts for the year preceding were \$380,146.66; the expenditures were \$327,997.67, of which \$209,969.65 were on the Southern field. During the year the debt of the association had been reduced \$2,347.99. It stood at the time of the anniversary, \$59,513.85. The following statement was made of the work of the society:

HOME FIELD.	
Number of teachers and missionaries sent into the Southern field.....	331
Number of primary schools.....	300
Number of collegiate schools.....	7
Number of graded schools.....	22
Number of theological schools.....	8
Number of churches.....	63
Number of pupils in the schools.....	15,000
Number of church-members.....	3,000
Number of admissions the present year.....	618

FOREIGN MISSIONS.	
Number of missionaries and teachers in the Jamaica Mission, West Indies.....	10
Missionaries in the Mendi Mission, West Africa.....	17
In the Sandwich Islands.....	7
In the Siam Mission.....	5
Number of missionaries and laborers in the Indian Mission.....	30
Number of Chinese missions in California.....	12

It appeared during the discussions of the meeting that the society had a large number of applicants for employment as missionaries and teachers, who could not be engaged for the want of sufficient funds. The Financial Committee recommended \$500,000 as the sum needed to be asked for during the ensuing year. The subjects of the work among the freedmen, the Chinese in the United States,

and the Indians, received especial attention. A missionary, who had spent two years with the Chippewa Indians, spoke of an extraordinary arousing of mental activity, and the awakening of a desire to better their condition among that tribe. During two years they had built up for themselves about one hundred and fifty houses.

The Congregational Union of Ontario and Quebec met at Montreal on the 5th of June. The chairman, in his address, spoke of the progress of the body as not entirely satisfactory. Sixteen years previously, the number of members of the churches was reported as 2,877, and the number of attendants on worship as 11,980. In the last year, the number of members was 5,052, and the number of attendants 14,205. He thought that the growth of the churches was hindered by failure to make the peculiarities of the denomination sufficiently prominent, and by impatience of results, manifesting itself in the frequent severance of pastoral relations. Hardly more than half the students who had been trained in the colleges were now in the country as pastors. The statistical secretary complained of the incompleteness of the returns. Many of the churches had not reported at all. Of 61 churches which had reported, all but 13 showed an increase in the number of their members. The net increase was 265. The increase in the amount of contributions for all purposes was \$3,350. The receipts of the Congregational Missionary Society were \$5,059. The society had aided 49 missionaries. The income of the Indian Missionary Society was about \$2,000. The operations of the society are on Manitoulin Island, and the north shore of the Georgian Bay. Several stations and schools are maintained, and the work is enlarging. Thirteen students had attended the college. Fraternal courtesies were exchanged with the conferences of the Wesleyan Connection and of the Methodist Episcopal Church. A motion was offered to recommend the French Canadian Missionary Society to the good-will of the churches. Upon this, the question was asked if this society was not becoming to all intents and purposes a Presbyterian society. Explanation was made that the funds contributed from Presbyterian churches for the society were devoted, to a large extent, to the support of the Presbyterian college, and that the students of that institution became Presbyterian ministers. Several distinctively Presbyterian churches had been formed among the French. The *Synod Evangelique*, which was formed with the hope and intention of absorbing all the converts, was not thriving. After this explanation, the Union gave its recommendation to the society.

The annual meeting of the Congregational Union of England and Wales was held in London, May 6th. An increase was reported of more than three hundred churches in alliance with the Union.

A conference had been held in London at an earlier date, between Baptists and Congregationalists, to endeavor to effect an arrangement by which small churches of these two denominations might be amalgamated, or caused so to act together as to avoid unnecessary and unprofitable divisions. A liberal disposition had been exhibited on both sides with reference to the communion, but the efforts to adjust the differences in reference to baptism were not successful. The Baptist ministers insisted that they would not baptize children, and the Congregationalist ministers would not consent to baptize over again persons who had been baptized when children. No agreement was reached. The committee of the Congregational Union reported back to it the failure of the conference to accomplish its object.

The Congregational Union of Scotland met at Glasgow, in April. Reports were made of the condition of its various enterprises. The Theological Hall had 14 students. The Chapel-building Committee had resolved to aim at raising a capital sum of £5,000, as a permanent loan-fund.

The statistics of the Congregational churches, for the year 1872, according to the *Congregational Quarterly*, for January, 1873, were as follows:

STATES.	Churches.	Church-Members.	In Sabbath-Schools.
Alabama.....	5	904	689

CONGRESS, UNITED STATES. The second session of the Forty-second Congress* commenced at Washington on December 4, 1871. (For the President's Message, see PUBLIC DOCUMENTS, ANNUAL CYCLOPEDIA, 1871.) The Vice-President, Schuyler Colfax, presided in the Senate, and James G. Blaine presided as Speaker of the House.

In the House, on December 4th, Mr. Beck, of Kentucky, offered the following resolution:

Resolved, That the President of the United States

* The following is a list of members of the second session of the Forty-second Congress.

SENATE.

Alabama—George E. Spencer, William Goldthwaite.
Arkansas—Benjamin F. Rice, Powell Clayton.
California—Cornelius Cole, Eugene Casserly.
Connecticut—Orris S. Ferry, William A. Buckingham.
Delaware—Thomas F. Bayard, Eli Sausbire.
Florida—Thomas W. Osborn, Abijah Gilbert.
Georgia—Joshua Hill, T. M. Norwood.
Illinois—Lyman Trumbull, John A. Logan.
Indiana—Oliver P. Morton, Daniel D. Pratt.
Iowa—James Harlan, George G. Wright.
Kansas—Samuel C. Pomeroy, Alexander Caldwell.
Kentucky—Willis B. Matchett, John W. Stevenson.
Louisiana—John Ray, J. B. West.
Maine—Hannibal Hamlin, Lot M. Morrill.
Maryland—George Vickers, William T. Hamilton.
Massachusetts—Charles Sumner, Henry Wilson.
Michigan—Zachariah Chandler, Thomas W. Ferry.
Minnesota—Alexander Ramsey, William Windom.
Mississippi—Adelbert Ames, James L. Alcorn.
Missouri—Carl Schurz, Frank P. Blair.
Nebraska—Thomas W. Tipton, P. W. Hitchcock.
Nevada—James W. Nye, William M. Stewart.
New Hampshire—James W. Patterson, Aaron H. Cragin.
New Jersey—John P. Stockton, F. T. Frelinghuysen.
New York—Roscoe Conkling, Reuben E. Fenton.
North Carolina—John Pool, Matt. W. Ransom.
Ohio—John Sherman, Allen G. Thurman.
Oregon—Henry W. Corbett, James K. Kelley.
Pennsylvania—Simon Cameron, John Scott.
Rhode Island—William Sprague, Henry B. Anthony.
South Carolina—Frederick A. Sawyer, Thos. J. Robertson.
Tennessee—William G. Brownlow, Henry Cooper.
Texas—J. W. Flanagan, Morgan C. Hamilton.
Vermont—Justin S. Morrill, George F. Edmunds.
Virginia—John F. Lewis, J. W. Johnson.
West Virginia—Arthur I. Boreman, Henry G. Davis.
Wisconsin—Timothy O. Howe, Matthew H. Carpenter.

HOUSE.

Alabama—Benjamin S. Turner, Charles W. Buckley, W. A. Handley, Charles Hayes, Peter M. Dox, Joseph H. Sloan.
Arkansas—James M. Hanks, O. P. Snyder, Thomas Bales.
California—S. O. Houghton, A. A. Sargent, J. M. Coghlan.
Connecticut—Joseph R. Hawley, S. W. Kellogg, H. H. Starkweather, Wm. H. Barnum.
Delaware—Benjamin T. Biggs.
Florida—Josiah T. Walls.
Georgia—A. T. McIntyre, Richard H. Whitely, John S. Bigby, Erasmus W. Beck, D. M. DuBose, William T. Price, Pierce M. B. Young.
Illinois—Charles B. Farwell, John F. Farnsworth, Horatio C. Burchard, John B. Hawley, Bradford N. Stevens, Henry Snapp, Jesse H. Moore, James C. Robinson, Thompson W. McNeely, Edward Y. Rice, Samuel S. Marshall, John B. Hay, John M. Crebs. At large, John S. Beveridge.
Indiana—William E. Niblack, Michael C. Kerr, William S. Holman, Joseph M. Wilson, John Coburn, Daniel W. Voorhees, Mahlon D. Manson, James N. Tyner, John P. C. Shanks, William Williams, Jasper Packard.
Iowa—George W. McCrary, A. B. Cotton, W. G. Donnan, Madison M. Walden, Frank W. Palmer, Jackson Orr.
Kansas—D. P. Lowe.
Kentucky—Edward Crossland, Henry D. McHenry, Joseph H. Lewis, William B. Read, Boyd Winchester, William E. Arthur, James B. Beck, George M. Adams, John M. Rice.
Louisiana—J. Hale Sypher, Lionel A. Sheldon, C. B. Darrell, Aleck Boardman, Frank Morey.
Maine—John Lynch, William P. Frye, James G. Blaine, John A. Peters, Eugene Hale.
Maryland—Samuel Hambleton, Stevenson Archer, Thomas Swann, John Ritchie, William M. Merrick.

† Appointed by the Governor.

be, and he is hereby, requested to inform this House under what provisions of the law of April 20, 1871, if any, and, if not under that law, by what authority, he has caused the Constitution and laws of the United States, and the constitution and laws of the State of South Carolina, to be set aside, and martial law declared, and the writ of *habeas corpus* suspended in Spartanburg, Union, and seven other counties in the State of South Carolina, whereby the courts and civil authorities are unable to afford protection to the lives, liberties, and rights of the people therein, and all of them left at the mercy of such military subordinates as he has seen or may see fit to place over them. He is specially requested to

Massachusetts—James Buffinton, Oakes Ames, Ginery Twichell, Samuel Hooper, Benjamin F. Butler, Nathaniel P. Banks, Constantine C. Esty, George F. Hoar, Alvah Crocker, Henry L. Dawes.

Michigan—Henry Waldron, William L. Stoughton, Austin Blair, Omar D. Conger, Jabez G. Sutherland, W. D. Foster.

Minnesota—Mark H. Dunnell, John T. Averill.

Mississippi—George E. Harris, J. L. Morphis, Henry W. Barry, George C. McKee, Le Grand W. Perce.

Missouri—Erastus Wella, G. A. Finkelnburg, J. R. McCormick, H. E. Havens, Samuel S. Burdett, A. Comingo, Isaac C. Parker, James G. Blair, Andrew King.

Nebraska—John Taffe.

Nevada—C. W. Kendall.

New Hampshire—Ellery A. Hibbard, Samuel N. Bell, Hosea N. Parker.

New Jersey—John W. Hazleton, Samuel C. Forker, John T. Bird, John Hill, George A. Halsey.

New York—Dwight Townsend, Thomas Kinsella, Henry W. Slocum, Robert B. Roosevelt, William R. Roberts, Samuel S. Cox, Smith Ely, Jr., James Brooks, Fernando Wood, Clarkson N. Potter, Charles S. John, John H. Ketcham, Joseph H. Tut-hill, Eli Perry, Joseph M. Warren, John Rogers, William A. Wheeler, John M. Carroll, Elbur H. Prindle, Clinton L. Merriam, Ellis H. Roberts, William E. Lansing, R. Holland Duell, John E. Seely, William H. Lampert, Milo Goodrich, Horace B. Smith, Freeman Clarke, Seth Wakeman, William Williams, Walter L. Sessions.

North Carolina—Clinton L. Cobb, Charles R. Thomas, Alfred M. Waddell, Sion H. Rogers, James M. Leach, Francis E. Shober, J. C. Harper.

Ohio—Ozro J. Dodds, Job E. Stevenson, Lewis D. Campbell, J. F. McKenney, Charles L. Lamson, John A. Smith, Samuel Shellabarger, John Beatty, Charles Foster, Erasmus D. Peck, John T. Wilson, Philadelphia Van Trump, George W. Morgan, James Monroe, William P. Sprague, John A. Bingham, Jacob A. Ambler, William H. Upson, James A. Garfield.

Oregon—Joseph H. Slater.

Pennsylvania—Samuel J. Randall, J. V. Creely, Leonard Myers, William D. Kelley, A. C. Harmer, E. L. Acker, Washington Townsend, J. Lawrence Getz, Oliver J. Dickey, John W. Killinger, John B. Storm, L. D. Shoemaker, J. D. Strawbridge, John B. Paoker, Richard J. Haldeman, B. F. Meyers, R. Milton Spear, Henry Sherwood, Glenn W. Scofield, Samuel Griffith, Henry D. Foster, James S. Negley, Ebenezer McJunkin, William McClelland.

Rhode Island—Benjamin T. Eames, James M. Pendleton.
South Carolina—Joseph H. Rainey, Robert C. De Large, Robert B. Elliott, Alexander S. Wallace.

Tennessee—Roderick R. Butler, Horace Maynard, A. E. Garrett, John M. Bright, E. J. Golladay, W. C. Whitthorne, Robert P. Caldwell, W. W. Vaughan.

Texas—Wm. S. Herndon, John C. Conner, D. C. Giddings, John Hancock.

Vermont—Charles W. Willard, Luke P. Poland, Worthington C. Smith.

Virginia—John Critcher, James H. Platt, Jr., Charles H. Porter, W. H. H. Stowell, R. T. W. Duke, John T. Harris, Elliott M. Braxton, William Terry.

West Virginia—John J. Davis, Frank Hereford, James O. McGrew.

Wisconsin—Alexander Mitchell, George W. Hazleton, J. Allen Barber, Charles A. Eldridge, Philletus Sawyer, Jeremiah M. Rusk.

DELEGATES.

Arizona—Richard C. McCormick.

Colorado—Jerome B. Chaffee.

Dakota—Moses K. Armstrong.

District of Columbia—N. T. Chapman.

Idaho—Samuel A. Merritt.

Montana—William H. Craggett.

New Mexico—José M. Gallegas.

Utah—William H. Hooper.

Washington—Seimicus Garfield.

Wyoming—William T. Jones.

lay before this House all the acts of insurrection, resistance, or opposition to the laws of the United States, committed in each of those counties at any time after the 20th of April, 1871, prior to the date of his proclamation of martial law, giving the character of the offences, the facts relative thereto, and the names of the offenders so far as ascertained. He is further requested to lay before the House any cases of resistance to the execution of the process of the civil courts, or the officers either of the United States or of the State of South Carolina, by any of the citizens of any of the counties in which the guarantees of constitutional liberty have been annulled by his proclamation aforesaid since the passage of the act of April 20, 1871, aforesaid; and that he give the names of all of said citizens who have been arrested or imprisoned under and by virtue of the authority conferred by his proclamation, with the violations of law with which each is charged, and the dates at which it is alleged they committed the offences for which they were so arrested and imprisoned; and that he give this House full information as to all the statements of fact on which he acted on issuing his proclamation aforesaid, giving the names of his informants, their statements when made to him in writing, and the substance of them when made verbally, so that this House can determine what steps are necessary to restore to the citizens of the counties aforesaid, and especially to those who are not guilty of offences against the United States, the equal protection of the laws with the people of other portions of the country, under the forms prescribed by the Constitution of the United States.

The resolution was referred to the joint committee on the condition of the late insurrectionary States.

In the Senate, on the same day, a similar resolution was offered by Mr. Blair, of Missouri, and laid over.

Mr. Blair, on the next day, asked the Senate to take up his resolution, saying: "Mr. President, this resolution contemplates that the President shall lay before the Senate an account of the manner in which he has executed the extraordinary authority devolved upon him by Congress. I understand that large numbers of citizens have been arrested for alleged crimes in the State of South Carolina, in the counties designated in the President's proclamation, and that of all those arrested nine-tenths were arrested for alleged crimes committed before the passage of the act of Congress of April 20, 1871, giving the President this authority. I have seen statements in the papers of the names of the parties, and of the crimes alleged to have been committed by them, which prove to be the same incidents or circumstances in regard to which the Committee on Outrages in the Southern States have examined witnesses, and those circumstances all occurred prior to the passage of the act under which the President proclaimed martial law, so that these parties have been arrested for offences, or alleged offences, committed anterior to the time when the Federal courts had any jurisdiction whatever, and anterior to the time when the authority was conferred upon the President."

Mr. Morton, of Indiana, said: "On the question of taking up the resolution at this time,

I desire to say a single word. It occurs to me that the substance of this resolution was pretty well answered yesterday by the President's message. But, aside from that, it seems to me this resolution can be much more intelligently discussed after we have the report from the investigating committee in regard to Southern outrages. For that reason I shall vote against taking it up this morning."

Mr. Blair: "In reply to what has fallen from the Senator from Indiana, I will say that the President's message does not give us any of the information asked for in this resolution. The resolution asks for a detail of the names of the parties arrested, the crimes alleged to have been committed by them, and the time at which they are alleged to have been committed, none of which facts the President gives us in his message. The President states in his message that the testimony taken before the committee on Southern affairs amply sustains him in his proclamation of martial law. I do not know how the President got that information. Certainly, he could not have got it by any report from the committee. Nobody was authorized by the committee to make any such report to the President. As a member of the committee, I can give my opinion that the facts elicited by that examination did not justify the proclamation of martial law, and I suspect that I know more about the facts elicited before the committee than the President himself. There was no authority given by the committee to any one to submit those facts to the President, or to make any report to him. And while I am not surprised that the President should have exercised the authority given to him, as his education and his genius are arbitrary and look to arbitrary measures, I am astonished, sir, at the servility of Congress in submitting the rights of all citizens of this country to his discretion, and depriving them of the guarantees of the Constitution. And I think, sir, that it becomes us, after having given him that authority, at least to ask him to show us the manner in which he has exercised it."

The Vice-President: "The question is on the motion of the Senator from Missouri."

Mr. Blair called for the yeas and nays, and they were ordered; and, being taken, resulted—yeas 11, nays 45; as follows:

YEAS—Messrs. Blair, Casserly, Cooper,, Davis of West Virginia, Johnston, Kelly, Saulsbury, Stevenson, Stockton, Tipton, and Vickers—11.

NAYS—Messrs. Alcorn, Ames, Anthony, Borman, Brownlow, Buckingham, Caldwell, Cameron, Chandler, Clayton, Conkling, Corbett, Cragin, Edmunds, Fenton, Ferry of Connecticut, Ferry of Michigan, Frelinghuysen, Gilbert, Hamlin, Harlan, Hitchcock, Howe, Logan, Morrill of Maine, Morrill of Vermont, Morton, Nye, Osborn, Patterson, Pomeroy, Pool, Ramsey, Rice, Robertson, Sawyer, Scott, Sherman, Spencer, Sumner, Trumbull, West, Wilson, Windom, and Wright—45.

ABSENT—Messrs. Bayard, Carpenter, Cole, Davis of Kentucky, Flanagan, Hamilton of Maryland, Hamilton of Texas, Hill, Kellogg, Lewis, Pratt, Schurz, Sprague, Stewart, and Thurman—16.

So the motion was not agreed to.

In the House, on December 5th, Mr. Wood, of New York, said: "The gentleman (Mr. Dawes) proposes, in one of the resolutions which have been read, to refer a portion of the President's message to what he is pleased to call the Committee on the Insurrectionary States. I deny that there are any insurrectionary States, or that there is any such committee of this House. I will say that we had in the last Congress a committee on reconstruction; that several efforts were made by the distinguished colleague of the gentleman from Massachusetts, the late chairman of the committee, to revive that committee in this Congress, and that on every occasion this House voted down the proposition to revive the committee on reconstruction. And when the other committee to which I have referred was first moved here, it was for a temporary purpose, to go into the Southern States to act in conjunction with a committee of the Senate, and to do certain things. In my judgment, that committee, when it reports to this House, has performed all the duties this House delegated to it, and has no further function. Therefore I am opposed to reviving that committee for this session in this surreptitious manner."

Mr. Dawes, of Massachusetts, said: "There are various answers to the gentleman from New York; and the first is, that he seems to have forgotten that the resolution under which the committee was raised by its terms continued it during the present Congress. And, if that were not so, the gentleman should remember that yesterday certain measures were referred to that committee, and that the House by that act revived the committee if it had expired, as the gentleman seems to think it did. The committee, by the terms of the resolution appointing it, was to continue beyond the last session, and, if it were not, it was revived by a vote of the House yesterday, and is now in existence."

"It was fondly anticipated by all lovers of peace and good order, I doubt not, that the committee would be able to discover some remedy for existing evils. The evils seem, however, to continue to exist in spite of the best efforts of that committee, certainly to such an extent that all lovers of good order will desire that it may have an opportunity to report to the House. I do not see any view the gentleman can take of it which will not bring the committee standing right up before his eyes as a committee existing."

Mr. Maynard, of Tennessee, said: "I would remind the gentleman from Massachusetts that the resolution creating the committee referred to, by its terms authorizes the committee to report at the then next session, the present session of Congress, or any subsequent session. By its terms, therefore, it continues the committee to this present session, or, if the committee shall find it necessary, to any subsequent session of this Congress. I make this remark in order that the statement shall not

go out unchallenged that this is a side-wind to continue a committee which has already discharged its functions, and which ought to be dissolved. It is possible that when the report of the committee shall be made, and the facts gathered by it this summer shall have been brought before the House, the House may see the importance not merely of their past work, but of their continuing to prosecute the same general line of investigation that they have done."

In the House, on December 5th, Mr. Randall, of Pennsylvania, said: "I would like to direct the attention of the gentleman from Massachusetts (Mr. Dawes) to one clause in his resolutions, which proposes to establish a special committee upon postal telegraphy. I am aware that there is a proposition to be submitted to the House and to the Congress of the United States looking to the purchase of the telegraphic lines of this country, and that the owners of those telegraphic lines estimate the cost to the Government at \$35,000,000, or thereabout. I have seen during my service here the evil effect of creating special committees to consider such subjects."

Mr. Farnsworth, of Illinois, said: "Mr. Chairman, I was about to move to amend the resolution of the gentleman from Massachusetts, so as to refer so much of the President's message as relates to the union of the telegraphic system with the Post-Office Department to the Committee on the Post-Office and Post-Roads; because it is proposed to connect so intimately the telegraphic system with the Post-Office Department, that, it seems to me, no other committee can properly take jurisdiction of the subject. It is proposed, I understand, to buy all the telegraphic lines in the United States, and to incorporate them into the Post-Office Department, and make them a part of the postal system of the United States. If that is to be done, the Committee on the Post-Office and Post-Roads, it seems to me, should have jurisdiction of the subject. I do not know what reason there is for the appointment of a select committee."

Mr. Dawes, of Massachusetts, said: "The very suggestion of the gentleman from Pennsylvania (Mr. Randall) that it approaches a matter valued by its owners at a great many millions of dollars, the suggestion of the gentleman from Illinois (Mr. Farnsworth) that it affects the whole postal system, the suggestion that my colleague from Massachusetts (Mr. Banks) is about to make, that it affects the foreign relations of the country in the matter of ocean-cables—any view of it that any gentleman, who will listen to the suggestions that that committee did for some considerable time, may take, will satisfy him that no one committee, as constituted in this House, can take jurisdiction of the whole matter. And, after all, I think the Committee on Appropriations, rather than any other committee, might feel as

if they ought to have this matter to consider, if it is proposed to take very many millions of dollars out of the Treasury to purchase these telegraph-lines."

Mr. Niblack, of Indiana, said: "I desire to call the attention of the gentleman from Massachusetts (Mr. Dawes) to a particular point of his remarks, in order to suggest to him another very important view which we ought to take of this question. I refer to the immense patronage which it is proposed to confer on the appointing power. According to the estimates which have been submitted to me, the number of persons to be appointed would necessarily be at least eight thousand to take charge of this telegraphic business on behalf of the Government, and to discharge the duties that would be imposed upon the Government in case we should purchase all the telegraph-lines and assume their control on behalf of the Government. To me the proposition is appalling, and that consideration would control my vote in any event, were there no other reason to operate upon me. I think that consideration is just as important to be considered as the statement of the gentleman from Pennsylvania (Mr. Randall), that it would probably cost \$35,000,000 to purchase the telegraph-lines in this country."

"But I have sought the floor at this time for the purpose of entering my protest against this proposition in all its length and breadth. And, if it had not come from the Executive of the United States in the form it does, I would denounce it as the most extraordinary proposition brought before Congress."

Mr. Farnsworth, of Illinois, said: "It is proposed, I understand, by the President and by the Postmaster-General, to establish in every post-office in the United States, where there is a sufficient number of inhabitants, a telegraph-office, and to make every postmaster a telegraph-operator, or else to put an expert in his office to operate the telegraph. It is proposed that we shall not only legislate here for post-routes, but that we shall legislate from year to year for telegraph-routes; that every member of Congress, and every Delegate from a Territory, shall come in here from session to session with his little bill to establish a telegraph-route from one insignificant town to another."

"It is proposed that the Government shall do all the telegraphic business; for private citizens cannot compete with the Government in any kind of business which it undertakes. The Government is a monopolist, and must be such necessarily; because no citizen can compete with the Government in the prosecution of any business. Whatever the Government undertakes to do must be under its control exclusively. If it undertakes telegraphing, it must do all the telegraphing of the country, private, confidential, financial, and commercial. Every member of Congress will of course be importuned by his constituents to secure the

establishment of a telegraphic station at every post-office, involving the employment, at a high salary, of an operator, an expert in manipulating the wires. We shall be called on to establish wires all over the country and throughout the Territories, to every little remote place. All these telegraphic operators are to be appointed by the Postmaster-General, which is another reason why this subject should go to the Committee on the Post-Office and Post-Roads. This business is all to be done under the Post-Office Department; and all the confidential and business communications throughout this country are to come under the view of the various postmasters, who are to be appointed, as they are now appointed, on account of their partisanship. All these things are to come under the control and direction of the Post-Office Department. That is the proposition of the President's message, and of the Postmaster-General's report. Therefore I do not see the necessity or propriety of sending this matter to a select committee."

Mr. Beck, of Kentucky, said: "I only desire to say a word. I was a member of the select committee of eight, which investigated this question most carefully during last Congress. On the committee I differed from both sides, and opposed either the Government undertaking the service itself or going into partnership with any corporation, on the ground that it would produce just what the minority said it would, a political monopoly, and give to the Postmaster-General, to begin with, the control of what they here enumerate:

The United States have about five thousand telegraph-stations, seventy-five thousand miles of line, and over seventy thousand employes, and transmit over eleven million five hundred thousand messages annually. Under the Government plan there will be at least twenty thousand telegraph-offices, one hundred and fifty thousand miles of line, and from twenty thousand to twenty-five thousand employes.

"That is from the report made by the gentleman from Iowa (Mr. Palmer), and indorsed by the gentleman from Massachusetts (Mr. Dawes) himself. They went on to show that the lowest estimate of it was \$40,000,000, while the owners of the lines were claiming an amount very largely in excess of that. My friend from Pennsylvania (Mr. Randall) must see, therefore, that he has understated what the system would cost the Government by one-half."

The amendment of Mr. Farnsworth that the reference should be to the Committee of Appropriations was adopted in Committee of the Whole and reported to the House.

The question was taken; and it was decided in the affirmative, as follows:

YEAS—Messrs. Acker, Adams, Ambler, Archer, Arthur, Barnum, Beck, Bell, Beveridge, Biggs, Austin Blair, Braxton, Bright, Caldwell, Campbell, Carroll, Clarke, Comingo, Conner, Coghlan, Cox, Crebs, Critcher, Crossland, Davis, Dox, Du Bose, Duke, Dunnell, Eldridge, Ely, Farnsworth, Farwell, Finkelnburg, Forker, Garrett, Getz, Griffith, Halde-

man, Hambleton, Hancock, Handley, Hanks, Harper, John T. Harris, Hereford, Hibbard, Hill, Holman, Kerr, King, Kinsella, Lamison, Lamport, Leach, Lewis, Manson, Marshall, McClelland, McCormick, McHenry, McKinney, McNeely, Merrick, Benjamin F. Meyers, Moore, Morgan, Niblack, Hosea W. Parker, Eli Perry, Peters, Poland, Potter, Price, Randall, Read, Edward Y. Rice, John M. Rice, Ritchie, William R. Roberts, Robinson, Rogers, Shanks, Sherwood, Shober, Slater, Slocum, Sloss, Worthington C. Smith, Snapp, R. Milton Speer, Stevens, Storm, Sutherland, Swann, Terry, Washington Townsend, Tuthill, Van Trump, Waddell, Waldron, Warren, Wells, Whitthorne, Willard, Winchester, and Wood—107.

NAVS—Messrs. Ames, Averill, Banks, Barber, Beatty, Bigby, Bingham, George M. Brooks, Buffinton, Burchard, Burdett, Roderick R. Butler, Cobb, Coburn, Conger, Cotton, Darrall, Dawes, Donnan, Duell, Eames, Charles Foster, Wilder D. Foster, Frye, Garfield, Hale, Halsey, Harmer, George E. Harris, Havens, Gerry W. Hazleton, John W. Hazleton, Hoar, Houghton, Kelley, Kellogg, Ketcham, Kilfinger, Lansing, Lowe, Lynch, Maynard, McCrary, McGrew, McJunkin, McKee, Mercur, Merriam, Monroe, Morphis, Leonard Myers, Negley, Orr, Packard, Packer, Palmer, Isaac C. Parker, Peck, Pendleton, Perce, Aaron F. Perry, Platt, Porter, Prindle, Rainey, Ellis H. Roberts, Ruak, Sessions, Sheldon, Shellabarger, Shoemaker, H. Boardman Smith, John A. Smith, Snyder, Thomas J. Speer, Sprague, Starkweather, Stevenson, Stoughton, Stowell, Strong, St. John, Sypher, Taffe, Thomas, Dwight Townsend, Twichell, Tyner, Upson, Wakeman, Walden, Walls, Washburn, Wheeler, Whiteley, Williams of Indiana, Jeremiah M. Wilson, and John T. Wilson—93.

NOR VOYAGE—Messrs. Barry, Bird, James G. Blair, James Brooks, Buckley, Benjamin F. Butler, Creely, De Large, Dickey, Edwards, Elliott, Henry D. Foster, Golladay, Goodrich, Hawley, Hay, Hays, Hooper, Kendall, McIntyre, Mitchell, Morey, Roosevelt, Sawyer, Scofield, Seelye, Turner, Vaughan, Voorhees, Wallace, Williams of New York, and Young—81.

So the amendment was agreed to, and the resolution adopted.

In the Senate, on December 4th, Mr. Sumner, of Massachusetts, said: "I offer the petition of a large number of colored citizens of Brooklyn, in the State of New York. As it is very brief, I will read it:"

We, the undersigned, citizens of the city of Brooklyn, State of New York, feeling ourselves aggrieved, inconvenienced, and degraded because of our color, and for the want of a law like unto the one offered to the Senate by Hon. Charles Sumner, known as Sumner's bill, supplementary to the civil rights bill, do respectfully pray for the passage of the same; and as in duty bound we will ever pray.

"As that bill is on the calendar of the Senate, I ask that this petition lie on the table."

The Vice-President: "The petition will lie on the table."

Mr. Sumner: "I also offer the petition of Dr. Augusta, professor of anatomy in the medical department of Howard University, and Dr. Purvis, professor of medical jurisprudence in Howard University, which is very brief, and therefore I will read it:"

We, the undersigned petitioners, respectfully represent to your honorable body that the Medical Society of the District of Columbia, an institution chartered by Congress, seeks to degrade us as medical practitioners on account of our race and color, and in contravention of the Constitution and laws of

the United States, by denying to us rights accorded to white practitioners, and thereby violating its act of incorporation. We therefore most respectfully petition that the charter of said society be repealed. And your petitioners will ever pray.

"It will be remembered that at the last Congress I reported a bill from the Committee on the District of Columbia in pursuance of the prayer of these very petitioners. There was no final action on that bill, and of course it fell with the expiration of the Congress. I seize this earliest occasion to call attention again to that question by presenting this petition. It seems to me that Congress owes it to the colored race everywhere throughout the country to put an end to outrage, at least here in the national capital. As the Committee on the District of Columbia is not yet appointed, I ask that the petition lie on the table."

The Vice-President: "It will lie on the table for the present."

In the Senate, on December 12th, Mr. Morton, of Indiana, said: "If it is in order, I move to proceed to the consideration of the concurrent resolution that I offered yesterday in regard to the final adjournment, and which was then laid on the table under the rule."

The motion was agreed to; and the Senate proceeded to consider the following resolution:

Resolved by the Senate (the House of Representatives concurring), That each House of Congress shall be adjourned *sine die*, by the Presiding Officer thereof, on the third Monday of May, 1873, at twelve o'clock meridian.

Mr. Sumner, of Massachusetts, said: "I offer the following amendment, to be added to the resolution by way of proviso:"

Provided, That there shall be no adjournment of Congress until after the passage of a supplementary civil rights law securing equality before the law without distinction of race or color.

Mr. Schurz, of Missouri, said: "Will it be in order to move an amendment to the amendment?"

The Vice-President: "Certainly."

Mr. Schurz: "Then I move to add to this amendment:"

A bill to reduce the tariff and internal taxation, and a bill to reform the civil service of the United States.

The Vice-President: "The question is on the amendment to the amendment proposed by the Senator from Missouri."

Mr. Trumbull, of Illinois, said: "Mr. President, I do not know that I am in favor of all the propositions which are suggested. I am certainly in favor of an early adjournment; and I am in favor of giving equal rights to all our people; and I am very much in favor of a reform in the civil service; and I am for reducing taxes; but it is manifest that we cannot dispose of all those questions this morning, and I think it will be a mere waste of time to discuss this resolution. I move to lay on the table the pending propositions,

with a view of asking the Senate to take up the bill for the removal of political disabilities."

The Vice-President: "The Senator from Illinois moves that the pending resolution, with the amendment and the amendment to the amendment, be laid on the table for the purpose indicated by him in his remarks."

The yeas and nays were ordered; and, being taken, resulted as follows:

YEAS—Messrs. Alcorn, Bayard, Cooper, Davis of West Virginia, Fenton, Ferry of Connecticut, Hamilton of Maryland, Hill, Johnston, Lewis, Morrill of Vermont, Rice, Robertson, Saulsbury, Sawyer, Schurz, Stockton, Sumner, Thurman, Tipton, Vickers, and Wilson—22.

NAYS—Messrs. Ames, Anthony, Boreman, Brownlow, Buckingham, Caldwell, Carpenter, Chandler, Clayton, Conkling, Corbett, Edmunds, Ferry of Michigan, Flanagan, Frelinghuysen, Gilbert, Hamilton of Texas, Hamlin, Harlan, Hitchcock, Kellogg, Morrill of Maine, Morton, Nye, Patterson, Pomeroy, Pratt, Ramsey, Scott, Stewart, and Wright—31.

ABSENT—Messrs. Blair, Cameron, Casserly, Cole, Cragin, Davis of Kentucky, Howe, Kelly, Logan, Osborn, Pool, Sherman, Spencer, Sprague, Stevenson, Trumbull, West, and Windom—18.

So the motion was not agreed to.

The Vice-President: "The question recurs on the amendment to the amendment proposed by the Senator from Missouri."

The Senate proceeded to the consideration of executive business, without final action on the amendments.

In the Senate, on December 7th, Mr. Trumbull, of Illinois, said: "I offer for adoption the following resolution: "

Resolved (the House of Representatives concurring), That a joint select committee on retrenchment, consisting of four members of the Senate and seven members of the House, be appointed by the Presiding Officers of the two Houses, and that said committee be instructed to inquire into the expenditures in all the branches of the service of the United States, and to report whether any, and what, offices ought to be abolished; whether any, and what, salaries or allowances ought to be reduced; what are the methods of procuring accountability in public officers or agents in the care and disbursement of public moneys; whether moneys have been paid out illegally; whether any officers or agents or other persons have been or are employed in the service without authority of law, or unnecessarily; and generally how, and to what extent, the expenses of the service of the country may and ought to be curtailed. And also to consider the expediency of so amending the laws under which appointments to the public service are now made as to provide for the selection of subordinate officers after due examination by proper boards; their continuance in office during specified terms, unless dismissed upon charges preferred and sustained before tribunals designated for that purpose; and for withdrawing the public service from being used as an instrument of political or party patronage. That said committee be authorized to sit during the recess of Congress, to send for persons and papers, and to report by bill or otherwise; and that said committee may appoint a clerk for the term of six months, and no more.

The Presiding Officer: "Objection being made, the resolution will lie over under the rules."

In the House, on December 11th, Mr. Wood, of New York, asked unanimous consent to introduce the following resolution:

Resolved, That the Republican party, having a large majority in both Houses of Congress, and the President, and those possessing ample power, should at once take measures to provide for the immediate reduction of direct taxation and of import duties to a strictly revenue standard; to provide for the immediate reduction of public expenditures in all the Departments of the Government; to abolish all sinecure offices and the system of collecting the revenue by secret informers and spies; to restore to the people of the States and their local governments the rights originally possessed by them under the Constitution; to abolish governmental paper money and to restore the only constitutional money—gold and silver; to reduce the Army to a peace footing, and abolish a system, recently established, of employing military officers in the discharge of civil duties; to provide against the accumulation and retention of large sums of money in the public Treasury, by which the interests of the people are subordinated to Government influence, and made dependent upon the caprice and personal views of the head of that Department; to prevent the purchase and sale of the public credit by the Secretary of the Treasury, at his own option, with no other control than his individual and personal will; to bring the President and his Cabinet advisers under the authority of law, making them obedient to its provisions, and, alike with others, subject to its penalties; to restore to the Southern States and people peace, prosperity, and contentment, which can only be accomplished by a cessation of vindictive legislation and military interference and a recognition of their equal rights, including self-government and political equality with the other States and peoples of the Union; to revive American commerce; to restore American credit; to reinaugurate American republican simplicity in the administration of public affairs; and to aid by all proper legal and constitutional authority in the full development of the agricultural, mineral, and commercial resources of the country.

He then moved to suspend the rules in order to pass the resolution, which was refused, and the resolution lost by the following vote:

YEAS—Messrs. Acker, Adams, Archer, Arthur, Bell, Biggs, Bird, James G. Blair, Braxton, Bright, Caldwell, Campbell, Carroll, Comingo, Conner, Cox, Crebs, Crossland, Davis, Dox, DuBois, Duke, Eldridge, Garrett, Getz, Golladay, Haldeman, Hancock, Handley, Hanks, Harper, John T. Harris, Hereford, Hibbard, Holman, Kerr, King, Lamson, Leach, Lewis, Manson, Marshall, McCormick, McHenry, McKinney, McNeely, Benjamin F. Meyers, Mitchell, Morgan, Niblack, Hosea W. Parker, Eli Perry, Potter, Price, Read, Edward Y. Rice, John M. Rice, Ritchie, William R. Roberts, Robinson, Sherwood, Shober, Slocum, Sloss, Storm, Swann, Terry, Tut-hill, Van Trump, Vaughan, Waddell, Wells, Whit-thorne, Williams of New York, Winchester, Wood, and Young—77.

NAYS—Messrs. Ambler, Ames, Averill, Banks, Barber, Barry, Beatty, Beveridge, Bigby, Bingham, Austin Blair, George M. Brooks, Buffinton, Bur-chard, Burdett, Roderick R. Butler, Clarke, Cobb, Coburn, Conger, Cotton, Coghlan, Darrall, Dawes, Dickey, Donnan, Duell, Dunnell, Eames, Elliott, Farnsworth, Farwell, Finkelnburg, Charles Foster, Henry D. Foster, Wilder D. Foster, Frye, Garfield, Goodrich, Griffith, Hale, Harmer, George E. Harris, Havens, Hawley, Gerry W. Hazleton, John W. Hazleton, Hoar, Hooper, Kelley, Kellogg, Ketcham, Killinger, Lampport, Lansing, Lowe, Lynch, May-nard, McClelland, McCrary, McGrew, McKee, Mer-cur, Merriam, Monroe, Moore, Morphis, Leonard

Myers, Negley, Orr, Packard, Packer, Palmer, Isaac C. Parker, Peck, Pendleton, Perce, Aaron F. Perry, Peters, Platt, Poland, Porter, Prindle, Rainey, Randall, Ellis H. Roberts, Rusk, Sawyer, Scofield, Seeley, Shanks, Sheldon, Shellabarger, Shoemaker, H. Boardman Smith, John A. Smith, Worthington C. Smith, Snapp, Snyder, R. Milton Speer, Thomas J. Speer, Sprague, Starkweather, Stevens, Stevenson, Stoughton, Stowell, Sypher, Taffe, Thomas, Turner, Twichell, Tyner, Upson, Wakeman, Walden, Waldron, Wallace, Walls, Washburn, Wheeler, Whiteley, Willard, Williams of Indiana, Jeremiah M. Wilson, and John T. Wilson—126.

NOT VOTING—Messrs. Barnum, Beck, James Brooks, Buckley, Benjamin F. Butler, Creely, Critcher, DeLarge, Edwards, Ely, Forker, Halsey, Hambleton, Hay, Hays, Hill, Houghton, Kendall, Kinsella, McIntyre, McJunkin, Merrick, Morey, Rogers, Roosevelt, Sessions, Slater, Strong, St. John, Sutherland, Dwight Townsend, Washington Townsend, Voorhees, and Warren—34.

In the Senate, on January 10th, Mr. Carpenter, of Wisconsin, said: "I ask leave to offer a resolution, to be laid on the table, and I give notice that at an early day I shall ask the Senate to proceed to its consideration, for the purpose of submitting some remarks on the recent political delusion called 'civil service reform,' by transferring the patronage of the Government from the officers in whom the Constitution vests it, to a board of schoolmasters to sit in Washington."

The resolution was read, as follows:

Whereas, The Constitution of the United States requires the President to nominate, and by and with the advice and consent of the Senate to appoint, all officers of the United States whose appointments are not in said Constitution otherwise provided for, and which shall be established by law, subject to the power of Congress by law to vest the appointment of such inferior officers as they may think proper in the President alone, in the courts of law, or in the heads of Departments: Therefore,

Resolved, That any law or regulation which is designed to relieve the President, and in the cases pertaining to them the courts of law or heads of Departments, of the full responsibility of such nominations or appointments is in violation of the Constitution.

In the Senate, on January 22d, Mr. Blair, of Missouri, said: "I offer a resolution and ask that it be read, printed, and laid on the table:"

Whereas, The island of Cuba is no longer necessary to the safety of any continental dominions of Spain, and is of vast importance to secure the southern shores of the United States from invasion, and the commerce floated from the great rivers of the continent into the Gulf of Mexico from depredation: and whereas the acquisition of Cuba by the United States would enhance its commercial importance not only to the United States, but to all the commercial nations of the world, and especially to Spain, and for the same reason that the incorporation of the colonies of England, France, and Spain, under the Government of the United States, has promoted the development of their commerce with their mother-countries: and whereas the acquisition of Cuba would free the American Continent from the last vestige of slavery by the operation of the Constitution of the United States, and would open for emigration, to the freemen of African descent now residing in the United States, a congenial climate and rich soil adapted to their physical constitution, where their intelligent labor would find its richest

rewards, promoting the improvement of the race, and guaranteeing their prosperity and equality under free institutions: Therefore,

Be it resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the President of the United States be, and is hereby, requested to open negotiations with Spain for the purchase and cession of the island of Cuba.

The resolution was ordered to lie on the table, and be printed.

In the House, on February 5th, Mr. Brooks, of New York, said: "I move to suspend the rules and pass the following resolution:"

Resolved, That we recognize the thirteenth, fourteenth, and fifteenth amendments to the Constitution as valid parts thereof.

The question on suspending the rules and passing the resolution was taken, and resulted as follows:

YEAS—Messrs. Ambler, Averill, Banks, Barber, Barnum, Beatty, Beck, Bell, Beveridge, Bigby, Bingham, Bird, James G. Blair, Bright, George M. Brooks, James Brooks, Buckley, Buffinton, Burchard, Burdett, Benjamin F. Butler, Roderick R. Butler, Campbell, Carroll, William T. Clarke, Cobb, Coburn, Comingo, Conger, Cotton, Cox, Crebs, Creely, Dickey, Donnan, Dox, Duell, Duke, Dunnell, Eames, Edwards, Eldridge, Ely, Farnsworth, Farwell, Finkelburg, Charles Foster, Wilder D. Foster, Frye, Garrett, Getz, Golladay, Goodrich, Griffith, Haldeeman, Hale, Hancock, Handley, Harmer, Harper, George E. Harris, Havens, Hawley, Hay, Hays, Gerry W. Hazleton, John W. Hazleton, Herndon, Hibbard, Hoar, Holman, Hooper, Houghton, Kelley, Kerr, Ketcham, Killinger, King, Lamison, Lampport, Leach, Lowe, Lynch, Manson, Marshall, Maynard, McClelland, McCormick, McGrew, McIntyre, McJunkin, McNeely, Mercur, Merriam, Merrick, Monroe, Moore, Morphis, Leonard Myers, Negley, Packard, Packer, Palmer, Hosea W. Parker, Isaac C. Parker, Peck, Pendleton, Perce, Eli Perry, Peters, Platt, Poland, Porter, Prindle, Rainey, Randall, Edward Y. Rice, Ellis H. Roberts, William R. Roberts, Robinson, Roosevelt, Sargent, Sawyer, Seeley, Sessions, Shanks, Sheldon, Shellabarger, Sherwood, Slocum, John A. Smith, Worthington C. Smith, Snapp, Thomas J. Speer, Starkweather, Stevens, Stevenson, Storm, Stoughton, Stowell, Strong, Sutherland, Swann, Sypher, Thomas, Washington Townsend, Turner, Twichell, Tyner, Upson, Waddell, Wakeman, Walden, Waldron, Wallace, Walls, Warren, Wells, Wheeler, Whiteley, Willard, Williams of Indiana, Jeremiah M. Wilson, John T. Wilson, and Wood—166.

NAYS—Messrs. Acker, Adams, Arthur, Biggs, Conner, Critcher, Crossland, Davis, DuBose, Hambleton, Hanks, Hereford, Lewis, McHenry, Niblack, Read, John M. Rice, Ritchie, Terry, Voorhees, Winchester, and Young—22.

NOT VOTING—Messrs. Ames, Archer, Barry, Austin Blair, Braxton, Caldwell, Freeman Clarke, Coghlan, Darrall, Dawes, DeLarge, Elliott, Forker, Henry D. Foster, Garfield, Halsey, John T. Harris, Hill, Kellogg, Kendall, Kinsella, Lansing, McCrary, McKee, McKinney, Benjamin F. Meyers, Mitchell, Morey, Morgan, Orr, Aaron F. Perry, Potter, Price, Rogers, Rusk, Scofield, Shober, Shoemaker, Slater, Sloss, H. Boardman Smith, Snyder, R. Milton Speer, Sprague, St. John, Taffe, Dwight Townsend, Tut-hill, Van Trump, Vaughan, Whitthorne, and Williams of New York—51.

So (two thirds voting in favor thereof) the rules were suspended, and the resolution was agreed to.

In the Senate, on December 11th, Mr. Conkling, of New York, moved to postpone the pending and all previous orders, and proceed to the consideration of the resolution offered by him.

The motion was agreed to; and the Senate proceeded to consider the following resolution:

Resolved, That the Committee on Military Affairs be instructed to inquire into the recent defalcation of J. L. Hodge, late a paymaster in the Army, and into the facts connected therewith, and to ascertain and report to the Senate whether any other officer or officers of the Government are derelict in duty in respect of the observance of regulations and safeguards intended to prevent such occurrences, and also whether other or further legislation or regulation is needed for the future.

Mr. Trumbull, of Illinois, said: "I move to amend that resolution by inserting the resolution which I offered to the Senate the other day, which I will ask to have read."

The Chief Clerk read the amendment, which was to strike out all after the word "resolved," and to insert in lieu thereof the following:

(The House of Representatives concurring,) That a joint select committee on retrenchment, consisting of four members of the Senate and seven members of the House, be appointed by the Presiding Officers of the two Houses, and that said committee be instructed to inquire into the expenditures in all the branches of the service of the United States, and to report whether any, and what, offices ought to be abolished; whether any, and what, salaries or allowances ought to be reduced; what are the methods of procuring accountability in public officers or agents in the care and disbursement of public moneys; whether moneys have been paid out illegally; whether any officers or agents or other persons have been or are employed in the service without authority of law, or unnecessarily; and generally how, and to what extent, the expenses of the service of the country may and ought to be curtailed. And also to consider the expediency of so amending the laws under which appointments to the public service are now made as to provide for the selection of subordinate officers after due examination by proper boards; their continuance in office during specified terms, unless dismissed upon charges preferred and sustained before tribunals designated for that purpose; and for withdrawing the public service from being used as an instrument of political or party patronage. That said committee be authorized to sit during the recess of Congress, to send for persons and papers, and to report by bill or otherwise; and that said committee may appoint a clerk for the term of six months, and no more.

Mr. Trumbull: "I should have preferred to have had the amendment which I have offered come before the Senate as a distinct proposition, and not to have had it complicated by the resolution offered by the Senator from New York; and, if I could have got the floor to make the motion, it would have been better for the Senate to have considered this resolution first, because, so far as I am concerned, if the Senate should think proper not to continue the Committee on Retrenchment, which we had at the last Congress and for the two previous Congresses, then I should be in favor of the resolution of the Senator from New York.

"The only reason that I offer this as an amendment is, that I think it would be proper, if this committee is to be raised, that the Senator's resolution should go to this committee. If there was any parliamentary way by which we could act first on the resolution I have offered, I should much prefer it, but the Senator from New York insists upon pressing his resolution. I do not know whether he means to interpose any objection to the passage of the resolution which I have offered or not.

"Now, Mr. President, I want this committee appointed for the purpose of following up the investigations that have been begun in regard to the use of patronage. I want a reform, and a substantial reform, in the civil service. I have believed, and I still believe, that it would be a long step toward a reform to pass a law disconnecting members of Congress from all appointments. At a former session I introduced a bill to that effect, and, if no man were to be appointed to any office who had obtained the recommendation of either a member of the Senate or House for the place, it would, in my judgment, bring about a very salutary reformation in the civil service. Not only that, but it would have a salutary effect upon the members of Congress, and upon the heads of Departments. The independence of members of Congress, and of the heads of Departments, cannot be maintained so long as they continue to put themselves under obligations to each other in the matter of appointments of friends to office.

"Why, Mr. President, I think it is no unusual thing, even in this body, for appointments to be held up until other appointments are made; or at least in former times such things have occurred. The appointing power has been given to understand that, unless certain other nominations were made, certain pending ones might not be confirmed. But, sir, whether or not this has actually been the condition of things in any given case, it is liable to be. I think that it would have been a great relief to the Departments and to the members of Congress, and would have been highly promotive of the public service, if a law could have been enacted forbidding Congressmen to make recommendations for office; but the Senate seemed not disposed to pass such a law.

"But it is not simply with regard to abuses in the use of patronage that I desire this committee to be continued. I wish it continued to suggest remedies, if it be possible, against the robbery of the public by its officials. These defalcations have become too frequent to be passed over without investigation. Let us examine into them, and let us examine thoroughly; let us go to the bottom without fear or favor to any one; and if the abuses do exist, if the organization in the Treasury Department, in the pay department, in the customs department, or anywhere else, is such as to afford facilities for robbing the public, let us

apply the proper remedy. If the system is as perfect as we can make it, if the accusations recently made in the newspapers of the country as to the abuse in the use of patronage, particularly in the city of New York, be untrue, let the fact be made known. I have heard nothing in reference to the present collector. The investigation from which I have read took place before he was appointed, and I hope he may bring about all the reforms we desire in his office. If he has done so, and is administering the collector's office honestly and faithfully, let the country know it.

"Throughout the land there is an impression that corruption exists, and that there is great demoralization in the public service. The recent exposures, showing that the people of the city of New York had been robbed of millions of dollars, have awakened a public sentiment throughout the nation; and how, Mr. President, was it possible for Tammany to perpetrate its frauds? Only upon this principle of partisanship in official position. Do you suppose that all of the many millions of which the people of that city have been robbed remained in the hands of the robbers? Do you suppose the persons who were arrested in the city of New York for robbing that city have got the many millions of dollars that they took from the public treasury? They may have a portion of it, but millions of it, I doubt not, have gone to perpetuate themselves in power from year to year. It has been paid to just such persons as are spoken of in this report—persons who had political influence. It has been paid to pack conventions, to carry elections, and to stuff the ballot-boxes. I have no doubt millions have gone in that way."

Mr. Edmunds, of Vermont, said: "Mr. President, I believe the question is up now, and the last speech of my friend from Illinois is fully to the point. I think, however, that my friend misapprehends a little what the precise point of discussion here is, after all. I think everybody on all sides of the Chamber will agree with him in condemning robbery, speculation, dishonesty, favoritism, every thing that is mean and unholy. I know the Republicans here will, and I have no doubt the Democrats will. The point is not whether it is wise and right to purify every department of the Government, but what is the wisest and most effectual method of doing it. That is the question, and that is all the question. My honorable friend need not spend time in reading pieces of testimony taken in the city of New York to show that appointments to office in the custom-house at New York can be improved. He does not need any special committee, or any joint select committee, to show that the appointments in the custom-house in New York and in other custom-houses can be improved. It is a waste of the public treasure to enter upon any such inquiry for such a purpose, because every Senator who hears

me, and every intelligent man in the country knows and has known for a great many years, that the system of selections for appointment to subordinate offices—and not very subordinate either, for I would go up pretty high, higher perhaps than my friend would be willing to go—has not been the system best adapted to subserve the public interests.

"Whether another can be devised is a subject that the Committee on Retrenchment at the first session of its existence acted upon, exhausted itself, reported upon; and it attempted with all the zeal and ability it possessed then to persuade Congress to pass the bill regulating the civil service of the United States, which I had the honor the other day to introduce in the identical language in which the committee reported it the last time I was on the committee. But there are difficulties about this business, as my friend from Illinois knows perfectly well, difficulties that I hope he and I and the other members of the Committee on the Judiciary, to which the bill to which I have just referred has gone, will be able to overcome. Where, for instance, are you to draw the line (as he speaks of it) between appointing a man on account of his political status and appointing a man on account of his want of political status, or some other reason, is the difficulty. He has read from the testimony of Horton as showing a case of grave misconduct on the part of Murphy, and it may have been—I pronounce no opinion on that—his statement when asked upon whose recommendation he was appointed to office: 'Well, I guess my own political status gave me the position.' That is exactly the answer that might be truthfully made by my friend from Illinois as to his being in this Chamber at this moment. It was his political status that made him a Senator. It was not, I suspect, because he was thought exclusively and solely the only man in the State of Illinois whose private character and whose fidelity to the Constitution were above question, for, as high as we all place that, and I certainly place it as high as possible, nobody will maintain that Senators are selected upon that ground solely.

"But, I think we have misconceived the issue here a little. The point is not whether we are to have a civil service reform—which is a subject referred to my friend's own committee, where, I trust, it will meet prompt and favorable action—but the point simply is whether we are to have a particular committee raised, which the Senate at the last session decided there was no occasion for, or whether we are to proceed with the duties of investigation that belong to this body according to the ordinary course of requiring each committee charged with a particular branch of the public service to make inquiries into that. That is all there is to it.

"Another thing I was a little sorry for, and that was, to hear my friend boldly assert,

and in terms, that the President of the United States in his message had said that the civil service of the United States was demoralized. That is the language which he imputed to the President of the United States. I have read that message with some care and a great deal of satisfaction. I find no such clause in it. The President of the United States has said in his message, to his honor, that the public service of the United States in respect to appointments to office could be improved. He has shown, by his return of the management of affairs during the period of his administration, that, instead of the public service in his hands being demoralized, it has become moralized from the condition of demoralization in which he found it at the expiration of the term of Mr. Johnson. He has expelled peculators and defrauding officers from the service, and he has done it as quickly and as readily whenever he has found people who have been appointed by himself as he has in respect to officers who were appointed by others."

The Senate then went into executive session, and further discussion was suspended indefinitely.

In the Senate, on December 18th, Mr. Anthony, of Rhode Island, offered the following resolution:

Resolved, That a standing committee of seven, to be known as the Committee of Investigation and Retrenchment, be created, to investigate and report on such subjects as may be committed to it by the Senate, such committee to be elected by the Senate as other standing committees.

By unanimous consent the Senate proceeded to consider the resolution.

Mr. Trumbull, of Illinois, said: "Mr. President, if this resolution is to be adopted, creating a standing committee of the Senate for the purpose of making investigations to bring about retrenchment and correct abuses in the Government, I desire that it should be vested with the same powers that were conferred on the joint select committee which formerly existed. Some objections are made to a joint committee of the two Houses for this purpose. It will be remembered that I introduced some days ago a resolution providing for a joint committee on retrenchment, and now the Senator from Rhode Island introduces a resolution for a standing committee of the Senate on retrenchment. My object is to get at the retrenchment and correct abuses in the Government, and I have no preference as to whether it be done by a joint select committee of both Houses or by a standing committee of the Senate, if one is as thorough as the other. I will move, therefore, to amend the resolution of the Senator from Rhode Island by adding to it the following:"

And the said committee be instructed to inquire into the expenditures in all branches of the service of the United States, and to report whether any and what offices ought to be abolished; whether any and

what salaries or allowances ought to be reduced; what are the methods of procuring accountability in public officers or agents in the care and disbursement of public moneys; whether moneys have been paid out illegally; whether any officers or agents, or other persons have been, or are employed in the public service without authority of law or unnecessarily; and generally how and to what extent the expenses of the service of the country may and ought to be curtailed.

And also to consider the expediency of so amending the laws under which appointments to the public service are now made as to provide for withdrawing the public service from being used as an instrument of political or party patronage.

That said committee be authorized to sit during the recess of Congress, to send for persons and papers, and to report by bill or otherwise; and that said committee may appoint a clerk.

Mr. Anthony: "The amendment which the Senator from Illinois proposes covers the ground of subjects which will be referred to this committee; but I think it is much better to appoint it as we appoint all the other committees, and then the Senator from Illinois can move to refer to this committee the subjects embraced in his amendment. We have a committee on naval affairs, but in constituting that committee we do not say that to that committee shall be referred all subjects relating to the navy. I should vote to refer those subjects to this committee immediately after its formation, but I think it is more parliamentary and orderly, more in conformity with the usage of the Senate, to state the name of the committee and its object, if at all, very generally."

Mr. Sherman, of Ohio, said: "Mr. President, I hope that in organizing this committee on retrenchment we shall pursue the ordinary usage of the Senate. When we organize a committee on retrenchment, as a matter of course every one knows what that means. You cannot make the definition broader than the word, because the word is known, and no definition can make it any broader. As to the power to send for persons and papers, to summon witnesses, to go about, if necessary, and take testimony—all these are powers which are conferred upon any committee of this body whenever the committee itself asks for them. I would not myself, in any case, unless it was a gross case, where an abuse of power might result from it, refuse to give these requisite powers on the request of the committee."

"Why not, then, let this committee stand like all other committees? and if any proposition is introduced and referred to this committee, and it sees proper in that particular case to send for persons and papers, an intimation of that kind from the committee, or a resolution of that kind introduced here, would be followed by the authority being conferred as usual. Why not pursue the same course in the organization of this committee? It seems to me that the attempt to define power always limits power. If, as I have no doubt is true, the Senator from Illinois desires a committee

organized to have power to investigate into all matters of retrenchment, all matters of public abuses, let the resolution be passed as it is presented, and it will be very easy at any time for this committee to call for the requisite power to investigate such matters."

Mr. Wilson, of Massachusetts, said: "Mr. President, we all agree, or profess to agree, and I have no doubt we are all sincere in it, that we desire to do every thing here that can be done to prevent abuses or to correct them when they have occurred. Now, sir, a proposition was brought in to appoint a joint committee with certain powers, and they are the powers that were given to joint committees in past years. It is thought best to have a Senate committee, a standing committee of this body, to be not only a standing committee now, but to continue perhaps in years to come as a standing committee of the Senate, whoever may be President of the United States. It is a general proposition, which has nothing to do with any abuses that have grown up recently or at any other time, but applying to the general service of the country, and I think applying for years to come.

"Now, sir, the proposition is to establish this committee to accomplish the very purposes suggested by the Senator from Illinois in his amendment. The Senator from Rhode Island says he will vote for that proposition just as soon as the committee is ordered. Why, then, have an apparent division here in the Senate on that subject? If he is ready to vote for it when the committee is appointed, what is the difficulty in voting for it when you make the committee? I am perfectly willing to vote for the committee, and then for the proposition of the Senator from Illinois; or I am willing to vote for the committee and for the amendment of the Senator from Illinois in one proposition. There is no real difference between the two. It is only the difference between tweedledum and tweedledee. It is an apparent difference here when in reality there is none."

Mr. Thurman, of Ohio, said: "The difference with the committee to be raised on the resolution of the Senator from Rhode Island, if it be passed without amendment, is that that committee will have cognizance of nothing but what shall be referred to it specifically by the Senate. The argument will be immediately, if that committee is to have an investigation, there must be some charge made against A B or against C D in open Senate, and then that charge referred to that committee; that instead of its being a committee to hunt up abuses itself and report them to the Senate, the Senate is to find out the abuses and prefer them to the committee. That is the truth of it, and I undertake to say that if this committee is raised on this resolution of the Senator from Rhode Island, without amendment, and then the course is taken that it is to have jurisdiction of nothing but such specific charges

as may be referred to it by the Senate, it will not be worth the paper the resolution is written on."

Mr. Trumbull said: "If there were only the difference which the Senator from Massachusetts thought between the offering of the amendment which I have offered now, and waiting until the committee is formed and then offering it, I should withdraw it at once and offer it afterward. I should be entirely willing to do that if he were right about it; but, sir, he is evidently mistaken. There is something more here than the difference between tweedledum and tweedledee. The Senator from Rhode Island tells me he would vote for my proposition, and the Senator from Ohio (Mr. Sherman) gives us notice that he would vote to give this committee authority to make investigations on the statement of a Senator, or on the request of the committee he would give them power to send for persons and papers. I want to vest this power originally in the committee, so that they shall have it without having their attention called to the particular subject. I cannot express that in better language than the Senator's colleague expressed it. The object which I have in view in the creation of this committee is, to have a committee that will itself inquire into these abuses if they exist, into the manner of keeping accounts, and try and correct them, without being moved upon by the Senate. I want this committee to get the information for the Senate, and not the Senate to have the information and send it to the committee to investigate afterward. There is the difference. It is very manifest, from what the Senator from Ohio says, that he does not propose to have the committee vested with power to send for persons and papers, vested with power to examine into those abuses on its own motion, but it must be done when a particular case is called to their attention. I think such a committee as that will amount to nothing."

Mr. Anthony said: "It seems to me that the difference between what the Senator from Illinois proposes and what is proposed in the original resolution, so far as he desires, is merely a technical one. It is whether this committee shall be invested in the beginning with all the powers with which we can invest it, and with which we do invest other committees from time to time, or whether it shall stand precisely on the same platform as all our other standing committees. The Senator from Ohio farthest from me (Mr. Thurman) objects because the committee will not investigate matters of its own motion. That is a recommendation, in my view. I do not want a committee to investigate any matter unless there is sufficient ground for accusation for it to be referred to them, and, whenever any thing comes to the knowledge of any member of a committee that ought to be investigated, it is the duty of that Senator to make a motion in this body referring the matter to the

committee, and it is done continually. Half the business that is referred to our committee is referred upon the motion of the members of the respective committees themselves."

Mr. Edmunds, of Vermont, said: "Mr. President, when this subject was before the Senate the other day, the discussion as to the nature of the committee to be appointed for this purpose was very slight indeed. The subject seems rather to have been opened in a manner which in old times, when there was any such difference of parties as amounted to any thing, might have been called the opening of a presidential campaign. If I had been a stranger here and had not known that the politics of the country were pretty much all one way, and had listened to the speech of an honorable and respectable gentleman that I did listen to, I should have said that the presidential campaign was about to be opened in form, and that that mental malaria which sometimes obscures the eyes of great men, and of which they are themselves unconscious, had obscured the mental vision of the distinguished Senator who made a speech on that occasion, not alluding to myself, so that in seeing the brightness of a distant object he had gone into what a Massachusetts Senator once called the 'sounding and glittering generalities' of affairs with a view to open to the eyes of the American people the fact that we had suddenly fallen upon very evil times; that, instead of having improved public affairs after emerging from the war, and after having emerged from that condition of things which was rather worse than war in all civil respects—the period of the administration of Mr. Johnson—we had been rapidly growing worse and worse ever since, and that the whole people were crying aloud for vengeance upon the entire body of public officers who were plundering them in every direction, and for reform in a dozen respects that were of course entirely new, such as reducing taxes and a variety of other things which no other means of reaching could be attained than that of reviving a committee that expired in the last Congress!

"But of course, Mr. President, this would be an entire mistake on the present occasion. I am sure that no unconscious malady has attacked my honorable friend from Illinois. I am sure that he is looking with an eye single and an eye clear to the mere details of public administration. I am sure that he believes, as I believe, and I am sure that he knows as I know (so far as any public man engaged in affairs can know about large operations), that the administration of this Government for the last three years, in respect to the fidelity of the whole body of its twenty thousand agents, leaving out deputy-postmasters, will compare favorably with any administration that ever preceded it from the days of George Washington to this day, when you take into consideration the number of persons necessarily employed in the Government now, compared to

its early days, and the larger amount of the transactions that they are obliged to perform.

"But what I have now said is intended to meet, in the humble and weak way which I confess is the only way I can meet, the observations of my good friend from Illinois, which had the appearance, and which were treated in a good many of the public papers as having had the intention, certainly the effect, to produce the impression upon the public mind that we were now in a very extraordinary condition of evil as it respects the administration of our Government, and that extraordinary measures in this great crisis must be resorted to. I think the contrary is quite true, and that our simple business is to go straightly and calmly on, as we have done in the last few years, applying a correction to every wrong that comes to our knowledge, improving by legislation every possible means which can be adopted to diminish the public expenditures and to insure faithfulness in the public service."

Mr. Thurman said: "In respect to this matter, I must confess that I am a little surprised at the objections to the amendment of the Senator from Illinois, objections made by gentlemen, every one of whom I venture to say voted for the appointment of the joint committee on retrenchment, with far larger powers than would be conferred on this committee if the amendment of the Senator from Illinois should be adopted. But let it be so, Mr. President. The majority of the Chamber can shape this resolution and pass it just as they please. They can pass it in such wise that the country will believe that there is an earnest determination to ascertain whether there are abuses and frauds, and there are some people in the country who will not take the round and whitewashing statement of the Senator from Vermont, much as he is respected, as complete and conclusive evidence of the purity of the officeholders of the United States. There are some people uncharitable enough to require further evidence than that, and who think that something like a grand-jury ought to sit to make these inquiries. You may pass a resolution that will be regarded all over the country as evidence that the Senate intends to make a thorough investigation, or you may pass it in such form that the whole country will see, or a least will think they see, that you mean that there shall be no investigation at all. The responsibility is upon the majority of the Senate."

Mr. Schurz, of Missouri, said: "I do not think there is a Senator on this floor, unless he became a member of this body during this Congress, who has not at least once voted for the powers formerly conferred on the Committee on Retrenchment, and I have yet to hear of the first objection that was made to the practice. It was done by general consent; it was considered a matter of eminent propriety. I have never heard a single complaint of the abuse of this power except in

one single instance, and that was, unless I am greatly mistaken, by the Senator from New York (Mr. Conkling) when the committee brought in its last report on the New York custom-house.

"Well, sir, this Committee on Retrenchment, with such powers, was organized five years ago. What was the occasion for its organization, and why were such discretionary powers conferred upon it? The Senator from Vermont (Mr. Edmunds) stated that at that time the civil service of the United States was in a very demoralized condition. I take it for granted that was the reason and no other, for certainly I cannot imagine that the Senate would have organized a committee like this actuated by mere motives of political hostility to the Administration. But if it was organized for the purpose of ferreting out abuses connected with the public service, then I think if the reason was good then the reason would be good now, unless the character of the civil service has changed so immensely as to make what was very imperfect then very perfect now.

"The Senator from Vermont has told us that great improvements have taken place. I have no doubt of it. I think in course of time all things are bound to improve, and yet I doubt whether there is a single Senator on this floor who would undertake to assert that the civil service of the United States is to-day as perfect as it ought to be or as it might be. Nay, sir, if you search the history of this country you cannot point out to me four consecutive months during which so many embezzlements and defalcations have come to light as have been laid bare to the public eye during the last three or four months. If I am mistaken, I shall be glad to be corrected. A great many of these frauds, embezzlements, and defalcations, were not discovered by diligent inquiry or investigation, but by something like accident; we simply stumbled over them, and there they are. So it would seem that as to the condition of the civil service, however much it may have improved, yet it is not so perfect at this time that a measure which was once considered eminently conducive to the public good in ferreting out abuses and wrongs can be cast aside now as entirely useless.

"For years and years the Senate without a single dissenting voice has been voting for conferring exactly those powers which the Senator from Illinois now demands upon the Committee on Retrenchment. Now it is suddenly found entirely improper, nay, even dangerous. There is something said of secret proceedings, of putting our hands into the private concerns of other people, of ruining innocent persons, of star-chambers, and other frightful things. Why, sir, if a committee with such powers was not dangerous before, I ask in all candor why it should be dangerous now? If it is dangerous now, I should like to

know how Senators could find it compatible with their conscientious convictions to vote for such a dangerous thing before? Either they were not conscientious when they did it before, or they would be equally conscientious in doing it to-day. Either it never was a proper thing, or it is now just as proper as it ever was. What has happened, I should like to be told, that you should look at this committee with its powers now with such remarkable apprehensions as a source of mischief and danger? Who has been injured in the past by the exercise of the powers this committee possessed, and which are now claimed for it again? Look into its record. Whose rights have ever been violated by it? Whose private affairs have been invaded? Where is the innocent person that has been harmed by it? Whom did it injure? None but corrupt men whose misdeeds ought to have been dragged into the light of day.

"I tell you, gentlemen, whatever we may say of the improvements that have taken place in the civil service, the people of the United States are startled at the frequency and the enormity of the disclosures which are now accumulating from day to day. Do not give yourselves up to any delusions in this respect. The American people demand honest government, and to secure it they want to have all the means used that are compatible with the laws of the country. The people of the United States demand the exposure and overthrow of corruption, regardless of the advantage of any party, and of the interest of any person, however high or low.

"It seems to me we are standing at the threshold of a great moral revolution in our political life that bids fair to sweep beyond the overthrow of Tammany Hall at New York, and in that revolution the science 'how not to do it' will be at a great discount, and all the arts of concealment will not be of avail much longer. Neither will the cheap declamation against corruption in the abstract, against the sinfulness of sin, and about the beauties of virtue in general, as it resounds so frequently in this Chamber, avail much longer. We have had enough of that. The people will not much longer take that worthless currency as a legal tender; the people want to see energetic and fearless efforts to put down abuses bodily, not in theory but in practice; and, if we mean to serve the country and to command its confidence, we must take such measures as shall make it clear to the whole world that we hate no political party more than we hate corruption, and that we love no party more than we love honest and good government."

Mr. Morton, of Indiana, said: "Mr. President, the first suggestion I have to make is that that resolution as it stands is much broader than the resolution offered by the Senator from Illinois; that the amendment offered by the Senator from Illinois is a limitation upon

a resolution much broader in its scope and consequences than the proposition which he offers. The resolution offered by the Senator from Rhode Island embraces all matters of retrenchment. Whatever may tend to retrench the expenses of this Government in reference to any department of the Government is embraced within the jurisdiction of the committee under that resolution; but the amendment moved by the Senator from Illinois is in its nature a limitation; it narrows it.

"But, Mr. President, the discussion has proceeded upon another theory. The resolution offered by the Senator from Rhode Island authorizes the investigation by the committee of such matters as may be referred to it by the Senate; of course, embracing within it the powers necessary for that investigation; but it has been assumed in the discussion that the committee should have the power to initiate investigations upon its own motion without any order from the Senate, and have power to send for persons and papers. I insist that such a power has never been committed to a standing committee of this body. To give to a standing committee the power to initiate investigations and to send for persons and papers is to make it an inquisition. It ceases to be a committee and becomes an inquisition, becomes a tyrant. That power might not be abused, and perhaps would not be in this instance; but we put it into the power of a committee, upon its own motion, to investigate the conduct of any officer of this Government, or any man connected with the Government, directly or indirectly, upon mere private information given to that committee, or it may act without information, if it chooses to abuse its power.

"No standing committee has ever had this power. Why has not the Committee on Commerce this power? Can they not be as safely intrusted with a general power to initiate investigations as this new committee? And yet that power has never been conferred. It is so high that it is never granted to a committee except upon special occasion. But here it is asked to give it in general terms to a committee, to be exercised year in and year out. I understand that no such power ever has been given in Congress, or in Parliament, or by any legislative body.

"I am not mistaken about the whole drift of this debate. It has been to show that there is corruption existing under this Administration, and gross corruption. The drift of this debate is a reflection upon the Republican party. I might appeal to those distinguished Senators and ask them if there is any ground for special assault upon the Republican party in that direction. I ask if ever there has been a party in this country that has exerted itself more systematically to expose and to destroy corruption than the Republican party? I ask if there has been an Administration within the memory of any man on this floor that has more promptly punished crime when it has

been brought to light, or has more promptly removed the offender from office? I think none of us remember an Administration entitled to higher credit than the present.

"We propose to raise this committee. We do not propose to confine it to the narrow limits specified by the Senator from Illinois in his resolution in the first branch of it, but to give it jurisdiction over all matters of retrenchment, and at the same time to give it power to send for persons and papers whenever in the opinion of the Senate the committee should be invested with that extraordinary power; but we cannot give it these general powers to initiate investigations upon its own motion, and to arrest any man, to take his private papers and bring them to the public gaze."

Mr. Schurz said: "Now, sir, my motives have been reflected upon, and we have been asked what objects we pursue. I am ready to tell the Senate in a few words. My object is to uncover, to denounce, and to have corrected any and every abuse wherever I can lay my hand upon it, without regard to the effect it may have on the interests of any party, and without regard to the likes or dislikes of any person. That, and no other, is the aim I pursue.

"I desire, also, to make a remark in reply to something that fell from the lips of the Senator from Indiana (Mr. Morton). He disclosed a most horrible picture of tyranny to which the operations of the investigating committee would most certainly lead if it were invested with the powers embodied in the amendment of the Senator from Illinois. It is just as if we were discussing an entirely new thing; as if the Committee on Retrenchment, invested with just such powers, had never been heard of in this body; as if it had never held a single sitting; as if it had never conducted a single inquiry and investigation; as if it had never reported to this body; as if the Senate had never acted upon its suggestions. We have witnessed and sustained the exercise of these very same powers, *verbatim et literatim*, for the last five years of our history. The Committee on Retrenchment held a meeting almost every week, and was almost continually engaged in some investigation under the very eyes of both Houses of Congress, and never, not a single time during those five years, have those immense dangers been discovered which we are now threatened with in such thrilling language, if we continue to do what we have been doing for five long years. Not once has there been a whisper in this Chamber or in the other about any abuse of these powers which the Committee on Retrenchment might have been guilty of. Not a single person has been discommoded in his private affairs; the rights of nobody have been violated. Nay, there has not even been a single complaint of anybody being dragged before that Star-Chamber, as it is called now. Only once, that I remember, were the proceedings of that

committee called in question, and that was when the committee rendered its report about the very abuses in the New York custom-house of which I have just been speaking; and mark you, that was one of the very few instances when the committee did conduct an investigation in pursuance of a resolution of the Senate. All those investigations which were conducted by the committee of its own motion, the investigation concerning the transit route, the investigation concerning the postal contracts in Texas, and many others, have never given rise even to a whisper of censure. And now we are suddenly told that the liberties of the American people will be in danger if we continue to do what all the Senators using that extravagant language have been voting for from 1866 to the opening of this Congress. Is it not an astonishing spectacle? Whence this bugbear which is raised before our eyes? What flimsy material is it made of?

"The Senator from Indiana has said something which I think is worth considering. He said:

I am not mistaken about the whole drift of this debate. It has been to show that there is corruption existing under this Administration, and gross corruption. The drift of this debate is a reflection upon the Republican party.

"A reflection upon the Republican party! How so? Do we not all profess to be in favor of reform? We have listened to the most fervid protestations in this debate time and again. There is not a Senator on this floor, it appears, who will not be glad and happy to disclose corrupt practices and to see them corrected. So we hear. The cry for reform is general and enthusiastic among us, and yet when a member of this body does attempt to lay bare a gross abuse existing in this Government, at once we are reprovingly told, 'This is done for the purpose of hurting the Republican party.' Gentlemen, either the party is not what you pretend it to be, a party of reform, or the party should, instead of repelling the denunciation of abuses, rather encourage that spirit which will prompt members of the party fearlessly and without hesitation, whenever they find a wrong in this Government, to disclose it before the eyes of the country."

The Presiding Officer (Mr. Wilson in the chair): "The question is on the amendment of the Senator from Illinois" (Mr. Trumbull).

Mr. Sumner, of Massachusetts, called for the yeas and nays, and they were ordered; and, being taken, resulted as follows:

YEAS—Messrs. Alcorn, Bayard, Blair, Casserly, Cooper, Davis of West Virginia, Fenton, Hamilton of Maryland, Johnston, Kelly, Logan, Patterson, Robertson, Saulsbury, Schurz, Stevenson, Stockton, Sumner, Thurman, Tipton, Trumbull, Vickers, West, and Wilson—24.

NAYS—Messrs. Ames, Anthony, Boreman, Brownlow, Buckingham, Caldwell, Cameron, Carpenter, Chandler, Clayton, Conkling, Corbett, Cragin, Ed-

munds, Ferry of Michigan, Flanagan, Frelinghuysen, Gilbert, Hamlin, Hitchcock, Howe, Kellogg, Lewis, Morrill of Vermont, Morton, Nye, Osborn, Pomeroy, Pratt, Ramsey, Sawyer, Scott, Sherman, Spencer, and Stewart—35.

ABSENT—Messrs. Cole, Davis of Kentucky, Ferry of Connecticut, Hamilton of Texas, Harlan, Hill, Morrill of Maine, Pool, Rice, Sprague, Windom, and Wright—12.

So the amendment was rejected.

The Presiding Officer: "The question recurs on the original resolution offered by the Senator from Rhode Island" (Mr. Anthony).

The resolution was agreed to.

Mr. Trumbull: "I now move that the committee be instructed to inquire as was proposed in my amendment to the resolution just adopted. I now move that amendment as an independent proposition."

The Presiding Officer: "The resolution will be read."

The Secretary read as follows:

Resolved, That the Committee of Investigation and Retrenchment be instructed to inquire into the expenditures in all branches of the service of the United States, and report whether any and what offices ought to be abolished; whether any and what salaries or allowances ought to be reduced; what are the methods of procuring accountability in public officers or agents in the care and disbursement of public moneys; whether moneys have been paid out illegally; whether any officers or agents, or other persons, have been, or are, employed in the public service without authority of law or unnecessarily; and, generally, how and to what extent the expenses of the service of the country may and ought to be curtailed.

And also to consider the expediency of so amending the laws, under which appointments to the public service are now made, as to provide for withdrawing the public service from being used as an instrument of political or party patronage.

Mr. Trumbull said: "Whatever others may say, I have no disposition to have an investigation that is hostile to the Republican party. I disagree utterly with the Senator from Indiana that an investigation of the kind that I propose is hostile to the Republican party. I believe that the Republican party has done great good to this country. It started as a reform party; it proclaims everywhere its devotion to honesty, integrity, purity in the Government; and the Senator from Indiana is not to put me in the position of saying that the Republican party is more impure than other parties have been. He insisted yesterday that the Republican party was as pure as any of the parties that had preceded it. Did I ever suggest anything different? But I trust we are progressing and improving, and when I propose to have an inquiry made into the expenditures of the public service and to learn whether any, and what, offices can be abolished, and an inquiry into the accountability of public officers and agents, is that hostile to the principles of the Republican party?"

"I am utterly astounded at the position taken by some members of this body. Shall it go out to the people of this country that an inquiry to ascertain what are the methods of

procuring accountability in public officers or agents in the care and disbursement of public money is hostile to Republicanism? Is that the idea of Senators? Why this zeal to rush in to the defence of Republicanism and the President when nobody proposes to assail either?

"This resolution is in aid of purifying the public service, elevating the public morals, bringing about greater security in the collection and disbursement of public money, and I am utterly astounded at the apparent effort made here by certain Senators to place others in a false position before the country. I do not know that they design it. I made no appeals to party considerations. I disclaimed them at the outset; but we find some Senators speaking of the amendment I offered as if it was hostile to some party or person. Now, sir, my hostility extends to abuses. It is against the system I protest. I am for purifying the public service, and that is my only object. It is not to hit at any individual, and no Senator here will be more gratified than I if the investigations, when they take place, show honesty and fidelity in all departments of the Government. But we have seen enough of defalcations within the last few months to justify an inquiry as to how the accounts are kept; and I think that there ought to be no objection to such an instruction to the committee as I have proposed."

Mr. Morton said: "Mr. President, I cannot permit myself or those with whom I act in this matter to be put in a false position by the remarks of the Senator from Illinois. He has represented me as saying here that a proposition to investigate the affairs of the Government is hostility to the Republican party. I have said no such thing; I have meant no such thing; but, on the contrary, I have said, and it is so recorded in the *Globe*, that the Republican party can bear investigation, that it courts investigation, and that it claims the merit of having exceeded other parties who have gone before it in its zeal to bring to punishment its own members who may have been guilty of crime."

"Now, Mr. President, I wish to say one word in regard to reform. There seems to be a disposition on the part of some people in this country to become professional reformers, to have it understood that they are the reformers *par excellence*. They seem to desire to monopolize that business, and to have it understood by the country that they of all others hate corruption, and that they are to make it the business of their lives to hunt down those who are corrupt. I desire to say to those gentlemen, wherever they may be, that for one I shall not permit them to monopolize that business, that I claim to be as good a reformer as any of them, although I may not say so much about it, or make such high pretensions."

"Now, Mr. President, one word in regard to this resolution. As was stated a moment

ago by the Senator from Ohio, I believe the Republican members on this floor have been in favor, from the first, of a standing committee on retrenchment. They were not in favor of the resolution offered by the Senator from Illinois, for reasons which have been given heretofore, and I will not go over them again. But it has been said that because we were opposed to investing a committee with general power to send for persons and papers in regard to matters that have never been before the Senate, to investigate anybody at all times upon any public or private charge that might be made, and thereby cast imputation, we were against the exercise of a power which has been conceded to this committee for the last five years. I want to call the attention of my friend, the Senator from Illinois, to the fact that, if that power has been ever exercised for the last five years by the committee, it was not given by the resolution creating it."

No final action was taken on this resolution.

In the Senate, on December 18th, Mr. Anthony, of Rhode Island, offered the following resolution:

Resolved, That the Committee of Investigation and Retrenchment consist of Mr. Buckingham (chairman), Mr. Pratt, Mr. Howe, Mr. Harlan, Mr. Stewart, Mr. Pool, and Mr. Bayard.

Mr. Sumner said: "I should like to have my friend, the Senator who makes the motion, state whether on that committee there are any of the Senators who brought forward this inquiry and who urged it upon the Senate?"

Mr. Anthony: "The Senator knows that as well as I do. I think they are exceedingly judicious and sensible men, moderate men—men who command in the highest degree the confidence and the respect of their associates and the confidence of the country. I do not know whether they have, any of them, made themselves particularly conspicuous in the charges which have been made, or whether they have qualified themselves, any of them, to do justice in the matter by pronouncing an opinion in advance."

Mr. Sumner: "Certainly I have nothing to say except in kindness and good-will toward every Senator named on this committee; but as I listened to the list I was astonished by the absence of certain names. On this list I do not find the name of a single Senator who had urged this investigation, as I believe, unless it be the Democratic Senator over the way—he will pardon me for that designation—the Senator from Delaware (Mr. Bayard), who did vote for investigation in the strongest form. The Senators on the list all voted against investigation in the strongest form. Thus, Senators in favor of investigation in the strongest form, every one, except the Democratic Senator, are excepted. It is for the Senate to consider whether a committee organized in this way, after the debate that has occurred, can justly satisfy the country."

"Perhaps also it would be worth while to consider whether it is in conformity with parliamentary law—I will not say simply usage, but parliamentary law, for the law is found in usage.

"Now, as I understand, this inquiry was first presented by the Senator from Illinois (Mr. Trumbull), and urged by him in an elaborate and able speech, which has already awakened echoes throughout the country. I miss his name from the committee. In that debate the Senator from Illinois was most ably and eloquently sustained by the Senator from Missouri (Mr. Schurz), I miss his name. There were other Senators who spoke on the same side; certainly there were others who voted on that side. I miss all their names; I think the country will miss them. Then there was for five years previously a Committee on Retrenchment, joint in character, still with representatives from the Senate. I know not if any member of that committee is on the list.

"My friend before me (Mr. Schurz) says, 'No, not one member;' not the honorable chairman from New Hampshire (Mr. Patterson), who had gained much experience in examining and exposing these abuses; not one of his associates finds a place on this committee. Why, sir, to me it is simply inexplicable on any ground of justice or parliamentary law. I am at a loss to understand how my excellent friend from Rhode Island, in whom reigns, I have always believed, the spirit of justice, should bring forward a proposition for such a committee at this time."

Mr. Anthony: "I do not know what my friend from Massachusetts means when he speaks of the Senators here who were opposed to this inquiry. I do not know of a Senator in this body who is opposed to the most searching and thorough inquiry into any charges of corruption, by whomsoever brought in this Chamber. Every Senator who has spoken during the debate—there was no debate on this resolution, but during the debate on a cognate resolution—every one expressed himself earnest for a thorough and complete investigation. Sir, I ask you to read the names of the men on this committee, and say if there is a man there whom you believe would cover up corruption, if there is a man there who would endeavor to shield his best friend as a public man from any just charges of corruption made against him? I consider the committee an eminently judicious one, and in my experience in the Senate this is the first time that I have ever heard a committee objected to on account of the character of its members, and I am very glad that the first example has been made in the case of men against whom so very little can be said."

Mr. Thurman, of Ohio, said: "Mr. President, I submit to the good sense of the Senate that the Senator from Rhode Island is entirely evading the question. There is no Senator here who will stand up and utter one word in

disparagement of the character of any one of the Senators who is proposed as a member of this committee, and no such issue can be forced upon the Senate. We are not here to try the character of those individuals, but we are here to inquire if this proposed committee will be, if appointed, in accordance with parliamentary usage and good, sound sense."

Mr. Anthony: "Will do their duty."

Mr. Thurman: "Well, sir, will do their duty. It is not a question at all as to the purity of men's motives. They may be ever so pure-minded, ever so honest, and yet their actions will be more or less governed by their opinion, by their belief; and it is upon this ground—"

Mr. Frelinghuysen, of New Jersey, said: "I wish to ask my friend this question: whether the parliamentary rule is not that persons who vote for the measure should be on the committee? I understand that every one of the persons on this committee did vote for this measure. But the insistence seems to be that we ought to place on the committee those who voted against it."

Mr. Thurman: "I do not say any such thing. The Senator says everybody voted for it. Then nobody voted against it. The argument is not so at all. I do not understand the Senator when he says that the argument is that somebody should be put on who voted against it."

Mr. Frelinghuysen: "I wish my friend to understand me. I understand the parliamentary rule to be that the committee ought to consist of those who favored the resolution, and that that is the parliamentary rule insisted upon by the Senators from Massachusetts and Ohio. Now, the record shows that every member of this committee did vote for this measure."

Mr. Thurman: "There is another rule of parliamentary usage, and that is that the Senator who moves an inquiry is to be placed at the head of the committee if he is of the party that is dominant in the body. Is the Senator from Illinois, who moved the first broad, sweeping resolution, placed at the head of this committee? No, sir, he is not on it at all."

"Mr. President, I had said that the reason of the rule to which I referred is that there are in every legislative body differences of opinion; and in this particular case here in the Senate some Senators affirm in their places that there is great necessity for investigation; that they believe great abuses exist which ought to be exposed, and the exposure of which ought to lead to action on the part of Congress. Other Senators do not so believe, or they do not believe it so strongly as those Senators who have made these declarations. And it is because of this difference of belief, which will influence the action of Senators, that the rule is that those who are in earnest in favor of investigation shall constitute a majority of the committee; and it is not at all a satisfac-

tion of this rule to say that you may appoint a committee out of any seven Senators who voted for the resolution ordering the committee. Upon that question there was no division at all. Everybody who voted at all did vote for the resolution which the Senate adopted. I believe there is one member of this proposed committee—I am told there is—who did not vote for that resolution, who did not vote at all, and that the *Globe* shows that that is the case—one who did not vote for it. But, though that may be, that does not touch the question. The question is not on the appointment of a committee or ordering that there shall be a standing committee of this character—upon that, as I said, there was no division; but the question is, upon the investigation; the question is, how Senators vote on the subject of investigating these abuses.

"The resolution offered by the Senator from Illinois provided for a thorough and searching investigation. It proposed to give to the committee the powers that had heretofore been given for five years to the Committee on Retrenchment and Reform—powers that no man will say were ever abused; powers that resulted in good to the country in the mass of testimony that the committee laid before the two Houses of Congress. The question was upon raising a committee with these ample and plenary powers, upon making an investigation that should be an investigation, raising a committee favorable to investigation, and clothing it with powers that should enable it to be effective in its work; and how was the vote on that? That is the test question. Where were the Senators who were in favor of this thorough investigation, of this broad and comprehensive investigation? All voting for the resolution of the Senator from Illinois. Where are they in reference to this committee? Not one of them is upon it.

"Now, Mr. President, this cannot be got rid of by saying that the proposed members of this committee are respectable and honest men. No such issue as that can be forced on the Senate. The rule depends on no such question as that. We do not admit in parliamentary language and in parliamentary usage that this Senate is composed partly of honest men and partly of villains; and this rule could have no existence at all if it were founded upon any such supposition as that.

"Then there is still another singular fact about this committee, and that is that there is but one Democrat allowed upon a committee of seven, and that a committee of investigation whose inquiries are to be as broad as the Republic, if they are to amount to anything at all. That was not so in your joint Committee on Retrenchment. There were two Democrats of the House on that committee, and one of the Senate, giving us three. Then there was a Democrat on every sub-committee of that joint Committee on Retrenchment. Here is an investigation broader than that. That

investigation was limited to eleven States of the Union. Here is an investigation that goes to the whole thirty-seven States of the Union. You appoint a committee of investigation into the conduct of Government officials; into the conduct of this Administration, and you allow the Opposition to the Administration but one member upon that committee, and that a gentleman charged already with the important and onerous duties of a member of the Committee on Finance and a member of the Committee for the Investigation of Southern Outrages.

"I do say, therefore, Mr. President, without uttering one word in disparagement of the *personnel* of this committee, that it is proposed to be appointed in violation of parliamentary usage, and in violation of what is due to the minority on this floor, who, though they may be very small here, you know very well, Mr. President, represent within a small fraction one entire half of the people of the United States."

Mr. Bayard, of Delaware, said: "It will not do by empty professions to say that you are in favor of reform and yet vote to impede, embarrass, and restrict every practical step taken to secure the information necessary to base it upon. There must be works in this case. There must be acts, not hollow professions; and, however ingeniously gentlemen may seek to explain away their votes, the meaning and operation of their votes cannot be gotten rid of, and I do not think will be misunderstood by the common-sense of the people of this country. This demand has been growing since the war closed. The period of necessary excitement in which our whole country was placed by the terrible convulsions of civil war enabled men under a patriotic cloak to avail themselves of the excitement to enrich themselves at public expense and intrench themselves behind abuses. Gradually, as the excitement of the war has passed away, as the country is resuming once more the sober-suited garb of peace, the demand for investigation, retrenchment, and reform is increasing.

"There is in this country undeniably a wide-spread suspicion and belief that the tenure of civil office in the United States is now a mere reward for partisan service and a mere weapon for party success. I am one of those who consider it most important that that fact should be determined one way or the other. There can be no greater evil to a country inflicted than to destroy the confidence of the people in those who rule it."

Mr. Trumbull: "I move to amend the resolution by adding these words: "

And that said Committee of Investigation and Retrenchment be instructed to inquire into the expenditures in all branches of the service of the United States, and to report whether any and what offices ought to be abolished; whether any and what salaries and allowances ought to be reduced; what are the methods of procuring accountability in pub-

lie officers or agents in the care and disbursement of public moneys; whether moneys have been paid out illegally; whether any officers or agents, or other persons, have been, or are, employed in the public service without authority of law or unnecessarily; and generally how, and to what extent, the expenses of the service of the country may and ought to be curtailed.

And also to consider the expediency of so amending the laws under which appointments to the public service are now made as to provide for withdrawing the public service from being used as an instrument of political or party patronage.

That said committee be authorized to sit during the recess of Congress, to send for persons and papers, and to report by bill or otherwise; and that said committee may appoint a clerk.

Mr. Morton: "Mr. President, it has been said here to-day that the country believes, from what has taken place in the Senate in the course of this discussion, there is some great corruption existing in this Administration, and that there was a majority of the Republicans in the Senate who were afraid to have it investigated, and who are working to cover it up. Those Senators who have said this may believe it to be true, but I for one desire to say that I think the country believes no such thing. There is a great deal of intelligence in the country, and I think the people will put a very different estimate on this whole proceeding, and, so far from imputing to the majority of this Senate a desire to cover up fraud and protect criminals and to prevent investigation, they will be apt to suppose that there have been other motives and other purposes at work.

"It is rather an ungracious business, I should suppose, to attempt to cast suspicions upon any of the members of this Senate or a majority of them; and yet it cannot be denied that during the course of this discussion, from the time it first commenced, there has been a deliberate attempt to make an impression upon the country that there were Senators here who were desirous of avoiding investigation upon the ground that the Administration could not stand investigation.

"I for one feel that that insinuation, whether made directly or indirectly, is unjust, and that those who have appeared to make it have not done themselves justice, and have not given themselves credit before the country. I impute nothing to the motives of any Senator; I never do that. I never impugn the sincerity or the patriotism of any Senator; but the attempt that has been made in the course of this discussion to cast suspicion upon the majority of this body in my opinion is most unjust. It is without evidence to justify it, and if it is to have any effect it will be on those who made it.

"The Senator from Massachusetts remarked in the opening of this discussion to-day that there was no person appointed on this committee who had voted for investigation in its strongest form; I believe I use his language. Now, I would like to know, and I would like to have that Senator state before I go any fur-

ther, what foundation there is in any vote which has been taken in this body that justifies that remark."

Mr. Sumner: "Does the Senator wish a reply now?"

Mr. Morton: "Yes, sir, I wish a reply."

Mr. Sumner: "I mean that there is no Senator on the committee, according to my knowledge, who has sustained by speech or vote the motion of the Senator from Illinois who began this appeal for investigation. The Senator from Illinois is not on the committee, and none of those who were associated with him in urging that important investigation."

Mr. Morton: "I so understood the Senator; but I wanted to have it distinctly stated that he meant that those who voted for the resolution of the Senator from Illinois were considered as voting for investigation in the strongest form, and that those who did not so vote did not vote for investigation in the strongest form, or, rather, voted against it.

"Now, Mr. President, allow me to call the attention of the Senate to what I did once before, that, under the resolution of the Senator from Illinois, no authority would be conferred upon the committee to investigate a single fraud. I make that statement now, and I think the Senator from Illinois himself will hardly controvert it. I think he has accepted that as being the true construction of his resolution, that that resolution as he first offered it, and as he now offers it, does not empower the committee to investigate any fraud.

"Now, what has been said during the course of this discussion? It has been said that there were great frauds committed in the Administration; that there was rottenness; that there was corruption; that this should be ferreted out, and the criminals should be brought to light; and it has been said that this would be brought about by the resolution of the Senator from Illinois. I say now that that resolution has been sailing here under false colors from beginning to end; that it contains no authority to investigate frauds, and it is not the first time that attention has been called to that fact; and yet, because it did not meet with the judgment of the majority in the beginning to support that resolution, it has been heralded throughout the country that they were disposed to cover up fraud, and that has been the broad intimation in this Senate to-day."

Mr. Trumbull: "Now, Mr. President, I propose briefly to give a narrative, which I think ought to go to the country, and ought to be understood by the Senate, of this resolution and of the course which has been pursued here in regard to it. We have had the resolution adopted originally in the Thirty-ninth Congress at the instance of the Senator from Vermont (Mr. Edmunds); in the Fortieth Congress at the instance of the Senator from Rhode Island (Mr. Anthony); and in the Forty-first Congress at the instance, I think, in this body,

of the Senator from New Hampshire (Mr. Patterson), and we have had various gentlemen upon this committee. The first joint committee on retrenchment consisted, on the part of the Senate, of Messrs. Edmunds, Williams, and Buckalew, appointed in 1866. In 1869, Messrs. Edmunds, Williams, Patterson, and Buckalew, constituted the committee on the part of the Senate. In 1870, Messrs. Harris, Patterson, Schurz, and Thurman, constituted the committee on the part of the Senate.

"Now, sir, I supposed that a proposition to raise a committee that had had an existence ever since 1866, with precisely the same powers that I asked for it in 1871, would have been adopted in this body without objection. On the 7th day of December, 1871, I offered a resolution to revive the Committee on Retrenchment, which had expired with the Forty-first Congress on the 8d of March last. After I had offered the resolution, the Senate immediately adjourned without any action upon it.

"On Monday, the resolution, if I recollect aright, came up, and was considered to some extent, but without arriving at any definite conclusion. On Tuesday the Senate sat but a few minutes; and again, if I recollect aright, the same thing was gone through with on Wednesday, and the newspapers of the country say that a caucus of Republican Senators was held in reference to this resolution. I wish the Senator from Indiana to consider what I am saying. The newspapers of the country say that a party caucus of Republican Senators was called to determine whether this resolution of investigation and inquiry to reduce the expenses of the Government should pass or not. Who gave this a party turn, or sought to give it a party turn? In my judgment, it was not a proper subject for party consideration. The very fact that Republican Senators got together to consider whether a resolution of inquiry into the abuses of the Government should be permitted to pass this body showed that the meeting was called for the purpose of considering it in a party point of view. The whole country has been given to understand that the Republican Senators were called together, for what? For the purpose of considering whether a resolution that had passed this body for five consecutive years without objection should be permitted to pass again.

"Sir, I deny that the Republican party of this country is to be bound by any such action, and, for one, I repudiated on the spot the idea of being bound by any such caucus. I will never consent, while I have the honor of a seat here, that a party caucus, or any other combination or organization, shall prevent my bringing before the Senate for its investigation matters that I believe the public good requires to be investigated.

"Sir, what followed? The resolution then followed in this body offered by the Senator from Rhode Island (Mr. Anthony), to do what? To create a Committee of Investigation and

Retrenchment, to consider such matters as should be referred to it, a committee with no power whatever. It could not move a step until something was referred to it."

Mr. Davis, of Kentucky: "I am opposed to the proposition of the honorable Senator from Rhode Island for this reason: as I understand the proposition of the Senator from Illinois, it proposes to clothe the committee with power to examine whether the patronage of the General Government has been brought into conflict with the right of suffrage and for purposes of general corruption. I think that there can be no more legitimate subject for inquiry connected with the duties of this committee. There is no Senator who would not, in theory at least, condemn the bringing of the patronage of the General Government into conflict with the freedom of suffrage and to be used for purposes of general corruption."

The Presiding Officer: "The Chair understands that a motion is made by the Senator from Rhode Island to strike out all of the proposed amendment of the Senator from Illinois after the word 'curtailed.'"

The Chief Clerk: "It is proposed to strike out from the amendment submitted by the Senator from Illinois the following words: "

And also to consider the expediency of so amending the laws under which appointments to the public service are now made as to provide for withdrawing the public service from being used as an instrument of political or party patronage.

That said committee be authorized to sit during the recess of Congress, to send for persons and papers, and to report by bill or otherwise; and that said committee may appoint a clerk.

Mr. Sumner: "Allow me to make one remark before this debate closes, if it ever shall close. Something has been said about senatorial caucuses. Now, I shall make no revelation, but I shall repeat what for ten years I have said in this Chamber as often as occasion allowed. A senatorial caucus is simply a convenience. It is in no respect an obligation on anybody. To hold that it is, is infinitely absurd and unconstitutional. I mean what I say—it is infinitely absurd and unconstitutional. We are all, under the obligation of an oath as Senators, obliged to transact the public business under the Constitution of the United States. We have no right to desert this Chamber and go into a secret conclave, and there dispose of the public business. I say it is absurd and unconstitutional to pretend that you have.

"I make a great, broad, clean distinction between a nominating convention outside, or a caucus outside, and a senatorial caucus. A nominating convention or a caucus outside is held in the light of day; it is open; there are reporters present; it is under the direct eye of the people. I think that all patriotic citizens are beginning to recognize that even that is a very questionable form of proceeding, and I know that there are many who are looking about anxiously for some way in which to

supersede it. But there is an immense difference between such an assembly and a senatorial caucus. The senatorial caucus is secret; it is confidential, if you please; it has no reporters present; it is not in the light of day. Why, sir, to take the public business from this Chamber and carry it into such a caucus, is a defiance of reason and of the best principles of government. A Senator has no right to abdicate his duties here in this Chamber. He has no right to go into a secret chamber and there constrain himself in regard to the public business."

The question being taken by yeas and nays, resulted as follows:

YEAS—Messrs. Ames, Anthony, Boreman, Buckingham, Cameron, Carpenter, Chandler, Clayton, Conkling, Corbett, Cragin, Edmunds, Ferry of Michigan, Flanagan, Frelinghuysen, Gilbert, Hamlin, Hitchcock, Howe, Morton, Osborn, Pomeroy, Pool, Pratt, Sawyer, Spencer, Stewart, Wilson, and Windom—39.

NAYS—Messrs. Bayard, Casserly, Cooper, Davis of Kentucky, Fenton, Hamilton of Maryland, Kelly, Logan, Patterson, Saulsbury, Schurz, Stevenson, Stockton, Sumner, Thurman, Tipton, Trumbull, and Vickers—18.

ABSENT—Messrs. Alcorn, Blair, Brownlow, Caldwell, Cole, Davis of West Virginia, Ferry of Connecticut, Hamilton of Texas, Harlan, Hill, Johnston, Kellogg, Lewis, Morrill of Maine, Morrill of Vermont, Nye, Ramsey, Rice, Robertson, Scott, Sherman, Sprague, West, and Wright—24.

So the amendment to the amendment was agreed to.

The Presiding Officer: "The question recurs on the adoption of the amendment proposed by the Senator from Illinois (Mr. Trumbull), as amended."

Mr. Wilson: "I now move to amend the amendment, as amended, by adding to it the following:"

And that the said committee be authorized to send for persons and papers, and report by bill or otherwise, and also to appoint a clerk.

The Presiding Officer: "The question is on adopting the amendment to the amendment, upon which the yeas and nays have been ordered."

The question being taken by yeas and nays, resulted as follows:

YEAS—Messrs. Bayard, Blair, Casserly, Cooper, Cragin, Davis of Kentucky, Fenton, Hamilton of Maryland, Hitchcock, Kellogg, Kelly, Lewis, Logan, Patterson, Saulsbury, Schurz, Spencer, Stevenson, Stockton, Sumner, Thurman, Tipton, Trumbull, Vickers, West, Wilson, and Windom—27.

NAYS—Messrs. Ames, Anthony, Boreman, Caldwell, Cameron, Carpenter, Chandler, Clayton, Corbett, Edmunds, Ferry of Michigan, Flanagan, Frelinghuysen, Hamlin, Osborn, Pomeroy, and Stewart—17.

ABSENT—Messrs. Alcorn, Brownlow, Buckingham, Cole, Conkling, Davis of West Virginia, Ferry of Connecticut, Gilbert, Hamilton of Texas, Harlan, Hill, Howe, Johnston, Morrill of Maine, Morrill of Vermont, Morton, Nye, Pool, Pratt, Ramsey, Rice, Robertson, Sawyer, Scott, Sherman, Sprague, and Wright—27.

So the amendment to the amendment was agreed to.

The Presiding Officer: "The question recurs on adopting the amendment as amended."

Mr. Vickers: "I offer this amendment: to strike out the names in the original resolution, namely, 'Mr. Buckingham (chairman), Mr. Pratt, Mr. Howe, Mr. Harlan, Mr. Stewart, Mr. Pool, Mr. Bayard, and Mr. Casserly;' and in lieu thereof to insert:"

Lyman Trumbull (chairman), Charles Sumner, Eugene Casserly, Thomas F. Bayard, Henry B. Anthony, Roscoe Conkling, Oliver P. Morton, and T. W. Tipton.

Mr. Edmunds: "On that I ask for the yeas and nays."

The yeas and nays were ordered.

The question being taken by yeas and nays, resulted as follows:

YEAS—Messrs. Bayard, Blair, Casserly, Cooper, Davis of Kentucky, Hamilton of Maryland, Kelly, Saulsbury, Stevenson, Stockton, Thurman, and Vickers—12.

NAYS—Messrs. Ames, Anthony, Boreman, Caldwell, Cameron, Carpenter, Chandler, Clayton, Conkling, Corbett, Cragin, Edmunds, Fenton, Ferry of Michigan, Flanagan, Frelinghuysen, Hamlin, Hitchcock, Kellogg, Osborn, Patterson, Pomeroy, Pool, Sawyer, Spencer, Wilson, and Windom—27.

ABSENT—Messrs. Alcorn, Brownlow, Buckingham, Cole, Davis of West Virginia, Ferry of Connecticut, Gilbert, Hamilton of Texas, Harlan, Hill, Howe, Johnston, Lewis, Logan, Morrill of Maine, Morrill of Vermont, Morton, Nye, Pratt, Ramsey, Rice, Robertson, Schurz, Scott, Sherman, Sprague, Stewart, Sumner, Tipton, Trumbull, West, and Wright—32.

So the amendment to the amendment was rejected.

The Presiding Officer: "The question recurs on adopting the amendment, as proposed by the Senator from Illinois, as amended."

The amendment was agreed to.

The Presiding Officer: "The question now is on adopting the resolution offered by the Senator from Rhode Island, as amended, upon which the yeas and nays have been ordered."

The question being taken by yeas and nays, resulted as follows:

YEAS—Messrs. Ames, Anthony, Boreman, Caldwell, Cameron, Carpenter, Casserly, Chandler, Clayton, Conkling, Cooper, Corbett, Cragin, Davis of Kentucky, Edmunds, Fenton, Ferry of Michigan, Flanagan, Frelinghuysen, Hamilton of Maryland, Hamlin, Hitchcock, Howe, Kellogg, Kelly, Lewis, Logan, Osborn, Patterson, Pomeroy, Pool, Sawyer, Schurz, Spencer, Stevenson, Stockton, Thurman, Tipton, Trumbull, Vickers, West, Wilson, and Windom—43.

NAY—Mr. Blair—1.

ABSENT—Messrs. Alcorn, Bayard, Brownlow, Buckingham, Cole, Davis of West Virginia, Ferry of Connecticut, Gilbert, Hamilton of Texas, Harlan, Hill, Johnston, Morrill of Maine, Morrill of Vermont, Morton, Nye, Pratt, Ramsey, Rice, Robertson, Saulsbury, Scott, Sherman, Sprague, Stewart, Sumner, and Wright—27.

So the resolution, as amended, was adopted.

Mr. Robertson, of South Carolina, in the Senate, on December 20th, moved that the pending and all previous orders be postponed, and that the Senate proceed to the consideration of the bill indicated by him.

The motion was agreed to; and the Senate, as in Committee of the Whole, proceeded to consider the bill for the removal of legal and political disabilities imposed by the third section of the fourteenth article of amendments to the Constitution of the United States. The bill proposed to remove all legal and political disabilities imposed by the third section of the fourteenth article of amendments to the Constitution of the United States on persons therein mentioned, because of their having engaged in insurrection or rebellion against the United States, or given aid or comfort to the enemies thereof, with the exception of persons included in either of the following classes, namely: first, members of the Congress of the United States who withdrew therefrom and aided the rebellion; second, officers of the Army or Navy of the United States who, being above the age of twenty-one years, left said Army or Navy and aided the rebellion; third, members of State conventions which adopted pretended ordinances of secession, who voted for the adoption of such ordinances. Before any person can be entitled to the benefit of the act he shall, within the district where he resides, before a clerk of some court of the United States or a United States commissioner, take and subscribe an oath or affirmation to support the Constitution of the United States and to bear true faith and allegiance to the same, which oath or affirmation must be forwarded by the officer to the Secretary of State of the United States, who shall cause a list of all persons complying with the provisions of the act to be laid before Congress at the opening of each session thereof; and the officer before whom such oath or affirmation is made is to give to the person taking it a certificate of the fact under such forms and regulations as the Secretary of State may prescribe.

Mr. Robertson said: "Mr. President, the interest of the country demands the passage of this bill. I do not propose to make any speech on the subject, as I stated my views upon it at the last session; but, sir, the passage of this bill will give the Republican party more strength in the South than any thing that has been done since the war ended. I ask the friends of the bill to show their allegiance to it by their votes and not by their speeches."

Mr. Buckingham, of Connecticut, said: "Mr. President, the bill for the removal of legal and political disabilities now under consideration proposes to open a door through which the great mass of disloyal men may enter and again participate in the administration of the Government which they endeavored to destroy."

"My views of the course which should now be pursued are in some measure changed by the action which Congress has already taken upon this subject. In relieving men of their political disabilities Congress does not appear

to have been governed by any well-established principles, but by the wishes of the personal friends of the guilty. We have relieved so many that the Government is charged with injustice in not extending the favor to others who are no more guilty. There is some ground for this charge. When a large number are selected from a class to be the recipients of governmental clemency, others of that class make a strong plea for like consideration, and, unless there are special reasons, reasons which are apparent and which clearly make it right to bestow the favor upon the persons selected, you cannot erase from the minds of men the conviction that the Government has exercised the pardoning power with partiality.

"We are now in circumstances which, in my judgment, render it necessary to extend relief much further than would have been justifiable a short time since—a necessity forced upon us by the overflowing and superabundant sympathy of generous conquerors for misguided public enemies. This necessity induces me to favor the bill under consideration, but if it shall be materially changed I shall not vote for it. It proposes to relieve the mass of rebels, whom I would now welcome to every right, to every privilege, to every position. I would receive them either with or without repentance, but with the hope (a hope based upon desire rather than upon conviction) that their release from merited punishment and their full restoration to all the rights of citizenship will inspire their hearts with loyalty to the Government and cause them to be truly the friends and supporters of republican liberty.

"But here I enter a caveat to stay further proceedings. I do it now because some of the friends of this measure have expressed a desire that relief should be universal, and regard this bill as an important step toward securing that result."

Mr. Morton, of Indiana, said: "Mr. President, I offer the following amendment, to come in at the end of the eleventh line of the first page of the bill: "

And provided further, That this act shall not be construed to relate back to and validate the election or appointment of any person to the position of Senator or Representative in Congress, or to any office, civil or military, under the United States, or under any State, which person was at the time of such election or appointment ineligible to the position to which he may have been so elected or appointed.

Mr. Stewart, of Nevada, said: "I am aware of the argument against the removal of disabilities. I am aware of the fact that many of those who are now laboring under disabilities are not good citizens of the United States. I am admonished by the report of my worthy friend from Pennsylvania (Mr. Scott) that many of those persons who are still laboring under disabilities, and are to be benefited by this bill, have no claim upon this Government

for its mercy, and no claims upon the generosity of this Government. But, while that is true, there are others whom we desire to relieve from disabilities, there are others who would undoubtedly be good citizens if relieved; but we have not the machinery and cannot invent it here to ascertain who they are specifically. They are too numerous for individual action, and generally those most meritorious are least likely to press their claims. That mode of action is surrounded by practical difficulties on all hands, and the administration of the law in that way is calculated to produce disquiet because of the discriminations made in passing special bills. That will constantly produce disquiet. It seems to me wiser to end the matter and to pass this bill as it came from the House of Representatives, and free ourselves from the embarrassments that we are placed in when we resort to special legislation. By doing this, we shall take from these men the excuse which they make that justice is not done to all, that bad men are relieved while good men are not. Take this pretext from them, so that they shall have no excuse for alleging that this Government is not generous to all because it has relieved the bad and also relieved the good. Let us take from them all chance for exciting sympathy among their fellows; for, view it as you will, if a citizen who stands well in a particular locality is overlooked, and one who stands badly is relieved, that community will blame Congress and blame the Government, and draw a comparison, so that a sympathy will be created for the citizen whose claims have been overlooked."

Mr. Sumner, of Massachusetts, said: "Mr. President, we have all heard of the old saying, 'Let us be just before we are generous.' I do not like to be against any thing that may seem to be generous; but I do insist always upon justice; and now that it is proposed that we should be generous to those who were engaged in the rebellion, I insist upon justice to the colored race everywhere throughout this land, and in that spirit I shall ask the Senate to adopt as an amendment, in the form of additional sections, what is already known in this Chamber as the supplementary civil rights bill, which I now send to the Chair and ask to have read. I offer it to come in at the end of the bill. It is not in order strictly until the amendment of the Senator from Indiana shall have been acted upon."

The Presiding Officer: "The question at present is on the amendment of the Senator from Indiana (Mr. Morton)."

Mr. Hill, of Georgia, said: "Before the vote is taken on that proposition, I beg to say to the Senate that I should regret exceedingly to see this measure, matured with so much care in the House of Representatives, and now at last brought before the Senate for consideration, overlaid with amendments which are not germane to its provisions, and thereby defeated.

I certainly would not insinuate that it is the purpose of any Senator on the floor, by offering amendments, to defeat this great measure. I characterize it as a great measure, because of the belief I have that it is to effect great consequences.

"Why, sir, gentlemen who do not live in the section of country that is affected materially by it cannot possibly know as well as some of us do the grievances of hundreds of worthy men, who had little or no part in the rebellion, who were valuable officers before it commenced, but by reason of having taken almost a coerced part, though perhaps to be denominated voluntary in a strict legal sense, are now excluded from participation in the public offices of the country. Like other Senators here I had no sympathy, and I may say no toleration, for the rebellion itself. I thought it unwise; I thought it unjust; I even thought it was wicked; and I so characterized it at the time; and the day has been when, if left to my own single volition to say whether so liberal an amnesty as is now proposed should be granted, I should have hesitated before according it, because the day has been—I say it in justice to myself—when I have felt more bitterly toward those who originated the rebellion, and those who eagerly assisted in it, than I do to-day. Time has soothed in some degree my own feelings, as it has toned down the feelings of others. It is no uncommon thing in my own State for old associates in the old Whig party of that State to appeal to me to know how it is that I can identify myself with a class of politicians who exclude from participation in public affairs the humble justice of the peace, who before the war performed faithfully his little functions in that office, because circumstances drove him into the rebellion, though he believed, as I did, that it never ought to have been inaugurated. The present measure is not as liberal, perhaps, as I might desire it to be; certainly it is not as liberal as many other gentlemen from the South desire; but it is one that has been well considered, and is well devised. I hope that it will not be interfered with at this late day by amendments such as have been offered.

"In regard to the amendment offered by the Senator from Indiana, relating, I suppose, as is hinted, to the election of a rather prominent rebel from the State of North Carolina to a seat in this Senate, I would suggest that it will be competent for the Senate hereafter to judge whether or not at the time of that election he was eligible to a seat here, and that will embrace the whole legal question that attaches to the matter. Sir, shall we mar the beautiful record of this great peace-offering to the country by making a reference to one individual from North Carolina or from any other State. I trust not."

Mr. Sumner: "I am very glad indeed that I have heard the Senator, for I should like to

bring home to the Senator that nearly one-half of the people of Georgia are now excluded from those equal rights which my amendment proposes to secure; and yet I understand that the Senator disregards their condition, sets aside their desires, and proposes to vote down my proposition. The Senator assumes that the former rebels are the only people of Georgia. Sir, I see the colored race in Georgia. I see that race once enslaved, for a long time deprived of all rights, and now under existing usage and practices despoiled of rights which the Senator himself is in the full enjoyment of."

Mr. Hill: "The Senator will pardon me for saying that, if I understand the purport of his bill (and I think I have some recollection of it), I never can agree with him in the proposition that if there be a hotel for the entertainment of travellers, and two classes stop at it, and there is one dining-room for one class and one for another, served alike in all respects, with the same accommodations, the same attention to the guests, there is any thing offensive, or any thing that denies the civil rights of one more than the other. Nor do I hold that if you have public schools, and you give all the advantages of education to one class as you do to another, but keep them separate and apart, there is any denial of a civil right in that. I also contend that even upon the railways of the country, if cars of equal comfort, convenience, and security, be provided for different classes of persons, no one has a right to complain if it be a regulation of the companies to separate them. I go further, and I illustrate it by my own observation and experience: in the town in which I live the fact bears me out, that prior to the war the slave and his master worshipped in the same church, and were members of the same congregation; but on the motion of the former slave after the close of the war, and with appeals to his white friends to aid him, separate churches have been built for the special accommodation of the colored people, and to-day colored ministers in those churches serve colored congregations to the exclusion of white ministers, unless they happen to be invited as matter of courtesy, which is sometimes done. I take it that this is done because the colored people prefer having it so. I have been appealed to myself, and I have yielded to it upon my own premises, to give to a colored congregation an acre of ground for the erection of a church. This is no uncommon thing with landed proprietors in the State. It is conveyed to trustees in the usual manner, and as long as it is occupied for the purpose they propose, for religious uses, and by a particular congregation, it is theirs. Whenever they cease to occupy it in that manner it lapses, and comes back to the grantor.

"Now, sir, there is a radical difference between the Senator from Massachusetts and

myself; it is irreconcilable. I never can see this as the Senator sees it, and yet I think I can safely hazard one remark by way of comparison with the Senator, whose humanity and generosity are so proverbial. I believe that the colored people who know me in Georgia would rely, any of them, upon my benevolence and sense of justice as soon as they would upon that of the Senator, or of any other man in any portion of this country. I think I have that standing among them, and I think I do them no disservice in taking the views I do respecting their rights."

Mr. Sumner: "Mr. President, we have a vindication on this floor of inequality as a principle, as a political rule."

Mr. Hill: "On which race, I would inquire, does the inequality to which the Senator refers operate?"

Mr. Sumner: "On both. Why, the Senator would not allow a white man to go into the same car with a colored man."

Mr. Hill: "Not unless he was invited, perhaps."

Mr. Sumner: "Very well. The Senator mistakes substitutes for equality. Equality is where all are alike. A substitute can never take the place of equality. It is impossible; it is absurd. And still further, I must remind the Senator that it is very unjust; it is terribly unjust. Why, sir, we have had in this Chamber a colored Senator from Mississippi; but according to the rule of the Senator from Georgia we should have set him apart by himself; he should not have sat with his brother Senators. Do I understand the Senator from Georgia as favoring such a rule?"

Mr. Hill: "No, sir."

Mr. Sumner: "The Senator does not."

Mr. Hill: "I do not, for this reason: it is under the institutions of the country that he becomes entitled by law to his seat here; we have no right to deny it to him."

Mr. Sumner: "Very well; and I intend, to the best of my ability, to see that under the institutions of his country he is equal everywhere. The Senator says he is equal here in this Chamber. I say he should be equal in rights everywhere; and why not, I ask the Senator from Georgia? Why not? He comes forward now the vindicator of a discarded barbarism, of inequality. I wish him to vindicate it. Let him assign the reason."

Mr. Hill: "If the Senator will allow me, I will say that I think his definition of rights differs materially from my own. What he may term a right may be the right of any man that pleases to come into my parlor and to be my guest. That is not the right of any colored man upon earth, nor of any white man, unless it is agreeable to me. The Senator may contend that it is the right of any man, under the institutions of this nation, to intermarry with any caste that he pleases. I think that such matters are subject to municipal regulation by the States for their own people;

and I think I shall adhere to that opinion, though I am open to the arguments the Senator may offer, if he can convince me to the contrary."

Mr. Sumner: "Mr. President, now we see where the Senator is. He admits that here in this highest Council Chamber there is, and there should be, perfect equality before the law; but descend from this Chamber into the hotel, on the railroad, into the common school, and there there is no equality before the law, according to the Senator. He does not complain because all are equal here in this Chamber. I know not whether he does not complain because all are equal in the other Chamber. But now I should like to ask the Senator from Georgia, if he will allow me, whether, in his judgment, the colored Representatives from Georgia and South Carolina in the other Chamber ought not on railroads and at hotels to have the same rights that he has himself? I ask that precise question."

Mr. Hill: "I will answer that question in this manner: I myself am subject in hotels and upon railroads to the regulations provided by the hotel proprietors for their guests, and by the railroad companies for their passengers. I am entitled, and so is the colored man, to all the security and comfort that either presents to the most favored guest or passenger; but I maintain that proximity to a colored man does not increase my comfort or security, nor does proximity to me on his part increase his; and therefore it is not a denial of any right in either case."

Mr. Sumner: "May I ask the Senator if he is excluded from any right on account of his color? The Senator says he is sometimes excluded from something at hotels or on railroads. I ask whether there is any exclusion on account of color, that bears on him?"

Mr. Hill: "I answer the Senator. I have been excluded from ladies' cars on railroads. I do not know on what account precisely; I do not know whether it was on account of my color; but I think it more likely that it was on account of my sex."

Mr. Sumner: "But the Senator, as I understand, insists that it is proper on account of color. That is his conclusion."

Mr. Hill: "No; I insist that it is no denial of a right, provided all the comfort and security be furnished to passengers alike."

Mr. Sumner: "The Senator does not seem to see that any rule excluding a man on account of his color is an indignity, an insult, and a wrong; and he makes himself on this floor the representative of indignity, of insult, and of wrong to the colored race. Why, sir, his State has a large colored population, and he turns upon them to deny them their rights."

Mr. Hill: "If the Senator will allow me, I will say to him that it will take him and others, if there should be any others who so believe, a good while to convince the colored

people of the State of Georgia who know me, that I would deprive them of any right to which they are entitled, though it were only technical; but in matters of pure taste I cannot get away from the idea that I do them no injustice if I separate them on some occasions from the other race."

Mr. Sumner: "I insist that by the law of the land all persons without distinction of color shall be equal before the law. Show me, therefore, a legal institution, any thing created or regulated by law, and I show you what must be opened equally to all without distinction of color. Notoriously, the hotel is a legal institution, originally established by the common law, subject to minute provisions and regulations; notoriously, public conveyances are in the nature of common carriers, subject to a law of their own; notoriously, schools are public institutions created and maintained by law; and now I simply insist that in the enjoyment of those institutions there shall be no exclusion on account of color."

Mr. Hill: "I must confess, sir, that I cannot see the magnitude of this subject. I object to this great Government descending to the business of regulating the hotels and common taverns of this country, and the street railroads, stage-coaches, and every thing of that sort. It looks to me to be a petty business for the Government of the United States, with all deference to the Senator, though he regards it as of greater importance than any other subject before the country."

Mr. Sumner: "Mr. President, I would not have my country descend; I would have it ascend. I wish it now to rise to the heights of the Declaration of Independence. Then and there did we pledge ourselves to the great truth that all men are equal in rights. And now a Senator from Georgia rises on this floor and denies it. He denies it by a subtlety. While pretending to admit it, he would overthrow it. He would adopt a substitute for equality. The Senator says that the colored people may have in the cars the same conveniences."

"Sir, there never can be an end to this discussion until all men are assured in equal rights. Vain is it for the Senator to make the distinction that he does. He insults a whole race; he insults half the voting population of his State; he insults the Declaration of Independence."

"And now, Mr. President, I desire to have my amendment read."

The Chief Clerk read as follows:

Sec. — That all citizens of the United States, without distinction of race, color, or previous condition of servitude, are entitled to the equal and impartial enjoyment of any accommodation, advantage, facility, or privilege furnished by common carriers, whether on land or water; by inn-keepers; by licensed owners, managers, or lessees of theatres or other places of public amusement; by trustees, commissioners, superintendents, teachers, or other offi-

cers of common schools and other public institutions of learning, the same being supported or authorized by law; by trustees or officers of church organizations, cemetery associations, and benevolent institutions incorporated by national or State authority; and this right shall not be denied or abridged on any pretence of race, color, or previous condition of servitude.

Sec. —. That any person violating the foregoing provision, or aiding in its violation, or inciting thereto, shall for every such offence forfeit and pay the sum of \$500 to the person aggrieved thereby, to be recovered on an action on the case, with full costs and such allowance for counsel-fees as the court shall deem just, and shall also for every such offence be deemed guilty of a misdemeanor, and upon conviction thereof shall be fined not less than \$500 nor more than \$1,000, and shall be imprisoned not less than thirty days nor more than one year; and any corporation, association, or individual, holding a charter or license under national or State authority, violating the aforesaid provision, shall, upon conviction thereof, forfeit such charter or license; and any person assuming to use or continuing to act under such charter or license thus forfeited, or aiding in the same, or inciting thereto, shall, upon conviction thereof, be deemed guilty of a misdemeanor, and shall be fined not less than \$1,000 nor more than \$5,000, and shall be imprisoned not less than three nor more than seven years; and both the corporate and joint property of such corporation or association, and the private property of the several individuals composing the same, shall be held liable for the forfeitures, fines, and penalties incurred by any violation of the — section of this act.

Sec. —. That the same jurisdiction and powers are hereby conferred, and the same duties enjoined upon, the courts and officers of the United States, in the execution of this act, as are conferred and enjoined upon such courts and officers in sections three, four, five, seven, and ten, of an act entitled "An act to protect all persons in the United States in their civil rights, and to furnish the means of their vindication," passed April 9, 1866, and these sections are hereby made a part of this act; and any of the aforesaid officers failing to institute and prosecute such proceedings herein required shall for every such offence forfeit and pay the sum of \$500 to the person aggrieved thereby, to be recovered by an action on the case, with full costs and such allowance for counsel-fees as the court shall deem just, and shall on conviction thereof be deemed guilty of a misdemeanor, and be fined not less than \$1,000 nor more than \$5,000.

Sec. —. That no person shall be disqualified for service as juror in any court, national or State, by reason of race, color, or previous condition of servitude: *Provided*, That such person possesses all other qualifications which are by law prescribed; and any officer or other persons charged with any duty in the selection or summoning of jurors, who shall exclude or fail to summon any person for the reason above named, shall, on conviction thereof, be deemed guilty of a misdemeanor, and be fined not less than \$1,000 nor more than \$5,000.

Sec. —. That every law, statute, ordinance, regulation, or custom, whether national or State, inconsistent with this act, or making any discriminations against any person on account of color, by the use of the word "white," is hereby repealed and annulled.

Sec. —. That it shall be the duty of the judges of the several courts upon which jurisdiction is hereby conferred, to give this act in charge to the grand-jury of their respective courts at the commencement of each term thereof.

Mr. Morton said: "Upon conference with several Senators, I am willing to modify my amendment so as to make it stop where it

concludes with a reference to officers of the United States, so as not to include persons elected or appointed to office under any State. The Secretary will read it as modified."

The Chief Clerk read as follows:

And provided further, That this act shall not be construed to relate back to or validate the election or appointment of any person to the position of Senator or Representative in Congress, or to any office, civil or military, under the United States.

Mr. Trumbull, of Illinois, said: "I wish to be informed by the Chair whether I am correct in supposing that the amendment of the Senator from Massachusetts is not before the Senate. Is that proposition before the Senate as an amendment to this bill?"

The Presiding Officer: "It is not. There is another amendment before the Senate."

Mr. Trumbull: "Here is a bill that passed the House of Representatives some eight or nine months ago by more than a three-fourths vote, if I recollect aright; it has lain upon our table during one entire session, and now we are in the second session of this Congress, about to take a recess for several weeks, and all sorts of amendments are being suggested to this bill. I confess, Mr. President, that it is not just such a bill as I would like to see passed; but I believe that the time has come, according to the general understanding of the people of this country, in the opinion of the President of the United States, in the opinion, as I understand, of those Senators representing Southern States where these disabilities exist, when they ought to be removed. We are near the close of the year, and no more acceptable Christmas present could be extended to the Southern people than the passage of this bill relieving from the disability of the right to hold office such persons as the people shall see proper to elect or the President shall think proper to appoint, with certain exceptions.

"The bill is not as general as some would desire it to be; it is perhaps more general than others would prefer; but it is a bill that has passed the House of Representatives. We all profess to believe, especially my friend from Massachusetts, in equality among the citizens of this country. Now, here is a bill placing upon an equality, so far as the right to hold office is concerned, those who have been disqualified by reason of their participation in the rebellion. Upon the principles of equality, which he so eloquently advocates, I am sure he can hardly refrain from giving it his support. Now, I appeal to him not to press his amendment, and to the Senator from Indiana not to press his. If any thing at all is to be done this year, it must be done upon this bill as it comes to us from the House of Representatives. The amendment of the Senator from Indiana would probably apply to but very few persons; in fact, I do not know that it would apply to more than one. I ask him if it is best to hazard the passage of this bill

at this time by insisting upon amendments to it? Amendments can be proposed plausible in their character, and amendments that I would like to vote for; but I have made up my mind that if we are to do any thing, if we are to relieve to any general extent the persons who are debarred of the right to hold office, we must take this bill as we have it. If it goes over the holidays, and all these amendments are to be proposed and discussed, we postpone this act of grace for another year."

Mr. Alcorn, of Mississippi, said: "We have had a recent election in Mississippi. It was necessary for the civil service of that State that men should come forward and present themselves for office who were laboring under disability. The friends of good order, the friends, if you please, of the Republican party, in some portions of the State advised and consented to this. Men who belonged to each of the political parties have been elected to office in that State who were laboring under disability, and no man knows better than I do the necessity for the removal of disabilities by this Congress so far as it applies to that State. In the constitution of the State of Mississippi there is a provision that, if the person elected to an office cannot qualify, then he who was the next highest candidate upon the poll-list shall be the officer qualified to discharge the trust.

"Then, sir, I submit to the honorable Senator from Massachusetts, if this be the case, the people of that State will be brought face to face with the fact that equality does not exist in the State of Mississippi, but an inequality clearly upon its face does there exist, and is there maintained by the Congress of the United States. I do trust that the honorable Senator from Massachusetts will not permit his zeal to lead him to hazard a measure which it is competent for a majority of Congress to pass, by attaching it to a bill that it requires two-thirds of Congress to pass. I could not go home to the colored people of the State of Mississippi, and meet them with a declaration that I had sought to discharge my duty here faithfully and well to them, if I had so voted as to imperil that cause which they hold so dear to themselves, by attaching the Senator's proposition to a bill the passage of which required two-thirds of Congress, when it was competent for a mere majority of Congress to pass it. And how can the honorable Senator from Massachusetts make good his declarations of friendship to the colored people of this nation when he comes here and proposes to place their rights in jeopardy, if you please, by attaching the measure which is to secure them to this two-thirds proposition?

"I come here indorsed by twenty-eight thousand Republican majority in the State of Mississippi at the recent election in that State. In that State we have equality before the law. We have free and full transportation upon the

railroad-cars. We have just such a law as the colored people of the State are content to have. He has no complaint from that State. And I say to him that, of all the Republicans of the State of Mississippi, not one can be found who is not anxious that Congress should take action upon the bill now before us, and that the Senate should be prompt to do that which they deem so necessary to the good order of their society."

Mr. Scott, of Pennsylvania, said: "There are two views of the operation of the disqualifications of the fourteenth amendment, and there is but one of them that is likely to attract much of our attention in this body or in the House of Representatives; and that is, as it bears upon national interests. Men are disqualified for holding office in Congress, and we direct our attention too much to the effect which that exclusion has, and forget that the disqualification extends also to State offices, and that it has affected to a very large degree the character and the capacity of the local State governments.

"Now, sir, looking at it in this light as a question of political wisdom, and not as a question of amnesty, as the chairman of the committee himself styled it, the measure seems to be looked upon as removing all disqualifications that exist in the Constitution as to holding office. This is not the case. I have taken the trouble to look at the Constitution, and I find that, in considering this question of political wisdom, the framers of the Constitution have disqualified many citizens from holding office, and there will be many disqualifications left after we have removed the disqualifications which have grown out of the rebellion. For instance, all voters under the age of twenty-five years are disqualified from holding office in the House of Representatives; all voters under thirty years from holding office in this body. All naturalized citizens, for nine and seven years respectively after they become citizens, are disqualified from holding office in this and in the other House; and there is also a disqualification which, if I recollect aright, the Senator from Missouri (Mr. Schurz), in one of his recent speeches, characterized as a humane or benevolent provision, which excludes all naturalized citizens from the two highest offices in the nation. We even go further: officers who have been impeached, found guilty, and sentenced, as a part of the punishment, to disqualification for office, are held to be so highly disqualified, that even the pardoning power cannot render them eligible to office again. And so I might go on. Senators and Representatives are disqualified from holding office in one sense, for they can never become electors of President and Vice-President of the United States, although they manage to get around that now by becoming members of national conventions, which amounts practically to the same thing.

"These disqualifications were imposed, not

cers of common schools and other public institutions of learning, the same being supported or authorized by law; by trustees or officers of church organizations, cemetery associations, and benevolent institutions incorporated by national or State authority; and this right shall not be denied or abridged on any pretence of race, color, or previous condition of servitude.

Sec. —. That any person violating the foregoing provision, or aiding in its violation, or incurring thereto, shall for every such offence forfeit and pay the sum of \$500 to the person aggrieved thereby, to be recovered on an action on the case, with full costs and such allowance for counsel-fees as the court shall deem just, and shall also for every such offence be deemed guilty of a misdemeanor, and upon conviction thereof shall be fined not less than \$500 nor more than \$1,000, and shall be imprisoned not less than thirty days nor more than one year; and any corporation, association, or individual, holding a charter or license under national or State authority, violating the aforesaid provision, shall, upon conviction thereof, forfeit such charter or license; and any person assuming to use or continuing to act under such charter or license thus forfeited, or aiding in the same, or inciting thereto, shall, upon conviction thereof, be deemed guilty of a misdemeanor, and shall be fined not less than \$1,000 nor more than \$5,000, and shall be imprisoned not less than three nor more than seven years; and both the corporate and joint property of such corporation or association, and the private property of the several individuals composing the same, shall be held liable for the forfeitures, fines, and penalties incurred by any violation of the — section of this act.

Sec. —. That the same jurisdiction and powers are hereby conferred, and the same duties enjoined upon, the courts and officers of the United States, in the execution of this act, as are conferred and enjoined upon such courts and officers in sections three, four, five, seven, and ten, of an act entitled "An act to protect all persons in the United States in their civil rights, and to furnish the means of their vindication," passed April 9, 1866, and these sections are hereby made a part of this act; and any of the aforesaid officers failing to institute and prosecute such proceedings herein required shall for every such offence forfeit and pay the sum of \$500 to the person aggrieved thereby, to be recovered by an action on the case, with full costs and such allowance for counsel-fees as the court shall deem just, and shall on conviction thereof be deemed guilty of a misdemeanor, and be fined not less than \$1,000 nor more than \$5,000.

Sec. —. That no person shall be disqualified for service as juror in any court, national or State, by reason of race, color, or previous condition of servitude: *Provided*, That such person possesses all other qualifications which are by law prescribed; and any officer or other persons charged with any duty in the selection or summoning of jurors, who shall exclude or fail to summon any person for the reason above named, shall, on conviction thereof, be deemed guilty of a misdemeanor, and be fined not less than \$1,000 nor more than \$5,000.

Sec. —. That every law, statute, ordinance, regulation, or custom, whether national or State, inconsistent with this act, or making any discriminations against any person on account of color, by the use of the word "white," is hereby repealed and annulled.

Sec. —. That it shall be the duty of the judges of the several courts upon which jurisdiction is hereby conferred, to give this act in charge to the grand-jury of their respective courts at the commencement of each term thereof.

Senators and Representatives are disqualified from holding office in one sense, for they can never become electors of President and Vice-President of the United States, although they manage to get around that now by becoming members of national conventions, which amounts practically to the same thing.

"These disqualifications were imposed, not

as penalties, but because these classes of men were considered as unfit depositaries of public power in the places from which they were excluded. It was political wisdom, as the framers of the Constitution believed, to impose these disqualifications; and, sir, it was political wisdom to impose the disqualifications of the fourteenth amendment at the time they were imposed."

Mr. Morton said: "Mr. President, it is much more important, in my opinion, to get this bill right than it is to make a handsome Christmas present, as was spoken of by the Senator from Illinois. The amendment that I have offered to this bill, as it now stands, prevents it from relating back so as to make valid the elections of persons to Congress who were under disabilities when they were elected; to prevent persons who knew themselves to be disqualified by the fourteenth amendment, who were known to be disqualified by the men who voted for them, who submitted themselves as candidates in defiance of the amendment, and were voted for in defiance of the amendment, from having their elections made valid by the passage of this bill. This is the simple amendment now before the Senate, and I am willing that the vote shall be taken upon it. I do not care to discuss it."

Mr. Wilson, of Massachusetts, said: "Mr. President, I shall vote for this bill; not as a measure of justice to the South or of equality among citizens. I vote for it as a safe and sound measure of public policy, as a thing of charity and mercy, of unmerited grace. In passing this bill the less we say about justice or equality the better. Whatever may have been the wisdom of this provision of the Constitution imposing disabilities, neither justice nor equality was violated. Those disabilities were, indeed, a very—yes, sir, very light punishment to inflict by the country upon those who sought through the fire and blood of civil war to blot the Republic from the list of nations. That crime and the motive for that crime would never be expiated by the simple prohibition for a few years of the right of a few guilty leaders of rebellion to hold office. Sir, when we think of justice to the actors in that dreadful crime, dungeons open their doors and scaffolds rise up before us. Do not, sir, place this act of kindness, charity, and mercy, upon that justice which would have doomed these men to a swift and sure punishment for their sin against man and their crime against their country."

The pending question being on the amendment of Mr. Morton, the yeas and nays were ordered; and, being taken, resulted as follows:

YEAS—Messrs. Ames, Anthony, Buckingham, Caldwell, Carpenter, Chandler, Clayton, Conkling, Corbett, Edmunds, Ferry of Michigan, Flanagan, Frelinghuysen, Hamlin, Morrill of Maine, Morrill of Vermont, Morton, Nye, Pomeroy, Pool, Pratt, Ramsey, Rice, Sawyer, Scott, Spencer, Sumner, and Windom—28.

NAYS—Messrs. Alcorn, Bayard, Blair, Casserly,

Cooper, Davis of Kentucky, Davis of West Virginia, Fenton, Ferry of Connecticut, Hamilton of Maryland, Hill, Hitchcock, Johnston, Kellogg, Kelly, Lewis, Logan, Norwood, Robertson, Saulsbury, Schurz, Sherman, Stevenson, Stockton, Thurman, Tipton, Trumbull, Vickers, and West—29.

ABSENT—Messrs. Boreman, Brownlow, Cameron, Cole, Cragin, Gilbert, Hamilton of Texas, Harlan, Howe, Osborn, Patterson, Sprague, Stewart, Wilson, and Wright—15.

So the amendment was not agreed to.

Mr. Sumner: "Mr. President, my amendment is already on the table. I move it now as additional sections to the bill.

"I wish to perfect the amendment, before it is voted on, by introducing in line eleven of its first section, after the word 'supported,' the words, 'by moneys derived from general taxation;' so that the clause will read: "

That there shall be no distinction by trustees, commissioners, superintendents, teachers, or other officers of common schools, and other public institutions of learning, the same being supported by moneys derived from general taxation, or authorized by law.

"I wish to have those words inserted after the word 'supported.' I suppose that will be done as a matter of course."

The President *pro tempore*: "That modification will be made."

Mr. Sumner: "Now, Mr. President, I hope there will be no question about adopting this amendment. But I will ask once more my friends over the way, who insist upon amnesty, to unite with me now in justice to the colored race. Let us do this work all at once. I wish to have the pleasure of voting for this bill. I wish to unite with the Senator from Mississippi (Mr. Alcorn) in the generosity that he proposes; but I do implore him to unite with me in justice to his own constituents. Treat the two together; put them both in the same bill; pass them by a two-thirds vote; and let the country see how grandly unanimous we are in an act which is at once generous and just, full of generosity, the noblest generosity, the grandest magnanimity in human history, and full, also, of simple justice."

The question being taken by yeas and nays on Mr. Sumner's amendment, resulted as follows:

YEAS—Messrs. Ames, Anthony, Brownlow, Buckingham, Caldwell, Carpenter, Clayton, Conkling, Corbett, Edmunds, Ferry of Michigan, Flanagan, Frelinghuysen, Hamlin, Kellogg, Morrill of Vermont, Morton, Nye, Patterson, Pomeroy, Pratt, Ramsey, Rice, Sherman, Spencer, Sumner, West, Wilson, and Windom—29.

NAYS—Messrs. Alcorn, Bayard, Blair, Boreman, Casserly, Cooper, Davis of Kentucky, Davis of West Virginia, Fenton, Ferry of Connecticut, Hamilton of Maryland, Hill, Hitchcock, Johnston, Kelly, Lewis, Logan, Morrill of Maine, Norwood, Pool, Robertson, Saulsbury, Sawyer, Schurz, Scott, Stevenson, Stewart, Thurman, Tipton, and Trumbull—30.

ABSENT—Messrs. Cameron, Chandler, Cole, Cragin, Gilbert, Hamilton of Texas, Harlan, Howe, Osborn, Sprague, Stockton, Vickers, and Wright—13.

So the amendment was rejected.

Mr. Edmunds: "I propose an amendment

which I trust the friends of the bill will agree to, because it is perfectly germane, and is for the purpose of perfecting the bill. I move to amend the bill in section one, line twelve, by striking out the word 'the' after the word 'of' and before the word 'Congress,' and inserting the word 'any,' and, then, by inserting after the word 'States,' in the same line, the words 'after the thirty-fifth;' and by striking out in the thirteenth line the words 'withdrew therefrom;' so that the clause of exception will read:—"

First. Members of any Congress of the United States after the Thirty-fifth, who aided the rebellion.

"The Thirty-fifth Congress ended on the 3d of March, 1859; so that the Thirty-sixth Congress and those succeeding it were those in which this conspiracy of rebellion was concocted, and out of which some gentlemen withdrew, feeling it a matter of honor, the moment they had made up their mind to make war on the country, to go away, which I can appreciate. Others, being equally traitorous and equally base, or more so, stayed here, causing all the trouble, and getting all the information they could, and drawing their pay until their term expired on the 4th of March, 1861.

"Now, I think it not unfair to ask the friends of this measure to allow that class of people, one and all, to stay out of this general bill, and then, if, in respect to any one of them, there is a special reason why he should be relieved, we can pass a bill for his benefit. The effect of my amendment simply is, therefore, instead of using the words 'withdrew therefrom,' that are in the bill applied to those Congresses, which would only apply to those who actually vacated their seats before their term expired, who were really the best class of rebels, to include those who stayed here, acting the part of spies and traitors together, and taking the money of the United States to aid the rebellion, until the 4th of March, 1861. I hope, therefore, that this amendment will be agreed to without opposition."

The President *pro tempore*: "The question is on the amendment of the Senator from Vermont."

The yeas and nays were ordered; and, being taken, resulted as follows:

YEAS—Messrs. Ames, Anthony, Brownlow, Buckingham, Caldwell, Carpenter, Clayton, Conkling, Corbett, Edmunds, Ferry of Michigan, Flanagan, Frelinghuysen, Hamlin, Howe, Morrill of Vermont, Morton, Nye, Pomeroy, Pool, Pratt, Ramsey, Scott, Spencer, Sumner, Wilson, and Windom—27.

NAYS—Messrs. Alcorn, Bayard, Blair, Casserly, Cooper, Davis of Kentucky, Davis of West Virginia, Fenton, Ferry of Connecticut, Hamilton of Maryland, Hill, Hitchcock, Johnston, Kellogg, Kelly, Lewis, Logan, Morrill of Maine, Norwood, Robertson, Saulsbury, Sawyer, Schurz, Sherman, Stevenson, Stewart, Thurman, Tipton, Trumbull, Vickers, and West—31.

ABSENT—Messrs. Boreman, Cameron, Chandler, Cole, Cragin, Gilbert, Hamilton of Texas, Harlan, Osborn, Patterson, Rice, Sprague, Stockton, and Wright—14.

So the amendment was rejected.

Mr. Pratt, of Indiana, said: I offer the following amendment, to come in at the close of the first section:—"

Provided, That the removal of such disabilities shall not have the effect of giving the persons relieved the status in court or elsewhere of loyal persons, in asserting any claim against the United States which they do not now possess, either for money claimed to be due, or for appropriation of, or injury to, property belonging to them.

Mr. Trumbull: "Having one minute, I wish to say that the fourteenth amendment to the Constitution provides simply for imposing a disqualification to hold office. This bill provides for removing the disability imposed by the fourteenth amendment, which is simply to hold office, and every citizen remains just as he stood before we passed this bill as to all his other rights except the right to hold office. This is not a pardon. The bill does not propose to pardon anybody. It merely proposes to remove the disability imposed by the fourteenth amendment, which is simply a disability to hold office. That is all there is about it. It has no effect whatever upon any claim that a man has."

Mr. Edmunds: "My friend says that this bill removes political disabilities. So it does. It also removes a legal disability which the Constitution has imposed upon a certain class of persons, and, under that Constitution, we have framed pension-laws, and claims-laws, and claims commission laws, based upon the theory of this constitutional provision and in harmony with it, in order to protect the Treasury, that we may have something to pay loyal claimants, and not be obliged to pay disloyal ones. In the decision of the Supreme Court, made a year or two ago, I think in the case of Paderford, they held that an act of amnesty or pardon put a man in such a position that, in point of law, he never had been guilty of any offence. Now, then, if we relieve from this constitutional inhibition the legal as well as the political disabilities of these parties, it will be maintained, and in some quarters with a great deal of force, so that the money will go, that we have restored these people to all rights by this last act of legislation. Therefore, as a matter of precaution, and safety, and absolute security, this amendment ought to go on the bill, if we wish to protect the Treasury."

The President *pro tempore*: "The question is on the amendment of the Senator from Indiana (Mr. Pratt)."

The question, being taken by yeas and nays, resulted—yeas 25, nays 34.

So the amendment was rejected.

Mr. Wilson: "Several amendments have been offered, and every Senator seems disposed to vote for precisely what he wishes, without regard to the passage of the bill. I therefore propose to amend the bill by striking out all of the first section after the word 'classes' in the eleventh line, and inserting:—"

First. All persons, who, being members of the

Thirty-sixth and Thirty-seventh Congresses of the United States, withdrew from their seats, and aided the rebellion.

Second. All persons who, having held the office of Judge of the Supreme Court of the United States, or head of one of the Executive Departments of the Government of the United States, in the year 1860 or 1861, shall have engaged in rebellion against the same.

"I will simply say that this amendment makes no exclusion from the benefits of this bill, except of members of the Thirty-sixth and Thirty-seventh Congresses who went out and engaged in rebellion, and Judges of the Supreme Court of the United States, and heads of the Executive Departments; and I desire to vote for it, because I believe that is what the bill should do. Therefore, I ask for the yeas and nays upon it."

The question, being taken by yeas and nays, resulted—yeas 4, nays 55.

So the amendment was rejected.

Mr. Morton: "I offer the following amendment, to come in after the word 'removed,' in line nine of the first section: "

Provided, That this act shall not be construed to relate back to or validate the election or appointment of any person to the position of Senator or Representative in Congress, or to any office, civil or military, under the United States, which person was, at the date of such election or appointment, ineligible to the office or position to which he may have been so elected or appointed.

"The object of this amendment is to exclude from the benefit of this bill any man who has consented to be elected, or has procured himself to be elected, to an office in defiance of the fourteenth amendment—any man who, while resting under the disabilities of that amendment, and in defiance of it, has attempted to obtain office. It is also intended that we shall defeat the purpose of those who have defied that amendment by knowingly electing or procuring the election of those who are disqualified by the Constitution of the United States. If there be such persons who have thus acted in defiance of the Constitution, who have set at naught a solemn amendment adopted by the people of the United States, they ought not, under any consideration, to be entitled to the benefit of this bill. They have no right to it in point of justice; but, on the contrary, having shown a disregard of the law, having wilfully defied the Constitution of the United States, they are not proper persons afterward to hold office under it."

Mr. Edmunds: "It is a new treason."

Mr. Morton: "Yes, sir. I therefore hope that this amendment will be adopted. If it should not be, this bill ought not to pass. This bill ought not to have the effect to legislate men into Congress, or to legislate men into the enjoyment of office, of influence, and of power, who have acted in open defiance and contempt of the Constitution."

Mr. Thurman, of Ohio, said: "I wish to inquire if that is not precisely the same amendment that was voted down?"

Mr. Morton: "There has been some slight change."

The question, being taken by yeas and nays, resulted as follows:

YEAS—Messrs. Ames, Anthony, Brownlow, Buckingham, Caldwell, Carpenter, Clayton, Conkling, Corbett, Edmunds, Ferry of Michigan, Flanagan, Frelinghuysen, Howe, Morrill of Maine, Morrill of Vermont, Morton, Nye, Patterson, Pomeroy, Pool, Pratt, Ramsey, Rice, Scott, Spencer, Sumner, Wilson, and Windom—29.

NAYS—Messrs. Alcorn, Bayard, Blair, Casserly, Cooper, Davis of Kentucky, Davis of West Virginia, Fenton, Ferry of Connecticut, Hamilton of Maryland, Hill, Hitchcock, Johnston, Kelly, Lewis, Logan, Norwood, Robertson, Saulsbury, Schurz, Sherman, Stevenson, Stewart, Tipton, Trumbull, and West—26.

ABSENT—Messrs. Boreman, Cameron, Chandler, Cole, Cragin, Gilbert, Hamilton of Texas, Hamlin, Harlan, Kellogg, Osborn, Sawyer, Sprague, Stockton, Thurman, Vickers, and Wright—17.

So the amendment was agreed to.

The bill was now reported from the Committee of the Whole to the Senate, and the report accepted. It being thus before the Senate, Mr. Sumner renewed his amendment, known as the Civil Rights Bill.

Mr. Kellogg, of Louisiana, said: "As I have already said, the colored man in the State of Louisiana now has all the rights that the Senator's bill would give him. I am in favor of every provision of that bill; but, while I am willing to vindicate every right of the colored man, I still wish to be consistent, and, believing it to be, not only sound policy, but a measure of justice, I am for a measure of universal amnesty that, with the laws already upon the statute-book (and, if they are not sufficient, I will cheerfully vote for others), will give to every man in the South, white or black, high or low, rich or poor, the same equality before the law. I want to inaugurate a policy in this and other measures that will set the South upon the high-road to prosperity, and enable her to emerge from the difficulties that unfortunately environ her at the present time, and retard her progress and development. More than that, sir, I want to see the people of the South turning their backs upon the prejudices and hostilities of the past, looking forward only to the reconciliations and consequent prosperity of the future."

Mr. Thurman, of Ohio, said: "The Senator from Massachusetts has declared that, if his amendment be not adopted, he will vote against this bill. I have to say that, if it be adopted, I shall vote against the bill, and I shall vote against it, if it be adopted, just so long as I believe, as I do believe, that his amendment is the most flagrant violation of the Constitution that ever I have seen proposed in this Senate, and I have seen some that I thought were pretty bad. It goes a whole bow-shot length beyond the Ku-klux bill."

Mr. Robertson, of South Carolina, said: "I see plainly that the amendments now tacked on this bill are calculated to defeat it, and the

amendments have been voted on the bill by friends of amnesty, by men who have heralded themselves throughout the country as the friends of amnesty. I merely wish to call the attention of the country to their votes."

Mr. Sawyer, of South Carolina, said: "I was about to remark that my colleague has seen fit to say that the friends of amnesty, or those who claim to be its friends, have slaughtered the bill by moving amendments, or by voting for amendments. Now, Mr. President, I am one of those who believe that an amnesty bill, when passed, should be a proper one. There are many features which I would be willing to waive in this bill which are, nevertheless very objectionable; but I am not one of those whose love for amnesty is such that it cannot wait a very few days for a certain verdict on the part of Congress in regard to it. I have no more question that this Congress, in a very short time, will pass an amnesty bill, than I have that the time will come about when we shall assemble again."

Mr. Sumner said: "Mr. President, slavery, in its original pretension, reappears in the present debate. Again the barbarous tyranny stalks into this Chamber, denying to a whole race the equal rights promised by a just citizenship. Some here thought slavery dead. This is a mistake. If not in body, at least in spirit or as a ghost, making our country hideous, the ancient criminal yet lingers among us, insisting upon the continued degradation of a race."

"Property in man has ceased to exist. The human auction-block is departed. No human being can call himself master, with impious power to separate husband and wife, to sell the child from its parents, to shut out the opportunities of religion, to close the gates of knowledge, and to rob another of his labor and all its fruits. These guilty prerogatives are ended. To this extent the slave is free. No longer a chattel, he is a man, justly entitled to all that is accorded by law to any other man."

"Such is the irresistible logic of his position. Ceasing to be a slave, he became a man, whose foremost right is Equality of Rights. And yet slavery has been strong enough to postpone his entry into the great possession. Cruelly, he was not permitted to testify in court; nor was he allowed to vote. More than four millions of people, whose only offence was a skin which had been the badge of slavery, were shut out from the court-room, and also from the ballot-box, in open defiance of the great promises of our fathers that all men are equal in rights, and that just government stands only on the consent of the governed. Such was the impudent behest of slavery, prolonged after it was reported dead. At last these crying wrongs were overturned. The slave testifies; the slave votes. To this extent his equality is recognized."

"But this is not enough. Much as it may seem compared with the past, when all was

denied, it is too little, because all is not yet recognized. The denial of any right is a wrong that darkens the enjoyment of all the rest. Besides the right to testify and the right to vote, there are other rights, without which equality does not exist. The precise rule is equality before the law; nor more nor less; that is, that condition before the law in which all are alike—being entitled, without any discrimination, to the equal enjoyment of all institutions, privileges, advantages, and conveniences, created or regulated by law, among which are the right to testify and the right to vote. But this plain requirement is not satisfied, logically or reasonably, by these two concessions, so that when they are recognized all others are trifles. The court-house and ballot-box are not the only places for the rule. These two are not the only institutions for its operation. The rule is general; how, then, restrict it to two cases? It is, all are equal before the law—not merely before the law in two cases, but before the law in all cases, without limitation or exception. Important as it is to testify and to vote, life is not all contained even in these possessions."

"The new-made citizen is called to travel for business, for health, or for pleasure, but here his trials begin. The doors of the public hotel, which, from the earliest days of our jurisprudence, have always opened hospitably to the stranger, close against him, and the public conveyances, which the common law declares equally free to all alike, have no such freedom for him. He longs, perhaps, for respite and recreation at some place of public amusement, duly licensed by law, and here also the same adverse discrimination is made. With the anxieties of a parent, seeking the welfare of his child, he strives to bestow upon him the inestimable blessings of education, and takes him affectionately to the common school, created by law, and supported by the taxation to which he has contributed, but these doors slam rudely in the face of the child where is garnered up the parent's heart. 'Suffer little children, and forbid them not, to come unto me;' such were the words of the divine Master. But, among us, little children are turned away, and forbidden at the door of the common school, because of the skin. And the same insulting ostracism shows itself in other institutions of science and learning; also in the church, and in the last resting-place on earth."

"What is the national Government, coextensive with the Republic, if fellow-citizens, counted by the million, can be shut out from equal rights in travel, in recreation, in education, and in other things, all contributing to human necessities? Where is that great promise by which the 'pursuit of happiness' is placed with life and liberty, under the safeguard of axiomatic, self-evident truth? Where is justice, if this ban of color is not promptly removed?"

"The two excuses show how irrational and

utterly groundless is this pretension. They are on a par with the pretension itself. One is that the question is of society and not of rights, which is clearly a misrepresentation; and the other is that the separate arrangements provided for colored persons constitute a substitute for equality in the nature of an equivalent; all of which is clearly a contrivance, if not a trick, as if there could be any equivalent for equality.

"Of this first excuse it is difficult to speak with patience. It is a simple misrepresentation, and, wherever it shows itself, must be treated as such. There is no colored person who does not resent the imputation that he is seeking to intrude himself socially anywhere. This is no question of society; no question of social life; no question of social equality, if anybody knows what this means. The object is simply equality before the law, a term which explains itself. Now, as the law does not presume to create or regulate social relations, these are, in no respect, affected by the pending measure. Each person, whether Senator or citizen, is always free to choose who shall be his friend, his associate, his guest. And does not the ancient proverb declare that a man is known by the company he keeps? But this assumes that he may choose for himself. His house is his 'castle'; and this very designation, borrowed from the common law, shows his absolute independence within its walls; nor is there any difference, whether it be palace or hovel; but, when he leaves his 'castle' and goes abroad, this independence is at an end. He walks the streets; but he is subject to the prevailing law of equality; nor can he appropriate the sidewalk to his own exclusive use, driving into the gutter all whose skin is less white than his own. But nobody pretends that equality in the highway, whether on pavement or sidewalk, is a question of society. And permit me to say that equality, in all institutions created or regulated by law, is as little a question of society.

In the days of slavery, it was an oft-repeated charge, that emancipation was a measure of social equality, and the same charge became a cry at the successive efforts for the right to testify and the right to vote. At each stage the cry was raised, and now it makes itself heard again, as you are called to assure this crowning safeguard.

"Then comes the other excuse, which finds equality in separation. Separate hotels, separate conveyances, separate theatres, separate schools, separate institutions of learning and science, separate churches, and separate cemeteries—these are the artificial substitutes for equality; and this is the contrivance by which a transcendent right, involving a transcendent duty, is evaded; for equality is not only a right, but a duty.

"How vain to argue that there is no denial of equal rights when this separation is enforced! The substitute is invariably an in-

ferior article. Does any Senator deny it? Therefore, it is not equality. At best, it is an equivalent only; but no equivalent is equality. Separation implies one thing for a white person, and another thing for a colored person; but equality is where all have the same alike. There can be no substitute for equality; nothing but itself. Even if accommodations are the same, as notoriously they are not, there is no equality. In the process of substitution, the vital elixir exhales and escapes. It is lost and cannot be recovered; for equality is found only in equality. 'Naught but itself can be its parallel'; but Senators undertake to find parallels in other things.

"Thus do I reject the two excuses. But I do not leave the cause here. I go further and show how consistent is the pending measure with acknowledged principles, illustrated by undoubted law.

"The bill for Equal Rights is simply supplementary to the existing Civil Rights Law, which is one of our great statutes of peace, and it stands on the same requirements of the Constitution. If the Civil Rights Law is above question, as cannot be doubted, then also is the supplementary amendment, for it is only the complement of the other, and necessary to its completion. Without the amendment the original law is imperfect. It cannot be said, according to its title, that all persons are protected in their civil rights, so long as the outrages I expose continue to exist; nor is slavery entirely dead.

"No doubt the supplementary law must operate, not only in national jurisdiction, but also in the States, precisely as the Civil Rights Law. Otherwise it will be of little value. Its sphere must be coextensive with the Republic, making the rights of the citizen uniform everywhere. But this can be only by one uniform safeguard sustained by the nation.

"An enlightened public opinion must be invoked. But this will not be wanting. The country will rally in aid of the law, more especially since it is a measure of justice and humanity. But the law is needed now as a help to public opinion. It is needed by the very people whose present conduct makes it necessary. Prompted by the law, leaning on the law, they will recognize the equal rights of all; nor do I despair of hailing a public opinion, which shall stamp the denial of these rights as an outrage not unlike slavery itself. Custom and patronage will then be sought in obeying the law.

"Mr. President, asking you to unite now in an act of justice to a much-oppressed race, being only a small instalment of that heavy debt accumulated by generations of wrong, I am encouraged by the pending measure of amnesty, which has the advantage of being recommended in the President's annual message. I regretted, at the time, that the President signaled by his favor the removal of disabilities imposed upon a few thousand rebels

who had struck at the Republic, while he said nothing of cruel disabilities inflicted upon millions of colored fellow-citizens, who had been a main-stay to the national cause. But I took courage when I thought that the generosity proposed could not fail to quicken that sentiment of justice which I now invoke.

"Believing that duty to these millions is foremost, and that until they are assured in equal rights we cannot expect the tranquillity which all desire, nay, sir, we cannot expect the blessings of Almighty God upon our labors, I bring forward this measure of justice to the colored race. Such a measure can never be out of order or out of season, being of urgent necessity and unquestionable charity.

"There are strong reasons why it should be united with amnesty, especially since the latter is pressed. Each is the removal of disabilities, and each is to operate largely in the same region of country. Nobody sincerely favoring generosity to rebels should hesitate in justice to the colored race. According to the maxim in chancery, 'Whoso would have equity must do equity.' Therefore, rebels seeking amnesty must be just to colored fellow-citizens seeking equal rights. Doing this equity they may expect equity.

"Another reason is controlling. Each is a measure of reconciliation, intended to close the issues of the war; but these issues are not closed unless each is adopted. This adoption together is better for each, and, therefore, better for the country than any separate adoption. Kindred in object, they should be joined together and never put asunder. It is wrong to separate them. Hereafter the rebels should remember that their restoration was associated with the Equal Rights of all, being contained in the same great statute.

"Clearly between the two the preëminence must be accorded to that for the Equal Rights of all, as, among the virtues, justice is above generosity. And this is the more evident when it is considered that, according to Abraham Lincoln, the great issue of the war was Human Equality."

Mr. Frelinghuysen, of New Jersey, said: "I desire to submit, in the hearing of the Senator from Massachusetts, a few suggestions, in reference to the amendment which he has offered to the pending bill. The first section of his amendment, in its last clause, contains the directory part of the law, and provides that 'this right shall not be denied or abridged on any pretence of race, color, or previous condition of servitude.' This is all well, but the previous part of the section, the declaratory part, states a proposition which cannot commend itself to the judgment of any Senator, and which none can desire to enact. The section reads: "

That all citizens of the United States, without distinction of race, color, or previous condition of servitude, are entitled to the equal and impartial enjoyment of any accommodation, advantage, facility, or

privilege, furnished by common carriers, whether on land or water, by inn-keepers, etc.

"In other words, it declares that all citizens, white or black, are entitled to the equal and impartial enjoyment of these privileges of common carriers, inns, schools, churches, etc. Mr. President, this is not true, and neither we nor the Senator from Massachusetts desire to make it true. No one desires that all, white or black, shall be entitled to the equal accommodation furnished by common carriers, inns, schools, etc. No one seriously proposes that we should render it illegal for a railroad company to provide a class of cars for ladies and gentlemen, or for an inn-keeper to exclude persons having contagious disease, or who are intoxicated, or indecently clad. We do not desire the passage of a law that shall make it obligatory upon the trustees of cemeteries, established especially for asylums or hospitals, to admit to burial every one for whom a license may be sought. Such is not the object of this law or the purpose of the Senator from Massachusetts; and yet that is the effect of the provision, that all citizens are entitled to these privileges.

"I suggest that we strike out the words, 'that all citizens of the United States, without distinction of race, color, or previous condition of servitude, are entitled,' etc., and substitute the words, 'that race, color, or previous condition of servitude, shall not debar or deprive any citizen of the United States of the equal and impartial enjoyment of any accommodation, advantage, facility, or privilege furnished by common carriers,' etc. That will not have the effect of asserting the unreasonable proposition that all citizens have the equal right to enjoy the facilities of cars, inns, schools, churches, etc., whether intoxicated or afflicted by contagious disease, whether indecently clad, or whether violating the customs and proprieties appertaining to the sexes; but it will have the effect of enacting that there shall be no discrimination on account of color, and that is all that the Senator seeks to obtain.

"The amendment as it stands declares that all citizens, white or black, are entitled to equal accommodations and facilities in all these institutions named. No one thinks that true, or desires that it shall be. What we seek is, that race, color, or previous condition of servitude, shall not deprive or debar any person from these privileges—a very different proposition. Let us say so. That will produce the equality which the Senator seeks.

"The second section of the amendment contains the sanction of the law, and imposes penalties for any violation of the law as stated in the first section; that is, if any common carrier, inn-keeper, etc., refuses the full use of cars, inns, schools, churches, etc., to any citizen whatever, he shall be subjected to the penalties stated. The Senator does not seek any such unreasonable end. The amendment

proposed simply destroys discrimination between citizens of different races.

"I desired to submit the amendment I have stated and one or two others to the Senator from Massachusetts, that his amendment may be perfected. After it shall have been thus amended there will still be objection to it. There is in almost every town in the land a church where the real estate has been purchased and the building erected from the hard earnings of colored people, the congregation being composed entirely of colored people, and the church their property. We do not seek to pass a law that shall divest them of such churches. The white population are the more numerous, and possibly grasping; the property has appreciated in value; there is no propriety in enabling the white citizens, by giving them the same privileges in these churches that the colored people possess, to wrest this property from the colored people. There are churches of that kind in this city, in the city in which I reside, and throughout the Union. This is also true of schools and of colleges. I would avoid this effect of the law by adding as an amendment, at the end of the first section, as follows: "

Provided, That churches, schools, cemeteries, and institutions of learning established exclusively for either the white or the colored race, shall not be taken from the control of those who established them, but shall remain devoted to their use.

"You cannot make the amendment I propose extend only to the colored people without falling into the absurdity of discriminating against whites while attempting to abolish the distinction of races. Therefore, let the law be that churches, schools, cemeteries, etc., established exclusively for either of the races, shall not be taken from their control, but remain devoted to their use. That provision modifies to some degree the law, but it does not affect the main subjects of the law, to wit, common carriers, inn-keepers, schools, etc., but does perpetuate to the colored people their own institutions.

"The second section provides: "

That any person violating the foregoing provision, or aiding in its violation, or inciting thereto, shall, for every such offence, forfeit and pay the sum of \$500 to the person aggrieved thereby.

"If a whole congregation or all the passengers of a steamboat or car violate some of the provisions of the foregoing section, every one so aiding in or inciting to such violation should not be liable to and the party aggrieved be entitled to recover from each one a penalty of \$500. And in case the offence complained of be a refusal of burial, who is to recover the penalty? The deceased is not aggrieved, and cannot bring suit if he is. I suggest after the word 'grave,' eleventh line of the section, this amendment: "

Provided, That the party aggrieved shall not recover more than one penalty; and, where the offence is a refusal of burial, the penalty aforesaid may be

recovered by the heirs-at-law of the person to whose body burial has been so refused.

"There is still another amendment to this second section, and that is to strike out all the residue of the section, which is in these words: "

And any corporation, association, or individual, holding a charter or license under national or State authority, violating the aforesaid provisions, shall, on conviction thereof, forfeit such charter or license.

"I understand that the Federal Government, excepting for a national purpose, cannot grant a charter, cannot incorporate a bank or railroad company for a State, that being beyond the jurisdiction of Congress; and so unquestionably it is beyond the power of Federal jurisdiction to forfeit a State charter. Besides, the penalty suggested is unreasonable. Were I ejected from the cars of the Baltimore & Ohio Railroad Company, there would be no propriety in mulcting them in damages to the amount of \$20,000,000. I suppose that the franchises of that company, which the bill would under such circumstances forfeit, are worth that. The penalties imposed in the previous part of the section, \$500 by personal suit and \$500 on indictment for misdemeanor, are sufficient for the offence committed. And further, the stockholders of the company offending might be favorable to the spirit of the bill he would promote; they might be the very colored people whom we seek to protect and who had been guilty of no offence, and yet the forfeiture of the charter would destroy their property and render them bankrupt. The penalties in the foregoing part of the section are abundant.

"The section next to the last also requires amending. It provides that"—

Every law, statute, ordinance, regulation, or custom, whether national or State, inconsistent with this act, or making any discriminations against any person on account of color, by the word "white," is hereby repealed.

"I understand that Congress have no power to repeal a State statute any more than we have to enact a State statute. That provision of the law is unconstitutional, and is entirely unnecessary. If we enact a constitutional law, all laws of the States inconsistent therewith are virtually annulled, because the Constitution of the United States provides that 'this Constitution and the laws made in pursuance thereof shall be the supreme law of the land, the constitution and laws of any State to the contrary notwithstanding.' The section is unnecessary, and worse. In any view we should strike out the words 'whether national or State,' and thus suffer the section to have such effect as the courts may properly give to it.

"The amendment being thus modified, its effect is not impaired. The question now arises whether this amendment is within the constitutional power of the General Government. The Ku-klux bill, which we passed

under the authority of the fourteenth amendment, was in aid of the suppression of insurrection and for the preservation of the public peace, and was clearly national in its character. It may be insisted that the General Government cannot enact a law generally regulating inns and cemeteries, schools, churches, colleges, etc., in the States. If this law, as modified, does undertake such regulation, unless there is some express authority in the Constitution giving us this power, I agree that the act is unconstitutional.

"But the amendment of the Senator from Massachusetts, as modified, in no manner assumes to regulate the relations of common carriers, inn-keepers, etc., with the public. All this it leaves to the States, excepting that it provides that every citizen shall be treated as a citizen, be he white or colored. That is constitutional. If the people of South Carolina, in their former animosity to the people of New England, should deprive them of the common rights of citizenship in that State, should refuse them the accommodation of cars or inns, we would find some constitutional power to protect them in the equal rights of American citizenship. We have the same right and are under the same obligation to the citizens of color.

"This act virtually says there has existed in this country an enslaved and degraded race; and the people have prejudices incident to their being associated with slavery. We have just passed through a war from which we have garnered three great principles which it is the purpose of this law to enforce. One is, that every person in the land has a chartered right to freedom. Before the thirteenth amendment it was in the power of a State to make any one a slave. They did by State law make four million such; and the Supreme Court held that the slaves had none of the rights of freemen. Now, every man has a charter for his freedom, which no State, no power on earth can take from him.

"I hope that the amendment of the Senator from Massachusetts, after due consideration by him, will be properly amended and be passed by this Senate. To that end I prefer that it should be presented as an independent bill, so as to require only a majority and not a two-thirds vote to pass it. But of that he must be the judge.

"Mr. President, I have a word to say as to the proposed amnesty. There are conflicting considerations, some prompting me to vote for, and some to vote against it. Understanding that a proposition is to be made to strike out all the exceptions in the bill and to make the amnesty universal, I will, while I have the floor, say to those who are in favor of the passage of the bill, that if they undertake thus to change the bill they will lose many votes, probably enough to defeat the measure."

Mr. Sawyer, of South Carolina, said: "No sound principle is sacrificed by granting am-

nesty. Political disabilities, whatever apology or excuse might have existed for them when they were imposed, have ceased to have any reasonable ground for existence. The last of the Southern States is admitted to its full privileges as a member of the brotherhood of States; the constitutional amendments, intended to secure the principles established by the war and subsequent events, have been accepted as valid. There can be no fear or danger of their being disturbed. Political rights once acquired by a people are not surrendered except through the process of despotism, a process from which we need fear nothing unless we are untrue to ourselves and to all the traditions and instincts of our race.

"A few words more, Mr. President, and I shall have done. I have said, sir, that I regard the attempt to attach the supplementary Civil Rights bill to the pending measure as an unfriendly act toward the former. Well may the Civil Rights bill ask to be delivered from such peril. I say, also, Mr. President, that the attempt to unite these two measures is in effect an unfriendly act to the amnesty measure. I do not charge the Senator from Massachusetts with the purpose to defeat the amnesty bill by this unnecessary and unnatural union. I do say that the amnesty bill is endangered by the alliance. I shall work for the passage of each at the earliest practicable moment. That moment will, in my judgment, be considerably delayed by attempting to unite them. The amnesty bill is the pending bill. I say let us now work for that. Were the bill of the Senator from Massachusetts the pending measure, or were there good reason to suppose that each would be strengthened by the other, I should say let us work for that."

Meanwhile, in the House, on January 15th, Mr. Hale, of Maine, said: "I move to suspend the rules for the purpose of putting upon its passage a bill for the removal of legal and political disabilities imposed by the third section of the fourteenth article of amendments to the Constitution of the United States."

The bill was read.

The first section provides for the removal of all legal and political disabilities imposed by the third section of the fourteenth article of the amendments to the Constitution of the United States, on the persons therein mentioned, because of their having engaged in insurrection or rebellion against the United States, or given aid or comfort to the enemies thereof; provided the act shall not apply to or in any way affect or remove the disabilities of any person included in either of the following classes, namely: First. Members of the Congress of the Union who withdrew therefrom to aid the rebellion. Second. Officers of the Army or the Navy of the United States who, being above the age of twenty-one years, left said Army or Navy and aided the rebellion.

The second section provides that before any person shall be entitled to the benefit of this act, he shall, within the district where he resides, before a clerk of some court of the United States, or a United States commissioner, take and subscribe an oath or affirmation to support the Constitution of the United States, and to bear true faith and allegiance to the same, which oath or affirmation shall be forwarded by said officer to the Secretary of State of the United States, who shall cause a list of all persons complying with the provisions of this act to be laid before Congress at the opening of each session thereof; and the officer before whom such oath or affirmation is made shall give to the person taking it a certificate of the fact, under such forms and regulations as the Secretary of State shall prescribe.

The question was taken upon suspending the rules and passing the bill; and upon a division there were—yeas 163.

The question was then taken by yeas and nays; and there were—yeas 171, nays 31, not voting, 37; as follows:

YEAS—Messrs. Acker, Ames, Archer, Arthur, Banks, Barber, Barnum, Barry, Beck, Bell, Beveridge, Biggs, Bingham, Bird, Austin Blair, James G. Blair, Braxton, Bright, George M. Brooks, James Brooks, Buckley, Burchard, Burdett, Caldwell, Carroll, William T. Clarke, Coghlan, Comingo, Conner, Cotton, Crebs, Critcher, Crossland, Darrall, Davis, Dawes, Dickey, Donnan, Dox, Du Bose, Duell, Duke, Eames, Edwards, Eldridge, Ely, Farwell, Finkelnburg, Forker, Charles Foster, Wilder D. Foster, Frye, Garfield, Garrett, Getz, Golladay, Griffith, Halde-man, Hale, Halsey, Hambleton, Hancock, Handley, Hanks, Harper, George E. Harris, John T. Harris, Hawley, Hay, Gerry W. Hazleton, John W. Hazleton, Hereford, Herndon, Hibbard, Hill, Holman, Hooper, Houghton, Kelley, Kellogg, Kerr, Ketcham, King, Kinsella, Lamison, Lamport, Leach, Lewis, Lynch, Manson, Marshall, McClelland, McCormick, McGrow, McHenry, McIntyre, McKee, McNeely, Merriam, Merrick, Benjamin F. Meyers, Mitchell, Monroe, Morey, Morgan, Leonard Meyers, Niblack, Hosea W. Parker, Isaac C. Parker, Peck, Pendleton, Aaron F. Perry, Poland, Potter, Price, Prindle, Randall, Read, Edward Y. Rice, John M. Rice, Ritchie, Ellis H. Roberts, William R. Roberts, Roosevelt, Sawyer, Scofield, Sessions, Sheldon, Shellabarger, Sherwood, Shoemaker, Slater, Slocum, Sloss, H. Boardman Smith, John A. Smith, Worthington C. Smith, Snapp, Snyder, R. Milton Speer, Thomas J. Speer, Starkweather, Stevens, Stevenson, Storm, Strong, Sutherland, Swann, Sypher, Terry, Thomas, Turner, Tut-hill, Twichell, Upson, Van Trump, Vaughan, Voorhees, Waddell, Wakeman, Wallace, Warren, Wells, Wheeler, Whiteley, Whitthorne, Willard, Williams of New York, John T. Wilson, Winchester, and Wood—171.

NAYS—Messrs. Ambler, Beatty, Buffinton, Co-burn, Conger, Dunnell, Goodrich, Hoar, Killinger, Lansing, Lowe, Maynard, McCrary, McKunkin, Mer-cur, Orr, Packard, Packer, Palmer, Porter, Rainey, Rusk, Seeley, Shanks, Sprague, Taffe, Washington Townsend, Tyner, Waldron, Walls, and Jeremiah M. Wilson—31.

NOT VOTING—Messrs. Adams, Averill, Bigby, Benjamin F. Butler, Roderick R. Butler, Camp-bell, Freeman Clarke, Cobb, Cox, Creely, De Large, Elliott, Farnsworth, Henry D. Foster, Harmer, Havens, Hays, Kendall, McKinney, Moore, Mor-phis, Negley, Perce, Eli Perry, Peters, Platt, Robin-

son, Rogers, Sargent, Shober, Sloughton, Stowell, St. John, Dwight Townsend, Walden, Williams of Indiana, and Young—37.

So (two-thirds voting in favor thereof) the rules were suspended, and the bill (H. R. No. 1050) was passed.

In the Senate, on January 22d, Mr. Robert-son, of South Carolina, moved to proceed to the consideration of House bill No. 1050, and to lay aside the bill now before the Senate, in order to proceed to its consideration.

Mr. Trumbull said: "I hope that the mo-tion of the Senator from South Carolina will prevail, for two reasons: In the first place, the last bill that passed the House is the most liberal one, and it is the best one; and, in the second place, we shall thereby have an oppor-tunity, if there is a majority of the Senate in favor of amnesty, of voting against all amend-ments, passing the bill, and making it a law at once, and this will bring us to a vote at some time. We shall never accomplish any thing by constantly loading down amnesty bills by riders. I know, or have reason to know, at least, I believe, that there are a num-ber of Senators who are opposed to any gen-eral amnesty bill, and they are ready to vote for any and every amendment that is offered, with a view of embarrassing the bill and de-feating it. I have no doubt there are some Senators, conscientiously, according to their convictions of duty, opposed to a general am-nesty bill—I so understand them—and, of course, those Senators will vote for any amendment that may be offered; but I trust that the real friends of amnesty, those who believe that the peace of this country, the restoration of good feeling, and the establish-ment of better governments in the South, will be promoted by the passage of a liberal am-nesty bill, will stand together and take the bill as the House has passed it, and let us make it a law, and not suffer it to be entangled with these various amendments, which are sup-ported, of course, by all those who are op-posed to amnesty, and supported by others, I suppose, because they think them proper amendments."

Mr. Conkling, of New York, said: "Mr. President, I do not feel called upon to vote for this motion, and certainly not for the reasons which have been given us. It is suggested, first, that the bill, in favor of which the motion is made to postpone the pending measure, is more liberal than the one we have before us, in that it extends amnesty to men who assem-bled in Southern conventions, as they were called, and voted their States out of the Union, who inaugurated, under solemn forms, the rev-olution which plunged the nation into the Red Sea of war. I am inclined to think that I would rather have some other recommenda-tion of the latter bill of the House than this.

"But I rose to speak more particularly of the other ground on which an appeal is made

to us to vote in favor of the motion now made by the Senator from South Carolina. We are asked to do it because it will divest the measure before the Senate of the amendment which, after a considerable debate, was adopted, and because it will reopen a question of order. I will not speak of the amendment, but I want to say a word on the question of order.

"The Senator from Massachusetts offering his amendment, a point of order was raised upon it. That point was ruled by the Presiding Officer, the honorable Senator from Rhode Island (Mr. Anthony), then occupying the chair. An appeal was taken from his decision, and deliberately, I may say elaborately, that appeal was discussed by the Senate, and by the action of the Senate the law was laid down in this case in favor of the propriety of the amendment of the Senator from Massachusetts.

"Now, Mr. President, how shall it be said that those who want a vote upon the amnesty bill, either for or against it, and to make an end of it, ought to go back, take up a measure *de novo*, and litigate over again, not only the question of the amendment which has prevailed, but even a prolix question of order? It seems to me that it would be making haste backward; it would be an advance crab-fashion toward a result and finality upon the amnesty bill. And I wish, for one, to protest against being classed with the enemies of amnesty in any form if I am unable to see the propriety, at this late day, of undoing all that we have done, and going back and proceeding again to rehearse and rehash questions of amendments already passed upon, and final action recorded, and even opening questions of order, which have not only been made and decided, but argued elaborately and decided by the Senate itself.

"Mr. President, the amendment of the Senator from Massachusetts has been elaborately discussed. Why not vote upon it? Can there be any doubt that we shall save time by adhering to the present bill, availing ourselves of so much work as we have done, which it has taken, if I mistake not, a fortnight to accomplish? Why throw that away, and go back to the beginning, and litigate over again all questions, including questions of order and of form?"

Mr. Morton said: "I think there cannot be found a worse class of men—men more underserving of amnesty, than the men who attempted to carry the States out of the Union by their votes in those conventions. In some of those conventions the vote was procured by fraud; the members of those conventions voted for ordinances of secession in defiance of the wishes of a majority of the people of the States. Take, for example, the State of Virginia, the State of Tennessee, the State of Alabama, and perhaps others can be named where the ordinance of secession was adopted by the convention in defiance of the will of

the majority of the people, as expressed at the polls at the time of the election of delegates. The men who were thus guilty of a double crime, and who have upon them all the responsibilities and the consequences of that rebellion, it is proposed to amnesty by this second bill; and that is offered as an argument why the former bill should be laid aside, and the second bill taken up!

"Mr. President, I hope this proceeding will go on upon the first bill, because, if the second bill should be taken up, there will be at least an effort made in the Senate to put in the third exception that is left out by the second bill, and the amendment adopted upon the first bill will at least be offered, and I believe it will be adopted upon the second bill, and the amendment offered by the Senator from Massachusetts will certainly be renewed upon the second bill, so that nothing will be gained, but much time will be lost, because we shall then have to fight over the very ground we have gone over. For one, I am ready to vote on the amendment of the Senator from Massachusetts. I believe the amendment that I offered as applied to the officers of a church, striking out those words, is accepted by the Senator from Massachusetts, so that my amendment is agreed to."

Mr. Thurman said: "I hope the motion of the Senator from South Carolina will prevail, and I think it will require very little reflection on the part of any Senator to see that, if it does prevail, instead of losing time, we shall gain time.

"First, in regard to the amendment that has been adopted on the motion of the Senator from Indiana, I do not think the Senator will see the necessity of offering it again, for there was but one man at whom it was aimed; no other name was suggested; no other possible name was spoken of; it was only in respect to the Senator-elect from North Carolina that the amendment was supposed to have any effect, and he has resigned all claim to that office, so that now, if the amendment were put on the bill, it would be without any office or effect whatever.

"Then, in regard to the other matter, the amendment of the Senator from Massachusetts, a point of order was raised. The Senator from New York objects to going into that question of order again. Let the Senator understand precisely how the matter stands. I made the question of order. The Chair had to decide it without argument, for the rule required him to decide it without argument. He did decide it, and ruled that the amendment was in order. I appealed. The appeal was debated, and the decision of the Chair was sustained by, I believe, barely a majority of one."

Mr. Sumner: "Two."

Mr. Thurman: "Take two, if you please; it is a *de minimis non curat* whether it is one or two; and there were seventeen absentees.

In a Senate not full by any means, that decision was sustained simply by a majority of one or two. Is that a decision that ought to govern? Is that a decision that ought to stand? No, sir; but it does stand as long as this bill is before the Senate. I cannot renew the question of order on this bill, because the question has been decided; but, whenever a new bill is up, then I can make the question, when the Senator from Massachusetts shall offer his amendment again; and, it is in order that the sense first of the Presiding Officer of the Senate and then of a full Senate may be taken upon that point that I for one wish to see the present bill postponed, and the other taken up, in order that the question may be made.

"Now, sir, in reference to that question, no man answered the argument, no man, I think, can answer the argument, that if you were to put on the amendment of the Senator from Massachusetts and pass this bill through the Senate by a two-thirds vote and send it to the House of Representatives, and there should there be a majority for it, but less than two-thirds, then you would have this great spectacle presented, of one-half of that bill passed by the necessary constitutional majority to enact it into a law, and the residue of the bill not passed by a sufficient number of votes; and where, then, is your law? What part of it is law, and what part of it is not law? No one has answered that question. Whether gentlemen did not think it worth while to answer it or not, I leave it for others to decide, but that is a question which ought to be met.

"The bill which the Senator from Massachusetts offers as an amendment to the amnesty bill has never been referred to a committee at this session. A similar bill was referred at a former session and reported against. He takes that old bill, greatly enlarges it, makes it more obnoxious to constitutional objections than his old bill was, and, without any reference to a committee at all, moves it as an amendment to this bill, and so imperfect that on all sides we see it has to be amended. It has undergone no sufficient scrutiny at all. The defects pointed out are so glaring, even if the measure were ever so constitutional, that the Senator is obliged to accept amendments the moment they are offered.

"And now this bill that is to be amended here in open Senate by these straggling amendments, with no careful examination of them, no sitting down in a committee-room and carefully discussing the details of the measure, as would be necessary if it were ever so constitutional—this bill of mere ordinary legislation is to be forced on to this amnesty bill, for what purpose? That you may have a fine rhetorical sentence, that justice went with grace; that you were just as well as generous; and that while you held out amnesty to the white people of the South, in the same hands you held out justice to the black people all over the country! That is all very beautiful rhetoric;

that makes an exquisitely fine heading to a speech, or perhaps to a bill; but I submit to the Senate that it is not the kind of consideration that should make us depart from the plain proper modes of legislation which require that an amnesty bill shall stand by itself, that, as it requires two-thirds to pass it, it shall not have amendments put upon it which can be made law by a bare majority of the two Houses of Congress, that it shall not have amendments put on it that have no relation properly to the subject-matter of the bill. I say this reason that has been given is altogether insufficient for the purpose for which it is given.

"Under what clause of the Constitution, pray, is this bill of the Senator from Massachusetts brought forward? Of course under the fourteenth amendment. I do not suppose it is under the Declaration of Independence, although that, it seems, is above the Constitution in the minds of some. It is not under *e pluribus unum*. I think you, Mr. President (Mr. Carpenter in the chair), exploded that once. It is not, then, under *e pluribus unum*, or under the Declaration of Independence, but it is under the fourteenth article of amendments to the Constitution.

"Now, what is it that this bill assumes to regulate? The privileges of American citizens. That is the thing. It is the privileges of American citizens. What are these privileges? The privilege to go into all places that are created or regulated by law, the privilege of every citizen to go into such a place and to enjoy whatever is there to be enjoyed. That is the proposition. Whatever is created or regulated by law is a matter in which every citizen has equal privileges. Therefore all citizens have an equal privilege to go into a hotel and abide there; all have an equal privilege to go into a theatre and to witness the performance, to go into a church if it is an incorporated church, and nearly all churches are, and to be seated there; to be buried in any cemetery if it belongs to an incorporated association, and most of the cemeteries do; and so on to the end of the chapter. These are privileges, it is said, that belong to the citizen of the United States; that are guaranteed to him by the fourteenth amendment.

"Now, I want Senators to bear in mind the language of that amendment that I shall presently call their attention more particularly to. The difference between privilege and protection is clearly recognized in this constitutional amendment. It is privileges that we are dealing with now; it is not with protection. This is a bill to secure to every one equal privileges, not equal protection against injury or wrong or outrage or violence. It is not to secure either life or liberty or property, because a man's life does not depend on whether he can go into a theatre or not; his liberty does not depend on whether he can go into a theatre or not; his property does not depend on whether he can go into a theatre or not.

"It is not life, or liberty, or property, then, that we are called upon by this bill to protect. It is not the protection of either of them, but it is the privileges which it is said belong to a citizen of the United States that this bill is designed to protect and enforce. Now, what says the constitutional amendment under which alone you can claim any power to pass any such bill? It is as plain as the spectacles on my nose: "

No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States.

"No State shall make the law or enforce the law. Well, sir, the law must be made either by the Federal Government or by the State government, or it is no law at all. It must be either a law recognized as the law of the State, and therefore impliedly made by it, or expressly made by it through its legislative body, or it must be a law of the Federal Government, otherwise it is no law at all. Now, the Constitution says that no State shall make or enforce any law which shall abridge the privileges or immunities of the citizen.

"Take the case of South Carolina. My friend (Mr. Sawyer) has said this morning that under the law of South Carolina a railroad company can make no discrimination between white and black passengers. I suppose it is the same in hotels, too, and the same in schools. Now, what do you say? Has South Carolina made or enforced any law that abridges any citizen in his privileges or immunities? No, sir; just the reverse is the truth. And yet the Senator from Massachusetts proposes to go down into South Carolina, take away these cases from the jurisdiction of the State courts, transfer them all into the Federal courts, forfeit State charters, interfere with State rules, interfere with the worship of religion in churches, interfere with every thing—in a word, while the State itself has not deprived a single citizen, white or black, of any privilege or immunity that belongs to him. And yet it is said that this bill is constitutional under an amendment to the Constitution which only gives you authority to act where the State has made or enforced a law that deprived a citizen of his privileges or immunities, which gives you no right to act unless the State has made or enforced such a law as that! Under a Constitution which says that, until the State has made or enforced such a law, you the Congress of the United States have no power at all, the Senator from Massachusetts wipes it all away, and says that he will go down there with this bill of his, a supplementary civil rights bill, and assume the whole protection of all the privileges and immunities that belong to every man in that State!

"Well, sir, what more does the fourteenth amendment say?"

Nor shall any State deprive any person of life, liberty, or property, without due process of law.

"Of course that clause gives no sanction to this bill. This bill cannot fall under that, for, in the first place, no State has deprived any person of life, liberty, or property, without due process of law. But the privilege and immunity here spoken of are neither life, liberty, nor property, as I have already stated. Then what is the last clause?"

Nor deny to any person within its jurisdiction the equal protection of the laws.

"That, taken in connection with the first clause which relates to privileges and immunities, shows that what is there meant by 'the equal protection of the laws' is that each person shall be entitled to that protection which the law affords for their life, liberty, and property to the other citizens in the State; and that is all of that.

"With all the tautology of this amendment to the Constitution you find what is very clear, that it speaks of 'privileges and immunities' as one thing; it speaks of 'life, liberty, and property' in another sentence; and it speaks of the 'protection of the laws' as not a privilege or immunity, but as another right that belongs to a citizen. But this bill is only to secure privileges and immunities, and in respect to them the Constitution is plain that no State shall make or enforce any law to deprive any citizen of them, and it is equally clear that you have no right to interfere until the State has made or enforced such a law.

"I say, then, without going further into this matter, although the subject is by no means exhausted, that to my mind nothing is clearer than that this bill is a plain usurpation of power that does not belong to Congress at all, and, if so, no matter what may be the merits of the general subject, that is a sufficient reason with me for voting against it.

Mr. Morton said: "Mr. President, there is no disability arising under the Constitution and laws of the United States, except under the fourteenth amendment, as to the right to hold office; and it is now proposed by the Senator from South Carolina (Mr. Sawyer), who has given notice of his motion, to strike out the exceptions in the bill before the Senate, and make amnesty universal.

"The fourteenth amendment was adopted by Congress in 1866, and presented to the States for their ratification. It was done at a time when it was understood that all punishment had passed by, that nobody would be punished under the laws of the United States for having taken part in the rebellion. It was done then as the only and the last means of fixing a stigma and a legal disapprobation upon the ringleaders and the authors of the rebellion. Those to whom the fourteenth amendment was made applicable were believed to be the authors of the rebellion, men who had gotten it up, who had brought it upon the country, the old politicians who had been at work on it for years, and it was intended to make them ineligible to hold office. All prospect of

their punishment otherwise had passed by, and all that was left to the loyal people of the United States, in the way of marking their disapprobation of the rebellion, was, by this amendment, to render the authors of it ineligible to office. It was provided, however, in the concluding part of this section of the amendment, that the disability might be removed by a two-thirds vote of each House of Congress.

"I believe that any proposition to grant universal amnesty is a violation of the spirit of the amendment, if not of its letter. As was remarked by the Senator from New Jersey (Mr. Frelinghuysen), the other day, it was not intended to put it into the power of Congress absolutely to abrogate that section of the amendment, but to put into the power of Congress to relieve the disability in any given case where it might be thought proper to do so—where the merit or the condition of the applicant was such as to entitle him to the favor of Congress, giving it the power by a two-thirds vote in that case to relieve the disability. But no man can read the debates which occurred on the adoption of the amendment, without coming to the conclusion that the proposition to amnesty by classes was not within the meaning and intendment of Congress at the time the amendment was passed.

"Now, Mr. President, what is amnesty? It is an act of oblivion; it is a proposition, when we consider it in the light of universal amnesty, to place the authors of the rebellion upon a footing with the loyal people of the United States, and to authorize them, provided they can procure the suffrages, to hold the highest offices in the Government. I have always voted amnesty to every man who has asked for it in good faith, and I am prepared to do so now. I believe I have refused in one instance; but it was because the applicant had, in addition to being a Confederate soldier, been a guerrilla. I believe there is a general feeling on the part of Congress, in both branches, to grant amnesty to every man who will ask it in good faith, except, it may be, to the principal authors of the rebellion, the chief criminals.

"Mr. President, this question is usually considered in the light of expediency on one hand, or in the light of feeling or hostility on the other. I propose to consider it from a higher plane, entirely above the domain of feeling or expediency. I think there is a great principle involved in this question, which Congress ought to consider—a principle of consistency, a principle of duty to the Government, and especially a principle of the greatest importance to posterity.

"The principal argument in favor of amnesty is expediency. Let me consider that for a moment. Why is it expedient to grant amnesty? It is said that it will conciliate the men who have been engaged in rebellion. So far as the authors of the rebellion are concerned, you can no more conciliate them than you can conciliate rattlesnakes by restoring their ex-

tracted fangs. Those men have been cast in the mould of the rebellion, and they cannot bend. They must go down into history as they have lived—rebels. They must die as they have lived. Whatever dignity history may give to their character, will depend entirely upon their maintaining their consistency—maintaining the character of rebels until they have passed away. This may not be the case with the great majority of the people of the South, but it is certainly true of those men who may be said to be the authors of the rebellion.

"And, Mr. President, this rebellion did not go up from the people. It was not the work of the people. It came down from the politicians to the people. It was not forced by the mass of the people upon the politicians, but was essentially the work of politicians and the result of political machinations that had been carried on for more than thirty years; and the question is, whether the men who had been engaged in these machinations, and who, by the practice of arts for many years, brought this great calamity upon the nation, shall be amnestied, and rendered eligible to hold the highest office in the Government.

"As I said before, you cannot conciliate the authors of the rebellion. Now, how will amnesty to the authors of the rebellion conciliate the masses of the Southern people? It will only conciliate them by being a concession that they were in the right, and that we were in the wrong. This is the way in which it will conciliate them, and it can do it in no other way.

"As I remarked before, universal amnesty removes the last mark of legal disapprobation of this rebellion. It is a declaration to posterity that there was nothing wrong in the rebellion, that it involved no criminality, that it was simply an honest difference of opinion between parties, in which there was no criminality on either side. If you grant amnesty to the authors of the rebellion, you cannot convince the children twenty years hence that there was any thing wrong in that rebellion. It will be regarded as a mere difference between parties, which unfortunately came to blows.

"The question now is whether you propose to educate the children of this country and those yet unborn in this opinion of the rebellion? Sir, in twenty years, the small reasons of expediency, which are now urged in favor of general amnesty, will be forgotten, and all that will be remembered will be the great fact that amnesty was awarded to the authors of the rebellion, and some of them, the most flagrant and responsible of all, were afterward placed in the highest positions in the Government.

"Now, sir, I remove this question from the domain of expediency and of feeling; I put it upon the ground of high principle; I put it upon the ground of our duty to coming generations, to the children that are now growing up

around us, and I declare it solemnly to be my opinion that by granting universal amnesty we should come short of our duty to ourselves, to our children, and to those who are to come after us.

"If any man believes that we are to have no future trouble in this country, that this rebellion was the last, that opinion is contradicted by the history of every nation. Troubles may occur from decade to decade. We shall not have a rebellion hereafter on account of slavery; that has passed away; but we may have it for a thousand other causes. There may be local dissatisfactions; troubles may arise in one section or the other; questions of disagreement and heart-burning and estrangement may arise of which we now have no conception and cannot even imagine; and are we prepared to say that the worst rebellion in history, one than which there can never be another more wicked, involved no criminality, and that the very authors of it shall be allowed to return to power just as if nothing had been done? If we shall say that in regard to the great rebellion, what will be the opinion in regard to future troubles that may arise? They will say 'There is no danger; there is no responsibility except the danger that may arise during the time of the actual conflict; there is to be no responsibility in history.' Then, sir, it is the lesson of history that is involved.

"Sir, I want peace in the South; I want it as earnestly as any man; but I want peace in the South upon correct principles. I am not willing to purchase peace by conceding that they were right, and that we were wrong. They must regard universal amnesty in that light; history must regard it in that light. Only the other day we had an argument from the Senator from Maryland, not now in his seat (Mr. Vickers), to the effect that the doctrine of State rights, of State sovereignty, was generally accepted in the South; that they were acting upon it; they believed they had the right to secede; they were honest, and therefore, as soon as the war was over, there should have been universal amnesty, and every thing should have been passed over and forgotten. If he was right in his premises, then there should be universal amnesty; if he was wrong, there should not be. If we grant universal amnesty, we concede that he was right; that those people were in the exercise of what they believed to be a constitutional right; that they were guilty of nothing wrong, and therefore, as soon as the war was over, we should let by-gones be by-gones, and restore them to their place in the Government.

"Mr. President, when we come to that conclusion, other conclusions will follow inevitably. If it is true that they were really honest upon both sides, that there was no criminality involved, and that the leaders of the rebellion ought to be allowed to return to their places of power, what else follows?

Mr. Hamlin: "We should pay their expenses."

Mr. Morton: "The Senator says 'pay their expenses.' Yes, we should pay the debts on both sides. That is the inevitable and irresistible conclusion. What is the philosophy of universal amnesty? If the authors of the rebellion ought to be allowed to hold office just as if nothing had occurred; if they should be allowed to come in afterward and become the law-makers and governors of this country while they are the great criminals, I ask if you ought to make any difference in the payment of pensions because a man fought on the one side or the other?

"Grant universal amnesty, and the next step that will be taken—and it is a philosophical step, and one that cannot be resisted—will be to pension the rebel soldiers and put them on the same footing with the loyal soldiers of this country. Every argument in favor of amnesty would be tenfold stronger in favor of that measure, and why? Because pensioning rebel soldiers would do more in the way of conciliating the South and of attaching them to the Government than any measure of amnesty could do. If you grant amnesty to conciliate the South, and if that is your object, then I tell you that pensioning the rebel soldiers will go much further than granting amnesty, and it is a legitimate consequence of the same argument. Will you say that Davis, or Toombs, or Breckinridge, should be admitted into this Senate to make laws for the loyal men of this country, while the rebel soldiers should be excluded from the pension-roll? There would be no sense in that. If you are to admit those authors of the rebellion into this Chamber, I ask if you should not bring their dead and bury them in Arlington alongside of the Federal dead? If the authors of the rebellion are to become your companions on this floor, shall not the Confederate dead, comparatively their innocent victims, become the companions of your soldiers in Arlington and other national cemeteries?

"Mr. President, there are other consequences to follow, other legitimate deductions from the logic of universal amnesty, not only the pensioning of rebel soldiers, but the payment of rebels for their property taken by our army during the war. I ask now, I might ask the Democratic Senators on this floor, if the Democratic party is not now committed in principle to the payment of the Confederates for their property taken by our army for supplies? Why, sir, we had a bill before the Senate which was in effect to authorize loyal persons in the Southern States to sue in the Court of Claims. While that bill was under consideration, the Senator from California, not now in his seat (Mr. Casserly), offered an amendment to extend the same right to persons who had been pardoned by the President, or whose disabilities had been removed or might thereafter be removed. The principle

involved in that amendment was that, in regard to the right to sue the Government for damages and for property taken, there should be no difference between loyal men and those engaged in the rebellion, and the Senator from California proposed to put them on the same level in the Court of Claims. Upon the principle of universal amnesty he was logical, and his amendment received the vote of every Democratic Senator present.

"Mr. President, I had intended to say something about the amendment offered by the Senator from Massachusetts (Mr. Sumner). I desire to say that I shall vote for that amendment. I agree with him—justice before generosity, justice before spurious magnanimity."

Mr. Thurman said: "If the Senator considers the bill which came from the House a bill not too narrow and not too broad, but precisely the right kind of a bill, containing the proper exceptions, and going far enough in its exceptions, then I put it to him, why have we had this impassioned denunciation of amnesty this morning? Where was there any thing to denounce? There has been no amendment offered to this bill yet to strike out a single one of its exceptions. The bill is here as it came from the House of Representatives; it is before us as it came from the House of Representatives. There has been no amendment offered to strike out a single one of the exceptions as yet. When that amendment shall be offered, it will be proper to consider the particular merits of that exception, and say whether it shall be stricken out or not. But the friends of this bill have again and again proposed to the Senate—they proposed it long ago, they proposed it weeks ago—to take this bill and pass it *in totidem verbis* as it came from the House of Representatives; and where has been the trouble about it? If the friends of this bill, although they were dissatisfied with some of these exceptions, although they would rather have seen them stricken out, or most of them stricken out, yet were willing, for the purpose of harmony, and for the purpose of a speedy passage of the bill, to take it just as it came from the House of Representatives, and to enact it into a law, where was the necessity for impassioned declamation this morning on the subject of amnesty?"

"I can only account for it in one way. It has come to be the custom, I am inclined to think, for the Senator from Indiana, at the beginning of each political campaign, to make a speech which the lesser lights of the Republican party and the Republican press generally announce as the key-note of that campaign; and it seems that he is looked to to sound the key-note of each campaign—that that function has been devolved upon him or assumed by him until it has passed into a part of the common law of the radical party. And now, at the beginning of this great campaign of 1872, the Senator has sounded his note again, and I

only regret that, in all the years that he has been studying this music, he has found no new tune, nor even a single new note. It is the same old note again; it is the same old tune again; it is the same old horrors of the rebellion; it is the same old wickedness of the instigators of that rebellion; it is the same old terrible suffering that that rebellion entailed on the country; and it is the same frightful array of ghosts, found nowhere except in the Senator's imagination, of what is to result to this country should the Democratic party ever get into power. It is the same old cry of payment of the rebel debt; payment of pensions to rebel soldiers; reinstitution of slavery; refusal to pay our own debt; refusal to pay pensions to our own soldiers; and so on to the end of the tune. These are charges that certainly the Senator believes, or he would not make them; for no one is authorized to charge a Senator, especially when speaking from his place in this Chamber, with asserting what he does not believe. There are charges which undoubtedly the Senator believes; apprehensions which his lively imagination conjures up in his fertile brain, but which I venture to say no other human being, in the whole length and breadth of the Republic, in his senses, and intelligent enough to form an opinion, does believe for one single instant.

"Why, how is it? Payment of the rebel debt? How is it to be paid in the face of your fourteenth amendment, which prohibits even a State from making any payment of it? Payment of pensions to rebel soldiers! Positively prohibited by your fourteenth amendment. Repudiation of your own debt! Its payment is solemnly guaranteed by your own Constitution. Reinstitution of slavery! It is positively prohibited by your Constitution and by the constitution of every State in the Union. And yet a Senator, a distinguished Senator, a Senator who is looked upon, perhaps, as the leader of his party and the particular mouth-piece of the Administration, has the boldness to get up in the American Senate, before it and the American people, and, sounding the key-note of the campaign, to hold up these preposterous pictures to frighten the credulous out of their propriety! Sir, it may do very well on the stump in some swamp of Indiana; it may do very well before an ignorant audience who do not know or have not ability enough to comprehend what is reasonable and what is not, and who are accustomed to take the assertions of the Senator from Indiana as a part of the law of this land, as sacred and as truthful as Holy Writ; but with men accustomed to reflect and dealing fairly with a subject, it is not too much to say—and I speak without disrespect to the Senator—that all the apprehensions he has expressed are simply preposterous—nay, more, simply ridiculous.

"Sir, I am at a loss to understand this Administration and its supporters. The President recommends amnesty, and the leader of

the party in the Senate denounces it in the most eloquent terms that his fertile brain and inventive genius can suggest. The President recommends civil service reform, and the distinguished Senator from Wisconsin (Mr. Carpenter) pours out upon it all the phials of his wrath and the wonderful scintillations of his wit, and all around the Senate-Chamber we find that civil service reform, though recommended by the President and inaugurated by him, gets the cold shoulder from those who are looked upon as his most particular supporters and friends. I do not understand this Administration. If I were an uncharitable man, I should say that here was what in common parlance is called throwing a tub to the whale; that it is a promise held out to the ear to be disappointed in the fulfilment; that when the President says, 'Let us have civil service reform,' there is a mental reservation that civil service reform shall be killed in Congress; that when he says, 'Let us have amnesty,' there is a mental reservation that leading radicals in the Senate shall kill amnesty stone-dead.

"Now, Mr. President, I do not charge any such false dealing upon the President; I charge no such hypocrisy upon him; and yet it does look wonderfully strange that nearly every important recommendation he makes is ignored by his friends in this Chamber, and the knife put to its throat for the purpose of drawing the life-blood from it.

"So much, sir, for that. Now, let us have a word or two upon the Constitution; for my friend from Indiana has considered that the Constitution must be looked into a little. He lays down this broad proposition, that whatever rights are conferred upon citizens of the United States by the Federal Constitution are taken under the protection of the Federal Constitution, and may be enforced by Congress by appropriate legislation. I might grant that proposition, and it would not touch the question before us; for there would still remain to be considered whether the rights of the citizen are conferred by the Federal Constitution. That is the first question.

"Then, secondly, if rights, etc., are so conferred, are the rights, privileges, or immunities, assumed by the Senator from Massachusetts in his amendment among them? If either of these questions be answered in the negative, then the Senator's proposition has no application. Thirdly, comes the question, assuming that we have power to enforce or secure rights, privileges, and immunities, conferred or guaranteed by the Constitution, in what manner are we authorized to enforce or secure them; *quo modo* can we enforce or secure them? And if it is found that you cannot constitutionally enforce or secure them in the mode proposed by the Senator from Massachusetts, that is a conclusive answer to his amendment. If there is some other mode in which you can enforce them according to the Constitution, that other mode is the proper mode. That is

the 'appropriate legislation' which it is provided that Congress may adopt.

"But, says the Senator, these are questions not left to the courts, because it is provided in the fourteenth amendment, in the last clause of it, that 'Congress shall have power to enforce by appropriate legislation the provisions of this article.' Need the Senator from Indiana be told that Congress would have precisely the same power if that section were stricken out; that that section is no broader at all than the section of the original Constitution, which gave to Congress the power to enact all legislation necessary to carry into effect the provisions of the Constitution, or the powers conferred upon any department of the Government by it?

"This very language, 'appropriate legislation,' is taken from an opinion of Chief-Justice Marshall in the case of *McCulloch vs. Maryland*, if my memory is right, in which he makes the terms 'necessary legislation' and 'appropriate legislation' synonymous and convertible terms. So that this language, 'Congress shall have power by appropriate legislation to enforce the provisions of this article,' is nothing more than the implied power which Congress would have if the section were stricken out of the article altogether; nothing more than Congress had under the old provision authorizing it to enact all legislation necessary to carry out the power conferred upon the Government, or upon any department thereof. That is all. It is not a substantive grant of power; it is simply putting into the form of an express power that which would have been an implied power, were this provision not in the Constitution at all. Does that take the question out of the jurisdiction of the courts? No, sir, not at all. What, then, is 'appropriate legislation?' I will tell you what is appropriate legislation. The Constitution consists of several categories or classes, so to speak. One is a grant of powers to the Federal Government; another class is a prohibition against the exercise of powers by the Federal Government; and the third class is a prohibition upon the exercise of certain powers by the States. This is the Constitution of the United States: affirmatively, a grant of power; negatively, a prohibition of power on the part of the Federal Government; and, secondly, a prohibition against the exercise of power by the State governments. The fourteenth amendment, in the main, is confined to this latter category or class. It prohibits the States from exercising certain powers, and the remedy is precisely the same, if a State shall violate that provision of the Constitution, that it would be if it were to violate one of the provisions in the original Constitution.

"What says the original Constitution? 'No State shall coin money.' Suppose a State does coin money, how do you get at that? You get at that under your law in this way: that the act of legislation which authorized the coinage

is declared by your Federal courts, to which the question can be taken, to be a violation of the Constitution of the United States, and void. So with any other prohibition. Here the fourteenth amendment declares, and it is unnecessary to read any more of it perhaps than that which bears on this bill: 'No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States.' That operates directly on the State. It cannot be denied that that operates directly on the State as a political entity, because it cannot be contended for a moment that a manager of a theatre can make a law of the State, and yet this bill is levelled at him; that an innkeeper can make a law of the State, and yet this bill is levelled at him; that a railroad company can make the law of the State, and yet this bill is levelled at it. No, sir, the law of the State can be made only by the legislative power of the State, its General Assembly.

"When, therefore, this Constitution says that no State shall make a law abridging the privileges or immunities of a citizen, it is the same as if it had said that no Legislature of any State shall pass any such law, for that is the only way in which the State can make a law. But it would have been, perhaps, a lame instrument if that were all, and hence it says no State shall enforce any law which abridges the privileges or immunities of a citizen of the United States.

"Mr. President, once more here is a plain inhibition upon the States, and now it is proposed to pass a bill which pays no attention to the fact that the State has not violated the Constitution of the United States. I understand the argument of the Senator from Indiana. He has made it before. He made it, I think, more than two years ago, and it is an argument that strikes down every State government in this Union as completely as if every State constitution were annihilated, never to be restored.

"What is the argument? It is that privileges, immunities, life, liberty, property, and the protection of the laws in the United States, are taken in charge, and are under the guarantee of the Constitution of the United States, and that, thus taken in charge and under its guarantee and protection, Congress has a right to legislate upon any subject whatsoever, according to its own discretion, that relates to the privileges, the immunities, the life, the property, or the liberty of a citizen of the United States; that it is wholly indifferent and immaterial whether a State has legislated upon that subject or not; that it is wholly immaterial what are the laws of a State, that the acts of Congress passed in pursuance of the Constitution are the paramount law of the land, and that Congress may, therefore, enter upon this subject as *res integra*, as a new thing, and may in its own discretion, without any reference to State legislation, State judicial decision, State custom, or State practice, make

just such a code of laws as it sees fit to make. If this is the case, then all local self-government is wiped out in this land; for there is not one subject of legislation, no, not one, not even a tax bill, that may not be referred to the category of the privileges, the immunities, the liberty, the life, the property, or the protection of the citizen. If this interpretation of the Constitution be true, then the Federal Government has swallowed up every State government as completely as the prophet Jonah was swallowed by the whale. I protest against any such interpretation as that.

"Mr. President, I once more say that, although I have never gone to any such length as some State-rights men have gone in deducing the doctrine of the right of secession, and have never believed and do not believe in that doctrine, yet I am, and hope I shall die, a State-rights man. I am so because I believe that the existence of the States and the existence of local self-government are essential to freedom and to prosperity in this country.

"Why, sir, if there is no such thing as State rights, how comes it that the two distinguished Senators from Vermont are here, coming from a State with not one tenth, not one twelfth, very little more than one thirteenth of the population of the State of New York? How comes it that, with three hundred thousand inhabitants only, there are two Senators on this floor from Vermont, while New York, with more than four millions, has but two? How comes that, sir; is there no such thing as State rights; what right have they to make local law for Ohio? Why should New York, with her four millions of people and only two Senators on this floor, have her local law made here by the votes of twelve Senators from New England when all New England has not a population equal to hers? How is it that twelve votes shall be received here from New England to make local law for Missouri? In that local law New England has no interest whatsoever, while that great State, soon to have a population equal to that of all of New England, and now with a population half as great, has but two Senators on this floor. What is it that gives this unequal representation in the Senate but the doctrine of State rights; nay, sir, to go further, but the doctrine of the original sovereignty of the States? I am not complaining of this. I am willing to stand by this inequality in the Senate of the United States so long as you stand by the Constitution as its framers intended it to be. So long as you do not trample State governments out of existence, so long as you let local legislation be the subject of local State law alone, so long as you do not interfere and usurp the powers that properly belong to the States, I greet with arms wide open the Senators from the smallest State of this Union; nay, I will take the Senators from Nevada into my embrace, although their whole State does not contain as many people as the little city in which I live; I will

take them and welcome them here as long as you leave to the State governments that power which the framers of the Constitution intended they should have, and which, in my judgment, is essential to the very existence of free institutions at all. But if you will strike down that power, if you will abolish local legislation, if you will annihilate the States, if you will make them mere departments of a centralized Government, if you will make them the mere counties of a great State, then I say to Senators the time will come when that inequality in the Senate will not be submitted to longer. But I do firmly believe that it is precisely the institution of State governments, it is precisely the allotment of local legislation to a local power, which enables this Republic to spread itself from ocean to ocean, and from the arctic zone down to the torrid. Strike that out of it, strike its local self-government out of the system, and it will go the way that all consolidated centralized governments have gone in all time past; first a despotism unendurable, and next a rending into fragments more numerous far than the States of this Union now are."

Mr. Morton said: "Mr. President, I ask the indulgence of the Senate a few minutes in reply. This speech that we have heard about the State governments being swallowed up, about the General Government absorbing all power, and about the despotism that is to come, has been frequently heard in the swamps of Indiana to which my friend referred. It is the same old Democratic speech with which the people are perfectly familiar in the swamps of Indiana and everywhere else. The Senator talks about State rights, but he expressed his whole philosophy in a phrase that dropped from him just before he concluded, 'the original sovereignty of the States.' I tell the Senator that as long as that doctrine is urged upon this country, there will be those who believe in the right of secession. I believe in State rights. I hold that there are State rights that are sacred and unapproachable. They are conferred by the Constitution of the United States, and they are safest under the protection of the nation, and the States have them because the Constitution has so declared, and not because of any original sovereignty. My State is the offspring of the Republic; she was carved out of territory that belonged to the nation; she was born of an act of Congress; she never had any original sovereignty, and but for that act of Congress she would today be but a Territory. And yet the Senator talks about the original sovereignty of Ohio and Indiana. These States have rights because the Constitution gave them to them; the States and the General Government both have rights; they both derive them from the same fountain, and one class of rights is just as sacred as the other; but just as long as this old doctrine of State sovereignty is urged upon the nation there is no security against future rebellions."

Mr. Schurz, of Missouri, said: "Let me, in a few words, sum up the whole meaning of the question which we are now engaged in discussing. No candid man can deny that our system of political disabilities is in no way calculated to protect the rights or the property, or the life or the liberty, of any living man, or in any way practically to prevent the evil-disposed from doing mischief. Why do you think of granting any amnesty at all? Is it not to produce on the popular mind at the South a conciliatory effect; to quicken the germs of good intentions, to encourage those who can exert a beneficial influence, to remove the pretexts of ill-feeling and animosity, and to aid in securing to the Southern States the blessings of good and honest government? If that is not your design, what can it be?

But if it be this, if you really do desire to produce such moral effects, then I entreat you also to consider what moral means you have to employ in order to bring forth those moral effects you contemplate. If an act of generous statesmanship, or of statesman-like generosity, is to bear full fruit, it should give not as little as possible, but it should give as much as possible. You must not do things by halves if you want to produce whole results. You must not expose yourself to the suspicion of a narrow-minded desire to pinch off the size of your gift wherever there is a chance for it, as if you were afraid you could by any possibility give too much, when giving more would benefit the country more, and when giving less would detract from the beneficent effect of that which you do give.

"Let me tell you, it is the experience of all civilized nations the world over, when an amnesty is to be granted at all, the completest amnesty is always the best. Any limitation you may impose, however plausible it may seem at first sight, will be calculated to take away much of the virtue of that which is granted. I entreat you, then, in the name of the accumulated experience of history, let there be an end of these bitter and useless and disturbing questions; let the books be finally closed, and, when the subject is forever dismissed from our discussions and our minds, we shall feel as much relieved as those who are relieved of their political disabilities.

"Sir, I have to say a few words about an accusation which has been brought against those who speak in favor of universal amnesty. It is the accusation resorted to, in default of more solid argument, that those who advise amnesty, especially universal amnesty, do so because they have fallen in love with the rebels. No, sir, it is not merely for the rebels I plead. We are asked, Shall the rebellion go entirely unpunished? No, sir, it shall not. Neither do I think that the rebellion has gone entirely unpunished. I ask you, had the rebels nothing to lose but their lives and their offices? Look at it. There was a proud and arrogant aristocracy planting their feet on the necks

of the laboring people, and pretending to be the born rulers of this great Republic. They looked down, not only upon their slaves, but also upon the people of the North, with the haughty contempt of self-asserting superiority. When their pretensions to rule us all were first successfully disputed, they resolved to destroy this Republic, and to build up on the corner-stone of slavery an empire of their own in which they could hold absolute sway. They made the attempt with the most overweeningly confident expectation of certain victory. Then came the civil war, and, after four years of struggle, their whole power and pride lay shivered to atoms at our feet, their sons dead by tens of thousands on the battle-fields of this country, their fields and their homes devastated, their fortunes destroyed; and more than that, the whole social system in which they had their very being, with all their hopes and pride, utterly wiped out; slavery forever abolished, and the slaves themselves created a political power before which they had to bow their heads, and they, broken, ruined, helpless and hopeless in the dust before those upon whom they had so haughtily looked down as their vassals and inferiors. Sir, can it be said that the rebellion has gone entirely unpunished?

"You may object that the loyal people, too, were subjected to terrible sufferings; that their sons, too, were slaughtered by tens of thousands; that the mourning of countless widows and orphans is still darkening our land; that we are groaning under terrible burdens which the rebellion has loaded upon us, and that therefore part of the punishment has fallen upon the innocent. And it is certainly true.

"But look at the difference. We issued from this great conflict as conquerors; upon the graves of our slain we could lay the wreath of victory; our widows and orphans, while mourning the loss of their dearest, still remember with proud exultation that the blood of their husbands and fathers was not spilled in vain; that it flowed for the greatest and holiest and at the same time the most victorious of causes; and when our people labor in the sweat of their brow to pay the debt which the rebellion has loaded upon us, they do it with the proud consciousness that the heavy price they have paid is infinitely overbalanced by the value of the results they have gained: slavery abolished; the great American Republic purified of her foulest stain; the American people no longer a people of masters and slaves, but a people of equal citizens; the most dangerous element of disturbance and disintegration wiped out from among us; this country put upon the course of harmonious development, greater, more beautiful, mightier than ever in its self-conscious power. And thus, whatever losses, whatever sacrifices, whatever sufferings we may have endured, they appear before us in a blaze of glory.

"But how do the Southern people stand

there? All *they* have sacrificed, all *they* have lost, all the blood *they* have spilled, all the desolation of *their* homes, all the distress that stares *them* in the face, all the wreck and ruin *they* see around them, all for nothing, all for a wicked folly, all for a disastrous infatuation; the very graves of their slain nothing but monuments of a shadowy delusion; all their former hopes vanished forever; and the very magniloquence which some of their leaders are still indulging in nothing but a mocking illustration of their utter discomfiture! Ah, sir, if ever human efforts broke down in irretrievable disaster, if ever human pride was humiliated to the dust, if ever human hopes were turned into despair, there you behold them.

"You may say that they deserved it all. Yes, but surely, sir, you cannot say that the rebellion has gone entirely unpunished. Nor will the Senator from Indiana, with all his declamation (and I am sorry not now to see him before me), make any sane man believe that, had no political disabilities ever been imposed, the history of the rebellion, as long as the memory of men retains the recollection of the great story, will ever encourage a future generation to rebel again, or that, if even this great example of disaster should fail to extinguish the spirit of rebellion, his little scarecrow of exclusion from office will be more than a thing to be laughed at by little boys."

Mr. Robertson, of South Carolina, said: "I withdraw my motion to postpone this bill, in order to make another motion. Before doing that, I will say that my object in making this motion is to ascertain the views of Senators as to which bill they prefer. I now move to lay on the table the pending bill, for the purpose of taking up the last bill passed by the House, No. 1050, which has only two exceptions in it."

The Vice-President: "House bill No. 380 being now before the Senate, with the amendment of the Senator from Massachusetts (Mr. Sumner) pending, the Senator from South Carolina (Mr. Robertson) moves that the bill and amendment lie on the table, giving notice that if that motion shall prevail he intends to move to take up another amnesty bill from the House of Representatives, which he states has fewer exceptions in it. The question is on laying on the table the pending bill."

The yeas and nays were ordered; and, being taken, resulted as follows:

YEAS—Messrs. Blair, Davis of West Virginia, Fenton, Ferry of Connecticut, Goldthwaite, Hill, Hitchcock, Johnston, Kelly, Logan, Norwood, Robertson, Schurz, Scott, Stevenson, Stockton, Thurman, Tipton, Trumbull, and Vickers—20.

NAYS—Messrs. Ames, Anthony, Boreman, Brownlow, Caldwell, Cameron, Carpenter, Chandler, Clayton, Cole, Corbett, Cragin, Edmunds, Ferry of Michigan, Flanagan, Frelinghuysen, Gilbert, Hamilton of Texas, Hamlin, Harlan, Morrill of Vermont, Morton, Nye, Osborn, Pomeroy, Pool, Sherman, Spencer, Sumner, West, Wilson, Windom, and Wright—33.

ABSENT—Messrs. Alcorn, Bayard, Buckingham,

Cassery, Conkling, Cooper, Davis of Kentucky, Hamilton of Maryland, Howe, Kellogg, Lewis, Morrill of Maine, Patterson, Pratt, Ramsay, Rice, Saulsbury, Sawyer, Sprague, and Stewart—20.

So the motion was not agreed to.

The Vice-President: "The question recurs now on the amendment of the Senator from Massachusetts (Mr. Sumner)."

Mr. Carpenter: "Is it in order at this time to move a substitute for the amendment of the Senator from Massachusetts?"

The Vice-President: "It is."

Mr. Carpenter: "I move to amend the amendment by substituting for it what I send to the Chair."

The Chief Clerk read as follows:

SEC. —. Whoever, being a corporation or natural person and owner, or in charge of any public inn or of any place of public amusement or entertainment for which a license from any legal authority is required, or of any line of stage-coaches, railroad, or other means of public carriage of passengers or freight, or of any cemetery, or other benevolent institutions, or any public school supported at public expense or by endowment for public use, shall make any distinction as to admission or accommodation therein of any citizen of the United States because of race, color, nationality, or previous condition of servitude, shall, on conviction thereof, be fined not less than \$500 or more than \$5,000 for each offence, to be recovered by information filed by the district attorney in any court having jurisdiction, upon the complaint of any person injured, one-half to the use of the United States, and one-half to the use of the complainant.

SEC. —. That the offences under this act may be prosecuted before any territorial, district, or circuit court of the United States, having jurisdiction of crimes at the place where the offence was charged to have been committed.

The Vice-President: "The question is on the amendment to the amendment."

Mr. Pomeroy, of Kansas, said: "Will not the Senator from Wisconsin point out wherein this differs from the amendment of the Senator from Massachusetts?"

Mr. Carpenter: "This amendment omits all regulation of churches."

Mr. Pomeroy: "Is that all?"

Mr. Carpenter: "It puts the basis of Federal interference, not upon the mere fact that these benevolent institutions are incorporated, but upon the fact that they are supported by taxation or endowment for public use. The object of this substitute is to base Federal interference in all these institutions upon the fact that they are supported at the public expense."

Mr. Sherman, of Ohio, said: "Mr. President, I have carefully examined these two propositions, and am clearly of the opinion that, with a single doubt upon one section of the amendment offered by the Senator from Massachusetts, it is within our constitutional power, and that the amendment proposed by the Senator from Wisconsin is far from being an improvement upon that amendment."

"The amendment suggested by the Senator, from Wisconsin is a short criminal section, punishing as a crime, by a prosecution in the name of the United States, the denial to any

person, on account of race, color, or previous condition of servitude, of the right to stop at an inn, to travel on a highway, to use the services of a common carrier, to participate in the ordinary public worship open to all other citizens, and to exercise the common rights of citizens freely granted to all citizens except those of African descent.

"The first objection I have to this amendment is that the remedy is inadequate. The only way you can enforce an obligation to do justice to citizens is by giving a private right to the injured party to sue. The only remedy provided here in this act of Congress is a criminal remedy, a criminal prosecution. I doubt very much, in the absence of specific law, whether under the provisions of the fourteenth amendment, and under the provisions of this section, any person injured would have a right to sue in the courts of the United States. There is no express provision giving a remedy, a civil action in a court of the United States, for an injury of this kind, and without that express provision I doubt whether the courts would entertain jurisdiction of cases of this kind. So that the only remedy of any person deprived of any right to stop at an inn, the right to be carried on a railroad, the right to go wherever any other citizen may freely go, is a criminal proceeding in the courts of the United States, now already overrun with business. It seems to me, with due deference to the judgment of my honorable friend, that this remedy is inadequate."

Mr. Morton: "I shall detain the Senate but a few moments in asking attention to the meaning of the last clause of the first section of the fourteenth amendment. I will not discuss the question as to the right or power of Congress to provide for the admission of colored men into social clubs; but the question arises upon this clause of the fourteenth amendment as to what the power of Congress is in regard to the substantial rights and equality of people in the States. The conclusion of this section reads thus: "

Nor shall any State deprive any person of life, liberty, or property, without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws.

"I desire to inquire what is meant by 'the equal protection of the laws' which a State shall not deprive any person of? To what does the word 'protection' refer? Does it mean that the State shall not deprive a man of the equal protection of the law for his person? Will any one contend that it shall have a construction so narrow as that? Will it be contended that it means that a State shall not deprive a person of the equal protection of the law for his property; that it shall be confined to that? I submit that, when it declares that no State shall deprive any person of the equal protection of the laws, it means substantially that no person shall be deprived by a State of the equal benefit of the laws; that the word

'protection,' as there used, means not simply the protection of the person from violence, the protection of his property from destruction, but it is substantially in the sense of the equal benefit of the law; that it is intended to promote equality in the States, and it refers to the laws of the States.

"I am willing to rest this whole question upon the construction of this clause of the fourteenth amendment. I believe the power to pass this bill can be derived from other sources, but it is sufficient to derive it from this."

Mr. Frelinghuysen said: "Mr. President, I have a word to say in reference to the application of the amendment of the Senator from Massachusetts to churches. In my judgment it is not wise for Congress to begin legislation on that subject; it is opening a crevice which may carry away all the barriers and work destruction. Governmental tyranny in former ages joined hands with ecclesiastical tyranny and by the unholy alliance rivers of blood flowed. When our fathers established this Government they determined to destroy ecclesiastical tyranny by severing it from governmental power.

"The words of the constitutional amendment do not mean that Congress shall pass no law regulating man's external conduct, for that is morality. The 'exercise of religion' means worship. It can mean nothing else. So the Constitution provides that Congress shall pass no law prohibiting the free exercise of worship. Now, the Japanese, in California, see proper to make nationality, we will suppose, a part of their religion, and to exclude all who do not belong to their people from their worship; or, the Huguenots of South Carolina might form a religious society, and one of their regulations be that no one should be a member unless a descendant of the Huguenots; or, the Scotch Presbyterians might declare that none shall be connected with their church unless producing a certificate from the church at home; or, the Africans might form a church making emancipation an essential to membership. It is clearly a restriction upon the perfect freedom of religious worship to provide that in these cases there shall not be liberty to exclude those who do not meet the requirements stated. If, in the cases that I have supposed, there is a right to exclude those who do not meet the description and requirements laid down, then a like right of exclusion for other reasons incident to their peculiar views belongs to all other churches.

"In answer to this view of the subject, it is said that the proposed amendment only applies to churches that are incorporated. But I ask whether that limitation is found in the Constitution? Does it say that Congress shall pass no law prohibiting the free exercise of religion to churches that are not incorporated, but may pass laws restraining that free exercise when the association is incorporated? If

such had been the provision of the Constitution all the churches would have been and would now be outside the protection of the Constitution, for all were and are incorporated. We may not thus interpolate the Constitution."

The Presiding Officer (Mr. Morrill, of Vermont, in the chair): "The question is on the amendment of the Senator from Wisconsin to the amendment of the Senator from Massachusetts."

The question being taken, resulted as follows:

YEAS—Messrs. Anthony, Carpenter, Chandler, Cole, Conkling, Corbett, Fenton, Ferry of Michigan, Frelinghuysen, Hamilton of Texas, Hamlin, Hitchcock, Morrill of Maine, Pool, Ramsey, Scott, and Wright—17.

NAYS—Messrs. Ames, Blair, Boreman, Brownlow, Cameron, Clayton, Davis of West Virginia, Edmunds, Ferry of Connecticut, Goldthwaite, Harlan, Hill, Johnston, Kelly, Logan, Morrill of Vermont, Morton, Norwood, Osborn, Pomeroy, Rice, Robertson, Saulsbury, Sawyer, Sherman, Spencer, Sprague, Stevenson, Stockton, Sumner, Trumbull, Vickers, West, and Wilson—34.

ABSENT—Messrs. Alcorn, Bayard, Buckingham, Caldwell, Casserly, Cooper, Cragin, Davis of Kentucky, Flanagan, Gilbert, Hamilton of Maryland, Howe, Kellogg, Lewis, Nye, Patterson, Pratt, Schurz, Stewart, Thurman, Tipton, and Windom—22.

So the amendment to the amendment was rejected.

The Vice-President: "The question recurs on the amendment of the Senator from Massachusetts."

Mr. Sherman: "I now offer the amendments I suggested yesterday to the amendment of the Senator from Massachusetts. In section two, lines six and seven, I move to strike out the words 'and such allowance for counsel fees as the court shall deem just.'"

Mr. Sumner: "I accept that. The Senator, I think, is right in his suggestion."

Mr. Sherman: "I also move to strike out the last section but one. I ask that it be read."

The Chief Clerk: "The section proposed to be stricken out is:"

SEC. —. That every law, statute, ordinance, regulation, or custom, inconsistent with this act, or making any discriminations against any person on account of color by the use of the word "white," is hereby repealed and annulled.

Mr. Sherman: "I will simply state that neither the Senator from Massachusetts himself nor any Senator in this body can tell the scope of this section. I have already found out that it changes the policy of the naturalization laws since the foundation of the Government, and it may strike in many places not only at the laws of the United States but at the laws of all the States, so that we are groping blindly in the dark in passing a provision so general as this. If there are any laws which the Senator from Massachusetts can point out where the word 'white' is used in violation of the spirit of the Constitution, I am willing to vote to repeal, modify, or change them;

but I am satisfied we ought never in any case to pass so general and sweeping a provision as this. I hope we may have a vote upon the subject, and I shall be content with whatever may be the judgment of the Senate."

Mr. Sumner: "The section proposed to be stricken out has one single object: it is to bring the legislation of this country and its laws in all respects into complete harmony with the Constitution of the United States. There is no word of color in that text. How can you introduce a word of color in any legislation or law under the Constitution of the United States?"

"The Senator from Ohio (Mr. Sherman) asks me to indicate the particular instances which may need this remedy. Sir, there is no occasion to indicate instances. If the word is introduced into any law or ordinance, whether of the nation or of a State, it is contrary to the spirit of the national Constitution; it ought to be eliminated; and the object of this section is to do that very work."

Mr. Cole, of California, said: "Mr. President, the amendment proposed by the Senator from Massachusetts has reference to civil rights, reference to benefits to be conferred upon the colored people of this country, which may be classified as the common rights of citizens, and was not intended, as I believe, to comprehend political rights."

"It is stated, and very truly, that, if the section which the Senator from Ohio moves to strike out be adopted, it will change our naturalization laws in a most essential particular. It will open the door for naturalization to all classes of people in the world. Inhabitants from the centre of Africa, from the South Sea islands, from Asia, and all parts of the world, could come in here under that, and, whether assimilating to our institutions or not, would become citizens of the United States, on the same footing with those who originated in Europe and portions of the Continent of America, who may be presumed to have some sympathy with our institutions, and who are similar to us in their origin."

Mr. Ferry, of Connecticut, said: "Mr. President, as I remarked yesterday, I shall vote against this as against other amendments. But with regard to this one in particular I have a special objection, for the amendment which the Senator from Ohio offers is placed before the Senate upon the one specific ground that, if the section which he moves to strike out remain in the bill, our naturalization laws will be extended so as to embrace the Chinese within the scope of their operations. I do not believe that the present discriminations in the naturalization laws are wise or just. I believe that the tendency of those discriminations is to exclude a most valuable immigration into this country. I believe that the one great necessity throughout the central regions of the West and along the Pacific coast is the advent of labor for the purpose of

developing the resources and constructing the vast internal improvements of that region, and I think that any act of the Senate of the United States, which must inevitably be construed as in hostility to the immigration of such labor, is hostile to the best interests of the country."

"Now, placed, as this amendment of the Senator from Ohio is, upon this sole ground, so far as the argument hitherto has gone, that the section as it is will have the operation of extending the naturalization laws, so as to embrace the Chinese within their scope, I cannot consent to the amendment without thereby consenting to an expression of opinion upon the part of the Senate which I believe would be unwise and unjust. And I must confess my surprise that Senators, who have urged and are urging the amendment of the Senator from Massachusetts upon the Senate on the broad ground of human rights alone, should consent to abandon this section which in its scope more widely reaches and affects human rights than all the rest of the amendment together."

The question being taken, resulted as follows:

YEAS—Messrs. Blair, Boreman, Brownlow, Cole, Corbett, Davis of West Virginia, Flanagan, Frelinghuysen, Goldthwaite, Hill, Hitchcock, Johnston, Kelly, Norwood, Nye, Pool, Saulsbury, Sawyer, Scott, Sherman, Stevenson, Stockton, Thurman, Tipton, and Vickers—25.

NAYS—Messrs. Ames, Anthony, Caldwell, Cameron, Carpenter, Chandler, Clayton, Conkling, Cragin, Fenton, Ferry of Connecticut, Ferry of Michigan, Gilbert, Hamilton of Texas, Hamlin, Harlan, Kellogg, Logan, Morrill of Maine, Morrill of Vermont, Morton, Patterson, Pomeroy, Ramsey, Rice, Robertson, Schurz, Spencer, Sumner, Trumbull, West, Wilson, Windom, and Wright—32.

ABSENT—Messrs. Alcorn, Bayard, Buckingham, Casserly, Cooper, Davis of Kentucky, Edmunds, Hamilton of Maryland, Howe, Lewis, Osborn, Pratt, Sprague, and Stewart—14.

So the motion to strike out was not agreed to.

The Vice-President: "The question is on agreeing to the amendment of the Senator from Massachusetts (Mr. Sumner)."

Mr. Frelinghuysen: "I move to strike out on the eleventh and twelfth lines of the first section the words 'of church organizations,' and in the fourteenth line the word 'churches.' I have already given my reasons why I think this amendment should be made."

Mr. Sumner: "Mr. President, I do not desire to protract debate on this question. I have already expressed myself fully upon it. To my mind, it is important to the unity of this measure that the prohibition should be as applicable to churches as to schools and institutions of benevolence. I do not feel the argument of my friend from New Jersey, which he presented so persuasively the other day. To my mind this is simply a proposition to apply to an incorporated association the great principles of our Government, and it does not in any respect interfere with religion, or tend in the least in that way. So it seems to me; and, having that conviction, I cannot myself

by any act of mine allow that part to be sacrificed; but it is all in the hands of the Senate. They will do as they think best by their votes, and I shall submit."

The Vice-President: "The question is on the amendment of the Senator from New Jersey to the amendment of the Senator from Massachusetts."

The question being taken by yeas and nays, resulted as follows:

YEAS—Messrs. Anthony, Boreman, Caldwell, Cameron, Carpenter, Cole, Conkling, Corbett, Cragin, Fenton, Ferry of Michigan, Flanagan, Frelinghuysen, Goldthwaite, Hamilton of Texas, Hamlin, Morrill of Maine, Morrill of Vermont, Morton, Patterson, Pool, Scott, Sherman, Sprague, Tipton, Vickers, Wilson, Windom, and Wright—29.

NAYS—Messrs. Ames, Blair, Clayton, Davis of West Virginia, Gilbert, Hill, Hitchcock, Johnston, Kelly, Logan, Norwood, Osborn, Pomeroy, Ramsey, Rice, Robertson, Schurz, Spencer, Stevenson, Stockton, Sumner, Thurman, Trumbull, and West—24.

ABSENT—Messrs. Alcorn, Bayard, Brownlow, Buckingham, Casserly, Chandler, Cooper, Davis of Kentucky, Edmunds, Ferry of Connecticut, Hamilton of Maryland, Harlan, Howe, Kellogg, Lewis, Nye, Pratt, Saulsbury, Sawyer, and Stewart—20.

So the amendment to the amendment was agreed to.

The Vice-President: "The question recurs on the amendment of the Senator from Massachusetts as amended."

Mr. Carpenter: "I move to amend the amendment by striking out the fourth section."

Mr. Cole said: "I move to strike out the fifth section, and substitute what I send to the Chair."

The Chief Clerk: "The words to be stricken out are—"

That every discrimination against any person on account of color, by the use of the word "white" in any law, statute, ordinance, or regulation, is hereby repealed and annulled.

"And it is proposed in lieu thereof to insert—"

That every discrimination against citizens of the United States on account of color, by the use of the word "white" in any law, statute, ordinance, or regulation, is hereby repealed and annulled.

Mr. Cole: "I am not disposed to detain the Senate more than a minute on this amendment. It will be observed that the only change in the section is in substituting the word 'citizen' for 'person.' This law relates to citizens of the United States, and I apprehend was not really intended to go further than that. We are not in this case legislating for 'all the world and the rest of mankind,' but for citizens of the United States; and, in reference to that view, I apprehend that there can be no great objection to the adoption of this amendment."

Mr. Trumbull said: "It is material to me to get strength to the bill, and that is why I am opposed to this whole thing. The Senator from California certainly does not deceive himself so much as to suppose that Senators do not understand, and that the whole country does not understand, that every person op-

posed to amnesty is voting for these amendments. Where do you find the votes of those who have announced on this floor that they are opposed to amnesty? They are for these amendments all the time. You cannot propose an amendment they will not vote for. But I am for the bill as it passed the House of Representatives, opposed to all these amendments; and I want to say a word about this particular amendment.

"But I did not propose to enter into any argument in reference to this matter. It is amnesty that I want. I want to see the peace of this country restored; I want to see the irritating questions which are keeping up the animosities of the people, engendering bad feeling all the time, which have led to the miserable governments that we now have in some of the Southern States—I want that state of things to be done away with. When we passed the fourteenth amendment, Mr. President, we passed it, so far as it excludes certain persons from holding office, for the public safety; that was the consideration: not to punish anybody. We thought that the public safety of this country required it at that time. When we had just freed the colored people and new governments were to be organized in the then late rebel States, we thought it would not do to let the men who had been making war upon the Government, who were hostile to it, who were hostile to the few Union men that lived in those States, and who were hostile to the colored people, take possession of the newly-organized State governments, because we feared that they would enact laws which would oppress the colored people, and laws that would be unjust to the few Union men who had been there during the war, and it was necessary that time should be allowed for the colored people to become accustomed to their new situation that they might assert and defend their rights; but it was never intended to perpetuate these disabilities. The clause was inserted in the fourteenth amendment, that they might be removed by a two-thirds vote of Congress, with the expectation that they would soon be removed. It was never intended as any thing more than a temporary measure. Now, the public safety does not require it to be continued, as I think, and I want to see the amnesty bill passed, and I am opposed to the whole amendment, because I think it is calculated to defeat amnesty. All these amendments I regard as designed, by many Senators who vote for them, to defeat amnesty, for I find that every Senator who is opposed to removing disabilities votes for these amendments.

"But I wanted to say a word about the particular amendment of the Senator from California. He is aiming to hit the Chinese.

"Mr. President, we have provided by law that the pagan from Africa, the idolater, the cannibal, the Hottentot, can be naturalized under our laws. The Senator from California

wants to exclude from naturalization the ingenious, the laborious, the patient, and the intelligent Asiatic from China or Japan. If the Hottentot is fit to be a naturalized citizen of this country, is not the intelligent Chinaman or Japanese? Sir, if we believe in human rights, in equality, why attempt to make this distinction? That is the only object, I suppose, which the Senator from California had in his amendment, although it goes further and makes a distinction against every unnaturalized person, though of the Caucasian race and from Europe."

The Presiding Officer: "The question is on the amendment to the amendment."

The question being taken, resulted as follows:

YEAS—Messrs. Boreman, Caldwell, Cole, Corbett, Cragin, Flanagan, Frelinghuysen, Gilbert, Morton, Nye, Scott, Sherman, Spencer, West, and Wilson—15.

NAYS—Messrs. Ames, Anthony, Blair, Brownlow, Carpenter, Clayton, Davis of West Virginia, Fenton, Ferry of Connecticut, Goldthwaite, Hamlin, Hill, Hitchcock, Johnston, Kelly, Logan, Morrill of Vermont, Norwood, Osborn, Patterson, Ramsey, Rice, Robertson, Saulsbury, Sawyer, Schurz, Stevenson, Stockton, Sumner, Thurman, Tipton, Trumbull, Vickers, and Wright—34.

ABSENT—Messrs. Alcorn, Bayard, Buckingham, Cameron, Casserly, Chandler, Conkling, Cooper, Davis of Kentucky, Edmunds, Ferry of Michigan, Hamilton of Maryland, Hamilton of Texas, Harlan, Howe, Kellogg, Lewis, Morrill of Maine, Pomeroy, Pool, Pratt, Sprague, Stewart, and Windom—24.

So the amendment to the amendment was rejected.

Mr. Coole: "I now offer a new proviso to that section, upon which I call for the yeas and nays:"

Provided, That this section shall not be construed to alter or affect the laws of the United States concerning naturalization.

The question being taken by yeas and nays, resulted—yeas 15, nays 34.

So the amendment to the amendment was rejected.

Mr. Corbett: "I now move to amend the amendment of the Senator from Massachusetts by adding to the fifth section the following proviso:"

Provided, That this section shall not be held to authorize the naturalization of Chinese.

Mr. Stevenson, of Kentucky, said: "Mr. President, I have voted against every amendment but one to this bill, because I thought they tended to embarrass the great subject of amnesty, the success of which I have had so much at heart. I have been greatly surprised at the votes of certain Senators upon this floor upon the various amendments by which it has been sought to defeat the removal of political disabilities. It does seem to me that their speeches are not in accord with their votes.

"But I utterly deny the constitutionality of the civil rights bill, or this proposed amendment of the Senator from Massachusetts. The Supreme Court of the United States will soon

decide upon the validity of the first, and I can but hope that the latter will never become a law. If Congress proposes to strike down every vestige of local self-government which the Constitution guarantees the States, then it had better at once proclaim its absolute centralism. If a right is exercised by Congress, as proposed by this bill, to dictate to the people of the States the qualification of judges and jurors in State courts; nay, more, that the Federal Government shall, through United States courts, coerce social equality between the races in public schools, in hotels, in theatres, in railways, and other modes of public conveyance, then all local self-government is at an end, and the people of the several States are the mere slaves of the Federal Government. If this amendment prevail, I should be glad to know what right of the States is left."

The question being taken resulted—yeas 13, nays 32.

So the amendment to the amendment was rejected.

The Presiding Officer: "The question now recurs on the amendment of the Senator from Massachusetts."

Mr. Robertson, of South Carolina, said: "Mr. President, I hope this amendment will not prevail. I think it is unwise for the honorable Senator from Massachusetts to attempt to attach his amendment to this bill which requires a two-thirds vote to become a law. I have advocated the equal rights of all citizens since the reconstruction acts have been passed. In 1868 I did it at the expense of every social tie I had in my State. I am still ready and willing to vote for the Senator's proposition as a separate measure, but not to attach it to this bill. The Senator's proposition comes up first in the order of business after we shall have disposed of this measure. I have told him in person that I will stay with him as long as any Senator on this floor will stay to pass a measure giving equal rights to all citizens of the United States."

The Vice-President: "The question is on the amendment of the Senator from Massachusetts (Mr. Sumner), on which question the yeas and nays have been ordered."

The Chief Clerk announced the result of the roll-call as follows:

YEAS—Messrs. Ames, Anthony, Brownlow, Cameron, Chandler, Clayton, Conkling, Cragin, Fenton, Ferry of Michigan, Frelinghuysen, Gilbert, Hamlin, Harlan, Morrill of Vermont, Morton, Osborn, Patterson, Pomeroy, Ramsey, Rice, Sherman, Spencer, Sumner, West, Wilson, Windom, and Wright—28.

NAYS—Messrs. Blair, Boreman, Carpenter, Cole, Corbett, Davis of West Virginia, Ferry of Connecticut, Goldthwaite, Hamilton of Texas, Hill, Hitchcock, Johnston, Kelly, Logan, Morrill of Maine, Norwood, Pool, Robertson, Saulsbury, Sawyer, Schurz, Scott, Stevenson, Stockton, Thurman, Tipton, Trumbull, and Vickers—28.

ABSENT—Messrs. Alcorn, Bayard, Buckingham, Caldwell, Casserly, Cooper, Davis of Kentucky, Ed-

munda, Flanagan, Hamilton of Maryland, Howe, Kellogg, Lewis, Nye, Pratt, Sprague, and Stewart—17.

The Vice-President: "The Senate being equally divided, by the Constitution the Vice-President must give the casting vote. Voting upon this amendment as a whole, without concurrence with all the features contained in it, the Chair votes in the affirmative, and the amendment is agreed to.

The next pending question will be on the amendment of the Senator from Vermont (Mr. Morrill), to add a fourth class of exceptions to the bill."

Fourth. All persons who have been or shall be members of what is known as the Ku-klux Klan, or any organization existing, or which may exist, for like objects and purposes.

The question being taken, resulted as follows:

YEAS—Messrs. Ames, Anthony, Boreman, Brownlow, Caldwell, Cameron, Carpenter, Chandler, Clayton, Cole, Conkling, Corbett, Ferry of Michigan, Flanagan, Frelinghuysen, Gilbert, Hamilton of Texas, Hamlin, Harlan, Morrill of Vermont, Morton, Osborn, Patterson, Pomeroy, Pool, Ramsey, Robertson, Sawyer, Spencer, Sumner, West, Wilson, Windom, and Wright—34.

NAYS—Messrs. Blair, Davis of West Virginia, Goldthwaite, Hill, Johnston, Kelly, Morrill of Maine, Norwood, Saulsbury, Schurz, Stevenson, Stockton, Thurman, Tipton, Trumbull, and Vickers—18.

ABSENT—Messrs. Alcorn, Bayard, Buckingham, Casserly, Cooper, Cragin, Davis of Kentucky, Edmunds, Fenton, Ferry of Connecticut, Hamilton of Maryland, Hitchcock, Howe, Kellogg, Lewis, Logan, Nye, Pratt, Rice, Scott, Sherman, Sprague, and Stewart—23.

So the amendment was adopted.

Mr. Morton: "I offer a further amendment, with a view to give effect to the one just adopted, by putting it into the oath."

The Chief Clerk read the amendment, which was in section two, line six, after the word "same," to insert the words "and that he is not, and has never been, a member of any association commonly known as the Ku-klux Klan."

The yeas and nays were ordered; and, being taken, resulted—yeas 33, nays 12.

So the amendment was agreed to.

Mr. Thurman: "Mr. President, ever since I have held a seat in this body I have been a believer in the good policy of removing the disabilities imposed by the fourteenth amendment.

"But, sir, while I am in favor of their removal, while I believe that public policy requires it, that it would be a measure tending to produce peace in the country, and much more than that, that it would give to some States (which are now afflicted with the worst governments almost on the face of the globe) governments under which it would be tolerable to live, yet I cannot, even for the purpose of removing these disabilities, vote for a bill that I believe to be unconstitutional, as I do believe this bill to be since the amendment of the Senator from Massachusetts (Mr. Sumner) has been fastened upon it. If I vote for

amnesty, I am compelled to take it in the form it now stands with the amendment of the Senator from Massachusetts. I am compelled to vote for that which I think we have no right to enact into a law in order to vote for that which we have a perfect constitutional right to pass. That which is unconstitutional in my judgment is tied to that which is constitutional; they are made inseparable; and I am necessarily driven by the respect that I have for the Constitution, and the oath I have taken to support it, to vote against this bill in its present shape."

Mr. Robertson: "Inasmuch as the friends of equal rights have chosen to risk their amendment on this bill which requires a two-thirds vote to become a law, I will join hands with them now in advocating the passage of the bill as amended, and I hope the friends of equal rights and amnesty will now vote together and let us pass the bill."

The bill was ordered to a third reading, and was read the third time.

The Vice-President: "The question is on the passage of the bill, which requires a two-thirds vote."

Mr. Sumner: "Mr. President, I shall vote for the bill as amended. That bill is now elevated and consecrated. Whoever votes against it must take the responsibility of voting against a great measure for the assurance of equal rights. He must take the responsibility of setting himself against a final measure for the establishment of reconstruction. Senators object to the association of equal rights with amnesty. Sir, they naturally go together."

Mr. Sawyer, of South Carolina: "I say the effect of the tactics of the Senator from Massachusetts on this bill has been to defeat not only the civil rights bill but the amnesty bill. That is patent here to-day; and it is doubtful if the bill, as amended by him, will receive a majority of the votes of the Senate.

"It is also perfectly patent to the Senate, it is perfectly patent to the country, that his bill could have been passed here at any time by a majority vote as an independent measure, and that the amnesty bill could be passed by the requisite constitutional majority as an independent measure; and yet the Senator comes here and tells me that it is the greatest mistake of my life that I have not followed in his path to do this slaughter-house work on both these measures. Sir, it is too much for mortal men to bear with equanimity when they have seen a measure for which they have as much affection as for this amnesty measure, or one of which they desire the passage so ardently as most of us on the Republican side of the Chamber do—an act to protect the rights of our fellow-citizens wherever they may go—I say it is too much for human nature to bear patiently with tactics, the evident effect of which, whatever the intention may be, is so disastrous to both; and then to be lectured by the Senator from Massachusetts as we are lectured here

day after day, and charged with being false to human rights, when, in fact, if he had adopted the course suggested by ordinary prudence, both bills might have become laws by this time, or certainly by the end of the present month. I say such lecturing is not warranted by the position even of that distinguished Senator. He has no right to come up here and tell Senators that they have made mistakes of this kind, in view of the fact that his tactics have defeated both of these bills for the present, and perhaps for the session."

Mr. Sumner: "Mr. President, the Senator says the two subjects have no sort of natural relation. There is his mistake. They have a natural relation which the Senator is so unhappy as not to see. 'Natural relation' is very simple. Do not be generous to your rebels until you are just to your fellow-citizens. The Senator does not see it. He is swift—"

Mr. Sawyer: "With the permission of the Senator I should like to ask if I did not say to him to-day that, if he would bring up his bill to-morrow as an independent measure, I would vote for it and let amnesty go over; but no, he did not want that."

Mr. Sumner: "I know the Senator said that, but I asked the Senator to vote for equal rights when he had an opportunity. He has had the opportunity now for six weeks, and he has not been willing to employ it; but he rises here and says that the measure of equal rights could pass in a day. The Senator is not old in this Chamber, but he is old enough to know that he ought not to make any such assertion. Why, sir, that bill of mine has been before the Senate now for nearly two years; I am not inattentive or inactive in the discharge of my duties; and never until the amnesty bill was before the Senate did I find any opportunity of calling the attention of the Senate to it."

The Vice-President: "The question is on the passage of this bill, which requires a two-thirds vote. The Secretary will call the roll."

The yeas and nays were then taken, with the following result:

YEAS—Messrs. Ames, Anthony, Brownlow, Caldwell, Cameron, Clayton, Conkling, Cragin, Fenton, Ferry of Michigan, Flanagan, Frelinghuysen, Gilbert, Hamilton of Texas, Hamlin, Harlan, Kellogg, Morrill of Vermont, Morton, Osborn, Patterson, Pomeroy, Pool, Ramsey, Rice, Robertson, Sawyer, Sherman, Spencer, Sumner, West, Wilson, and Windom—33.

NAYS—Messrs. Blair, Boreman, Davis of West Virginia, Goldthwaite, Hill, Johnston, Kelly, Logan, Morrill of Maine, Norwood, Saulsbury, Scott, Stevenson, Stockton, Thurman, Tipton, Trumbull, Vickers, and Wright—19.

ABSENT—Messrs. Alcorn, Bayard, Buckingham, Carpenter, Casserly, Chandler, Cole, Cooper, Corbett, Davis of Kentucky, Edmunds, Ferry of Connecticut, Hamilton of Maryland, Hitchcock, Howe, Lewis, Nye, Pratt, Schurz, Sprague, and Stewart—21.

The Vice-President: "Upon the passage of this bill the yeas are 33, and the nays 19. Two-thirds not voting in the affirmative, the bill is rejected."

In the Senate, on May 8th, Mr. Boreman, of West Virginia, said: "Mr. President, in the absence of the chairman of the Committee on the Removal of Political Disabilities, the duty is devolved on me of moving to take up the House bill for the removal of political disabilities, ordinarily called the amnesty bill."

The motion was agreed to.

The Vice-President: "The Secretary will read the amnesty bill, which has been taken up by vote of the Senate."

The Chief Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That all legal and political disabilities imposed by the third section of the fourteenth article of amendments to the Constitution of the United States on persons therein mentioned, because of their having engaged in insurrection or rebellion against the United States, or given aid or comfort to the enemies thereof, be, and the same are hereby, removed: *Provided*, That this act shall not apply to, or in any way affect or remove, the disability of any person included in either of the following classes, namely: first, members of the Congress of the United States who withdrew therefrom and aided the rebellion; second, officers of the Army or Navy of the United States who, being above the age of twenty-one years, left said Army or Navy and aided the rebellion.

SEC. 2. That, before any person shall be entitled to the benefit of this act, he shall, within the district where he resides, before a clerk of some court of the United States, or a United States commissioner, take and subscribe an oath or affirmation to support the Constitution of the United States, and to bear true faith and allegiance to the same; which oath or affirmation shall be forwarded by said officer to the Secretary of State of the United States, who shall cause a list of all persons complying with the provisions of this act to be laid before Congress at the opening of each session thereof; and the officer before whom such oath or affirmation is made shall give to the person taking it a certificate of the fact, under such forms and regulations as the Secretary of State shall prescribe.

Mr. Boreman said: "Mr. President, I have no disposition to discuss at any considerable length the subject of amnesty, or the removal of political disabilities from those who are laboring under such disabilities by reason of the provisions of the fourteenth amendment to the Constitution of the United States. I have charge of this bill simply as the organ of the committee on this subject, in the absence of the chairman. I expect, however, to vote for the bill if it shall be put upon its passage in its present form, or without any marked amendments to the provisions as they now exist in the bill."

Mr. Sumner: "Mr. President, I have no desire to discuss the general question of amnesty, nor to discuss any other question; but, as I am about to make a motion, I shall state in one word why I do it.

"I propose to move to strike out all after the enacting clause and insert what is generally known as the civil rights bill, being the bill on which the Senate has already voted several times, and which, as is known, is now pending in the other House, but, owing to the

rules of the House, no decision upon it there has yet been reached. I shall take the form of the bill which is now pending in the other House, which, in substance and almost precisely in language, is that on which the Senate acted. There are one or two verbal changes, but not important in principle or in any way affecting any principle of the bill.

"I do this, sir, intending to follow it up by a second motion to strike out the enacting clause, which requires a two-thirds vote, and insert the ordinary enacting clause; and then, in the third place, to strike out the title and to insert the title of the civil rights bill.

"I do this as a practical way of giving to our friends in the other House an opportunity of acting on the civil rights bill when they shall be on an equality with those in this Chamber who are in favor of amnesty.

"As is well known, the amnesty bill has already passed the other House, and only waits a vote in this Chamber, with the signature of the President, to be a law. My anxiety is that the civil rights bill shall, so far as possible, be in the same situation, that it should pass the Senate, and I hope then that it will pass the other House, and I cannot doubt that it will receive the signature of the President."

The Chief Clerk read the amendment of Mr. Sumner, which was to strike out all after the enacting clause of the bill, and in lieu thereof to insert the bill hitherto offered by him as an amendment to the amnesty bill, which may be found on another page.

Mr. Ferry, of Connecticut: "I send up an amendment, to come in as an additional section, section six."

The Chief Clerk read the proposed amendment as follows:

SEC. — That all legal and political disabilities imposed by the third section of the fourteenth article of amendments to the Constitution of the United States on persons therein mentioned, because of their having engaged in insurrection or rebellion against the United States, or given aid or comfort to the enemies thereof, be, and the same are hereby, removed: *Provided*, That this act shall not apply to, or in any way affect or remove the disability of any person included in either of the following classes, namely: first, members of the Congress of the United States who withdrew therefrom and aided the rebellion; second, officers of the Army or Navy of the United States who, being above the age of twenty-one years, left said Army or Navy and aided the rebellion.

The Presiding Officer: "The question is on the amendment of the Senator from Connecticut to the amendment of the Senator from Massachusetts."

Mr. Scott, of Pennsylvania, said: "My attention was directed otherwise, and I simply wish to make an inquiry whether the amendment now pending is the amnesty bill offered as an amendment to the civil rights bill. Is that the form of the amendment?"

Mr. Conkling: "Let me answer the Senator. The amendment is just that, except that the amendment consists not of the whole amnesty

bill, but only of the first section of the amnesty bill precisely as it came from the House."

Mr. Scott: "Then it is an offer to add to the civil rights bill, which can be passed by a majority, the amnesty bill which will require two-thirds."

The question being taken, resulted as follows:

YEAS—Messrs. Alcorn, Ames, Bayard, Blair, Boreman, Buckingham, Caldwell, Cameron, Carpenter, Casserly, Clayton, Cooper, Corbett, Davis of West Virginia, Edmunds, Ferry of Connecticut, Ferry of Michigan, Flanagan, Goldthwaite, Hamilton of Maryland, Hamilton of Texas, Harlan, Hitchcock, Johnston, Kellogg, Kelly, Norwood, Osborn, Pomeroy, Pratt, Saulsbury, Sprague, Stevenson, Stewart, Tipton, Trumbull, Vickers, and West—38.

NAYS—Messrs. Cragin, Fenton, Gilbert, Hamlin, Morrill of Vermont, Morton, Pool, Rice, Scott, Sherman, Spencer, Sumner, Wilson, and Windom—14.

ABSENT—Messrs. Anthony, Brownlow, Chandler, Cole, Conkling, Davis of Kentucky, Frelinghuysen, Hill, Howe, Lewis, Logan, Morrill of Maine, Nye, Patterson, Ramsey, Ransom, Robertson, Sawyer, Schurz, Stockton, Thurman, and Wright—22.

So the amendment to the amendment was agreed to.

The Vice-President: "The question recurs on the amendment of the Senator from Massachusetts as amended."

Mr. Boreman: "I offer this as an additional section to the amendment, to come in after the section just inserted."

SEC. — That, before any person shall be entitled to the benefit of the preceding section of this act, he shall, within the district where he resides, before a clerk of some court of the United States, or a United States commissioner, take and subscribe an oath or affirmation to support the Constitution of the United States, and to bear true faith and allegiance to the same; which oath or affirmation shall be forwarded by said officer to the Secretary of State of the United States, who shall cause a list of all persons complying with the provisions of this act to be laid before Congress at the opening of each session thereof; and the officer before whom such oath or affirmation is made shall give to the person taking it a certificate of the fact, under such forms and regulations as the Secretary of State shall prescribe.

The Vice-President: "The question is on the amendment offered by the Senator from West Virginia to the amendment of the Senator from Massachusetts, which is the second section of the original House bill."

Mr. Trumbull called for the yeas and nays, and they were ordered; and resulted as follows:

YEAS—Messrs. Alcorn, Ames, Anthony, Boreman, Buckingham, Caldwell, Cameron, Clayton, Conkling, Corbett, Cragin, Edmunds, Fenton, Ferry of Michigan, Flanagan, Gilbert, Hamlin, Harlan, Hitchcock, Morton, Osborn, Pomeroy, Pool, Pratt, Scott, Sherman, Spencer, Sumner, West, Wilson, and Windom—31.

NAYS—Messrs. Bayard, Blair, Casserly, Cooper, Davis of West Virginia, Ferry of Connecticut, Goldthwaite, Hamilton of Maryland, Hamilton of Texas, Hill, Johnston, Kellogg, Kelly, Logan, Morrill of Vermont, Norwood, Rice, Saulsbury, Sprague, Stevenson, Stewart, Tipton, Trumbull, and Vickers—24.

ABSENT—Messrs. Brownlow, Carpenter, Chandler, Cole, Davis of Kentucky, Frelinghuysen, Howe,

Lewis, Morrill of Maine, Nye, Patterson, Ramsey, Ransom, Robertson, Sawyer, Schurz, Stockton, Thurman, and Wright—19.

So the amendment to the amendment was agreed to.

Mr. Trumbull said: "I move to strike out the first, second, third, fourth, and fifth sections of the amendment as amended. My object in making that motion is to bring the Senate to a direct vote on the amendment of the Senator from Massachusetts, and I trust the Senate will vote it down, and then we shall have the amnesty bill, and let us pass it."

Mr. Wilson: "What sections?"

Mr. Trumbull: "My motion is to strike out all of the amendment as proposed by the Senator from Massachusetts from the amendment as amended."

"I will say one word, that it may be understood what my object is and the effect of this motion. I am in favor of an amnesty bill. The House of Representatives has sent us such a bill. I regard this attempt to put something else upon it as an effort to defeat the amnesty bill; that is the effect of it; and whatever influences Senators may vote under, however the Senator from Ohio may undertake to force the House of Representatives to come to a vote on some other measure by his action here, the whole country and the whole world will understand that this is an effort to defeat amnesty. Now, let us have a direct vote on the proposition of the Senator from Massachusetts, and know whether amnesty is to be defeated by forcing white and colored children into the same schools, and by undertaking to force in the State courts certain persons upon juries and to regulate the jury systems of the various States, and other provisions of that kind."

The Vice-President: "The question is on the amendment to the amendment, offered by the Senator from Illinois, to strike out from this amendment, now containing seven sections, the first five sections."

The question being taken, resulted as follows:

YEAS—Messrs. Alcorn, Bayard, Boreman, Carpenter, Casserly, Cooper, Corbett, Cragin, Davis of West Virginia, Fenton, Ferry of Connecticut, Goldthwaite, Hamilton of Maryland, Hamilton of Texas, Hill, Hitchcock, Johnston, Kelly, Logan, Norwood, Pratt, Saulsbury, Scott, Sprague, Stevenson, Stewart, Tipton, Trumbull, and Vickers—29.

NAYS—Messrs. Ames, Anthony, Buckingham, Caldwell, Cameron, Chandler, Clayton, Conkling, Edmunds, Ferry of Michigan, Flanagan, Gilbert, Hamlin, Harlan, Howe, Kellogg, Morrill of Vermont, Morton, Osborn, Pomeroy, Pool, Ramsey, Rice, Sherman, Spencer, Sumner, West, Wilson, and Windom—29.

ABSENT—Messrs. Blair, Brownlow, Cole, Davis of Kentucky, Frelinghuysen, Lewis, Morrill of Maine, Nye, Patterson, Ransom, Robertson, Sawyer, Schurz, Stockton, Thurman, and Wright—16.

The Vice-President: "On this question the Senate are equally divided. The Chair votes in the negative, and the first five sections are not stricken out."

Mr. Vickers, of Maryland, said: "I move to

amend the amendment in section one, lines fourteen and fifteen, by striking out the words 'or State.' My object is to confine the operation of this bill, in regard to cemetery associations and benevolent institutions, to such as are incorporated by national authority, not by State authority. I know of no power in the General Government to interfere with State corporations, for they are contracts between the State and the corporators, and, being in the nature of a contract, the General Government has no right to interfere with it. Even the State cannot interfere after the contract is once made. I desire to confine this to institutions incorporated by the national Government, and not to any incorporated by State authority."

Mr. Boreman: "I think this amendment should prevail, and I will state my reason in a moment. It seems to me that this provision, if allowed to remain as it is, is an invasion of private life. It is a declaration that cemetery companies and benevolent institutions, incorporated by State or national authority, shall not be allowed to manage their own property. That is the effect of it."

"So in regard to benevolent institutions. What right have we to say that a benevolent institution, simply because they get a dozen lines of a charter to allow them to transact business in a chartered name, owning a private house in which to meet for benevolent purposes, shall be compelled to allow anybody and everybody to come in there? The bill makes no exception in regard to secret associations. It applies to them as well as to others. It does seem to me that this is going too far, and that this provision, if it is to be retained at all, ought to be limited to those organizations that are incorporated by national authority. I may be wrong about this matter; but, as I remarked yesterday, it seems to me an invasion of private rights that I cannot support by my vote."

Mr. Morton: "I should like to hear the amendment reported again."

The Chief Clerk: "The clause now reads: 'By trustees and officers of cemetery associations and benevolent institutions incorporated by national or State authority;' and it is proposed to strike out the words 'or State.'"

The Vice-President: "The yeas and nays will now be taken on the amendment to the amendment, offered by the Senator from Maryland, to strike out the words 'or State.'"

The result was announced—yeas 21, nays 21.

The Vice-President: "The Senate being equally divided, the Chair votes in the affirmative. The amendment to the amendment is agreed to."

Other amendments were adopted.

The Vice-President: "The question now is on agreeing to this amendment of the Senator from Massachusetts as amended by the Senate, which now embraces seven sections, as a substitute for the original House amnesty bill."

Mr. Trumbull: "I understand that, if we vote down this amendment, then we have before us the amnesty bill as it passed the House."

Mr. Edmunds: "Yes, Mr. President, and I understand that if we vote in favor of this amendment we vote amnesty to the disabled traitors and equal rights to the colored men; they go hand in hand together. So we all understand it."

The result was announced as follows:

YEAS—Messrs. Ames, Anthony, Buckingham, Caldwell, Cameron, Clayton, Conkling, Corbett, Edmunds, Ferry of Michigan, Flanagan, Gilbert, Harlan, Howe, Kellogg, Morrill of Vermont, Morton, Osborn, Pomeroy, Pool, Ramsey, Rice, Spencer, Sumner, West, Wilson, and Windom—27.

NAYS—Messrs. Alcorn, Boreman, Carpenter, Casserly, Cooper, Cragin, Davis of West Virginia, Fenton, Ferry of Connecticut, Goldthwaite, Hamilton of Maryland, Hamilton of Texas, Hill, Hitchcock, Johnston, Kelly, Logan, Norwood, Pratt, Saulsbury, Scott, Sprague, Stevenson, Stewart, Tipton, Trumbull, Vickers, and Wright—28.

ABSENT—Messrs. Bayard, Blair, Brownlow, Chandler, Cole, Davis of Kentucky, Frelinghuysen, Hamlin, Lewis, Morrill of Maine, Nye, Patterson, Ransom, Robertson, Sawyer, Schurz, Sherman, Stockton, and Thurman—19.

The amendment, as amended, was rejected.

Mr. Sumner: "I now move what is known as the civil rights bill as amended, as an addition to the pending bill."

The Vice-President: "The Senate have refused to strike out the House amnesty bill and insert the amendment of the Senator from Massachusetts, as amended. The Senator from Massachusetts now moves to add to the amnesty bill, so that if agreed to it shall go to the House as an amendment, the five sections popularly known as the civil rights bill."

The question being taken, resulted as follows:

YEAS—Messrs. Ames, Anthony, Buckingham, Caldwell, Cameron, Clayton, Conkling, Corbett, Edmunds, Ferry of Michigan, Flanagan, Gilbert, Harlan, Howe, Kellogg, Morrill of Vermont, Morton, Osborn, Pomeroy, Pool, Ramsey, Rice, Spencer, Sumner, West, Wilson, Windom, and Wright—28.

NAYS—Messrs. Alcorn, Boreman, Carpenter, Casserly, Cooper, Cragin, Davis of West Virginia, Fenton, Ferry of Connecticut, Goldthwaite, Hamilton of Maryland, Hamilton of Texas, Hill, Hitchcock, Johnston, Kelly, Lewis, Logan, Norwood, Pratt, Saulsbury, Scott, Sprague, Stevenson, Stewart, Tipton, Trumbull, and Vickers—28.

ABSENT—Messrs. Bayard, Blair, Brownlow, Chandler, Cole, Davis of Kentucky, Frelinghuysen, Hamlin, Morrill of Maine, Nye, Patterson, Ransom, Robertson, Sawyer, Schurz, Sherman, Stockton, and Thurman—18.

The Vice-President: "Upon agreeing to the amendment of the Senator from Massachusetts, to add the five sections known as the civil rights bill to the House amnesty bill, the yeas are 28, and the nays are 28. The Chair votes in the affirmative, and the amendment is agreed to."

The bill was reported to the Senate as amended.

The amendments were ordered to be engrossed, and the bill to be read a third time.

The bill was read the third time.

The Vice-President: "The question is, Shall this bill pass? which by the Constitution requires a two-thirds vote."

The result was announced as follows:

YEAS—Messrs. Ames, Buckingham, Caldwell, Clayton, Conkling, Corbett, Cragin, Edmunds, Fenton, Ferry of Michigan, Flanagan, Gilbert, Harlan, Hitchcock, Howe, Kellogg, Lewis, Morrill of Vermont, Morton, Osborn, Pomeroy, Pool, Pratt, Ramsey, Rice, Spencer, Sprague, Stewart, Sumner, West, Wilson, and Windom—32.

NAYS—Messrs. Alcorn, Bayard, Blair, Boreman, Casserly, Cooper, Davis of West Virginia, Ferry of Connecticut, Goldthwaite, Hamilton of Maryland, Hamilton of Texas, Hill, Johnston, Kelly, Logan, Norwood, Saulsbury, Stevenson, Tipton, Trumbull, Vickers, and Wright—22.

ABSENT—Messrs. Anthony, Brownlow, Cameron, Carpenter, Chandler, Cole, Davis of Kentucky, Frelinghuysen, Hamlin, Morrill of Maine, Nye, Patterson, Ransom, Robertson, Sawyer, Schurz, Scott, Sherman, Stockton, and Thurman—20.

The Vice-President: "On the passage of this bill the yeas are 32, and the nays are 22. Two-thirds not having voted in the affirmative, the bill is rejected."

On May 10th, the Senate, as in Committee of the Whole, proceeded to consider the bill to amend an act entitled "An act to amend an act approved May 31, 1870, entitled 'An act to enforce the rights of citizens of the United States to vote in the several States of the Union, and for other purposes.'"

The bill was reported from the Committee on Privileges and Elections with amendments.

Mr. Morton, of Indiana, said: "Mr. President, there is a law on the statute-book now authorizing the judges of the circuit court of the United States to appoint inspectors of elections in cities having twenty thousand inhabitants or more; these inspectors to be of opposite politics, to be present at the registration, if there be a registration law in the State, to be present at the election of Representatives to Congress, at the reception of the votes; not to leave the ballot-box until the votes are counted, and to put their statement upon the certificate of the result of the election. That law also authorizes the marshal of the district to appoint deputy-marshals in such cities to a number necessary to preserve public order and to insure a fair and free election.

"The object of this bill is to extend the first provision of that law, of which I have spoken, to every voting precinct in the United States, to authorize the circuit judge, or to allow the circuit judge, in case he cannot serve himself, to direct the district judge to appoint inspectors of election in every voting precinct, to serve without pay, to be present at the registration, at the voting, to remain with the box until the votes are counted out, and to be of opposite politics, to belong each to one of the great parties. In case there should be three parties, I suppose the duty would be to appoint one from the two principal parties. That

contingency is not provided for. The object of the bill is simply to secure a fair and honest election, to give nobody the advantage. The bill is in the interest of liberty, in the interest of good government, in the interest of justice. It is not in the interest of any party, or of any faction. It was presented for the purpose of preventing the wrongs that have been complained of in some of the States, and to insure fair elections. This is the whole purpose of the bill so far as I know."

Mr. Wright, of Iowa, said: "I understand that, so far as the provisions of this bill are concerned, it is the intention of the bill to confer power on the Federal judges to appoint these supervisors in the several election districts and precincts; that is to say, their power is invoked and action is taken when application is made by two citizens of any congressional district. But am I to understand that, when this application is made by any two citizens of a congressional district, then the power obtains to appoint in all the election districts and precincts, whether application is made from such precincts and districts, or not? That is the inquiry I suggest to the chairman."

Mr. Morton: "I understand the effect of the section as now amended to be this: whenever any two citizens of a congressional district shall make this request in writing to the circuit judge, the court shall be opened, and thereupon he shall appoint two citizens of opposite parties in each election district where they ask it."

Mr. Wright: "That is exactly what I understand it to mean; but, as it stands now, it is not necessary that it should be asked by the citizens of the voting precinct or district in order to appoint, but the power is given to appoint, whether it is asked or not for that particular precinct or district. There is no doubt but that I am right on that subject. Now, I suggest to the chairman that he strike out the words 'in the manner herein prescribed,' and insert 'by two citizens thereof.' In order to get the question before the Senate, I move to strike out, in line twenty-eight, the words 'in the manner herein prescribed,' and insert 'by two citizens thereof;' and then it will read:"

For each district or voting precinct in said congressional district as shall, by two citizens thereof, have applied therefor.

Mr. Morton: "I think that would be an improvement. I am willing to accept the amendment."

The Presiding Officer (Mr. Carpenter in the chair): "The question is on the amendment of the Senator from Iowa."

The amendment was agreed to.

Mr. Trumbull, of Illinois, said: "The committee reported an amendment striking out 'circuit' and inserting 'district,' and it was not agreed to. I wish to call the attention of the Senator from Indiana now to the condition in which the bill is left. I was a little sur-

prised that the Senate did not agree to that recommendation of the committee. It seems to me it could not have been considered. We have but one circuit judge in a circuit. Take, for example, the Southern circuit, of which Judge Woods is the judge. I think his residence is in Alabama. That circuit extends from Texas to Florida. Florida and Texas are both in the circuit of which Judge Woods is the judge, who resides somewhere in Alabama. Suppose they want these supervisors in Florida: it is utterly impossible to get at the judge in Alabama.

"The object of the law is to have a fair election. That is the intent of it, of course. The machinery of it ought to be so arranged as to enable the people to take the advantage of it. If it is to serve any good purpose, it seems to me that it would have been greatly better to have adopted those amendments of the committee."

Mr. Morton: "The third section of the law to which this bill is an amendment provides that—"

Whenever, from sickness, injury, or otherwise, the judge of the circuit court of the United States in any judicial circuit shall be unable to perform and discharge the duties by this act imposed, it shall be his duty, and he is hereby required, to select and to direct and assign to the performance thereof, in his place and stead, such one of the judges of the district courts of the United States, within his circuit, as he shall deem best.

"This provides expressly for the difficulty suggested by the Senator from Illinois. He, however, intimates that there may be an obscurity in the construction of this third section; that the circuit judge can select but one district judge to perform his duties, in case he is not able to do so. In order to meet the objection, and to remove any obscurity in the third section of the law of 1871, I offer the following amendment as an additional section to this bill: "

That the third section of the act to which this is an amendment be so amended as to authorize each judge of the circuit court of the United States to appoint one or more of the judges of the district courts of the United States, within his circuit, to discharge the duties contemplated by this act and the one to which it is an amendment.

The Presiding Officer: "The question is on the amendment of the Senator from Indiana."

The amendment was agreed to.

The bill was reported to the Senate as amended.

Mr. Trumbull: "Now, with a view to getting at the direct question, I move to strike out the word 'circuit' and insert the word 'district,' just as the Committee on Privileges and Elections originally reported it."

Mr. Morton: "I have simply to say that, upon reflection and further consideration, I hope that the change proposed by the Senator from Illinois will not be adopted."

Mr. Casserly, of California, said: "There are sixty or seventy district judges, all of

them, of course, appointed for their ability and integrity. There are nine circuit judges, of whom I do not wish to say any thing different. The great question is, when you are dealing with a body of appointments so great as that provided for by this bill, amounting to, I will say, speaking now within limits (of course, a great deal by guess-work), not less than six or seven thousand men, taking the whole country through, whether you will give the power to appoint that great number of officers to sixty or seventy men, or to nine? It is a question whether the nine men could have the time, the information, or the opportunity, in any shape, to make these appointments as efficiently as the sixty or seventy district judges. It is an enormous addition to the labor and responsibilities already imposed upon your circuit judges."

Mr. Morton: "I desire to say but one word. The object is to give to this law as high a character and inspire as much confidence on the part of the country as may be possible. I think it important, therefore, for these considerations, that, in the States where the circuit judges live, they ought to perform these duties, and perhaps in other States; and the provision that has just been adopted enables them, by calling upon the district judges, to require them to perform the duties where they themselves cannot. It seems to me there can be no objection to the bill as it now stands, in this respect."

Mr. Thurman said: "If the circuit judge makes these appointments, it is very obvious that he must make them upon the representations of some other person or persons. He cannot have personal knowledge in respect to every election precinct in the three or four States composing his circuit. Indeed, the district judge cannot have that personal knowledge in respect to a great many precincts in his district, although that is usually only about the half of a State; and yet the district judge will have much greater personal knowledge than the circuit judge can have; and the district judge will also have more knowledge of the persons who recommend individuals to him for appointment, a much better knowledge than the circuit judge can have."

"Take the case, for instance, of Judge Emmons, in Detroit. He is there, and he is asked to make appointments in Tennessee; he is asked to do it ten days before the election. A paper is presented to him signed by ten men, citizens in an election precinct, asking him to appoint two supervisors for that precinct. He says: 'I do not know two men in the precinct; I do not know anybody who does know a man in the precinct.' What then must he do? The law is mandatory; he shall make the appointment. He has no discretion; he must make it. How, then, can he get two names out of that precinct, except from the men who present to him at Detroit the paper demanding their appointment? The consequence of the

law, as it now stands, therefore, is simply this: that the men who demand the appointment also make the appointment. That is the fact."

"I say, Mr. President, if this bill is to pass at all, and if it is to be any thing like a fair bill, to accomplish the purposes that are professed, the amendment offered by the Senator from Illinois ought to prevail."

Mr. Trumbull said: "It has been thought by Congress advisable to take, to some extent, the supervision of the election of members of Congress. And, in doing that, we have passed a law by which we proposed originally to appoint these supervisors only in the large cities. The Senator from New Jersey says we confined the appointment to the circuit judges. There might have been more propriety for it then. It was only in cities, I think, containing more than twenty thousand inhabitants, that any provision was originally made for appointing these inspectors, and, of course, there were but few such cities in a circuit. Now it is proposed to extend the law so as to authorize the appointment of inspectors in every precinct in the United States when a congressional election takes place, and it is proposed to confine the appointment of these inspectors, one of each party in those precincts, to the judge of the circuit court. There is but one judge of the circuit court in a circuit. These circuits consist of many States, all of them of several States."

"Now, Mr. President, I suppose there must be somewhere, but I do not know who it is, some judge whom it is supposed it will not do to trust to appoint these persons—I do not know what else this can amount to—and who that judge is I do not know. I presume this law is supposed to be chiefly desirable in the Southern States, where all the judges have been appointed within a few years. I have no idea that in the State of Illinois anybody will apply to a judge to have any one appointed. I do not suppose they will in the State of Indiana. We have never had any such officers appointed in my State hitherto, and I trust there will be no necessity for it. The elections in the State of Illinois, so far as I know or believe, have been fair elections. I do not mean to say that an illegal vote was never cast. Probably, in half a million votes there would be more or less illegal votes cast; but that there ever were any considerable frauds practised at the elections in my State I do not believe, or any frauds that these supervisors appointed by the judge of the court would have prevented. So that this law is to have its application, I suppose, chiefly in the Southern States. Throughout the Northern States, except in some of the large cities like New York or Philadelphia, I suppose, it will have no practical operation whatever."

Mr. Edmunds, of Vermont, said: "I do not wish to waste the time of the Senate, but we considered this matter, I think, very fully in the

Judiciary Committee a year or two ago, and reported the bill giving this power of appointment to the circuit judges upon consideration, as being that body of men who would be most removed from the intensity of local politics in any particular State or town where the district judges happened to live, and would be therefore more fair and impartial persons to act independently and rightly upon such subjects; and I thought that provision had the approval of my friend from Illinois."

Mr. Norwood, of Georgia, said: "If the honorable Senator will pardon me a moment, was not the bill he refers to limited to cities with a population of twenty thousand?"

Mr. Edmunds: "Yes, sir; that is the only law there is on the subject, except this one, of course."

Mr. Norwood: "And this bill applies to every precinct in the country. Does not the Senator see the vast difference between the powers that would be exercised by the circuit judges then, and the powers that are to be exercised now, when, instead of its being limited to cities having a population of over twenty thousand, it goes into every precinct, however small and however distant?"

Mr. Edmunds: "Yes; I do see a vast numerical difference, but the difference is not one of principle. You might as well argue, if it is right for a circuit judge to try one cause, when there were twenty to be tried, he would not be a competent man to try those, as to argue that the circuit judge is unfit to perform this duty."

Mr. Casserly: "Mr. President, the Senator from Vermont has come somewhat late into the fray, very much astonished as well as exceedingly suspicious. I will first refer to his astonishment.

"He is astonished that objections now should be made to investing the appointment of eight, ten, or twelve thousand officers of election, all over the country, in nine circuit judges, and that arguments should be made in favor of giving that extraordinary power to sixty or seventy district judges. The source of his astonishment is, that when the bill to which the present measure is proposed as an amendment was passing through the Senate, no objection was made by the opponents of the bill to giving the power of appointment to the circuit judges. It would seem, too, that he has been looking through the *Globe*, in order to make certain of what he said. Did his researches enable him to refresh his memory as to the character of the measure—I speak now of both measures, the bill of 1870 and the bill of 1871—and as to the circumstances under which they were introduced into this body, and put through?"

"Sir, he knows just as well as anybody in the Senate, and perhaps a great deal better than most, what were the features of those bills, of each of them and of both of them, against which the main opposition was pre-

sented. He knows (whether we were right or wrong) that we opposed each of those bills upon grounds of such magnitude as to make the question of the power which should appoint these supervisors utterly insignificant by comparison, utterly immaterial as to whether it was reposed in the circuit or in the district judges.

"Sir, we dealt with those bills as bills that struck down, at a blow, the whole power of the State over its own elections; as bills that put it into the power of the Administration party of this country to destroy at its will, to any extent or to the whole extent, the freedom of election in the States. Does he not know that our judgment was that each of those bills was filled, not only with unconstitutional, but with odious and oppressive details? Does he remember the objection that was made to the original bill, and never attempted to be answered, that it put it into the power of any man, though he were a convict who had just come out of State's prison, after serving his time, upon an *ex parte* affidavit, to break up the election at any poll in the country? Does he remember that that bill contained a provision enabling the President to appoint any number of deputy commanders-in-chief of the army and navy, to use the army and navy with the same power and the same freedom with which he could use them?"

"Why, sir, it was a bill, as we regarded it—I speak of each of them—filled from the first line to the last, almost, with such provisions as it seemed to us impossible the Senate could ever adopt. When we had to deal with causes of complaint so pressing and so grave, it would have been the height of folly in us to pause by the way to discuss whether the appointment of your congressional supervisors of election should be vested in the circuit judges or in the district judges.

"In the second of those bills the enormous power was given to these supervisors to supervise and to overlook the elections for State officers. There was no pretence, and there could be none, that Congress had, under any view of the Constitution, the slightest authority to interfere with those elections; but, under a mere bald, transparent pretence that it might be necessary in order to carry out the congressional control of elections for Representatives and Delegates in Congress, these congressional supervisors were authorized to regulate the polling, to scrutinize the polling, and overhaul the ballot-boxes in which votes were received, and only were received for those officers, and only those officers were to be voted for under the exclusive authority of the State.

"Why, sir, we should have been justly ridiculous if, when we were dealing with such a measure as that, we spent our breath in complaining that the appointment of officers, armed with such extraordinary powers as these supervisors were armed with, should be given

here or there. No source of appointment could have purged such a body of men of the despotic and unconstitutional powers reposed in them by the act.

"Does the Senator remember also the circumstances under which the first of those bills was put through in the Senate? Does he remember that he and his associates in this body compelled the minority to sit here from twelve o'clock at noon of one day until seven o'clock of the morning of the next day? And he wants to know why that little jaded band of men, to whose eyes even the excess of their fatigue forbade sleep to come through all those long and weary hours—he is astonished that during that session of nineteen hours when there was but a handful of us here in all, and frequently but two or three, as it were, to mount guard against the assaults upon the Constitution—he wonders now why none of us had not any thing to say as to why these appointments should not be given to the district judges rather than the circuit judges! Why, sir, that would have been a very foolish undertaking for us! We had matter much more serious to deal with."

The Presiding Officer: "The question is on the amendment of the Senator from Illinois, upon which the yeas and nays have been ordered."

The result was announced as follows:

YEAS—Messrs. Alcorn, Bayard, Casserly, Cooper, Davis of West Virginia, Hamilton of Maryland, Hamilton of Texas, Johnston, Kelly, Norwood, Pratt, Ransom, Saulsbury, Sprague, Stevenson, Stockton, Thurman, Tipton, and West—19.

NAYS—Messrs. Ames, Anthony, Boreman, Carpenter, Chandler, Cole, Corbett, Edmunds, Ferry of Michigan, Flanagan, Frelinghuysen, Harlan, Kellogg, Logan, Morrill of Vermont, Morton, Osborn, Pool, Rice, Scott, Stewart, Sumner, Wilson, Windom, and Wright—25.

ABSENT—Messrs. Blair, Brownlow, Buckingham, Caldwell, Cameron, Clayton, Conkling, Cragin, Davis of Kentucky, Fenton, Ferry of Connecticut, Gilbert, Goldthwaite, Hamlin, Hill, Hitchcock, Howe, Lewis, Morrill of Maine, Nye, Patterson, Pomeroy, Ramsey, Robertson, Sawyer, Schurz, Sherman, Spencer, Trumbull, and Vickers—30.

So the amendment was rejected.

The Presiding Officer: "The question now is on concurring in the amendment made in Committee of the Whole, which was proposed by the Senator from Indiana (Mr. Morton) to insert an additional section relative to the designations of district judges by the circuit judges."

The amendment was concurred in.

Mr. Saulsbury, of Delaware, said: "I offer the following amendment as an additional section: "

Sec. —. That if any person having any duties to perform under the provisions of this act, or the act to which this is an amendment, shall use the power upon him conferred in such manner as to prevent any person from voting entitled to vote, he shall be guilty of a misdemeanor, and upon conviction thereof shall be imprisoned not less than three months, and shall be liable to the party injured in a civil suit.

"I understand that there is no provision in the bill to which this is an amendment, or in the bill under consideration, providing for the punishment of these officers in any manner for the oppressive use of the powers conferred upon them. The bill under consideration proposes to add to the long list of supervisors and other officers provided for in the original law, and there is no provision in it punishing those men in case they use the power conferred upon them oppressively or injuriously to the voters of the country. My amendment is simply to provide that, if any officer having power conferred upon him under the original act, or under this act, shall so use it as to deprive any person entitled to vote of the exercise of that right, in such case he shall be guilty of a misdemeanor, and punishable by fine and imprisonment."

Mr. Edmunds: "The original act of 1870, and on that very point which seems now to give rise to this amendment, was resisted by our friends on the other side. The whole scope of the original act is to prevent any unlawful interference with the right of anybody to vote who is entitled to vote, whether that interference is under color of law or without color of law; and, therefore, if one of these people unlawfully and wrongfully interferes with any person's right to vote, the most sweeping provisions are made against it, just as against inspectors of election, and the punishments are all provided. This would only tend to produce confusion instead of advantage."

Mr. Stockton, of New Jersey, said: "I have not had time to read the section relied upon; but it seems to me that the explanation made by the Senator from Vermont does not reach the point that the amendment of the Senator from Delaware aims at. It does reach the point of punishing any person who interferes with an election or prevents a man from voting; but it does not reach an officer who, clothed with your authority, clothed with power given to him by your act, armed by you with powers which are dangerous, much more dangerous than the powers which exist between one individual and another, exceeds his authority and abuses the trust which you repose in him. The very reason on which I sustained the amendment of the Senator from Illinois, providing that these persons should not be paid, so that they might be men whom you could trust, men who would not abuse your trust, induces me to support the amendment of the Senator from Delaware, for that is a safeguard. You should inflict punishment upon your own officers if they violate the powers you have given them for protection, and make them powers to coerce and constrain free elections. The amendment of the Senator from Delaware is in the very spirit of the bill itself, if the spirit of the bill is what these gentlemen insist that it is."

Mr. Saulsbury said: "All I want to do by

this amendment is to secure every man the right to vote without the interference of these officials, who are now providing for supervising and attending to the election. We all know that, under the provisions of the act to which this is a supplement, or amendment, persons were appointed in different States of this Union who did interfere with the citizens' right to vote. Can any Senator tell me of a single case where any man so interfering with the rights of others to vote has been punished under the act to which this is an amendment? You provide amply for the punishment of every man who interferes with these parties in the exercise of the powers you confer upon them; and if it is true that the act does provide that the officers themselves shall be punished, it is very singular that, after they have interfered with the rights of persons, they never have been punished. I want to make it clear.

"And now I say, if the object of the Senate in the passage of the original act and of this amendatory act is to secure fair elections, let us have it fair on all sides. Let us say to these men who obtrude themselves upon the electors of the different States, 'Beware how you use the power conferred upon you, because if you exceed your power, if you deprive any man, white or black, of exercising the elective franchise who is entitled to it, by color of the authority conferred upon him, you shall be liable,' and say to him in what manner he shall be liable."

Mr. Casserly said: "The amendment which I propose reads in this way. First of all, section four begins: 'If any person by force,' etc. My amendment is, or rather my substitute for the amendment of the Senator from Delaware, which I ask him to accept, is: "

Sec. —. That the words "any person," in section four of the act of May 31, 1870, to which this is amendatory, shall be held to include any officer or other person having powers or duties of an official character under this act or the act to which this act is amendatory.

The Presiding Officer (Mr. Boreman in the chair): "Does the Senator from Delaware accept this as a substitute?"

Mr. Saulsbury: "Yes, sir."

The Presiding Officer: "This will be substituted for the original amendment of the Senator from Delaware."

The question being taken by yeas and nays, resulted—yeas 41, nays none.

So the amendment was agreed to.

Mr. Casserly: "I have an amendment to offer—two additional sections. I regret that the leading friends of the bill have determined to have all amendments rejected merely because they are amendments. The Senator from Wisconsin a while ago protested against an amendment of the most obvious necessity, as it seemed to me, because he did not know in what way it might interfere with the original act. That amendment dealt with a mere

excrescence on that act which had so little to do with it that it not only could be cut out without impairing the general scope of the act, but very much to the benefit of the act. I fear that the same policy is to be pursued throughout in regard to the bill, that every amendment is to be opposed merely because it is an amendment. On the very eve of a presidential election, which promises to be sufficiently exciting of itself, it becomes us all as good citizens, and it especially becomes us here, who are charged with the duty of making laws, to avoid with our best endeavors the bringing of any new elements of trouble or discord into the contest.

"It seems to me that in such a point of view as that, in which all must agree, at least abstractly considered, it is very desirable indeed that the bill with which we are now dealing, and the bills to which it is amendatory, ought to be pruned of all features of needless offence. A considerable part of what I have sent up to the desk is copied from statutes already in existence. I had a special idea in offering the amendment because of the recent most unjustifiable transactions at the polls connected with the navy-yard in California. Those transactions were of a character to bring the blush to the cheek of every man who understands what free institutions are, who comprehends what the freedom of elections means, and who has a regard for the dignity of American workmen."

The Vice-President: "The Senator from California modifies his amendment, and the amendment will be read as modified."

The Chief Clerk: "The amendment is to add as additional sections the following: "

Sec. —. That it shall not be lawful for any civil, military, or naval officer of the United States, or other person engaged in the civil, military, or naval service of the United States, to order, bring, keep, or have under his authority or control, any troops or armed men at the place where any general or special election is held in any State of the United States of America; and that it shall not be lawful for any officer of the Army or Navy of the United States to prescribe or fix, or attempt to prescribe or fix, by proclamation, order, or otherwise, the qualifications of voters in any State in the United States of America, or in any manner to interfere with the freedom of any election in any State, or with the exercise of the free right of suffrage in any State of the United States. Any officer of the Army or Navy of the United States, or other persons engaged in the civil, military, or naval service of the United States, who violates this section, shall, for every such offence, be liable to indictment as for a misdemeanor in any court in the United States having jurisdiction to hear, try, and determine cases of misdemeanor, and, on conviction thereof, shall pay a fine not exceeding \$5,000, and suffer imprisonment in the penitentiary, not less than three nor more than five years, at the discretion of the court trying the same; and any person convicted as aforesaid shall, moreover, be disqualified from holding any office of honor, profit, or trust under the Government of the United States; he shall always be liable in a civil suit to the person injured in a penalty of \$500, which, with any damages accruing, may be recovered in any circuit court having jurisdiction: *Provided*, That nothing herein contained shall prevent any

officer, soldier, sailor, or marine from exercising the right of suffrage in any election district to which he may belong, if otherwise qualified according to the laws of the State in which he shall offer his vote.

Sec. — That no officer or person in the civil, military, or naval service of the United States shall, directly or indirectly, order or advise, or directly or indirectly, by force, intimidation, coercion, promises, rewards, or any undue or improper influence or inducement, or in any other manner, wrongfully interfere with, hinder, influence, or control any qualified voter of any State of the United States in or about the free exercise of his right of suffrage according to law at any general or special election in any State, or attempt so to do, or to that end contrive, make, distribute, or circulate for the use of voters at such election any ballot or paper ticket for voting different from that required by law, or having upon it anywhere any mark, number, device, design, color, or other peculiarity or thing intended or calculated to ascertain how the voter using it voted, or otherwise in any manner to interfere with or embarrass him in the free exercise of his right of suffrage, or to destroy or impair the secrecy of the ballot, or being of such unusual size, shape, or color as might be intended or calculated to have the same result; nor shall any such officer or person employ any one in or upon any work, labor, or service of the United States for the purpose or with the view of having him vote at any such election, whether at the place of such employment or elsewhere, nor with or upon any such understanding express or implied. Any officer or person violating any of the provisions of this section shall be liable in all respects as provided in section — of the said act of May 31, 1870, to which act this act is amendatory, and upon judgment civil or criminal against him, shall also be disqualified from holding any office or employment of honor, trust, or profit under the United States.

The Presiding Officer: "The question then will be on the first section of the amendment."

The result was then announced, as follows:

YEAS—Messrs. Alcorn, Blair, Casserly, Cooper, Davis of West Virginia, Goldthwaite, Hamilton of Maryland, Hamilton of Texas, Kelly, Norwood, Ransom, Schurz, Sprague, Stevenson, Stockton, Thurman, Tipton, and Trumbull—18.

NAYS—Messrs. Ames, Anthony, Boreman, Buckingham, Caldwell, Clayton, Cole, Corbett, Cragin, Ferry of Michigan, Flanagan, Frelinghuysen, Gilbert, Hamlin, Kellogg, Morrill of Vermont, Morton, Nye, Osborn, Pomeroy, Pool, Pratt, Ramsey, Robertson, Sawyer, Scott, Spencer, Stewart, Wilson, Windom, and Wright—31.

ABSENT—Messrs. Bayard, Brownlow, Cameron, Carpenter, Chandler, Conkling, Davis of Kentucky, Edmunds, Fenton, Ferry of Connecticut, Harlan, Hill, Hitchcock, Howe, Johnston, Lewis, Logan, Morrill of Maine, Patterson, Rice, Saulsbury, Sherman, Sumner, Vickers, and West—25.

So the amendment was rejected.

The Vice-President: "The question now is on the second section of the amendment of the Senator from California."

The question being taken by yeas and nays, resulted—yeas 19, nays 26.

So the amendment was rejected.

Mr. Trumbull: "I move to amend the bill by inserting the following as a new section: "

Sec. — That all disabilities imposed by the third section of the fourteenth article of amendments to the Constitution of the United States on persons therein mentioned be, and the same are hereby, removed: *Provided*, That this act shall not apply to, or in any way affect or remove, the disability of any person included in either of the following classes,

namely: first, members of the Congress of the United States who withdrew therefrom and aided the rebellion; second, officers of the Army or Navy of the United States who, being above the age of twenty-one years, left said Army or Navy and aided the rebellion.

"Mr. President, that is the first section of the amnesty bill as it passed the House of Representatives, except that I have changed the phraseology a little by striking out the words 'all legal and political' and simply saying 'all disabilities imposed,' which I think is better phraseology; and I have left out the second section of the bill as it passed the House. This is the bill precisely as it passed the House for the removal of political disabilities, removing the disabilities of those and only those that the bill as it passed the House removed; it contains the same exceptions."

Mr. Frelinghuysen: "What was the second section?"

Mr. Trumbull: "The second section required the parties whose disabilities were removed to go before a court and make oath. I have left that out; but this removes the disabilities of precisely those persons that the House voted to remove them from, and none others."

Mr. Nye: "I move to add the second section of the House amnesty bill."

The Vice-President: "The question is on the amendment of the Senator from Nevada to the amendment of the Senator from Illinois."

The question being taken by yeas and nays, resulted—yeas 36, nays 24; as follows:

YEAS—Messrs. Alcorn, Ames, Anthony, Boreman, Buckingham, Caldwell, Carpenter, Chandler, Clayton, Cole, Corbett, Cragin, Ferry of Michigan, Flanagan, Frelinghuysen, Gilbert, Hamlin, Harlan, Hitchcock, Kellogg, Logan, Morrill of Vermont, Morton, Nye, Osborn, Pomeroy, Pool, Pratt, Ramsey, Robertson, Scott, Sherman, Spencer, Sumner, Windom, and Wright—36.

NAYS—Messrs. Blair, Casserly, Cooper, Davis of West Virginia, Ferry of Connecticut, Goldthwaite, Hamilton of Maryland, Hamilton of Texas, Hill, Johnson, Kelly, Norwood, Ransom, Rice, Sawyer, Schurz, Sprague, Stevenson, Stewart, Stockton, Thurman, Tipton, Trumbull, and Wilson—24.

ABSENT—Messrs. Bayard, Brownlow, Cameron, Conkling, Davis of Kentucky, Edmunds, Fenton, Howe, Lewis, Morrill of Maine, Patterson, Saulsbury, Vickers, and West—21.

So the amendment to the amendment was agreed to.

Mr. Sumner said: "Mr. President, I give notice that should the motion of the Senator from Illinois prevail, and the amnesty bill be fastened upon the pending measure, I shall try to attach a much superior and more important measure, which, notwithstanding what he says, I shall insist upon calling the civil rights bill."

Mr. Morton: "I hope this amendment will be voted down. If it is adopted, the effect will probably be to defeat this bill, upon which we have been engaged some two or three days, and which I think it is very important to pass. We have had enough votes

of the Senate, and the experiment has been tried often enough for us to understand perfectly well that if this amnesty amendment is passed and adopted the civil rights bill will be put upon it, and then the friends of amnesty will again vote against the whole bill, as they have done repeatedly. As I am anxious to secure the passage of this bill, which we have been engaged upon for two or three days, I hope it will not be loaded down in such a way as past experience shows will kill it. I therefore hope that the friends of this bill in regard to elections will vote down this amendment."

Mr. Trumbull: "I hope not. The Senate has never been full when we have taken a vote upon amnesty. The votes have been ties frequently. There are several members present who were not present before, and if those in favor of amnesty will stand by it we can put amnesty on and carry it, and can keep what is called civil rights, or in other words the social equality bill, off."

Mr. Edmunds: "It will be very easy, I can tell my friend from Indiana, to get out of the difficulty that is suggested about embarrassing the two measures by having them together, because I have no doubt it is the intention of the Senator from Illinois, or some other Senator, the moment this amendment is agreed to, to move to strike out the first part of the bill, and then we shall have amnesty alone, and that he thinks everybody will go for. He has not shown such a very strong admiration for this election bill during the discussion we have had upon it as to lead me to suppose that he is desiring to strengthen it by this movement of amnesty. So that I should advise any Senator who really believes in the election bill and wants to have it become a law, however much he may be in favor of amnesty, to keep the two measures separate, when we can take care of them both."

Mr. Robertson said: "I hope the Senator from Illinois will not persist in this amendment. To be consistent I shall have to vote against it. I have been the consistent friend of amnesty for over three years; but to attach it to a bill which requires only a majority to pass would jeopardize both measures. I voted against attaching civil rights to the amnesty bill for the simple reason that I did not think the amendment germane to the bill. For the same reason I propose to vote against this amnesty amendment to this bill, as much as I am in favor of amnesty. I hope that the friends of amnesty will not vote to attach it to this measure, it not being germane to the bill."

Mr. Sawyer, of South Carolina, said: "I rise for the purpose of asking a question which I would like to have some Senator who is versed in parliamentary law and other law answer. Suppose that the amnesty bill is attached to the bill now pending as an amendment, and that it passes both Houses of Congress and goes to the President, and the Presi-

dent sees fit to veto it: I want to know if the amnesty part of the proposition will not nevertheless be the law?"

Mr. Edmunds: "I say no, for one."

Mr. Sawyer: "It is not necessary at all for the President to sign a bill granting relief from disabilities; that part of it is not necessary to go to him; but the amnesty bill is put upon this bill; it passes; it goes to the President; he chooses in consideration of something in some part of the bill to veto it; I want to know if the relief of disabilities is not, under the terms of the fourteenth amendment, still effected?"

Mr. Trumbull: "In reply to the Senator from South Carolina, I will say that it is my opinion that it would be effective. I do not think a bill removing political disabilities need go to the President at all. I thought it was very improper, as the Senator from Indiana says, to unite a two-thirds bill with a majority bill, and I gave that as one of the reasons for my course previously; but unfortunately a majority of the Senate did not agree with me, and they decided that it was proper to put together, and the Senator from Indiana has helped to put together, legislative bills and bills removing disabilities. Now, when he returns upon me and says that this is inconsistent with my action, I have only to say that I am conforming to the regulations of the Senate. The Senate has decided that these bills may go together. Of course I have to conform in business to the rules adopted by the Senate."

Mr. Sawyer: "Now, Mr. President, I am for amnesty. I believe it important to the interests of this country that the disabilities under which a large portion of our people labor shall be removed. I am for the civil rights bill. I believe that the colored man should have the same right to the privileges which belong to citizens of the United States as the white man. I will go as far as the farthest in securing those rights to the colored man; but I am not to be induced to vote to couple together measures, one of which can be passed by a mere majority and the other of which requires a two-thirds vote, by the threat of being held up to the country as opposed to amnesty and opposed to civil rights."

The Vice-President: "The question now recurs to agree to the amendment of the Senator from Illinois (Mr. Trumbull), as amended by adding the second section of the House amnesty bill."

Mr. Trumbull: "I move to amend the present amendment by adding to it the amendment just offered by the Senator from South Carolina."

The Vice-President: "The Senator from Illinois moves to amend the pending amendment by adding the so-called civil rights sections moved by the Senator from South Carolina."

Mr. Trumbull: "It is known that I am op-

posed to this social equality bill, but I want to see now who is for it. I want to see whether the Senate is for it, or whether Senators are simply using it to defeat amnesty. This will give us a direct vote on it. Let us see now those in favor of this social equality bill. On that question I ask for the yeas and nays."

Mr. Sumner: "And, Mr. President, I too shall vote against it—"

Mr. Morton: "Mr. President, I am a friend of the civil rights bill, as I have shown by a good many votes; but when the civil rights bill is offered by one of its enemies, not for the purpose of securing its success, but for the purpose of securing its defeat along with the defeat of the measure we have been engaged upon for several days, I shall vote against that as an amendment to the amnesty amendment, and I hope the bill will be passed without having any thing of the kind attached to it. It is an important bill."

The question being taken by yeas and nays, resulted as follows:

YEAS—Messrs. Caldwell, Clayton, Edmunds, Hamlin, Pomeroy, and Sprague—6.

NAYS—Messrs. Alcorn, Anthony, Blair, Boreman, Buckingham, Cameron, Carpenter, Casserly, Cole, Cooper, Corbett, Davis of West Virginia, Ferry of Connecticut, Ferry of Michigan, Flanagan, Frelinghuysen, Gilbert, Goldthwaite, Hamilton of Maryland, Hamilton of Texas, Hamlin, Hill, Hitchcock, Johnston, Kellogg, Kelly, Logan, Morrill of Maine, Morrill of Vermont, Morton, Norwood, Pool, Pratt, Ramsey, Ransom, Rice, Robertson, Saulsbury, Sawyer, Schurz, Scott, Sherman, Stevenson, Stockton, Sumner, Thurman, Tipton, Trumbull, Wilson, and Windom—50.

ABSENT—Messrs. Ames, Bayard, Brownlow, Chandler, Conkling, Cragin, Davis of Kentucky, Fenton, Howe, Lewis, Nye, Osborn, Patterson, Spencer, Stewart, Vickers, West, and Wright—18.

So the amendment to the amendment was rejected.

The Vice-President: "The question recurs on the amendment of the Senator from Illinois, which is to add the amnesty proposition as generally known in the Senate."

The question being taken by yeas and nays, resulted—yeas 22, nays 33.

So the amendment was rejected.

Mr. Sumner: "I now send to the Chair an amendment which I desire to come in at the end of the bill. It is known as the civil rights bill. It is the same that has been read just now."

The Vice-President: "The question is on the amendment of the Senator from Massachusetts, to add the sections known in the Senate as the civil rights proposition."

Mr. Boreman, of West Virginia, said: "I move to strike out in the first section all after the word 'amusement' in the ninth line."

The Vice-President: "The amendment, in brief, is to strike from the first section of the civil rights bill that provision relative to schools and cemeteries."

Mr. Ferry, of Connecticut, said: "I shall vote

for the amendment of the Senator from West Virginia, because I believe from the depths of my inmost convictions that the passage of the bill of the Senator from Massachusetts, so far as it relates to common schools, will be the very destruction of the entire system of common-school education throughout the whole southern portion of our country, where that common-school education is now most needed."

Mr. Thurman said: "When this subject was under discussion before, I called upon the Senator from Massachusetts to point out some provision in the Constitution that authorized Congress to pass such a bill as this; I never have received an answer to that question yet. I never have found anybody who could point out one single line of the Constitution that gives Congress authority to pass such a measure as this."

"Now, sir, since that debate took place, I wish to say to the Senate that the very question has been before the Supreme Court of my State, composed of five judges, every one of whom is a Republican, the question whether the law of Ohio requiring the schools for colored children and white children to be kept separate is constitutional or not; whether it is a violation of any provision of the Constitution of the United States, and that court has just decided, by a unanimous vote, that that law violates no provision whatever of the Constitution of the United States, nor any law of Congress passed in pursuance of the Constitution of the United States. If that decision be sound, and of its soundness I do not think any good lawyer can doubt for a moment, there is an end of all pretence of constitutional foundation for this bill."

"The question was made in that court directly on an application to the court for a *mandamus* to compel the directors of a school for whites—a public school supported by public money—to receive the child of a colored man living within the school district. It was a question which the colored people made. The father did not send his child to the colored school, but demanded his admission into the white school. He, being a resident of the school district, a tax-payer there, made the demand for the purpose of trying the question, and applied to the Supreme Court for a *mandamus* to compel the directors to receive the child; and the court, by a unanimous vote, decided to refuse the *mandamus*, on the ground stated in a learned and able opinion, that the law of Ohio which excludes that child from that school violates no provision of the Constitution of the United States, or of any law of Congress passed in pursuance of the Constitution."

Mr. Hamlin, of Maine, said: "I have voted, I believe, on several occasions to unite the amnesty bill and the civil rights bill so called. I did so under the impression that perhaps it was the wisest and best method of progressing in our legislation. I am, however, satisfied

that I voted wrongly, and I now mean to vote for each measure separately, and to keep the one distinct from the other on every occasion when they are presented here for our action. I shall say nothing of the motives of Senators who offer the amendments. The effect is vicious in connecting them in any way at all; and from this time on I propose to vote to keep each of these measures distinct by itself, and to vote upon each by itself."

Mr. Sherman: "I rose at the same moment with the Senator from Maine to appeal to the Senator from Massachusetts to withdraw this amendment. I feel precisely like the Senator from Maine so far as the adding of this proposition to whatever bill is proposed in the Senate is concerned. The bill now pending is a bill that relates to elections, to guard the purity of elections. It is a bill that seems to me in the interest of that great object, with very little, perhaps no political significance in it, none that I can see. The bill that is now proposed as an amendment is entirely different, upon a different subject-matter."

Mr. Sumner: "I know the sincerity with which the Senator from Ohio (Mr. Sherman) has supported the civil rights bill, and how effectively he has done it; I also know his familiarity with the rules of both Houses, and I cannot listen to his appeal without feeling its force. I see that by attaching the civil rights bill to the pending measure it does not obtain the advantage in the House of Representatives which it would have had if attached to the other measure which was under consideration two or three days ago. Therefore, yielding to his appeal, and also to the suggestions of other friends in the Chamber, I now withdraw the amendment."

Mr. Morton: "I desire to amend the first section of the bill by adding after the amendment originally proposed by the Senator from Texas (Mr. Hamilton) so that the proviso will read: "

Provided, That no compensation shall be allowed to the supervisors herein authorized to be appointed, except those authorized to be appointed by the act to which this is an amendment, in cities having twenty thousand inhabitants or more.

"I will merely explain how this amendment becomes necessary. When the Senator from Texas offered his amendment, which was accepted, it was understood that it did not affect the compensation authorized by the original bill to those supervisors appointed in cities having twenty thousand inhabitants or more, but on examination of the amendment it was found that in effect it repealed the second section of the original bill, so that all supervisors, even those in the cities, will be appointed under the provision of this bill—this bill taking the place of the other. Therefore, to save the compensation of those supervisors to be appointed in cities, it is necessary to adopt this amendment. It is simply to carry out the will of the Senate as before expressed by a vote."

The Presiding Officer: "The question is on the amendment of the Senator from Indiana." The result was announced—yeas 37, nays 18. So the amendment was agreed to.

Mr. Casserly: "I move another amendment, to insert the following additional section: "

SEC. —. That no person shall be appointed under this act as supervisor of election who is not at the time of his appointment a qualified voter of the election district or voting precinct for which he is appointed. No person shall be appointed deputy-marshal under this act or the acts to which this is amendatory who is not a qualified voter at the time of his appointment in the precinct where he resides.

The amendment was agreed to.

Mr. Spencer, of Alabama, said: "I move to amend by inserting the word 'county' before the word 'election,' so as to require him to be a resident of 'the county, election district, or precinct.'"

Mr. Kellogg, of Louisiana, said: "I move to insert 'parish' as well as county."

Mr. Spencer: "I accept that amendment."

The Presiding Officer: "The question is on the amendment of the Senator from Alabama, as modified."

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, and was read the third time.

The Presiding Officer: "The question is on the passage of the bill."

The question being taken by yeas and nays, resulted as follows:

YEAS—Messrs. Ames, Anthony, Boreman, Caldwell, Carpenter, Clayton, Cole, Corbett, Cragin, Edmunds, Ferry of Michigan, Flanagan, Frelinghuysen, Hamlin, Howe, Kellogg, Logan, Morrill of Maine, Morrill of Vermont, Morton, Nye, Osborn, Pomeroy, Pool, Pratt, Ramsey, Rice, Sawyer, Scott, Sherman, Spencer, Stewart, West, Wilson, Windom, and Wright—38.

NAYS—Messrs. Alcorn, Blair, Casserly, Cooper, Davis of West Virginia, Goldthwaite, Hamilton of Maryland, Hamilton of Texas, Johnston, Kelly, Norwood, Ransom, Sprague, Stephenson, Stockton, Thurman, and Trumbull—17.

ABSENT—Messrs. Bayard, Brownlow, Buckingham, Cameron, Chandler, Conklin, Davis of Kentucky, Fenton, Ferry of Connecticut, Gilbert, Harlan, Hill, Hitchcock, Lewis, Patterson, Robertson, Saulsbury, Schurz, Sumner, Tipton, and Vickers—21.

So the bill was passed.

Mr. Kellogg: "I move to amend the title by inserting at the end of the title the words 'approved the 28th of February, 1871.'"

The amendment to the title was agreed to, so as to make it read: "A bill to amend an act entitled 'An act to amend an act approved May 31, 1870, entitled "An act to enforce the rights of citizens of the United States to vote in the several States of the Union, and for other purposes,"' approved February 28, 1871."

In the House, on May 30th, the bill above was taken up.

The question was put upon suspending the rules and passing the bill, and resulted as follows:

YEAS—Messrs. Ames, Averill, Banks, Barry, Beatty, Beveridge, Bigby, Bingham, Buckley, Buffinton, Burchard, Burdett, Benjamin F. Butler, Rod-
erick R. Butler, Clarke, Coburn, Coghlan, Conger, Cotton, Darrall, De Large, Dickey, Donnan, Duell, Dunnell, Eames, Elliott, Charles Foster, Wilder D. Foster, Frye, Hale, Halsey, Harner, George E. Harris, Havens, Hawley, Hays, Gerry W. Hazelton, John W. Hazelton, Hill, Kelley, Ketcham, Killinger, Lampart, Lansing, Lowe, Lynch, Maynard, McCrary, McGrew, McJunkin, McKee, Mercier, Merriam, Monroe, Moore, Morey, Leonard, Myers, Orr, Packard, Packer, Palmer, Isaac C. Parker, Peck, Pendleton, Perce, Poland, Prindle, Rainey, Ellis H. Roberts, Rusk, Sargent, Sawyer, Sessions, Shanks, Sheldon, Shellabarger, Shoemaker, H. Boardman Smith, John A. Smith, Thomas J. Speer, Sprague, Starkweather, Stevenson, Stoughton, Strong, Sypher, Washington Townsend, Turner, Twichell, Tyner, Wakeman, Walden, Waldron, Wallace, Walls, Whately, Willard, Williams of Indiana, Jeremiah M. Wilson, and John T. Wilson—101.

NAYS—Messrs. Ambler, Archer, Arthur, Barnum, Beck, Bell, Biggs, Bird, Austin Blair, James G. Blair, Braxton, Bright, Brooks, Caldwell, Campbell, Carroll, Comingo, Conner, Crebs, Critcher, Crossland, Dox, Du Bose, Duke, Eldredge, Ely, Finkelnburg, Forker, Henry D. Foster, Garrett, Getz, Giddings, Golladay, Goodrich, Haldeman, Hambleton, Hancock, Handley, Hanks, Harper, John T. Harris, Hay, Hereford, Herndon, Hibbard, Holman, Kellogg, Kendall, Kerr, King, Lamison, Lewis, Manson, Marshall, McClelland, McCormick, McHenry, McIntyre, McNeely, Merrick, Mitchell, Morgan, Niblack, Hosea W. Parker, Potter, Price, Randall, Read, Edward Y. Rice, John M. Rice, Ritchie, William R. Roberts, Robinson, Sion H. Rogers, Roosevelt, Shober, Slater, Slocum, Sloss, R. Milton Speer, Stevens, Storm, Sutherland, Swann, Terry, Tuthill, Van Trump, Vaughan, Waddell, Warren, Wells, Whitthorne, Williams of New York, Winchester, Wood, and Young—98.

NOT VOTING—Messrs. Acker, Adams, Barber, Bolea, Cobb, Cox, Creely, Crocker, Davis, Dawes, Farnsworth, Farrell, Garfield, Griffith, Hoar, Hooper, Houghton, Kinsella, Leach, McKinney, Benjamin F. Meyers, Morphis, Negley, Aaron F. Perry, Eli Perry, Peters, Platt, Porter, John Rogers, Scofield, Seeley, Sherwood, Worthington C. Smith, Snapp, Snyder, Stowell, St. John, Taffe, Thomas, Dwight Townsend, Upson, Voorhees, and Wheeler—48.

So (two-thirds not voting in favor thereof) the rules were not suspended.

A similar motion was made on June 7th, and lost—yeas 56, nays 89, not voting 95. The bill was then presented in the Senate under a new aspect.

In the Senate, on June 7th, Mr. Kellogg, of Louisiana, moving to amend the appropriation bill then under consideration, said: "I move to amend the bill by inserting after the word 'dollars,' at the end of line ninety-nine on page 5, the following words," etc., etc.

Mr. Hamilton, of Maryland: "I raise the question of order on that amendment."

The Presiding Officer: "The Senator from Maryland will state his point of order."

Mr. Hamilton of Maryland: "It is undertaking—I will not use a harsh term—surreptitiously on an appropriation bill to get in some of the gravest legislation that has ever characterized the action of Congress, in my judgment. It is a proposition to reenact the elec-

tion law which we had before us some time since, and which is now before the House of Representatives for their consideration. I maintain that it is not in order, and I raise the question of order against it."

Mr. Edmunds and Mr. Conkling: "It is not out of order."

Mr. Hamilton, of Maryland: "I raise the question of order under the rule."

Mr. Kellogg: "It is clearly in order."

The Presiding Officer: "The text appropriates money—"

Mr. Casserly: "I ask my friend from Maryland to withdraw his point for a moment. The difficulty about the amendment is that except to those who have seen it before it was offered it is nearly impossible to understand the drift of it. It is evidently an elaborate amendment as well as an extended one. I should say the proper course to take with it would be to pass it over for the present, and let it be printed, so that we can see it to-morrow and understand the bearing of it."

Mr. Kellogg: "I will state to the Senator that I have taken the precaution to have it printed, and I have here a number of copies of it."

Mr. Edmunds: "I wish to ask the Senator from Louisiana whether this is in substance the same bill that passed the Senate the other day?"

Mr. Kellogg: "Yes, sir."

Mr. Casserly: "I ask the Senator from Louisiana to let his amendment be passed over for the present, and that his printed copies be distributed, so that it can be examined."

Mr. Kellogg: "No, sir; I decline to pass it over."

The Presiding Officer: "The Chair understands that the Senator from California asks the Senator from Louisiana to pass the amendment over for the present."

Mr. Kellogg: "I decline to do so."

Mr. Casserly: "I make the request in order that the printed amendment may be examined by Senators. It is impossible either to raise a point of order or to discuss intelligently an amendment which nobody has seen, although it seems the Senator has had it printed."

Mr. Kellogg: "I decline to pass it over. I have given notice of it."

The Presiding Officer (Mr. Anthony, of Rhode Island): "The Chair will rule on the point of order. The Chair is somewhat under the difficulty of the Senator from California of not precisely understanding how the amendment would read; but understanding that it applies to the 'act of February 28, 1871, or any acts amendatory thereof or supplementary thereto,' the Chair thinks it comes clearly within the rule as decisions have been made to-day and heretofore. It directly relates to the money appropriated in the bill."

Mr. Thurman: "I appeal from the decision of the Chair. That, I believe, is debatable."

Mr. Edmunds: "For five minutes."

The Presiding Officer: "It is debatable under the five-minutes rule."

Mr. Thurman: "I do not understand that to be the case."

The Presiding Officer: "This question undoubtedly grows out of the amendment, and is covered by the rules as to it."

Mr. Hamilton, of Maryland: "This amendment is a breach of the understanding."

Mr. Thurman: "Totally and absolutely. Where is this amendment offered? Where is it to come in?"

Mr. Kellogg: "The Secretary will read it for the edification of the Chamber."

Mr. Conkling: "On page 5."

Mr. Thurman: "I want to know where it is to come in."

The Presiding Officer: "After line ninety-nine, on page 5."

Mr. Kellogg: "After the word 'dollars' in that line. That section has been amended by the addition of '\$200,000' after '\$300,000.'"

Mr. Edmunds: "No; the word 'dollars' stands in the print just as it does in the amendment, and the '\$200,000' comes in before 'dollars.'"

Mr. Kellogg: "Precisely; the word 'dollars' is at the end of the sentence, and my amendment is to follow that word."

Mr. Thurman: "Mr. President, if this is not legislation, then nothing can be legislation."

Mr. Stewart, of Nevada: "The Chair has ruled it out of order."

Mr. Thurman: "No, he has not; he has ruled it in order. The law as it now stands applies this election law simply to cities and towns having twenty thousand inhabitants and upward, and I understand the Chair to rule that this amendment, which extends that election law over the whole United States, every hamlet in it, is in order. It is a law now confined simply to the cities of the United States having twenty thousand inhabitants and upward, and I understand that under a rule which prohibits any thing like legislation, any thing that is not germane to the bill, the Chair decides that this law can be extended over the entire United States. Sir, if that can be done, your rule is worth nothing at all."

"I should like to know how it is that this amendment comes here printed at the Government Printing-Office; how it is that it comes here in this shape. Has it passed through a caucus? Has it been resolved that it shall be placed on this bill in direct violation of your rule? How is it that this thing comes here in this way?"

"Sir, nothing can be clearer in the world—I say it with all due respect to the Chair—than that this is a plain and direct violation of your rule, and your rule is worth nothing if this can be admitted. Upon what principle, pray, is it that this amendment is to be admitted? Because there is in the bill a provision for enforcing an existing law, because there is a provision making an appropriation to ex-

cute an existing law? Is that the ground? Under that pretence, can you extend a law which now applies only to cities of twenty thousand inhabitants and upward over the whole United States, into every hamlet in the United States? Is that the construction you put upon your rule? If so, I should like to know when you expect an appropriation bill to be carried through. When is it that you will expect to pass an appropriation bill? What is there that cannot be made in order if this is in order? Of what use is your rule if this amendment is in order? Of no use whatsoever."

"Sir, I wish to see whether this thing has been agreed upon; I wish to know whether a caucus has been held upon it; I wish to know how it is that this thing comes here printed at the Government Printing Office; I wish to know how it stands; and for the purpose of trying that question I move to lay that amendment on the table."

Mr. Casserly said: "Mr. President, this is a most unexpected proceeding. A rule was brought in here, the precise purpose of which was to confine appropriation bills to their legitimate objects. That rule has been enforced with the greatest rigor, and in some cases, as it seemed to me, beyond the just meaning of it or the interests of the public service. And now, sir, on Friday night, there being but one full day more left of this session, this amendment is brought in here by the Senator from Louisiana."

"Now, sir, here is an amendment which takes up a bill of very great gravity, which has always excited much discussion, and extends it all over the United States."

"It is impossible for me to discuss this amendment, for obvious reasons. The Senator from Louisiana, who once before brought a measure in here and succeeded in getting it to a committee unknown to the great majority of the Senate, is the putative father of this amendment. He has brought it here printed, and I desire to call the attention of the Senate and of the country to this fact: that having brought it here printed, he refused my respectful request to allow it to be passed over until his printed copies could be read. I am sorry the Senator is not in his place, for he would then hear what I have to say. I have never known such a proceeding on the part of any Senator, in the greatest heat of debate in the Senate, during my time. It would be impossible for me or anybody to examine this amendment except by a debate brought about on a course of verbal amendments. Five minutes will not be sufficient to enable me to understand it. Five minutes will not enable any Senator who has not been in the secret to understand it."

"Sir, the rule adopted by the Senate is to be construed by its object, and construed by its object nothing is more plain than that this amendment is a violation of the rule. It is

legislation. It is not legislation that 'relates directly to the appropriation' in the bill. The legislation which relates directly to the appropriation in the bill is the legislation which is specified in the bill. What is that legislation? It is 'the act of February 28, 1871, or any acts amendatory thereof or supplementary thereto.' What does that mean? It does not mean other acts that may be passed after this bill was brought in, but it means the acts that were in existence when this bill was brought before the Senate."

Mr. Stevenson, of Kentucky, said: "Mr. President, the success of our legislation depends on understanding the rules and a strict observance of them. I understand the Chair to decide that this amendment is in order."

The Presiding Officer: "The Chair has so decided, and an appeal therefrom has been taken and is now pending."

Mr. Stevenson: "Now, sir, I wish to say to the Chair and to the Senate that our present rule provides that 'no amendment to any such bill,' an appropriation bill, 'making legislative provisions, other than such as directly relate to the appropriations contained in the bill, shall be received.' The question occurs, then, does this amendment apply to any appropriation in this bill? It is proposed as an amendment to the clause making an appropriation 'for defraying the expenses of the courts of the United States, including the District of Columbia; for jurors and witnesses, and expenses of suits in which the United States are concerned, of prosecutions for offences committed against the United States; for the safe-keeping of prisoners, and for the expenses which may be incurred in the enforcement of the act relative to the rights of citizens to vote, of February 28, 1871.'

"Now, it is proposed in this appropriation bill to change a whole section of law. If this amendment is adopted, it is reforming and amending a legislative bill which has already passed this House. It is moved, in other words, to strike out 'city or town' wherever those words occur in the election law of Congress, and insert provisions making that law applicable to the whole country; and we are confined to five-minutes debates on a question of this sort. This shows, as I conceive, that, in the adoption of the five-minutes rule, the Senate had no possible conception that an amendment such as this could be passed. In addition to that, you propose to strike out the words 'circuit judge,' upon which there was such a debate in the Senate, and to insert the words 'district judge,' and that in an appropriation bill limited to five-minutes debate, and sprung upon the Senate when no man had any conception that such an amendment could be offered.

"If such an amendment as this is in order, I cannot well conceive what amendment possibly would not be in order. We are not only restrained from all the privileges of debate on

this question, but absolutely the most stringent election law, which operates on the suffrage, the very vitality of free institutions, is to be affected by inconsistent and unexpected amendments like this, and the Senate are to be deprived of all discussion upon them. Why, the Chair remembers that when this election law was considered before it occupied hours and hours; it elicited a discussion of days, and well it might, because it strikes at the very vitality of free institutions, which is the right of the people to vote; and now, upon an appropriation bill, this election law is wholly changed, striking out 'circuit judges,' extending the operation of that law from 'cities' to 'counties and parishes'; and we are required under a five-minutes debate to vote upon it."

The Presiding Officer: "The Chair will state what he understands to be the question. It is, Shall the decision of the Chair stand as the judgment of the Senate? And the Chair thinks that that decision, until it is reversed, is the decision and is binding, and if it is not reversed it must stand."

Mr. Conkling, of New York: "Mr. President, I shall move that this appeal lie on the table. I believe, according to everybody's construction of the rule, that will bring the Senate to a vote. Before submitting that motion, however, I beg to say one word in reply to the numerous speeches which have been made assailing the ruling of the Chair. The rule is: 'and no amendment to any such bill making legislative provisions' shall be in order 'other than such as directly relate to the appropriations contained in the bill.' Turning to the bill I find:"

For the safe keeping of prisoners; and for the expenses which may be incurred in the enforcement of the act of February 28, 1871, to enforce the rights of citizens to vote, or any acts amendatory thereof, or supplementary thereto, \$3,000,000.

"What is the argument of those who deny the decision of the Chair? It is that the amendment is not legislation directly relating to this. How can that be argued? Has it ever been pretended that to be within this rule one must move to increase or diminish the appropriation? Not at all. The rule expressly tolerates general legislation, with no restriction save one, namely, that it relates—what relates? That the general legislation relates to the appropriation in question."

Mr. Thurman: "If the Senator's argument is right, we can move to amend all the laws in regard to life-saving stations, for this bill relates to them. I can move the steamboat bill as an amendment to this bill."

The Presiding Officer: "The question is, shall this appeal lie on the table?"

The result was announced as follows:

YEAS—Messrs. Alcorn, Ames, Boreman, Buckingham, Caldwell, Carpenter, Chandler, Cole, Conkling, Corbett, Cragin, Edmunds, Ferry of Michigan, Flanagan, Frelinghuysen, Harlan, Howe, Kellogg, Morrill of Maine, Morrill of Vermont, Morton, Nye,

Pomeroy, Pool, Pratt, Ramsey, Sawyer, and Windom—28.

NAVS—Messrs. Bayard, Blair, Casserly, Cooper, Fenton, Hamilton of Maryland, Hamilton of Texas, Hill, Johnston, Kelly, Norwood, Ransom, Saulsbury, Schurz, Sprague, Stevenson, Stockton, Thurman, Tipton, Trumbull, Vickers, and West—22.

ARMY—Messrs. Anthony, Brownlow, Cameron, Clayton, Davis of Kentucky, Davis of West Virginia, Ferry of Connecticut, Gilbert, Goldthwaite, Hamlin, Hitchcock, Lewis, Logan, Osborn, Patterson, Rice, Robertson, Scott, Sherman, Spencer, Stewart, Sumner, Wilson, and Wright—24.

So the appeal was ordered to lie on the table.

Mr. Thurman: "I move to indefinitely postpone the bill.

"Mr. President, nothing that has happened since I have had a seat in the Senate has given me more surprise and more pain than the vote which has just been taken. I did suppose that the rule which was adopted by the Senate, and which we unanimously applied to this bill, relying upon what we supposed to be its fair, honest, and well-understood meaning, would not be extended in a way that this vote indicates, extended in a way that takes every Senator on this floor who votes against the extension, not only by surprise, but creates in his mind unaffected astonishment. What is the principle that has this moment been determined by the Senate? Why, sir, it is that you may amend any law on the statute-book in reference to which there is any appropriation made in this bill; amend it indefinitely; amend it without limit; go over almost the whole statute-book of the United States, because there is an appropriation for executing that law. Sir, let us see what it is.

"The first appropriation in this bill is under the head of 'the Treasury Department,' and relates to life-saving stations. Now, sir, if this decision to which the Senate has just come be the true ruling, the true interpretation of this rule, then we can amend by this bill all the laws in relation to life-saving stations. Then comes the 'revenue-cutter service,' and you may go on and amend all the laws in relation to that service. Then, sir, comes the 'marine hospital service;' you may amend all the laws in relation to that service. Then comes 'loans and Treasury notes and national currency,' and you may amend the entire national bank law, and all this under a five-minutes rule of debate, and you may amend all the laws in relation to the issue of greenbacks, and limit the debate to five minutes. Then comes 'detection and punishment of counterfeiting,' and under that you may amend all the criminal laws on the statute-book in relation to the crime of counterfeiting. Then comes 'the contingent expenses of the Senate,' and you may amend all the laws in relation to them. Then comes the 'judiciary,' and you may amend every judicial act upon the statute-book, every one from the act of 1789 down to this day, and limit debate to five minutes—the jurisdiction of the Supreme Court, the jurisdiction of the circuit court, the

jurisdiction of the district court, the jurisdiction of the Court of Claims, the jurisdiction of the courts of the District of Columbia, the writ of *habeas corpus*, every thing that appertains to the judiciary, every statute passed since the foundation of the Government is open to amendment or repeal, and that is under a debate limited to five minutes, under this ruling which has just been made by the Senate! That is the truth about it. Why, sir, I would a thousand times rather have the previous question of the House of Representatives than this.

"Sir, Senators may smile as much as they please; they may think this is a very smart trick—no, I will not use the word 'trick,' for it is not respectful; they may think this is very sharp practice; that this is a very acute thing on the part of the majority that has power to do what it pleases. But I say it is not good faith. I say it is not a fair interpretation of this rule. I say it is a ruling which makes the rule absolutely nugatory for the purposes for which it was adopted, absolutely so. Worse than all that, Mr. President, it is a rule that utterly stifles every thing like debate, and that upon the most important questions which can concern the Senate or the American people. Why, sir, is it so that, whenever an appropriation is made to execute an existing law, you can move as an amendment under this rule, and limit debate to five minutes, any amendment whatsoever of that law? If that is the case, I pray to know whether there is any freedom of debate left in this body? Sir, we had better stop all debate at once, if that is the case.

"I say to Senators, beware before you adopt such a rule as this. There was a time when the Republican party marched to victory with 'free speech' upon its banners. There was a time when it claimed that in every part of this country there should be free speech. There was a time when the silencing of voices and preventing the utterance of the thoughts of even the smallest minority was considered a crime against humanity, and a crime against the Constitution of the country. But now, in the highest legislative Chamber of the country, we find a rule that stifles free speech utterly, and places the whole body of the statute law of the land at the mercy of a numerical majority of the Senate, without any debate whatsoever on the merits of the proposition to modify or to repeal it. I say it will not do to talk about free speech any more. You had better say at once, with Napoleon I., 'I hate phrasemongers.' You had better at once adopt the logic of the Senator from Michigan (Mr. Chandler) the other day, who hates all 'o-rators,' as he calls them, despises every thing like speech; establish military rule; have no discussion; discussions are always hostile to tyranny. There never was a tyrant yet who loved discussion; there never was one yet who did not frown down debate.

"In perfect good faith, without one single word of objection from any member on this floor, we agreed to the application of this five-minutes rule to this bill; but never did any one suppose that that rule, which heretofore has been properly and strictly construed, was to be so interpreted, that the whole body of the statute law of the United States was open to be repealed, amended, or modified, by way of amendment to this appropriation bill, and that debate on it was to be limited to five minutes. Why, sir, every law, the law to enforce the fourteenth amendment, the law to enforce the fifteenth amendment, civil rights, every thing may be altered, changed, amended, or repealed, under this ruling that has been made, and every Senator limited to five minutes. I do pray that the Senate will reconsider what it has done before it establishes such a rule of despotism, utterly destructive of free debate in the American Senate."

Mr. Sumner, of Massachusetts, said: "Mr. President, I thank the Senator from Ohio for the word he has just uttered. He said that, under the ruling of the Chair, the bill for civil rights would be in order. I so understood him."

Mr. Thurman: "Certainly."

Mr. Sumner: "He now says 'certainly,' and I agree with him. The act which it is proposed to amend is entitled 'An act to enforce the rights of citizens of the United States to vote in the several States of this Union, and for other purposes,' and one of its sections, section eighteen, is as follows: "

That the act to protect all persons in the United States in their civil rights, and furnish the means of their vindication, passed April 9, 1866, is hereby reenacted, and sections sixteen and seventeen thereof shall be in force, according to the provisions of said act.

"Now, sir, I have nothing to say of the ruling of the Chair, or the question of order which the Senator has so ably debated. I accept the ruling of the Chair; I follow it; I apply it logically, and I adopt the illustration afforded by the distinguished Senator from Ohio, when he said that it covered the civil rights bill. I thank him for teaching us that word. It does cover the civil rights bill, and I now insist that the civil rights bill shall at last find hospitality in this Chamber. Long enough has it been played with and paltered with. Now, at last, I insist upon a vote. I move, sir, at the end of the pending amendment to insert as follows: "

Also, that the act above mentioned be further supplemented and amended by adding the following provisions.

"Then follows what is known familiarly as the civil rights bill, being a bill well known in this Chamber, carefully drawn by myself, much amended, debated, and this has all the last emendations."

Mr. Thurman: "And none of the emasculations?"

Mr. Sumner: "None of the emasculations; it is the pure article."

The Presiding Officer (Mr. Pomeroy in the chair): "It is the duty of the Chair to remind Senators that the motion now pending is to indefinitely postpone the bill."

Mr. Casserly said: "Sir, I listened with amazement and with sorrow to the decision of the Chair. There is not a justice's court in the country where such a decision upon a similar law with this would be made; or if made, where it would not be torn into shreds in fifteen minutes by any lawyer that was ever qualified to argue about ten dollars. Why, sir, it proceeds upon a theory that is essentially false and unfounded in itself, namely, that because an appropriation in a bill refers to a law which has created a subject for that appropriation to act upon, therefore you can introduce any sort of amendment to reach that bill. That is the proposition.

"Why, sir, what is the object of an appropriation bill? It is not to make a new law; it is as to the expenditure of money. An appropriation bill must have, before it can be drawn even, subjects of expenditure already created by law. In other words, there must be laws on the statute-book providing for such and such things, which require expenditure to carry them out, in the first place. Then you make your appropriation bill for the purpose of appropriating the amounts of money necessary to satisfy those expenditures. The decision made here to-night amounts to this, neither more nor less, that because there may be one to twenty or two hundred appropriations in your bill that relate to the law creating the subject of that expenditure, therefore you have the right upon that view of the case, which is a necessary view, there can be no appropriation bill without it, to amend these laws creating that subject of expenditure indefinitely. The appropriation bill becomes, therefore, the omnibus of the whole legislation of the session. Under this rule, intended to restrict an appropriation bill to its just and proper function of applying the means for carrying out subjects of expenditure created by other laws, you may amend every law in regard to the subject of expenditures, in regard to which an appropriation is stated in the bill.

"And now, sir, at the end of the session, within two legislative days of the adjournment, or less than two, all the controversies over your Ku-klux bill and your bill for regulating the elections by your bayonets in this year of grace 1872, when the head of your Government and the head of your armies is a candidate for reelection—those measures, and others no worse and no better, are brought in here to be fought over and thrust through Congress at this session over the back of an appropriation bill. What a spectacle for a great majority party in Congress to present to the country and to the world! And to do that

you overturn your own plain rule; you take advantage of a decision of which all I have to say is that I do not envy the making of it; I wonder at it, rather; and besides all that, an attempt to debate the fitness of that decision, an attempt to point out its manifest error, an attempt to expose its utter unfitness for application to the business of this session or of any session of the Senate, according to any parliamentary rules, was cut off by a motion to lay upon the table."

Mr. Stockton, of New Jersey, said: "Mr. President, there never has been any rule in the Senate of the United States requiring that an amendment should be germane to the bill. There is no such parliamentary rule, and there is no rule of the Senate, let me remind the Chair, which requires a Senator to be pertinent and germane. Both of those matters are trusted to the discretion of Senators, and it is presumed they will not exercise that discretion improperly. There is not and never has been, I repeat, a rule in the Senate confining Senators to amendments which are germane, and there is no rule either controlling or limiting debate, so that it is respectful and proper. But, in order to facilitate business at the close of the session, for the benefit of a majority of the Senate, for their convenience, as a public and patriotic duty, the minority of this body voluntarily submitted to have themselves bound. It was provided that debate should be limited to five minutes. But no Senator on this side of the Chamber, and very few Senators on the other, would have voted to limit debate to five minutes. I can speak of Senator after Senator on the other side of the Chamber, thin as their seats now are at this time of night, who never would have voted to limit debate to five minutes if you had not introduced this other principle, this saving clause, that nothing should be put upon an appropriation bill that was not germane to the bill. You did that deliberately. You appealed to the minority, you appealed to yourselves; you said: 'Never, never will we gag the Senate; never will we deny you the privilege of speaking on any public question, or any legislation making any great change in the laws of this land; that we do not propose to do; but, while we ask you to limit debate to five minutes, we say we will not offer an amendment, nor permit one to be offered, that interferes with the general legislation of the country, which is not (to use my short term, for I shall be more definite directly) germane to the bill.' That was the contract stated in the rule, and those were the only terms on which the American Senate, on both sides of the Chamber, ever could have been induced to permit the adoption of that five-minutes rule."

"Now, sir, let me turn for a moment to the language of that rule:"

Resolved, That during the present session it shall be in order at any time to move a recess—

"That was one change—

and pending an appropriation bill, to move to confine debate on amendments thereto to five minutes by any Senator on the pending motion, and such motions shall be decided without debate."

"There is another gag. What was the consideration? What was the consideration that would have induced Senators on the other side who have long been members of this body, and who glory in its privileges, which are seldom abused, to agree to such a rule? What was the consideration you offered to us and offered to your own members? To facilitate public business, to help you through, we agreed to the limitation of five minutes, we agreed that the motion could be made without debate, and you said this:"

And no amendment to any such bill making legislative provisions other than such as directly relate to the appropriations contained in the bill shall be received."

"I used the word 'germane.' Under this rule a matter of legislation has been introduced, a proposition which is admitted to be legislation, a proposition which the Chair itself admits to be legislation, but, as the Chair said, 'legislation which relates to an appropriation.' It appropriates nothing, and is defended on that ground by its advocates, and it is decided that it is legal because it appropriates nothing. If it appropriated anything it would be a violation of the regular rule, because it would be an amendment appropriating money without the proper notice having been given to the committee. Let me read that rule for a moment; that is, rule 30:

No amendment proposing additional appropriations shall be received to any additional appropriation bill, unless it be made to carry out the provisions of some existing law, or some act or resolution previously passed by the Senate during that session, or moved by direction of a standing or select committee of the Senate, or in pursuance of an estimate from the head of some of the Departments; and no amendment shall be received whose object is to provide for a private claim, unless it be to carry out the provisions of an existing law or treaty stipulation."

"Now, I appeal to such Senators as think this matter important enough to listen to the sound of my voice, whether the object was not, and that alone, to prevent the loading down of appropriation bills with matters which ought to be treated as matters of substantive legislation. This amendment, as I was saying, could not have been received if it contained an appropriation, and so the Chair says it is legitimate, it can come in under this rule because it contains no appropriation. It is legislation, the Chair decides, but it can come in under the other rule because it is 'legislation which relates to an appropriation bill.' That is precisely the ruling of the Chair. I shall not comment upon it. I have too much respect for the Chair and too much respect for the Senate to comment on it."

"One illustration, and I have done. Suppose the President of the United States is authorized by this bill, or by some other bill,

officer, soldier, sailor, or marine from exercising the right of suffrage in any election district to which he may belong, if otherwise qualified according to the laws of the State in which he shall offer his vote.

SEC. — That no officer or person in the civil, military, or naval service of the United States shall, directly or indirectly, order or advise, or directly or indirectly, by force, intimidation, coercion, promises, rewards, or any undue or improper influence or inducement, or in any other manner, wrongfully interfere with, hinder, influence, or control any qualified voter of any State of the United States in or about the free exercise of his right of suffrage according to law at any general or special election in any State, or attempt so to do, or to that end contrive, make, distribute, or circulate for the use of voters at such election any ballot or paper ticket for voting different from that required by law, or having upon it anywhere any mark, number, device, design, color, or other peculiarity or thing intended or calculated to ascertain how the voter using it voted, or otherwise in any manner to interfere with or embarrass him in the free exercise of his right of suffrage, or to destroy or impair the secrecy of the ballot, or being of such unusual size, shape, or color as might be intended or calculated to have the same result; nor shall any such officer or person employ any one in or upon any work, labor, or service of the United States for the purpose or with the view of having him vote at any such election, whether at the place of such employment or elsewhere, nor with or upon any such understanding express or implied. Any officer or person violating any of the provisions of this section shall be liable in all respects as provided in section — of the said act of May 31, 1870, to which act this act is amendatory, and upon judgment civil or criminal against him, shall also be disqualified from holding any office or employment of honor, trust, or profit under the United States.

The Presiding Officer: "The question then will be on the first section of the amendment."
The result was then announced, as follows:

YEAS—Messrs. Alcorn, Blair, Casserly, Cooper, Davis of West Virginia, Goldthwaite, Hamilton of Maryland, Hamilton of Texas, Kelly, Norwood, Ransom, Schurz, Sprague, Stevenson, Stockton, Thurman, Tipton, and Trumbull—18.

NAYS—Messrs. Ames, Anthony, Boreman, Buckingham, Caldwell, Clayton, Cole, Corbett, Cragin, Ferry of Michigan, Flanagan, Frelinghuysen, Gilbert, Hamlin, Kellogg, Morrill of Vermont, Morton, Nye, Osborn, Pomeroy, Pool, Pratt, Ramsey, Robertson, Sawyer, Scott, Spencer, Sumner, Windom, and Wright—31.

ABSENT—Messrs. Bayard, Brownlow, Cameron, Carpenter, Chandler, Conkling, Davis of Kentucky, Edmunds, Fenton, Ferry of Connecticut, Harlan, Hill, Hitchcock, Howe, Johnston, Lewis, Logan, Morrill of Maine, Patterson, Rice, Saulsbury, Sherman, Sumner, Vickers, and West—25.

So the amendment was rejected.

The Vice-President: "The question now is on the second section of the amendment of the Senator from California."

The question being taken by yeas and nays, resulted—yeas 19, nays 26.

So the amendment was rejected.

Mr. Trumbull: "I move to amend the bill by inserting the following as a new section:"

SEC. — That all disabilities imposed by the third section of the fourteenth article of amendments to the Constitution of the United States on persons therein mentioned be, and the same are hereby, removed: *Provided*, That this act shall not apply to, or in any way affect or remove, the disability of any person included in either of the following classes,

namely: first, members of the Congress of the United States who withdrew therefrom and aided the rebellion; second, officers of the Army or Navy of the United States who, being above the age of twenty-one years, left said Army or Navy and aided the rebellion.

"Mr. President, that is the first section of the amnesty bill as it passed the House of Representatives, except that I have changed the phraseology a little by striking out the words 'all legal and political' and simply saying 'all disabilities imposed,' which I think is better phraseology; and I have left out the second section of the bill as it passed the House. This is the bill precisely as it passed the House for the removal of political disabilities, removing the disabilities of those and only those that the bill as it passed the House removed; it contains the same exceptions."

Mr. Frelinghuysen: "What was the second section?"

Mr. Trumbull: "The second section required the parties whose disabilities were removed to go before a court and make oath. I have left that out; but this removes the disabilities of precisely those persons that the House voted to remove them from, and none others."

Mr. Nye: "I move to add the second section of the House amnesty bill."

The Vice-President: "The question is on the amendment of the Senator from Nevada to the amendment of the Senator from Illinois."

The question being taken by yeas and nays, resulted—yeas 36, nays 24; as follows:

YEAS—Messrs. Alcorn, Ames, Anthony, Boreman, Buckingham, Caldwell, Carpenter, Chandler, Clayton, Cole, Corbett, Cragin, Ferry of Michigan, Flanagan, Frelinghuysen, Gilbert, Hamlin, Harlan, Hitchcock, Kellogg, Logan, Morrill of Vermont, Morton, Nye, Osborn, Pomeroy, Pool, Pratt, Ramsey, Robertson, Scott, Sherman, Spencer, Sumner, Windom, and Wright—36.

NAYS—Messrs. Blair, Casserly, Cooper, Davis of West Virginia, Ferry of Connecticut, Goldthwaite, Hamilton of Maryland, Hamilton of Texas, Hill, Johnson, Kelly, Norwood, Ransom, Rice, Sawyer, Schurz, Sprague, Stevenson, Stewart, Stockton, Thurman, Tipton, Trumbull, and Wilson—24.

ABSENT—Messrs. Bayard, Brownlow, Cameron, Conkling, Davis of Kentucky, Edmunds, Fenton, Howe, Lewis, Morrill of Maine, Patterson, Saulsbury, Vickers, and West—21.

So the amendment to the amendment was agreed to.

Mr. Sumner said: "Mr. President, I give notice that should the motion of the Senator from Illinois prevail, and the amnesty bill be fastened upon the pending measure, I shall try to attach a much superior and more important measure, which, notwithstanding what he says, I shall insist upon calling the civil rights bill."

Mr. Morton: "I hope this amendment will be voted down. If it is adopted, the effect will probably be to defeat this bill, upon which we have been engaged some two or three days, and which I think it is very important to pass. We have had enough votes

of the Senate, and the experiment has been tried often enough for us to understand perfectly well that if this amnesty amendment is passed and adopted the civil rights bill will be put upon it, and then the friends of amnesty will again vote against the whole bill, as they have done repeatedly. As I am anxious to secure the passage of this bill, which we have been engaged upon for two or three days, I hope it will not be loaded down in such a way as past experience shows will kill it. I therefore hope that the friends of this bill in regard to elections will vote down this amendment."

Mr. Trumbull: "I hope not. The Senate has never been full when we have taken a vote upon amnesty. The votes have been ties frequently. There are several members present who were not present before, and if those in favor of amnesty will stand by it we can put amnesty on and carry it, and can keep what is called civil rights, or in other words the social equality bill, off."

Mr. Edmunds: "It will be very easy, I can tell my friend from Indiana, to get out of the difficulty that is suggested about embarrassing the two measures by having them together, because I have no doubt it is the intention of the Senator from Illinois, or some other Senator, the moment this amendment is agreed to, to move to strike out the first part of the bill, and then we shall have amnesty alone, and that he thinks everybody will go for. He has not shown such a very strong admiration for this election bill during the discussion we have had upon it as to lead me to suppose that he is desiring to strengthen it by this movement of amnesty. So that I should advise any Senator who really believes in the election bill and wants to have it become a law, however much he may be in favor of amnesty, to keep the two measures separate, when we can take care of them both."

Mr. Robertson said: "I hope the Senator from Illinois will not persist in this amendment. To be consistent I shall have to vote against it. I have been the consistent friend of amnesty for over three years; but to attach it to a bill which requires only a majority to pass would jeopardize both measures. I voted against attaching civil rights to the amnesty bill for the simple reason that I did not think the amendment germane to the bill. For the same reason I propose to vote against this amnesty amendment to this bill, as much as I am in favor of amnesty. I hope that the friends of amnesty will not vote to attach it to this measure, it not being germane to the bill."

Mr. Sawyer, of South Carolina, said: "I rise for the purpose of asking a question which I would like to have some Senator who is versed in parliamentary law and other law answer. Suppose that the amnesty bill is attached to the bill now pending as an amendment, and that it passes both Houses of Congress and goes to the President, and the Presi-

dent sees fit to veto it: I want to know if the amnesty part of the proposition will not nevertheless be the law?"

Mr. Edmunds: "I say no, for one."

Mr. Sawyer: "It is not necessary at all for the President to sign a bill granting relief from disabilities; that part of it is not necessary to go to him; but the amnesty bill is put upon this bill; it passes; it goes to the President; he chooses in consideration of something in some part of the bill to veto it; I want to know if the relief of disabilities is not, under the terms of the fourteenth amendment, still effected?"

Mr. Trumbull: "In reply to the Senator from South Carolina, I will say that it is my opinion that it would be effective. I do not think a bill removing political disabilities need go to the President at all. I thought it was very improper, as the Senator from Indiana says, to unite a two-thirds bill with a majority bill, and I gave that as one of the reasons for my course previously; but unfortunately a majority of the Senate did not agree with me, and they decided that it was proper to put together, and the Senator from Indiana has helped to put together, legislative bills and bills removing disabilities. Now, when he returns upon me and says that this is inconsistent with my action, I have only to say that I am conforming to the regulations of the Senate. The Senate has decided that these bills may go together. Of course I have to conform in business to the rules adopted by the Senate."

Mr. Sawyer: "Now, Mr. President, I am for amnesty. I believe it important to the interests of this country that the disabilities under which a large portion of our people labor shall be removed. I am for the civil rights bill. I believe that the colored man should have the same right to the privileges which belong to citizens of the United States as the white man. I will go as far as the farthest in securing those rights to the colored man; but I am not to be induced to vote to couple together measures, one of which can be passed by a mere majority and the other of which requires a two-thirds vote, by the threat of being held up to the country as opposed to amnesty and opposed to civil rights."

The Vice-President: "The question now recurs to agree to the amendment of the Senator from Illinois (Mr. Trumbull), as amended by adding the second section of the House amnesty bill."

Mr. Trumbull: "I move to amend the present amendment by adding to it the amendment just offered by the Senator from South Carolina."

The Vice-President: "The Senator from Illinois moves to amend the pending amendment by adding the so-called civil rights sections moved by the Senator from South Carolina."

Mr. Trumbull: "It is known that I am op-

posed to this social equality bill, but I want to see now who is for it. I want to see whether the Senate is for it, or whether Senators are simply using it to defeat amnesty. This will give us a direct vote on it. Let us see now those in favor of this social equality bill. On that question I ask for the yeas and nays."

Mr. Sumner: "And, Mr. President, I too shall vote against it—"

Mr. Morton: "Mr. President, I am a friend of the civil rights bill, as I have shown by a good many votes; but when the civil rights bill is offered by one of its enemies, not for the purpose of securing its success, but for the purpose of securing its defeat along with the defeat of the measure we have been engaged upon for several days, I shall vote against that as an amendment to the amnesty amendment, and I hope the bill will be passed without having any thing of the kind attached to it. It is an important bill."

The question being taken by yeas and nays, resulted as follows:

YEAS—Messrs. Caldwell, Clayton, Edmunds, Harlan, Pomeroy, and Sprague—6.

NAYS—Messrs. Alcorn, Anthony, Blair, Boreman, Buckingham, Cameron, Carpenter, Casserly, Cole, Cooper, Corbett, Davis of West Virginia, Ferry of Connecticut, Ferry of Michigan, Flanagan, Frelinghuysen, Gilbert, Goldthwaite, Hamilton of Maryland, Hamilton of Texas, Hamlin, Hill, Hitchcock, Johnston, Kellogg, Kelly, Logan, Morrill of Maine, Morrill of Vermont, Morton, Norwood, Pool, Pratt, Ramsey, Ransom, Rice, Robertson, Saulsbury, Sawyer, Schurz, Scott, Sherman, Stevenson, Stockton, Sumner, Thurman, Tipton, Trumbull, Wilson, and Windom—50.

ABSENT—Messrs. Ames, Bayard, Brownlow, Chandler, Conkling, Cragin, Davis of Kentucky, Fenton, Howe, Lewis, Nye, Osborn, Patterson, Spencer, Stewart, Vickers, West, and Wright—18.

So the amendment to the amendment was rejected.

The Vice-President: "The question recurs on the amendment of the Senator from Illinois, which is to add the amnesty proposition as generally known in the Senate."

The question being taken by yeas and nays, resulted—yeas 22, nays 83.

So the amendment was rejected.

Mr. Sumner: "I now send to the Chair an amendment which I desire to come in at the end of the bill. It is known as the civil rights bill. It is the same that has been read just now."

The Vice-President: "The question is on the amendment of the Senator from Massachusetts, to add the sections known in the Senate as the civil rights proposition."

Mr. Boreman, of West Virginia, said: "I move to strike out in the first section all after the word 'amusement' in the ninth line."

The Vice-President: "The amendment, in brief, is to strike from the first section of the civil rights bill that provision relative to schools and cemeteries."

Mr. Ferry, of Connecticut, said: "I shall vote

for the amendment of the Senator from West Virginia, because I believe from the depths of my inmost convictions that the passage of the bill of the Senator from Massachusetts, so far as it relates to common schools, will be the very destruction of the entire system of common-school education throughout the whole southern portion of our country, where that common-school education is now most needed."

Mr. Thurman said: "When this subject was under discussion before, I called upon the Senator from Massachusetts to point out some provision in the Constitution that authorized Congress to pass such a bill as this; I never have received an answer to that question yet. I never have found anybody who could point out one single line of the Constitution that gives Congress authority to pass such a measure as this."

"Now, sir, since that debate took place, I wish to say to the Senate that the very question has been before the Supreme Court of my State, composed of five judges, every one of whom is a Republican, the question whether the law of Ohio requiring the schools for colored children and white children to be kept separate is constitutional or not; whether it is a violation of any provision of the Constitution of the United States, and that court has just decided, by a unanimous vote, that that law violates no provision whatever of the Constitution of the United States, nor any law of Congress passed in pursuance of the Constitution of the United States. If that decision be sound, and of its soundness I do not think any good lawyer can doubt for a moment, there is an end of all pretence of constitutional foundation for this bill."

"The question was made in that court directly on an application to the court for a *mandamus* to compel the directors of a school for whites—a public school supported by public money—to receive the child of a colored man living within the school district. It was a question which the colored people made. The father did not send his child to the colored school, but demanded his admission into the white school. He, being a resident of the school district, a tax-payer there, made the demand for the purpose of trying the question, and applied to the Supreme Court for a *mandamus* to compel the directors to receive the child; and the court, by a unanimous vote, decided to refuse the *mandamus*, on the ground stated in a learned and able opinion, that the law of Ohio which excludes that child from that school violates no provision of the Constitution of the United States, or of any law of Congress passed in pursuance of the Constitution."

Mr. Hamlin, of Maine, said: "I have voted, I believe, on several occasions to unite the amnesty bill and the civil rights bill so called. I did so under the impression that perhaps it was the wisest and best method of progressing in our legislation. I am, however, satisfied

that I voted wrongly, and I now mean to vote for each measure separately, and to keep the one distinct from the other on every occasion when they are presented here for our action. I shall say nothing of the motives of Senators who offer the amendments. The effect is vicious in connecting them in any way at all; and from this time on I propose to vote to keep each of these measures distinct by itself, and to vote upon each by itself."

Mr. Sherman: "I rose at the same moment with the Senator from Maine to appeal to the Senator from Massachusetts to withdraw this amendment. I feel precisely like the Senator from Maine so far as the adding of this proposition to whatever bill is proposed in the Senate is concerned. The bill now pending is a bill that relates to elections, to guard the purity of elections. It is a bill that seems to me in the interest of that great object, with very little, perhaps no political significance in it, none that I can see. The bill that is now proposed as an amendment is entirely different, upon a different subject-matter."

Mr. Sumner: "I know the sincerity with which the Senator from Ohio (Mr. Sherman) has supported the civil rights bill, and how effectively he has done it; I also know his familiarity with the rules of both Houses, and I cannot listen to his appeal without feeling its force. I see that by attaching the civil rights bill to the pending measure it does not obtain the advantage in the House of Representatives which it would have had if attached to the other measure which was under consideration two or three days ago. Therefore, yielding to his appeal, and also to the suggestions of other friends in the Chamber, I now withdraw the amendment."

Mr. Morton: "I desire to amend the first section of the bill by adding after the amendment originally proposed by the Senator from Texas (Mr. Hamilton) so that the proviso will read: "

Provided, That no compensation shall be allowed to the supervisors herein authorized to be appointed, except those authorized to be appointed by the act to which this is an amendment, in cities having twenty thousand inhabitants or more.

"I will merely explain how this amendment becomes necessary. When the Senator from Texas offered his amendment, which was accepted, it was understood that it did not affect the compensation authorized by the original bill to those supervisors appointed in cities having twenty thousand inhabitants or more, but on examination of the amendment it was found that in effect it repealed the second section of the original bill, so that all supervisors, even those in the cities, will be appointed under the provision of this bill—this bill taking the place of the other. Therefore, to save the compensation of those supervisors to be appointed in cities, it is necessary to adopt this amendment. It is simply to carry out the will of the Senate as before expressed by a vote."

The Presiding Officer: "The question is on the amendment of the Senator from Indiana."

The result was announced—yeas 37, nays 18.

So the amendment was agreed to.

Mr. Casserly: "I move another amendment, to insert the following additional section: "

Sec. —. That no person shall be appointed under this act as supervisor of election who is not at the time of his appointment a qualified voter of the election district or voting precinct for which he is appointed. No person shall be appointed deputy-marshal under this act or the acts to which this is amendatory who is not a qualified voter at the time of his appointment in the precinct where he resides.

The amendment was agreed to.

Mr. Spencer, of Alabama, said: "I move to amend by inserting the word 'county' before the word 'election,' so as to require him to be a resident of 'the county, election district, or precinct.'"

Mr. Kellogg, of Louisiana, said: "I move to insert 'parish' as well as county."

Mr. Spencer: "I accept that amendment."

The Presiding Officer: "The question is on the amendment of the Senator from Alabama, as modified."

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, and was read the third time.

The Presiding Officer: "The question is on the passage of the bill."

The question being taken by yeas and nays, resulted as follows:

YEAS—Messrs. Ames, Anthony, Boreman, Caldwell, Carpenter, Clayton, Cole, Corbett, Cragin, Edmunds, Ferry of Michigan, Flanagan, Frelinghuysen, Hamlin, Howe, Kellogg, Logan, Morrill of Maine, Morrill of Vermont, Morton, Nye, Osborn, Pomeroy, Pool, Pratt, Ramsey, Rice, Sawyer, Scott, Sherman, Spencer, Stewart, West, Wilson, Windom, and Wright—36.

NAYS—Messrs. Alcorn, Blair, Casserly, Cooper, Davis of West Virginia, Goldthwaite, Hamilton of Maryland, Hamilton of Texas, Johnston, Kelly, Norwood, Ransom, Sprague, Stephenson, Stockton, Thurman, and Trumbull—17.

ABSENT—Messrs. Bayard, Brownlow, Buckingham, Cameron, Chandler, Conklin, Davis of Kentucky, Fenton, Ferry of Connecticut, Gilbert, Harlan, Hill, Hitchcock, Lewis, Patterson, Robertson, Saulsbury, Schurz, Sumner, Tipton, and Vickers—21.

So the bill was passed.

Mr. Kellogg: "I move to amend the title by inserting at the end of the title the words 'approved the 28th of February, 1871.'"

The amendment to the title was agreed to, so as to make it read: "A bill to amend an act entitled 'An act to amend an act approved May 31, 1870, entitled "An act to enforce the rights of citizens of the United States to vote in the several States of the Union, and for other purposes,"' approved February 28, 1871."

In the House, on May 30th, the bill above was taken up.

The question was put upon suspending the rules and passing the bill, and resulted as follows:

greater question, I must call the attention of members to the parliamentary history of this bill. It is one of the twelve great appropriation bills necessary for carrying on the Government. After being considered forty days in the Committee on Appropriations, after being elaborately debated in this House, it went to the Senate, and, after having there encountered storm and tempest of no ordinary character, it came back to the House with such amendments as the Senate saw fit to add. Again in the House, it was a bill in order under all the rules of parliamentary law, for our rules do not allow us to rule as out of order an amendment added by the Senate. The bill then being in order, there were but five courses of action open to the House in the ordinary processes of legislation. The first was, to refer it to the Committee on Appropriations, to be considered and brought back subject to the order of the House. The second was, we might have referred it to the Committee of the Whole on the state of the Union, where it would have been open to debate and amendment on every one of the ninety-three amendments, and then to be reported back to the House to await the further order of this body. A third course was, that we should proceed to consider it in open House under the five-minutes rule, subject to amendments and debate. A fourth plan was, to non-concur in all the Senate amendments and send the bill to a committee of conference, to be again brought back into the House. There was a fifth plan, to concur in all the Senate amendments, and thus send the bill to the President for his approval.

"Now, there is no other ordinary course to be taken with an appropriation bill, and I call the attention of the House to the fact that I and my associates on the Committee on Appropriations tried again and again in the House each and all of these five ordinary courses of procedure, and again and again did the minority of this House refuse to allow the House to take either of these courses until late at night of Saturday, after a twelve hours' session, and then only on condition that the non-concurrence and reference to a conference committee should be coupled with a recess which should bring us within four hours of the final adjournment of Congress. In other words, the minority have for days refused to allow the usual legislative processes to be employed in reference to a great and necessary public measure; they have refused to allow it to be debated or considered except upon terms of their own dictation wholly beyond the ordinary range of parliamentary order.

"Mr. Speaker, a question has therefore arisen, in its importance far above any item in this bill, and even above the whole bill, and it is simply this: shall the majority of the members of this House have the right to consider and act upon a great appropriation bill in the mode provided in the rules? The moment a minority, however large, deny that proposi-

tion, that moment we are in the midst of a parliamentary revolution, and legislation of any sort is impossible for evermore until that position be utterly abandoned. In saying this I do not fail to recognize the amplest right of the minority to make dilatory motions for any and all legitimate purposes. I recognize that right whenever the minority is being oppressed by any parliamentary proceeding. If, for instance, we should insist that a bill should be passed without being read, I would filibuster as long as any man here to prevent it, if it were a bill that I did not understand or approve."

Mr. Eldredge, of Wisconsin, said: "I want to ask a question on this particular point, as to what was said by him to gentlemen on this side of the House, and to me personally."

Mr. Garfield: "When we went into the conference committee, we sat two hours on Saturday night, running our session into midnight.

"We met on Sunday and sat eight hours continuously. At the end of six hours we had finished, to the satisfaction of the conferees, every other item of disagreement between the two Houses. When we reached the tenth amendment, the one in dispute, the Senate conferees informed us that they could make no report that did not treat of that subject in it; that the report must be one and a whole. The committee on the part of the House was thus compelled to adopt one of two courses, either at eight o'clock on Monday morning, four hours before the time fixed for final adjournment, bring back a report that they had made no progress whatever, that nothing was agreed to, nothing settled, thus making it wholly impossible to reach an adjustment before twelve o'clock, or to bring in a report concurring in something.

"After mature deliberation we thought it to be our duty to bring in a report, and in order to do that we proposed a substitute to the Senate's tenth amendment. That substitute consists in the main of the enforcement bill sent to the House by the Senate a few weeks since; but there are two or three important modifications put on that at the suggestion of the House conferees.

"The amendment thus guarded is clearly within the provisions of the Constitution which empower Congress to regulate the time, place, and manner of holding elections for Representatives in Congress. Now, the committee of conference having brought in a report under the rules, I do now insist, and shall continue to demand, that the bill before the House shall be acted on; and against all factious and revolutionary resistance I propose to stand, if need be, until December next, until this appropriation bill shall be considered, shall be voted on, voted up or voted down.

"And now, once for all, I say to the gentleman from Wisconsin (Mr. Eldredge), and to the gentleman from Pennsylvania (Mr. Kelley),

that I have said no word to them or to any man inconsistent with the declarations I have made in these remarks. I challenge any man to the proof, if he venture to join the issue."

Mr. Brooks, of New York, said: "The fourth article of amendments to the Constitution of the United States provides that 'the right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no warrants shall issue but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.'

"Section eight of the law prescribes: "

And the marshal or his deputy shall arrest and take into custody, with or without process—

"There is nothing in this act which forbids the arrest of any man without process of law."

Mr. Bingham: "Mr. Speaker, there is nothing in the bill, so far as the rights of citizens and persons are concerned, that has not already been on the statute-book for two years. It has been in force in the State represented by the honorable gentleman from New York (Mr. Brooks), and I have yet to learn that any of the provisions of this law of which the gentleman complains have been held unconstitutional by any court, State or national."

Mr. Randall: "You will not let it be tested by the Supreme Court."

Mr. Bingham: "Test it before any court. That right is assured by the law as it was originally enacted. The question might have been tested in the Supreme Court. It was not, because there was no doubt of the validity of the law. Gentlemen talk about not letting it be tested in the Supreme Court! I do not stop to argue the constitutional question now. I gave these gentlemen an opportunity ten days ago to take the Senate bill on this very subject from the table and allow it to be considered. And now gentlemen come and raise the miserable quibble that there is some constitutional privilege invaded here, because the Senate has introduced an amendment to enlarge or restrict the terms and effect of an appropriation, while it is in accordance with the practice of this Government under every Administration and in every Congress since it was a Government. In the original text of the bill was the provision for the expenses which may be incurred in the enforcement of the act of February 28, 1871, and thereupon, the House having incorporated that provision in its appropriation, and having appropriated money to carry out the act, the Senate, according to all usage, introduces amendments, restricting, limiting, and prescribing the effect of the appropriation to the particular act.

"I consider the question gentlemen have seen fit to raise now is a question as important as any that can arise under the Constitution of the country, and I propose to fight it out

with them; and that is whether, after refusing in the regular course of business to take up the independent Senate bill and consider it, and record their united votes against it, refusing to allow the Judiciary Committee to report a substitute for that bill, correcting its verbal errors, they are to come here now, under the pretence of taking care of the Constitution, and taking care of the rights of the people, and inaugurate here in this Hall a treason."

Mr. Kelley: "The gentleman from Ohio (Mr. Garfield) appealed to the House to sustain this bill, in order to avert a parliamentary revolution. Why, sir, I have but stated the proximate reason for my action; but the underlying and supreme reason was the desire on my part to avert a parliamentary revolution. Sir, parliamentary or other revolution is not likely to spring from imperfections in the rules of the House, nor am I of the belief that the rule of which he complains, that which secures the right of a numerous minority to defend its opinions, is an objectionable or dangerous one. During the eleven years I have had the honor of a seat in this House I have often felt that this reserved right of the minority was exercised in an improper manner, but I have always felt that, being here in a minority, I would also do what I have always honored the distinguished gentleman from Ohio (Mr. Bingham), who has just addressed the House, for having done in the Thirty-fifth Congress. When, sir, it was attempted to control appropriations by refusing to put a proper restraining clause in an appropriation bill, there was just such action by the Republican minority, of which he was then an honored member. Whether it was right or not, for thirty-six hours the Republican minority held the Democratic majority in check, and went to the country on the issue. That action did much to secure to the Republican party the magnificent results of the following October and November elections. The country approved the action of the heroic Republican filibusters who had held in check and defeated the powerful Democratic majority.

"Sir, an inconsiderable minority have no power to control legislation. A vote of two-thirds will pass a bill on any Monday, or at any time within ten days of a final adjournment. Moreover, if the rule be an unwise one, it is within the control of the House, and we can alter it. The danger of parliamentary revolution comes not from this cause, but from quite another quarter, and that is from the absorption of all the powers of the Government by the Senate. That is the weak point in our Constitution and our Government, and never was it more glaringly demonstrated than during the present Congress. I pause not to allude to its ceaseless encroachments on the functions of the executive department of the Government, and will refer but briefly to facts within the knowledge of every member. The originating of revenue measures was confided

to the House of Representatives by the Constitution; yet when we assembled here we were met with a revenue measure, which had been prepared during the recess by a special committee of the Senate. It was soon sent to us for our acceptance. The House, which is charged with raising revenue and making appropriations for carrying on the Government, has always enjoyed the privilege of being the first to name the day for an adjournment. The Senate, however, long before our business was well shaped, and before it was known what exigencies might arise, assumed the conceded functions of this House, and sent us a formal intimation as to the time at which it would, in its judgment, be convenient and agreeable for us to adjourn.

"And now, sir, when we come to act upon an important appropriation bill for the support of the Government, what do we find? The Senate meets us with the intimation that we may designate necessary appropriations, but we must yield our convictions on other points not germane to such a bill, or they will prevent our bill from becoming a law. There is where the danger of revolution lies. And, sir, I may say that while my opposition to this measure is manifested as it is at this time, by reason of my commitments of an honorable character to gentlemen on the other side, there is lying behind it the conviction that this method of passing any law, whatever the merits of the measure may be, is dangerous, and one for which the Republican party ought not to make itself responsible. Therefore, I hope that this report will be recommitted; and, on my motion to recommit, I call the previous question."

The question being taken on seconding the previous question, the House divided; and the tellers reported—yeas 101; nays not counted.

So the previous question was seconded and the main question ordered; which was upon the motion of Mr. Kelley to recommit the report of the committee of conference.

The question was taken; and it was decided in the affirmative, as follows:

YEAS—Messrs. Acker, Archer, Arthur, Banks, Beck, Bell, Biggs, Bird, Austin Blair, James G. Blair, Braxton, Bright, Brooks, Caldwell, Campbell, Carroll, Comingo, Conner, Cotton, Critcher, Crossland, Dox, Du Bose, Duke, Eldredge, Finkelnburg, Forker, Henry D. Foster, Garrett, Getz, Giddings, Golladay, Haldeman, Hambleton, Hancock, Handley, Hanks, Harmer, Harper, John T. Harris, Havens, Hawley, Hay, Hereford, Hibbard, Holman, Houghton, Kelley, Kellogg, Kendall, Kerr, Ketcham, King, Lamison, Lewis, Manson, Marshall, McClelland, McCormick, McGrary, McGrew, McHenry, McIntyre, McKinjin, McNeely, Mercer, Merrick, Morgan, Morphis, Packer, Potter, Price, Randall, Read, Edward Y. Rice, John M. Rice, Ritchie, William R. Roberts, Sion H. Rogers, Sherwood, Shober, Slater, Slocum, Sloss, Stevens, Storm, Strong, Swann, Terry, Thomas, Washington Townsend, Van Trump, Waddell, Warren, Wells, Whitthorne, Williams of New York, Winchester, and Young—99.

NAYS—Messrs. Ames, Averill, Barber, Beatty, Beveridge, Bigby, Bingham, Buckley, Buffinton, Burchard, Burdett, Benjamin F. Butler, Roderick

R. Butler, Cobb, Coburn, Coghlan, Conger, Crocker, Darrall, Dawes, De Large, Donnan, Duell, Dunnell, Eames, Elliott, Charles Foster, Wilder D. Foster, Frye, Halsey, George E. Harris, Hays, Gerry W. Hazleton, John W. Hazleton, Hill, Hoar, Lowe, Maynard, McKee, Merriam, Monroe, Morey, Leonard Myers, Packard, Peck, Pendleton, Perce, Aaron F. Perry, Platt, Poland, Prindle, Rainey, Ellis H. Roberts, Rusk, Sawyer, Sessions, Shanks, Sheldon, Shellabarger, H. Boardman Smith, John A. Smith, Snyder, Thomas J. Speer, Sprague, Starkweather, Stevenson, Taffe, Turner, Twichell, Tyner, Wake-man, Walden, Wallace, Walls, Whiteley, Willard, Williams of Indiana, Jeremiah M. Wilson, and John T. Wilson—79.

NOT VOTING—Messrs. Adams, Amber, Barnum, Barry, Boles, Clarke, Cox, Crebs, Creely, Davis, Dickey, Ely, Farnsworth, Farwell, Garfield, Goodrich, Griffith, Hale, Herndon, Hooper, Killinger, Kinsella, Lamport, Lansing, Leach, Lynch, McKinney, Benjamin F. Meyers, Mitchell, Moore, Negley, Niblack, Orr, Palmer, Hosea W. Parker, Isaac C. Parker, Eli Perry, Peters, Porter, Robinson, John Rogers, Roosevelt, Sargent, Scofield, Seeley, Shoemaker, Worthington C. Smith, Snapp, R. Milton Speer, Stoughton, Stowell, St. John, Sutherland, Sypher, Dwight Townsend, Tuthill, Upson, Vaughan, Voorhees, Waldron, Wheeler, and Wood—62.

Subsequently Mr. Garfield, of Ohio, said: "Mr. Speaker, I desire to submit the following report from the committee of conference."

The Clerk read as follows:

The committee of conference on the disagreeing votes of the two Houses on the amendments to the bill (H. R. No. 2,705) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1873, and for other purposes, having met, after full and free conference, have been unable to agree.

JAS. A. GARFIELD,
FRANK W. PALMER,
WM. E. NIBLACK,

Managers on the part of the House.

CORNELIUS COLE,
GEO. F. EDMUNDS,
JOHN W. STEVENSON,

Managers on the part of the Senate.

Mr. Garfield, of Ohio: "The Senate originally asked for a committee of conference in reference to the disagreeing votes of the two Houses on this bill, and I suppose they will make known their wishes. I do not know but the House might hasten business by ordering a new conference. I move the appointment of a new conference on the disagreeing votes of the two Houses on the bill; and on that motion I demand the previous question."

The motion of Mr. Garfield, of Ohio, was agreed to.

The Speaker: "The Chair appoints the same conferees as managers on the part of the House."

Mr. Garfield, of Ohio, soon after submitted a privileged report, and said: "In explanation of the report, I desire to state to the House that the main body of the report is the same as was presented before. Three important changes were made, in view of additional facts brought before the conference committee as to the amount of sums appropriated. Beyond those three changes every word is the same, except what relates to the tenth amend-

ment, the matter in contest between the two Houses.

"There are but three changes made in that tenth amendment. We strike out the words 'this act or,' in the fortieth line of the print which gentlemen have before them. The second change is in the forty-third line, where we strike out the words 'he resides,' and insert in lieu thereof the words 'his duties are to be performed.' The third, and the one of chief importance, is the addition of a proviso at the end of line sixty-two, in these words: "

And provided further, That the supervisors herein provided for shall have no power or authority to make arrests or to perform other duties than to be in the immediate presence of the officers holding the election, and to witness all their proceedings, including the counting of the votes, and the making of a return thereof.

"The effect of this is that the supervisors authorized by this act stand by and witness the proceedings of the election, and have the official right to stand by, so that, if frauds are being perpetrated, the Government of the United States may have as witnesses, a member of the Democratic party, and one of the Republican party, to the facts in the case."

Mr. Eldredge: "I desire to ask the chairman of the Committee on Appropriations if the words 'guarded and inspected' are not retained in the bill."

Mr. Garfield: "No, sir. It is provided that when ten citizens in any county or parish in any congressional district shall apply to the judge of the district in which such county or parish is situated 'to have said registration or election both guarded and scrutinized'"—

Mr. Eldredge: "Yes, those are the words, 'guarded and scrutinized.'"

Mr. Garfield: "The persons applying express their wish to have the election guarded and scrutinized. But the powers of the persons appointed for that purpose are in terms restricted by the proviso I have read."

Mr. Eldredge: "They are to guard and scrutinize the election."

Mr. Garfield: "The gentleman is in error. The words 'guarded and scrutinized' apply only to the form of application made to the judge. But those words do not apply at all to the powers of the persons appointed. Their powers are defined and limited by the strong language of the proviso which I have just read. They are thus made mere witnesses of all the transactions of the election."

Mr. Kerr, of Indiana, said: "Before my colleague (Mr. Niblack) takes the floor, I want to ask a question, in order to remove any doubt upon the mind of any member of the House. I desire to know of the chairman of the Committee on Appropriations whether he understands that there is any thing in the language of this amendment that touches the matter of qualifications of electors."

Mr. Garfield: "I understand, on the contrary, that there is nothing that can touch

or change the qualifications of electors now provided by law."

Mr. Ritchie, of Maryland, said: "In the State of Maryland the judges of the election have no discretion as to the qualifications of voters. They are controlled by the registration list; in fact, they are merely recording officers. Now, I ask the gentleman what would be the relation of the supervisors contemplated by this amendment to our registration and elections?"

Mr. Garfield: "That of simply standing by and seeing the work done, without any other power than to witness it from beginning to end."

Mr. Eldredge: "Gentlemen who have not surrendered their opposition on this question have not yet had an opportunity to speak. None of us have had that opportunity who feel that we cannot surrender our opposition as long as we have the power to resist this measure. I ask the gentleman to yield to me for two or three minutes."

Mr. Garfield: "Gentlemen all around me insist that I shall call the previous question. I cannot yield further."

Mr. Holman, of Indiana, said: "This is the most fatal measure ever brought into this Congress."

Mr. Haldeman, of Pennsylvania, said: "We are not going to yield."

Mr. Eldredge: "It is an unconstitutional bill."

Mr. Holman: "It is most infamous in its character."

Mr. Garfield: "I now move that the rules be suspended, and that the House proceed to take an immediate vote, without dilatory motions, upon agreeing to the report of the committee of conference."

The question was put on the motion of Mr. Garfield, to suspend the rules; and there were—yeas 122, nays 28.

So (two-thirds voting in favor thereof) the rules were suspended.

The Speaker: "The House has directed that it now vote by yeas and nays upon this question. Will the House agree to the report of the committee of conference on the disagreeing votes of the two Houses to the amendments of the Senate to the sundry civil appropriation bill?"

The question was taken; and it was decided in the affirmative, as follows:

YEAS—Messrs. Ames, Averill, Banks, Barber, Beatty, Beveridge, Bigby, Bingham, Buckley, Bufington, Burchard, Burdett, Benjamin F. Butler, Roderrick B. Butler, Cobb, Coburn, Coghlan, Conger, Cotton, Crocker, Darrall, Dawes, De Large, Donnan, Duell, Dunnell, Eames, Elliott, Finkelnburg, Charles Foster, Wilder D. Foster, Frye, Garfield, Goodrich, Halsey, Harmer, George E. Harris, Havens, Hawley, Hay, Hays, Gerry W. Hazleton, John W. Hazleton, Hill, Hoar, Houghton, Kelley, Kellogg, Ketcham, Killinger, Lansing, Lowe, Maynard, McGrew, McJunkin, McKee, Mercer, Merriam, Monroe, Leonard Myers, Packard, Packer, Palmer, Peck, Pendleton, Perce, Aaron F. Perry, Peters, Platt, Poland,

Prindle, Rainey, Ellis H. Roberts, Rusk, Sawyer, Sessions, Shanks, Sheldon, Shellabarger, H. Boardman Smith, John A. Smith, Snyder, Sprague, Starkweather, Stevenson, Strong, Sypher, Taffe, Thomas, Washington Townsend, Turner, Twichell, Tyner, Wakeman, Walden, Wallace, Walls, Whiteley, Willard, Williams of Indiana, Jeremiah M. Wilson, and John T. Wilson—102.

YEAS—Messrs. Acker, Archer, Arthur, Beck, Bell, Biggs, Bird, James G. Blair, Braxton, Bright, Brooks, Caldwell, Campbell, Carroll, Comingo, Conner, Critcher, Crossland, Dox, Du Bose, Duke, Eldredge, Farnsworth, Forker, Henry D. Foster, Garrett, Getz, Giddings, Golladay, Haldeman, Hambleton, Hancock, Handley, Hanks, Harper, John T. Harris, Hereford, Hibbard, Holman, Kendall, Kerr, King, Lamison, Lewis, Manson, Marshall, McClelland, McCormick, McHenry, McIntyre, McNeely, Merrick, Morgan, Niblack, Potter, Price, Randall, Read, Edward Y. Rice, John M. Rice, Ritchie, William R. Roberts, Sion H. Rogers, Sherwood, Shober, Slater, Slocum, Sloss, Stevens, Storm, Swann, Terry, Waddell, Warren, Wells, Whitthorne, Williams of New York, Winchester, and Young—79.

NOT VOTING—Messrs. Adams, Ambler, Barnum, Barry, Austin Blair, Boles, Clark, Cox, Crebs, Creely, Davis, Dickey, Ely, Farwell, Griffith, Hale, Herndon, Hooper, Kinsella, Lamport, Leach, Lynch, McCrary, McKinney, Benjamin F. Meyers, Mitchell, Moore, Morey, Morphis, Negley, Orr, Hosea W. Parker, Isaac C. Parker, Eli Perry, Porter, Robinson, John Rogers, Roosevelt, Sargent, Scofield, Seeley, Shoemaker, Worthington C. Smith, Snapp, R. Milton Spear, Thomas J. Spear, Stoughton, Stowell, St. John, Sutherland, Dwight Townsend, Tutthill, Upson, Van Trump, Vaughan, Voorhees, Waldron, Wheeler, and Wood—59.

So the report of the committee of conference was agreed to.

In the Senate, on the same day, the final report of the committee of conference was presented, when Mr. Stevenson, of Kentucky, said: "I did not sign that report, for the reason that I did not believe Congress had any authority to exercise power over the State elections under the Constitution of the United States; but, if Congress had the power, I should not very much object to the proviso here as it is in the amendment. Believing as I do that the power is not within the constitutional competency of Congress, I shall vote against the report."

The question of concurrence being taken by yeas and nays, resulted as follows:

YEAS—Messrs. Alcorn, Ames, Anthony, Boreman, Buckingham, Caldwell, Carpenter, Chandler, Clayton, Cole, Conkling, Corbett, Cragin, Edmunds, Ferry of Michigan, Flanagan, Frelinghuysen, Harlan, Howe, Kellogg, Logan, Morrill of Maine, Morrill of Vermont, Morton, Nye, Osborn, Pomeroy, Pool, Pratt, Ramsey, Robertson, Sawyer, Scott, Sherman, Spencer, Stewart, Sumner, West, and Windom—89.

NAYS—Messrs. Bayard, Blair, Casserly, Cooper, Fenton, Hamilton of Texas, Kelly, Norwood, Ransom, Saulsbury, Sprague, Stevenson, Stockton, Thurman, Tipton, Trumbull, and Vickers—17.

ABSENT—Messrs. Brownlow, Cameron, Davis of Kentucky, Davis of West Virginia, Ferry of Connecticut, Gilbert, Goldthwaite, Hamilton of Maryland, Hamlin, Hill, Hitchcock, Johnston, Lewis, Patterson, Rice, Schurz, Wilson, and Wright—18.

So the report was concurred in.

On May 17th, the Senate, as in Committee

of the Whole, proceeded to consider the bill to extend the provisions of the fourth section of the act approved April 20, 1871.

The Chief Clerk read as follows:

Be it enacted, etc., That the provisions of the fourth section of the act approved April 20, 1871, entitled "An act to enforce the provisions of the fourteenth amendment to the Constitution of the United States, and for other purposes," shall continue in force until the end of the next regular session of Congress.

Mr. Scott, of Pennsylvania, said: "Mr. President, this bill proposes to continue in force until the end of the next regular session of Congress the provisions of the fourth section of the act of April 20, 1871, which I ask the Secretary to read."

The Chief Clerk read as follows:

SEC. 4. That whenever in any State or part of a State the unlawful combinations named in the preceding section of this act shall be organized and armed, and so numerous and powerful as to be able, by violence, to either overthrow or set at defiance the constituted authorities of such State, and of the United States within such State, or when the constituted authorities are in complicity with, or shall connive at the unlawful purposes of, such powerful and armed combinations; and whenever, by reason of either or all of the causes aforesaid, the conviction of such offenders and the preservation of the public safety shall become in such district impracticable, in every such case such combinations shall be deemed a rebellion against the Government of the United States, and during the continuance of such rebellion, and within the limits of the district which shall be so under the sway thereof, such limits to be prescribed by proclamation, it shall be lawful for the President of the United States, when in his judgment the public safety shall require it, to suspend the privileges of the writ of *habeas corpus*, to the end that such rebellion may be overthrown: *Provided*, That all the provisions of the second section of an act entitled "An act relating to *habeas corpus*, and regulating judicial proceedings in certain cases," approved March 3, 1868, which relate to the discharge of prisoners other than prisoners of war, and to the penalty of refusing to obey the order of the court, shall be in full force so far as the same are applicable to the provisions of this section: *Provided further*, That the President shall first have made proclamation, as now provided by law, commanding such insurgents to disperse: *And provided also*, That the provisions of this section shall not be in force after the end of the next regular session of Congress.

Mr. Scott: "Mr. President, these provisions and the proposition to extend them suggest the following inquiries:

"1. Are there unlawful combinations organized and armed in any State or parts of any State?

"2. Are they so numerous and powerful as to be able by violence to either overthrow or set at defiance the constituted authorities of the State and of the United States within such State?

"3. Are the constituted authorities in complicity with or do they connive at the unlawful purposes of such combinations?

"4. Is the conviction of offenders or the preservation of the public safety impracticable by reason of all or either of these causes?

"5. If the conviction of offenders and the preservation of the public safety be not at the

present moment impracticable, does the past give such reason to apprehend such a state of affairs as will render them impracticable, and as will require this power to be lodged in the President for the protection of the public welfare?

"These inquiries open a very wide field of investigation; but I do not propose to follow any of them at great length, nor can I take them up in their order, as the testimony which I shall consider will bear upon them all. There was a time when it might have been advisable to dwell upon the evidence establishing the existence of the Ku-klux Klan, the combination against which principally it is well known this legislation was directed; but that time has passed. Its existence now stands confessed.

"The testimony taken by the joint committee clearly establishes that the same organization, pursuing the same purposes and seeking to accomplish them by the same means, has existed, and been active since 1868, in the States of North and South Carolina, Georgia, Florida, Alabama, and Mississippi. There can be no reasonable doubt of its existence still in Tennessee and in most of the other States where it is for the present quiet, but ready to act whenever it may be deemed necessary or prudent to do so. Its recent character is better fixed, however, by the evidence furnished from the organization itself, evidence which stamps it as one of the foulest blots upon the civilization of this century. At the trials in Columbia, South Carolina, the constitution of the Ku-klux in that State was given in evidence, having been found in possession of one Samuel Brown, Esq., a man of wealth and standing in York County, who was chief of a klan, and is now expiating his offence in the Albany penitentiary, sentenced upon his own confession. The same constitution governed the order in North Carolina, as is shown by the testimony of David Schenck, Esq., a leading lawyer of Lincolnton, in that State, who became a member of the order in 1868, and says that in doing so he considered that he was swearing to support the platform of the convention that nominated Seymour and Blair in New York.

"Now, sir, as to the extent to which this organization has prevailed: it is stated in the views of the minority that it does not prevail in more than forty counties in these States of North and South Carolina, Georgia, Florida, Alabama, and Mississippi. Let me give you the names of the counties in these States in which these offences have been committed. Outrages have been committed in North Carolina in the counties of Orange, Chatham, Alamance, Lenoir, Harnett, Sampson, Caswell, Guilford, Gaston, Lincoln, Moore, Rutherford, Cleveland, and Catawba.

"*South Carolina.*—In the counties of Spartanburg, York, Union, Chester, Abbeville, Laurens, Fairview, Newberry, and Lancaster.

"*Georgia.*—In the counties of Jasper, Wal-

ton, White, Morgan, Jackson, Hancock, Wilkinson, Washington, Cherokee, Greene, Madison, Pike, Whitefield, Habersham, Putnam, Haralson, Warren, Richmond, Gwinnett, Floyd, Glascock, Chattooga, Dade, Clark, Jefferson, Oglethorpe, Walker, Appling, and Columbia.

"*Alabama.*—In the counties of Blount, Calhoun, Chambers, Choctaw, Fayette, Greene, Hale, Jackson, Jefferson, Lawrence, LIMESTONE, Macon, Madison, Marshall, Morgan, Perry, Pickens, Sumter, Tuscaloosa, St. Clair, Cherokee, Coosa, Lauderdale, Marengo, Tallapoosa, and Walton.

"*Mississippi.*—In the counties of Chickasaw, Kemper, Itawamba, Tishomingo, Prentiss, Lee, Leake, Tippah, Union, Alcorn, Kemper, Lauderdale, Lincoln, Lowndes, Marshall, Monroe, Noxubee, Oktibbeha, Pontotoc, and Winston.

"*Florida.*—In the county of Jackson alone the evidence shows that within the last five years there have been one hundred and fifty-three homicides.

"Here we have ninety-nine counties in all, and this in all probability falls below the number. I have not had time to make a careful examination of that part of the testimony at the taking of which I was not personally present, and have only inserted here the names of those counties where offences are clearly shown to have been committed. I have no doubt there are more. I shall give presently a summary of the offences committed in these counties.

"These facts bear upon the denial made, in the views of the minority, of the extent of the organization, of its political significance, or of its having the countenance of any of the respectable white people of the South. Each of these may require a passing notice.

"As to the numbers of the organization, the fact that in York County the number was almost equal to the white voting population is of itself startling, and when it is remembered that about the same state of affairs existed in the two adjoining counties, and to a large extent in other counties, it is evident that nothing but the power of the General Government is sufficient to restrain that organization in that State.

"Again, after the concession that General Forrest knows so much more about the origin of the organization than any other person, his statement as to its numbers becomes important. In 1868 he said there were forty thousand in Tennessee and five hundred thousand in the Southern States. The only correction he made of that statement, in his letter written to correct errors, was, that he believed there were those numbers. His belief as the head of that organization is significant, and equivalent to the knowledge of other people.

"The allegation that the order does not exist in more than forty counties is met by the names of the counties of the several States which I have already given.

"I will now give the summary to which I have referred. In North Carolina fourteen counties are shown in which outrages occurred, and in them there occurred eighteen homicides and three hundred and fifteen whippings. In South Carolina, nine counties, in which the testimony taken by the committee shows there were thirty-five homicides and two hundred and seventy-six other outrages. The presentment of the grand-jury says there were forty homicides in those counties, and over two thousand cases of other outrages. In Georgia there are twenty-nine counties shown, in which seventy-two homicides and one hundred and twenty-six cases of whippings are disclosed by the testimony. In Alabama there are twenty-six counties, in which two hundred and fifteen homicides are shown to have occurred, and one hundred and sixteen cases of other outrages. In Mississippi there are twenty counties in which there are twenty-three homicides, and seventy-six cases of outrages, by this testimony; and in Florida, in the one county of Jackson—I have not had time to look through the other portions of the testimony—one hundred and fifty-three homicides have occurred in that county alone since the war; and let it not be supposed that these even are all. These foot up ninety-nine counties, five hundred and twenty-six homicides and twenty-nine hundred and nine cases of other outrages shown in this testimony, and by this finding of the grand-jury.

"It is alleged that in all these proceedings the men are of that class in society who have no countenance. Sir, let me call your attention to two or three facts. The minority of the committee have admitted—it is an admission—that General Napoleon B. Forrest and General John B. Gordon were the first men who were at the organization of this klan. Who are N. B. Forrest and J. B. Gordon? I suppose that for political purposes I could give them no higher indorsement than to state that they were both delegates at large from their respective States of Tennessee and Georgia in the Democratic National Convention of 1868; and taking the testimony of Schenck, of North Carolina, that he considered he was swearing, when he was initiated in the Ku-klux organization, to support the platform of that convention, it is not much to be wondered at that the platform was so construed when two men who are admitted to have organized the Ku-klux were delegates at large in that convention, and their position ought to rank them as respectable men.

"As to the other denial, that this organization has any thing political in it, I wish to say here that I do not care whether it has any thing political in it or not. I do not care whether these outrages have been animated by partisan hate or not. There is the fact: they have been committed upon the poor and defenceless, and they have been unable to secure redress. Until this legislation of Congress

and the exercise of power by the President, the men who committed these offences could not be brought to punishment by the courts. I care not whether the offences were committed by Republicans on Democrats or by Democrats on Republicans, or without any shadow of partisan feeling, every dictate of humanity, every impulse of enlightened civilization requires and demands that the Government shall extend its power for the purpose of bringing these offenders to justice and of protecting the defenceless.

"But, sir, I have given enough to show what its political character is. I do not wish to go at large into the mere partisan aspect of this case. There is abundant material for it. Turn to its oaths 'against radicals;' to its constitution 'to relieve those suffering from radical misrule;' turn to the finding of that grand-jury in Columbia, South Carolina; to the testimony of hundreds of witnesses both in and out of the order, where the victims testified that they were whipped to compel them to renounce their radicalism; where the members of the organization testify and confess that the defeat of radicalism was the purpose of the organization. Go on all through this testimony, that of Schenck, of North Carolina, in which he admits that he went into the organization not believing that it would countenance violence, but that he went into it as a political organization; that he afterward attempted to divert it from violence and could not do it. Take the identification of Forrest and of Gordon with it in the beginning, Hampton's appeal for it in the end. Take the fact that another prominent man in South Carolina, J. Banks Lyle, a member of the South Carolina Legislature, fled also at the time the proclamation was issued; and so well satisfied were his own Democratic associates, from the county from which he was elected, of his complicity with this organization that they voted with the other members of the Legislature to declare his seat vacant. All these facts show that there is a political significance in the organization.

"I come now to the views of the minority on this subject. They say that the white and the black citizen cannot coexist in the same Government. That feeling is inculcated in the Ku-klux Klan of the South. It has been one of the fruitful sources of these outrages; and I regret to find that, notwithstanding the constitutional amendments have declared the negro to be free, to be a citizen, and to be entitled to all his civil and political rights, we are even now, as the result of this investigation, told that the time is near when those rights shall be taken from him.

"There are many causes assigned for these outrages: the debts of the States, the reconstruction acts, bad legislation. I do not, at this time, propose to go into any discussion of them. I am discussing the evil itself, its existence, its magnitude, its power, its extent,

and the necessity of providing against a recurrence of the violence which has hitherto disgraced the nation.

"Withdraw from the President of the United States the power to suspend the writ of *habeas corpus* in those States where this organization exists, and no man can answer for the scenes that will follow and the retaliation that may ensue. Keep it there, and the very existence of the power will render its exercise unnecessary.

"This is the question which we are to determine. Are we, taking up these provisions in their order, to say that men who have not been secure in their persons, in their houses, or in their papers; that men who have been deprived of life and liberty without due process of law; that men whose houses have been subject to unreasonable searches and sieges; that criminals even have been hanged without trial in the face of a writ of *habeas corpus* issued to secure them a trial; that men upon whom cruel and unusual punishments have been inflicted by the mob instead of by judicial tribunals; and that men entitled to citizenship, freedom, and the ballot, have all of them denied by this conspiracy—shall we say that these men shall continue to be subject to these outrages? Or shall we vest in the President that power which we believe we can vest in him, and which we believe will be effective to protect and defend these rights and to bring to justice their guilty combinations against them."

Mr. Pratt, of Indiana, said: "Mr. President, the bill under consideration has been introduced by the chairman of the joint committee of Congress raised at the last session to inquire into the alleged outrages in the Southern States, and by the authority of that committee. It simply continues in the President of the United States the power of suspending the privilege of the writ of *habeas corpus* to the end of the next session of Congress, as that power was given by the act of April 20, 1871, entitled 'An act to enforce the provisions of the fourteenth amendment to the Constitution of the United States.' The power which the bill confers is no other or different in the circumstances of its exercise from that which has been so beneficently employed by him in nine counties in the State of South Carolina. Fortunately for the country, he has found it necessary to use his discretion in but a single State, and in but a small portion of that.

"Looking at the good results which have been accomplished in that most disturbed district of the entire South, who can doubt that Congress acted wisely and in the interest of humanity and justice in investing the President with this power? Nobody has suffered, so far as I am aware, who was not engaged in the conspiracy, or against whom reasonable grounds of suspicion did not exist. Hundreds of persons whose guilty consciences informed against them, seeing that the Government was in earnest in its purpose to put a stop to law-

lessness and violence, have fled to parts unknown. Law has been reinstated, and protection given to life and property by the passage of that act.

"I know, sir, full well how jealous the people of this country are of their liberties. They regard this writ as their greatest safeguard. They are not forgetful of its history and of the struggles of the people of England to ingraft it upon Magna Charta. The fathers of this Republic wisely provided, when they came to form the national Constitution, that its privilege should not be suspended unless when in cases of rebellion or invasion the public safety might require it. For myself I believe the power is inherent in the office of the President without act of Congress. An invasion may occur or a rebellion spring up when Congress is not in session, and when its suspension may be necessary before this body could be convened.

"But it is unnecessary to argue that question or refer to precedents. The only question now is, whether there is such a condition of things in any part of the South as makes it prudent to continue in force for a limited time this provision in the act of April 20, 1871. The object of this writ, as we all understand, is to enable any person, deprived of his liberty, to bring his case before a judge that the cause and validity of his detention may be inquired into. No one disputes the value of the writ, nor that it is the bulwark of personal liberty, nor that its privilege should never be suspended except in great emergencies. No free State can exist without it. Yet, while all this is true, there are of necessity limitations to its use. A man convicted of crime has no right to invoke it in his cell in the penitentiary, or while standing under the gallows; nor in times of war is its use practicable, when civil law is suspended and military organizations are abroad controlling private action, and the voice of the judge is drowned in the clash of arms. And so, too, when there exists a widespread conspiracy to deprive any portion or class of the people of their rights under the law, by intimidation, violence, and outrage; to overthrow the laws which guard the life and liberty of the citizen; when the local courts are utterly powerless to deal with the criminals; where the conspiracy manifests itself by bands of armed men too numerous and powerful for the civil officers to deal with them; when arrests with a view to trial and punishment would be made nugatory through the complicity or fears of the constituted authorities of the State, there exists the same necessity for a suspension of the privilege of the writ as in case of invasion and rebellion.

"Mr. President, the question is, shall the grant of this power of suspension be continued, not indefinitely, but until the 4th of March next? The answer to this question must depend upon another question, whether

the public safety requires it. The committee of which I have spoken have spent months in taking testimony from every part of the South. We have had volume upon volume of the evidence printed, amounting to several thousand pages. The report of the committee and the views of the minority, in which the evidence is summed up, alone amount to over one thousand pages. Even the minority do not deny, and I now quote their language, 'that bodies of disguised men have in several of the States of the South been guilty of the most flagrant crimes.' But, sir, who are the guilty parties, and what are their motives? I know what is claimed by the Opposition here, and I know the theory on this subject of those who give tone to public opinion in the South. They pretend that these crimes have no political significance whatever, but are the work of the poor, the lawless, and irresponsible white men of that region, who, it is said, are the enemies of the freedman, jealous of his lately-acquired civil and political rights, envious of the planter's preference for his labor, and bent on getting rid of his competition. Such is the theory of the minority of the committee. They insist that these outrages are neither committed nor sanctioned by the respectable classes, and that they are not to be held responsible for them. But is this true? So far from being true, I insist that the investigations, thorough and exhaustive, which have been made by the congressional committee and in the Federal courts, have conclusively implicated the intelligent and property-holding classes in these outrages, and fixed the responsibility on them for their indulged continuance without punishment or prosecution even. From whom but this class come the funds which support these costly military organizations, which supply the horses, equipments, arms, ammunition, and disguises; the intelligence which directs the movements of these lawless bodies and prevents discovery? Who have the greatest motives for inflicting these punishments? Suppose the charge to be that a freedman has stolen cotton, corn, or cattle; the planter is the injured party, and not the poor white class, who have nothing to be stolen. He is the one interested in punishing the thief. He may employ these poor whites as his instruments, but he is the moving power; he is the responsible party.

"Colored schools are broken up and the school-houses burned by the hundred. This is a favorite pastime with the Ku-klux gentlemen. These brave fellows especially delight to deal with school-mistresses. There is no danger there. But who are most interested in breaking up schools and instigating raids upon the teachers and school-houses? I answer, the men of property, the tax-payers, the men who hold tax-payers' conventions and denounce taxes, and compel those who levy them to resign; the men who fill the country with their clamor that they are im-

poverished, robbed, and plundered, under the new order of things!"

Mr. Saulsbury, of Delaware, said: "Will the Senator allow me to interrupt him a moment? Do I understand him to say that the investigation of this committee and the investigation of the Federal courts prove that the property-holders in the South are the responsible parties for the outrages that he alleges to have been committed there?"

Mr. Pratt: "The Senator understands me correctly."

Mr. Saulsbury: "Then I ask if he knows of any instance where those men have been prosecuted under the provisions of the act passed last session, which gives ample power to punish any person who has entered into any conspiracy?"

Mr. Pratt: "Certainly, the records of the courts in three or four States are full of such cases."

Mr. Saulsbury: "How many?"

Mr. Pratt: "If you will examine the report of the majority of this committee you will ascertain how many prosecutions have been instituted in North Carolina and South Carolina."

Mr. Saulsbury: "I beg to be excused from examining the seven thousand pages of testimony."

Mr. Pratt: "I will take great pleasure in showing them to the honorable Senator from Delaware after I get through with my remarks. The seven or eight thousand pages of testimony the committee have taken form quite a bulky piece of literature, and I commend it to my honorable friend upon next Sunday or upon some leisure day for his reading. He will find it profitable if not pleasant."

Mr. Saulsbury: "I certainly would be inclined to avail myself of any suggestion of the honorable Senator from Indiana in reference to what is profitable reading for the Sabbath; but he must excuse me if I see proper to turn to the pages of the old Bible in preference to the report of this committee. But I understood the honorable Senator to be indicting the whole class of property-holders in the South. I wanted to call the attention of the Senator from Indiana, before he made the wholesale charge against the respectable property-holders of the Southern States, to the broad terms of the indictment which he was making against that people. I do not believe that the declaration of the Senator (worthy and highly as he is honored in his own State, in the Senate, and in the country) will have the effect to blast the reputation of the whole Southern people unless he lays his hands on the facts and shows the evidence on which that opinion is founded."

Mr. Pratt: "If the honorable Senator will hear me through, I hope to convince him before I am done; and, if he will do the committee the justice to read through the testimony, he will find abundance of cases establishing the propositions that I claim here."

Mr. Saulsbury: "Then I would suggest to the honorable Senator not to make his indictment a wholesale indictment against the property-holders of the South. Limit it to the men whom the evidence shows are implicated in the crime."

Mr. Pratt: "As I said, sir, before the interruption, in stating the argument of the slaveholders, I have shown who are responsible for these scourings for opinion's sake. It is the old ruling class, the men who own the plantations and property, the men who must pay the taxes. They are the men most interested in moulding the opinions of voters."

"Then in regard to national elections their interest is, if possible, still stronger. They regard the whole policy of the Republican party as having been hostile to their class from its organization. They point to the constitutional amendments, the civil rights bill, the Freedmen's Bureau, the test-oath, the penalties against disloyalty, the enforcement bill, the suspension of the *habeas corpus*, and the presence of soldiery in the disturbed districts; and their panacea for all these ills is to put down the Republican party. That is the dearest wish of the entire Democratic heart in the South. They see no end to what they call their grievances, except in the overthrow of the party in power. They are the same men who were so impatient of the restraints of Government that in 1861 they plunged the country in war and bloodshed, stopping at no measures of unscrupulous violence in order to overthrow the Government many of them had so often sworn to maintain."

"Now, who shall tell me that this sentiment of hate toward the party in power, and this lust for the political control they once wielded, are not sufficient motives to account for these outrages and fix the responsibility where I believe, before God, it belongs, upon these influential classes of the South?"

Mr. Blair, of Missouri, said: "Practically this bill proposes to give the President of the United States the power of electing himself by force. It puts at his disposal the military power of the Government to be used during the period of the presidential election at his own discretion, and in my judgment for no other purpose than to secure his reelection as President. It is one of a series of acts by which the elections in this country have been placed under the supervision and control of the Government of the United States. The act which it is now proposed to continue in force was passed about a year ago, limited to cease at the close of this session of Congress. This was intended to feel the temper of the people of this country to ascertain if they would consent to the overthrow of the great writ of right, the *habeas corpus*, under circumstances defined in the bill, circumstances which were then shown to be such as did not authorize the Congress or the President to suspend the privileges of the writ of *habeas*

corpus, because there was not such a case as that which had been defined in the Constitution."

"I do not intend at this time to go over the argument which was then made, and which was to my mind conclusive; but I desire to call the attention of the country now to this attempt to continue this act in force during the period of the presidential elections, which was anticipated at the time by those who opposed it, in which their anticipations have not been at fault, because the attempt is now being made to force it through before the adjournment for the purpose of giving the control of the military authority of the Government to the President of the United States to reflect himself."

"I have said that it was one of a series of acts looking to this object. An act passed some time ago, in 1870, giving the Federal Government supervision of the elections within the States, which in the original act was limited to cities of over twenty thousand in population. That has also been extended within the last few days, by a bill which has passed the Senate, to every precinct in the country, authorizing the judges appointed by the President, upon the application of a certain number of citizens, to appoint supervisors in any precinct and in all the precincts where elections are held in this country."

"So solicitous were the dominant party in this country to make these laws supervising and controlling the elections applicable to every portion of our country, that within the last few days they have changed the time of election in the State of Louisiana to bring that State in the presidential election under the direct supervision of the Government."

"The other portions of the act, the fourth section of which you now propose to continue, give jurisdiction to the courts of the United States of all crimes which can, by any possibility, occur within the States. That does not require an act to continue it in force. It remains in force by its own terms, clearly demonstrated upon this floor, by the Senators opposing its passage, to be unconstitutional, subversive of the jurisdiction of the State courts, drawing to the Federal officials complete, absolute, and universal control over questions which never before, under any circumstances, were deemed cognizable in the courts of the United States. Hence I assert that the plain object of this bill (and it can have no other object) is to give the President power to reflect himself by the bayonet. Martial law is not an unusual device under radical rule for carrying elections in this country. It is not now for the first time attempted and put in force for that purpose. It has been made use of elsewhere, and with the approval of the Administration, and we have come to this: that the party in power are endeavoring to prop themselves and to maintain their power by the use of the Army of the United States

in controlling the elections of the people. That is the point to which this misnamed Republican party has at length brought us.

"The President of the United States has already exercised the authority vested in him by this act, and a resolution was passed by the other House of the Congress which had clothed him with the authority to exercise this power, asking him to inform the country the precise circumstances under which he felt himself authorized to exercise this power in nine counties of the State of South Carolina last fall. After long delay we have the President's response, and I propose briefly to call attention to that response giving the justification of the President for declaring martial law in South Carolina last autumn. The President says in House Executive Document No. 268, of the present session, the message being addressed to the House of Representatives: "

Representations having been made to me that in certain portions of South Carolina a condition of lawlessness and terror existed, I requested the then Attorney-General, Akerman, to visit that State, and after a personal examination to report to me the facts in relation to the subject. On the 16th of October last he addressed me a communication from South Carolina, in which he stated that in the counties of Spartanburg, York, Chester, Union, Laurens, Newberry, Fairfield, Lancaster, and Chesterfield, there were combinations for the purposes of preventing the free political action of citizens who were friendly to the Constitution and Government of the United States, and of depriving the emancipated class of the equal protection of the laws. "These combinations embrace at least two-thirds of the active white men of those counties, and have the sympathy and countenance of a majority of the other third. They are connected with similar combinations in other counties and States, and no doubt are part of a grand system of criminal associations pervading most of the Southern States. The members are bound to obedience and secrecy by oaths which they are taught to regard as of higher obligation than the lawful oaths taken before civil magistrates. They are organized and armed. They effect their objects by personal violence, often extending to murder. They terrify witnesses. They control juries in the State courts and sometimes in the courts of the United States. Systematic perjury is one of the means by which prosecutions of the members are defeated. From information given by officers of the State and of the United States, and by creditable private citizens, I am justified in affirming that the instances of criminal violence perpetrated by these combinations within the last twelve months in the above-named counties could be reckoned by thousands."

I received information of a similar import from various other sources, among which were the joint select Committee of Congress upon Southern Outrages, the officers of the State, the military officers of the United States on duty in South Carolina, the United States attorney and marshal and other civil officers of the Government, repentant and abjuring members of those unlawful organizations, persons specially employed by the Department of Justice to detect crimes against the United States, and from other credible persons.

Most, if not all, of this information, except what I derived from the Attorney-General, came to me orally, and was to the effect that said counties were under the sway of powerful combinations popularly known as Ku-klux Klans, the objects of which were, by force and terror, to prevent all political action

not in accord with the views of the members, to deprive colored citizens of the right to bear arms and of the right to a free ballot, to suppress schools in which colored children were taught, and to reduce the colored people to a condition closely akin to that of slavery; that these combinations were organized and armed, and had rendered the local law ineffectual to protect the classes whom they desired to oppress; that they had perpetrated many murders and hundreds of crimes of minor degree, all of which were unpunished; and that witnesses could not safely testify against them unless the more active members were placed under restraint.

"Mr. President, a similar resolution to that to which this message was responsive was introduced into this House by myself and objected to by members on the other side. It was, however, introduced into the House of Representatives, and went to the joint select committee on the condition of affairs in the South, and was by them reported back to the House with amendments, some of the amendments cutting out much matter which we desired the President to respond to. But there was one point retained in the resolution to which I ask the attention of the Senate, and to which I am very sorry to say the President has not responded. It was this: among other things the resolution asked 'the number and character of the offences forbidden by said act or the act of May 31, 1870, which are shown by such combinations or other parties to have been committed in the respective counties in which the privileges of the writ of *habeas corpus* had been suspended in the State of South Carolina, and the dates of all such alleged offences.'

"The House asked the President of the United States to communicate what offences, if any, had been committed against the act of Congress, which had led to the declaration of martial law, and the date at which such offences had been committed. We have a long list of persons arrested under that act, and the crimes charged against them, ninety-nine out of one hundred of which is the crime of conspiracy, and in no single instance has the President given us the date of any single offence which is alleged to have been committed. This was omitted, I am compelled to say, deliberately, with a view of creating a false impression, of misleading the country, of inducing the country to believe that those persons arrested had committed the offences in or about the time when martial law was declared, the fact being that all these offences were committed nine or eighteen months or two years previous to the passage of the law itself, of which they undertook to take cognizance in their court. At this point I call the attention of the Senate to a brief paragraph from the report of the minority of the committee. Mr. Van Trump, who was in South Carolina as a member of the sub-committee, states in his report, page 586: "

We believe, we might almost say we know, that nothing has transpired in South Carolina since the

passage of the Ku-klux law which can be the slightest justification of the President in suspending the writ in the absence of war and the clash of arms, spreading terror and dismay among whole masses of people guiltless of crime. The public press, as well as our own private information, testify to the fact that there has been no more trouble or disorder in South Carolina, for the last nine months, than is common to any other State in the Union.

In the absence of the facts, or statements and representations, which are not facts founded in truth, communicated to the President, whether truthfully or falsely, prior to the issuing of his proclamation, we unhesitatingly assert that, for nine months prior to said proclamation, and at least three months previous to the passage of what is known as the Ku-klux law, there was more peace and good order throughout the entire borders of South Carolina than had been at any time since the termination of the war. Now, if this is the fact, then the action of the President was not only unwise and impolitic, but it was a naked and most unjustifiable act of tyranny and oppression, at war with the spirit of free institutions, and a precedent which, by repeated use, will not only sap the foundations of the Government, but "can almost change the stamp of Nature."

"Upon this point I desire also to quote from the correspondent of the *New York Herald*, a paper which, at that time and since that time, has been an earnest advocate of the policy of the President. Writing from Spartanburg, as late as November 1, 1871, he said: "

In this county, as in all others I have visited, I cannot find any case of resistance to the State or the United States authorities. Two years ago a couple of revenue officers were forcibly resisted by some men who were engaged in illicit whiskey distilling. No one pretends, however, that they were any more Ku-klux than were and are the men who distill whiskey illicitly in Brooklyn, Philadelphia, Ohio, and any other States North, and who resist the revenue officers. This is the only case of resistance on record. "I never give them a chance to resist," said a Federal officer to me, "because I always send an overwhelming force to arrest them." "Very well, but has any resistance been offered?" "No." "Have you ever tried to make arrests without an overwhelming force?" "No; we used an ounce of prevention." "Now, major—"

"I have no doubt this is the gentleman whose report has been quoted by the majority, although it is not said, Major Merrill: "

"Now, major, are you not aware that the sheriff of this county, a one-armed man, has gone to remote parts of the county unattended, arrested men, and brought them to Spartanburg, without meeting with opposition?" "So I have heard; but I do not risk finding the same submission." I put it to you, readers, whether it is fair to assume that a people will resist until they have resisted? I am assured by some of the most eminent citizens that there has not been a day during the past two years when a Federal deputy marshal could not have arrested any citizen in the county unaided by the military.

But let me give you a further fact: many of the arrests in this county were made before the President's proclamation appeared. "Why, then, major," I asked, "was it necessary to suspend the writ of *habeas corpus*?" "It was not suspended because we could not make arrests," was the reply, "but for the purpose of preventing any attempt on the part of the State courts to get the prisoners away from us."

"This is a wretched excuse, inasmuch as all the State courts are officered by members of the Republican party, and, as I have been re-

minded by my colleague on the committee (Mr. Bayard), there is not a Democratic official in the State of South Carolina, neither judge, nor commissioner, nor any thing else. The same correspondent, writing from Union Courthouse, November 3, 1871, says: "

In this letter I have not concealed the fact that troubles have existed in Union County, and I have not denied that the Ku-klux, or men representing themselves as such, have perpetrated gross outrages. But will you not be surprised to learn that these troubles ended seven months ago? I appeal to Captain Thompson, of the United States Army, to say how many Ku-klux outrages have occurred in Union County during the seven months he has been stationed there. Two have been reported, minor affairs, which, upon investigation, proved to be personal quarrels. Curiously enough, all the Federal officers admit that for months past these counties have been quiet. Why, then, wait until the troubles are over to begin operations? "Because," replies a Federal officer to me, "the Government must show its power." Is it not a wanton display of power? While the Ku-klux were committing "outrages," nobody was arrested. From four to seven months after they have retired to their "dens," and society has resumed its normal condition, the Government pounces down upon them. I defy the United States marshal to produce a single warrant against a Ku-klux in which the alleged offence was committed within three months past.

"I defy the Senator from Pennsylvania or any other Senator on this floor to adduce one single instance, out of all that he has enumerated, which did not occur three months anterior to the arrests which were made under this Ku-Klux law; and hence it is that the President of the United States, on returning a reply to the resolution of the House of Representatives, conceals sedulously the dates of the offences for which these persons were said to have been arrested, although directly asked by the House of Representatives to state the dates of the alleged offences."

Mr. Scott: "Does the Senator desire me to give him the answer now?"

Mr. Blair: "Certainly, the Senator may answer if he wishes."

Mr. Scott: "As the Senator says in very broad language that he will defy me to state any instance, I will state that, about the latter part of August or September—I am not certain which—the very occasion of the communication of the President was the fact that a large number of disguised men, Ku-klux, visited and committed an outrage upon a man named Quinn, who lived very near to the line of Spartanburg County, but in Union County, and that a number of persons who committed that outrage upon him, or those who were supposed to have committed it upon him, were arrested, and bills found against them. They were found by the grand-jury at the United States court at Greenville, and they were acquitted for want of sufficient identification. That is one case which occurred. There were one or two others in York County, but I will not take up the time of the Senate in detailing them, but I give him the specific case that I have referred to."

Mr. Blair: "Then the Senator has given me one specific case in which parties were arrested on suspicion for an offence committed just before the declaration of martial law. The parties arrested were acquitted by his own acknowledgment, and he cites another case of a destruction of a school-house in York County. Mr. President, attention was called to the fact. These are the cases. One, an isolated case of outrage, for which the suspected persons were acquitted, and another, the burning of a school-house; and this is insurrection and rebellion!

"Now, sir, what is to prevent any State or any city or county in the United States from being put under martial law by the President, if rebellion and insurrection are made by one isolated outrage of disguised men and the burning of a school-house? These are all that are claimed. The Senator says he could refer to one or two others. These are all that he thought it worth while to put in his speech delivered here last Friday, and which I now hold in my hand. The President had not one word to say on the subject of the time when the offences were committed. He could not have got any information of crimes committed there from the Ku-klux committee, although he refers to the joint select committee as being one of the sources of his information. He could not have referred to any thing stated to him by that committee, because the committee never authorized any one to give the information to the President. He may have got information from one of its members; but no one of its members could have given him information of any crime or outrage committed within less than nine months previous to the declaration of martial law, for *no such crime or outrage is proven*, and none can be found in their reported testimony. Here is a book with its seven thousand pages, here is the committee's report made subsequent to that declaration of martial law, and, to justify it, they name no crime committed; the people were quiet, arrests were made, a one-armed sheriff arrested individuals throughout that district without aid or assistance from any one.

"The Chief Magistrate of this country has seen proper to exercise this great authority never before given to a President of the United States, yielded against the protests of the ablest Republicans in this House and in the other, and which ought not to have been used except in the clearest and most overwhelming case of necessity. It has been exercised. The President has failed to show to us that there existed, at the time he exercised this authority, any ground of justification whatsoever. Admitting all that is claimed, that from a year to eighteen months, or two years previous, there had been such a condition of things as has been described by the Senator in his eloquent speech, it had passed away. You might as well attempt to defend the exercise of this power of declaring martial law,

and suspending the privileges of the writ of *habeas corpus*, because the rebellion existed seven years before this declaration. The occasion had passed; there was no disturbance. The officers there admit there was no disorder. My colleague of the House, Mr. Van Trump, who was there with the Senator, declares in his report, which is unchallenged, which cannot be successfully denied, that there was no disturbance; that he knew it of his own knowledge. The President does not pretend that there was. The Senator cannot make it appear that there was any; and here was the wanton exercise of this power, to overthrow the guarantees of the Constitution for the personal liberty of the individual, without excuse and without cause!

"Martial law is still maintained within those nine counties. Hundreds of citizens have been dragged, without any allegation of crime, from their homes, without the right of appeal to the courts, to be discharged from illegal custody. Thousands, as has been said by the Senator, have fled from their homes, and he, in imitation of the President, declares that those who have fled from illegal arrest confess, by flying, their guilt, when they knew that, if arrested, they would not have the right of the writ of *habeas corpus*. The Senator knows well that they could be followed and arrested; if charges could be brought against them, the courts are open; but no military arrest could be made outside of these counties, upon which the courts would not have a right to pass."

The Presiding Officer: "No amendment being offered, the bill will be reported to the Senate without amendment."

Mr. Alcorn, of Mississippi, said: "Mr. President, for three hundred miles on the Mississippi front in the State of Mississippi there has not been a case of Ku-klux violence established or even charged since the year 1868, within my knowledge. In all that vast rich delta that is now scarce of labor, susceptible of the production of a bale of cotton to an acre, where capital seeks to obtain labor, they are sending out their emissaries, as I have said, and agents every year, to bring labor there; and I undertake to say there is not a plantation there that has the amount of labor it could use. In all those river counties for three hundred miles not a man holds an office unless he holds it at the will of the colored people, and a majority of the offices, I will say two-thirds of the offices, are in truth and in fact held by the colored people. Is it possible that the courts cannot administer justice to the colored people in a society like this? Is it possible that the county in which I live, where the colored population is seventy-six per cent. of the whole; in the county below me, where it is eighty per cent.; in the county below that, where it is eighty-three per cent.; and in the county below that, where it is ninety per cent. of the whole, justice cannot be ad-

ministered to the colored people when we have a thorough Republican, a true man, an excellent lawyer, a man of unspotted reputation, to preside as judge, and a Northern man, who is a citizen of Mississippi in full accord with the Republican party, and in the full confidence of the colored people, as prosecuting attorney?

"I undertake to say that justice is administered there, and that there is no complaint in all that district of country that justice is not administered; that colored men sit upon juries, and it is frequently the case that the jury is entirely composed of colored men. Colored men are overseers of the roads. A colored man is the sheriff of Issaquena County, appointed by myself. A colored man is elected sheriff of Issaquena County; a colored man is elected sheriff of Adams County; a colored man is elected sheriff of Jefferson County, and colored men are officers in several other counties in the State of Mississippi; and yet it is said justice cannot be administered there, when every judge who sits upon the bench is a Republican, appointed by a Republican Governor and confirmed by a Republican Senate.

"I repel the charge that justice is not administered in Mississippi. I assert that the Governor of Mississippi, when he delivered his message to the Legislature in January, and declared that the condition of Mississippi was peace, told the truth; that when he wrote to me on the 15th of May, the present month, declaring that the condition of Mississippi to-day was peace, that peace reigns throughout her borders, the Governor, who is a Northern man, but who is a citizen of Mississippi interested in our society, identified with us, a part of us, a man whom we all respect, and who is entitled to our respect, told the truth.

"I stated the fact that I did not think there was any necessity for the suspension of the writ of *habeas corpus*, that the condition of Mississippi to-day was one of repose; that if Congress would allow the people there to do something toward going forward in the reconstruction of the State, and not attempt to do every thing by legislation, allow time to do its work, and the effect of this new order of things to adjust itself, every thing would be in Mississippi as we would desire it; and that this intervention, and this violent legislation that is calculated to disturb the repose of the State and engender hostilities between the races in the State, is an intervention that no man who is interested in the peace and prosperity of this country, either North or South, would desire to see."

Mr. Stevenson, of Kentucky, said: "The Senator from Indiana asks why the South did not in 1866 or 1867 return loyal men as her representatives. Was not Judge Sharkey a loyal man? Did he not resist the rebellion? Was he not a Union man in the broadest sense during the darkest hours of that conflict? Old and venerable as he was, honored for his

learning, revered for his virtues, and distinguished throughout the land as a jurist *sans peur et sans reproche*, that old man, almost singly and alone, breasted in his own native Mississippi the storm of rebellion; and how did the Republican party repay him? When he came, bearing the sign-manual of Mississippi that he was her chosen Senator of the United States, bringing proof of his loyalty, known far and wide for his patriotism, how did you receive him? When Alexander H. Stephens, the bitter opponent of secession, when it occurred, sought admittance into this Chamber as the regularly-elected Senator from Georgia, how did you receive him? With what respect did you honor the constitutional claims of Mississippi and Georgia for representation in the persons of their selected and distinguished sons? Did you treat them as sovereigns in this confederacy? Did you extend your fraternal arms and welcome them back as representatives of a restored Union? No, Senators, no! Dead to the teachings of that love illustrated in the parable of the prodigal son, who, though he had erred, was welcomed back to the paternal mansion of his early love, you preferred the guidance of an extreme party standard, whose success is above patriotism, and which prefers in its merciless abuse of usurped power to crush out all returning obedience of the Southern people to the Federal Government or its laws.

"You still persevere in your unhallowed warfare upon this down-trodden people. With all your courts open, with hundreds of indictments pending for the punishment of these secret, illegal combinations, with a people denied all participation in the government, broken in fortune, beggared by their reverses, with persons once their slaves now their lawgivers and official superiors, backed by the Army and supported by the Government of the United States, you propose still to clothe the President of the United States, and every military satrap or subordinate belonging to the Army and stationed in the South, in a period of peace, and during a presidential election, with the dictatorial power at his discretion to suspend this writ of *habeas corpus*, and to imprison these unfortunate people at pleasure. Nay, more, you attempt by selecting isolated instances of violence and outrage in the South, and scattering them in speeches broadcast through the land, by charges that Gordon, Hampton, Butler, in all respects your peers, are members of this secret organization, charged falsely to be a political one, to rekindle the expiring embers of the late civil war, and in this way you hope to arouse a sectional hatred that will keep you still in power.

"And yet the Senator from Indiana tells us the Republican party wants peace. Can these oppressions continue, can the guarantees of constitutional liberty be ruthlessly disregarded and the apprehension of freemen not be

aroused? Can our Republican friends be so blinded by party as not themselves to become aroused to the dangerous precedent for the ultimate overthrow of the Constitution which the enactment of this measure must inaugurate. There is, there can be no exigency that demands it now or will demand it hereafter. Why, Mr. President, I have seen and known from my boyhood something of the South. I have talked with eminent men and women unsurpassed in all that adorns the highest type of manhood or womanhood, and that heart must be as cold and callous as stone that would not be touched by the merciless inhumanity and atrocities under which through Federal agencies this generous people are now being crushed. And yet we are told that the perils to the public safely demand it. How? Where? What Senator—I care not who—will point out in this mass of testimony the proof of any overt act of the Ku-klux organizations in the South threatening the subversion of Federal or State Governments? Has an iota of proof been introduced going to show any such intent? To say that a rebellion or insurrection exists in any part of our country is a sham, a mockery. It is not true in law; it is not true in fact. Secret combinations, illegal combinations, have existed, as I have already admitted. They have committed acts of violence that call for suppression. I am not the apologist for force or violence anywhere. The majesty of the Constitution and the laws constitutes our safety. But it is untrue, as I believe, that these organizations are political. It is equally untrue that they cannot be suppressed and put down by the laws and through the courts. These disorders exist everywhere. Can you point me to a State north or south of the Ohio River where outbreaks and secret combinations or mobs do not occasionally commit violence? They exist in Indiana, and, from a recently-published judicial charge of Judge Durham, more violent deaths have recently occurred in that State than in any other north or south of the Ohio River immediately adjacent to it."

Mr. Morton, of Indiana, said: "What is the proposition established by this testimony, overwhelmingly, conclusively, so that there is no doubt left, and no man who reads it can doubt it, unless he begins to read with a prejudice and with a passion that take from his mind the capacity to gather and to comprehend truth, that there is an organized society armed and equipped, a homogeneous society, as much so as Masonry or Odd-Fellowship, having a uniformity of signs, of pass-words, of grips, of ceremonies, of oaths, and a unity of purpose, existing in nine States of this Union? This organization in Mississippi is the same as it is in South Carolina, and the same that it is in North Carolina, sometimes carrying one name for temporary convenience and safety, and sometimes carrying another, embracing

thousands. We have the testimony of General Forrest that at one time there were forty thousand in the single State of Tennessee. We cannot doubt that it embraced hundreds of thousands taking those nine States through. It is distinguished by its disguises, its hideous uniform, travelling at night, committing like crimes; one gang going from Mississippi over into Alabama, if you please, to commit a crime, travelling forty or fifty miles, while another gang from Alabama will pass into Mississippi to a place where they are total strangers, and having received their orders there to commit a murder or several murders, there to whip, to outrage, and to burn. This proposition is fully, overwhelmingly established by the evidence, and cannot be shaken by the honorable Senators any more than they can shake Washington Monument down here by putting their fingers upon it.

"The character of that organization is also completely established. What is it? First, that it is political in its character; that it is aimed at the Republican party so called. It is aimed particularly at the colored people, first, because they are Republicans; secondly, because they are colored people, and are invested with political rights. They were recently slaves, and the men who held them as slaves, many of them—not all; there are some noble exceptions—cannot endure to see them as freemen clothed with equal civil and political rights. This organization is political, thoroughly and completely in every part, although it has undoubtedly sometimes been employed for purposes of private malice or of private gain.

"Then what is its machinery? Murder, scourging, arson, crimes without a name, atrocities of every kind. The principal machinery is perjury, perjury for self-protection and perjury for the assault of its enemies. Its members are required to commit perjury in court to protect their fellow-members upon trial, and are required to commit perjury to blacken the character, destroy the influence, or imprison its enemies. This history and feature of this organization are overwhelmingly established. They have got witnesses; of course they have. The Ku-klux can furnish witnesses upon any subject to any required point. They can prove any thing that may be required. If necessary, they can go into court or they can go before this examining committee and swear that they were Republicans, and walked three miles on their hands and feet, as I believe one of them said he had, to vote the Republican ticket."

Mr. Fenton, of New York, said: "I do not like to be discourteous to any gentleman who wishes to speak, and still I feel that this session ought to close; and, for the purpose of testing the sense of the Senate on the subject of getting away from here, I move to lay the bill on the table."

The Presiding Officer: "The Senator from

New York moves to lay the bill upon the table."

The result was announced, as follows:

YEAS—Messrs. Alcorn, Bayard, Blair, Casserly, Cooper, Davis of West Virginia, Fenton, Hamilton of Maryland, Johnston, Kelly, Ransom, Saulsbury, Sprague, Stevenson, Thurman, Trumbull, Vickers, and West—18.

NAYS—Messrs. Ames, Anthony, Boreman, Caldwell, Carpenter, Chandler, Clayton, Cole, Conkling, Corbett, Edmunds, Ferry of Michigan, Flanagan, Frelinghuysen, Logan, Morrill of Maine, Nye, Osborn, Patterson, Pomeroy, Pool, Pratt, Ramsey, Robertson, Scott, Spencer, and Windom—27.

ABSENT—Messrs. Brownlow, Buckingham, Cameron, Cragin, Davis of Kentucky, Ferry of Connecticut, Gilbert, Goldthwaite, Hamilton of Texas, Hamlin, Harlan, Hill, Hitchcock, Howe, Kellogg, Lewis, Morrill of Vermont, Morton, Norwood, Rice, Sawyer, Schurz, Sherman, Stewart, Stockton, Sumner, Tipton, Wilson, and Wright—29.

So the motion was not agreed to.

Mr. Vickers, of Maryland, said: "Mr. President, I do not propose to detain the Senate long at this early hour of the morning.

"I have examined it with care, have given it some reflection, and have come to the clear conclusion that the bill is unauthorized by the Constitution. The Constitution reads: "

The privilege of the writ of *habeas corpus* shall not be suspended, unless when in cases of rebellion or invasion the public safety may require it.

"It is conceded that there is no invasion. Consequently, if there is no rebellion, there is no authority for the suspension of this writ. Paschal, in his 'Commentary on the Constitution,' says: "

It would seem, as the power is given to Congress to suspend the writ in cases of rebellion or invasion, that the right to judge whether the exigency had arisen must exclusively belong to that body.

"And he refers to *Martin vs. Mott*, 12 Wheaton, 19; and Judge Story's Commentaries, 1842. We have here a decision of the Supreme Court of the United States and the Commentaries of Judge Story, asserting that Congress has no right to delegate this power to another. If the Supreme Court is any authority with the Senate, if Judge Story's Commentaries are to have any weight with this body, I do not see how we can vote to confer upon the President the authority which is exclusively his own.

"This power can only be exercised when the exigency arises. Who is to judge of the existence of the contingency when the power is to be brought into operation? Congress. It is found among the legislative powers of Congress. The very clause that precedes it reads: "

The migration or importation of such persons as any of the States now existing shall think proper to admit shall not be prohibited by the Congress prior to the year 1808, etc.

"And then follows the clause we have under consideration: "

The privilege of the writ of *habeas corpus* shall not be suspended, unless when in cases of rebellion or invasion the public safety may require it.

VOL. XII.—14 A

"And following that: "

No bill of attainder or *ex post facto* law shall be passed.

"It is among the legislative powers of Congress, and belongs exclusively to it. It is impossible, from the nature of the power, that it can be conferred upon another. It is one of the most important in the Constitution, perhaps the most important to be found in that instrument. It is a delicate and a dangerous power, by which the liberty of the citizen may be taken from him without warrant, without any authority shown, and he imprisoned with no redress. He may lie in prison and be deprived of his liberty without the means of inquiry into the cause of his commitment. It is the most dangerous power that can be conferred or exercised.

"Alexander Hamilton, writing upon the subject of the Constitution when it was submitted to the people for their consideration (and his opinions must have had great weight with the community to whom he addressed his publications), comparing the proposed Constitution of the United States with the constitution of the State of New York, speaks of the several provisions in the Constitution as follows: "

It may well be a question whether these are not, upon the whole, of equal importance with any which are to be found in the constitution of this State. The establishment of the writ of *habeas corpus*, the prohibition of *ex post facto* laws, and titles of nobility, to which we have no corresponding provisions in our constitution, are perhaps greater securities to liberty than any it contains. The creation of crimes after the commission of the fact, or, in other words, the subjecting of men to punishment for things, which, when they were done, were breaches of no law, and the practice of arbitrary imprisonments, have been in all ages the favorites and most formidable instruments of tyranny.

"The observations of the eminent commentator in reference to the latter are well worthy of recital: "

To bereave a man of life, or by violence to confiscate his estate without accusation or trial, would be so gross and notorious an act of despotism as must at once convey the alarm of tyranny throughout the whole nation; but confinement of the person, by secretly hurrying him to jail, where his sufferings are unknown or forgotten, is a less public, a less striking, and therefore a more dangerous engine of arbitrary government.

"As a remedy for this fatal evil, he is everywhere peculiarly emphatic in his encomiums on the *habeas corpus* act, which in one place he calls 'the bulwark of the British Constitution.'

"Before this writ can be suspended there must be facts or evidence laid before the power that is to suspend it. These facts and this evidence must be considered and examined. There are thought, deliberation, judgment to be exercised, and there is discretion after the facts are exhibited and collated. There must be a sound discretion whether the writ shall issue or not; and was it ever known that a discretionary power could be transfer-

red? When a court has discretionary power there is no appeal from the exercise of its judgment. So here. There is a discretion after the evidence is produced.

"Mr. President, does the public safety, the very existence of one of the States or of the Government, require the interposition of the authority of Congress for the suspension of this great writ of right, so dear to every American heart, and the exercise of this dangerous power? It is called by the English commentators a bulwark of liberty. What sort of liberty is that which can be taken from an individual by the *ipse dixit* of one man? Is the *habeas corpus*, when it can be suspended at any time, a bulwark of American liberty? What security has the citizen for his liberty or freedom from incarceration, when Congress may invest the President at any moment, in a time of profound peace and quiet, when there is no tumult and no combination to overturn or to resist the laws, with the power to suspend this great writ? What security is there for personal liberty when such a power is placed in the hands of any man? Why, sir, Congress could not exercise the power now, constitutionally, itself, and if it cannot exercise the power itself, how can it transfer the authority to another?"

The bill was reported to the Senate without amendment.

Mr. Carpenter, of Wisconsin, said: "Mr. President, if I were ambitious to make a speech on this question, I should select some occasion other than this. In these little hours of the gray morning, when half the Senators are home and three-fourths of the other half are fast asleep, and the galleries are empty and everybody weary, I certainly shall not enter on any philippic against Democracy, upon any discussion of the general political questions of the day, or, indeed, upon any pretence make a speech on any subject whatever. Nevertheless, I intend to vote for this bill, and it is a mere matter of justice to myself and my constituents that I should state and place upon the record in language as dry as a stick the reasons which induce me to cast that vote. The Constitution provides that"—

The United States shall guarantee to every State in this Union a republican form of government, and shall protect each of them against invasion, and, on application of the Legislature, or of the Executive (when the Legislature cannot be convened), against domestic violence.

"Congress, in 1795, while Washington was yet President, and he approved the act, passed an act the first section of which is as follows: "

That whenever the United States shall be invaded, or be in imminent danger of invasion from any foreign nation or Indian tribe, it shall be lawful for the President of the United States to call forth such number of the militia of the State, or States, most convenient to the place of danger, or scene of action, as he may judge necessary to repel such invasion, and to issue his orders, for that purpose, to such officer or officers of the militia as he shall think proper. And in case of an insurrection in any State

against the government thereof, it shall be lawful for the President of the United States, on application of the Legislature of such State, or of the Executive (when the Legislature cannot be convened), to call forth such number of the militia of any other State or States as may be applied for, as he may judge sufficient to suppress such insurrection.

"That act is a construction placed by the very framers of the Constitution upon the provision of the Constitution which I have read. The power given by the Constitution is not given in terms to the legislative department nor the executive department. It is conferred upon the Government of the United States in general, and the last clause in the section which declares the power of Congress, authorizes Congress to pass all laws which shall be needful and proper to carry into execution the powers which this Constitution confers upon this Government. In execution of this Constitution, Congress passed that law vesting this discretion in the President to call out the militia for the purposes specified in this act. That is the construction of the very framers of the Constitution. Now, the other section is: "

The privilege of the writ of *habeas corpus* shall not be suspended, unless when in cases of rebellion or invasion the public safety may require it.

"The writ of *habeas corpus* shall not be suspended, etc., by whom? Not by Congress, not by the President, but, by plain implication, by the Government of the United States. The power is conferred in general upon the Government to suspend this writ in the cases mentioned in this section. How is that power to be executed? Certainly under and in pursuance of law. Congress may sit here the year round and judge of all these emergencies, and suspend the writ upon each day when the emergency happens to be in full force; or it may, following the precedent of the act of 1795, confer this power upon the President to suspend the writ when the contingency specified in this section shall happen. In one case as in the other the power is delegated by Congress, and it is clearly within that power which is given to Congress to make all laws needful and proper for the execution of every power conferred upon the General Government. Now, the act before us which we are continuing is this—I will ask the Secretary to read the fourth section of the act of 1871."

The Chief Clerk read the fourth section of the act of April 20, 1871, as follows:

SEC. 4. That whenever in any State or part of a State the unlawful combinations named in the preceding section of this act shall be organized and armed, and so numerous and powerful as to be able, by violence, to either overthrow or set at defiance the constituted authorities of such State, and of the United States within such State, or when the constituted authorities are in complicity with, or shall connive at the unlawful purposes of such powerful and armed combinations; and whenever, by reason of either or all of the causes aforesaid, the conviction of such offenders and the preservation of the public safety shall become in such district impracticable, in every such case such combinations shall be deemed a re-

bellion against the Government of the United States, and during the continuance of such rebellion, and within the limits of the district which shall be so under the sway thereof, such limits to be prescribed by proclamation, it shall be lawful for the President of the United States, when in his judgment the public safety shall require it, to suspend the privileges of the writ of *habeas corpus*, to the end that such rebellion may be overthrown: *Provided*, That all the provisions of the second section of an act entitled "An act relating to *habeas corpus*, and regulating judicial proceedings in certain cases," approved March 3, 1863, which relate to the discharge of prisoners other than prisoners of war, and to the penalty for refusing to obey the order of the court, shall be in full force so far as the same are applicable to the provisions of this section: *Provided further*, That the President shall first have made proclamation, as now provided by law, commanding such insurgents to disperse: *And provided also*, That the provisions of this section shall not be in force after the end of the next regular session of Congress.

Mr. Carpenter: "Mr. President, the question is whether this section is constitutional. My friend from Ohio (Mr. Thurman) suggests to me in an undertone that the act which I have read of 1795 does not provide for the suspension of the *habeas corpus*. This is true. I did not cite it for that purpose. I cited it simply for the purpose of showing that a power which is by the Constitution delegated to the Government in gross, so to speak, not distributed among the departments, is to be regulated by law under the last clause of the legislative article conferring upon Congress its specific powers, and whether that be to raise an army, to suppress an insurrection, or to suspend the writ of *habeas corpus*, both powers being conferred upon the Government and not upon any particular department, the principle of course is precisely the same.

"The question now is whether this act be constitutional. It will be conceded to be constitutional if it specifies here a case within the provisions of the Constitution, and if it be competent for Congress to delegate the power to the President to suspend the writ when the emergency does happen. Upon the last branch of the subject I cited the act of 1795. Upon the first branch, as to whether this makes a case of insurrection, I refer my honorable friends on the other side of the Chamber to authorities which they cannot question, to the decisions of all the Federal judges during the fugitive-slave law days, to the charge to a grand-jury by B. R. Curtis, published in the *Law Reporter*, and the elaborate and perfectly sound opinion of Justice Nelson to a grand-jury in New York, reported in 'Blatchford's Reports,' where both these eminent jurists charged the grand-jury that if a number of men combined together to resist the execution of a general law, and assembled in force, that is, in numbers, by force to prevent its execution, that was levying war against the United States, and was high-treason.

"Within those authorities the case specified in this section is clearly a case of insurrection, and that insurrection occurring and becoming

patent to the Government, or to such officer of the Government as Congress shall appoint to execute this provision, it must be perfectly competent and within the provisions of the Constitution to enact that section.

"I know that an ingenious and plausible argument may be made against this power, as there may be against any power and against any act that was ever passed in the world; but I believe that this act, although it may be conceded that it goes very near the extreme limit of our power, is still within those limits and that we have the constitutional power to pass it."

Mr. Thurman: "Mr. President, we are making to-night a precedent the influence of which may not cease as long as this Government shall last. It is to be a precedent on the side of liberty or on the side of despotism; and that consideration is a sufficient excuse for me for troubling the Senate with a few words in reply to what has just been said.

"The Senator from Wisconsin (Mr. Carpenter) agrees with me that the power to suspend the writ of *habeas corpus* is given to the Government and can only be exercised in pursuance of law. When he says that it is given to the Government, I do not think he speaks quite accurately, for the Government is composed of three departments, legislative, executive, and judicial, and certainly it is in no wise conferred upon the judicial department to determine whether the privilege of this writ shall be suspended or not; nor in any proper sense can it be said to be conferred upon the executive department of the Government: for what is the executive department of the Government? It is that department which is charged with the execution of the law. The Constitution is the highest law, and the laws enacted by the legislative department are the remainder of the body of the law, and it is simply to execute these laws that the executive department is ordained and instituted. So that in the nature of things the power to decide whether the privilege of the writ shall be suspended—a power which requires the exercise of judgment and of discretion, of volition—must necessarily belong to the legislative department of the Government. In its nature it is not an executive power, for, as I have said, the executive power is a power to execute the law. In its nature it is not a judicial power, for the judicial power never comes into exercise, as has been repeatedly decided by the Supreme Court of the United States, until there is a case, which means a plaintiff and a defendant in a court of justice. So that it necessarily follows that the power to suspend the privilege of the writ is a legislative power.

We are agreed upon this; but the Senator from Wisconsin thinks it is a sufficient compliance with the Constitution for Congress to enact a law which authorizes the President to suspend the privilege on the happening of certain contingencies or of certain events, of

which, not Congress, but the President is to be the judge. There is where our difference is. And now he cites the act of 1795 as proof of the fact that the President may be invested with a power which primarily rests in the legislative department of the Government. But that is an entire mistake. The act of 1795 did not provide for the suspension of the writ of *habeas corpus* at all. What did it provide? Let me refer to the first and second sections of that act:—

That whenever the United States shall be invaded, or be in imminent danger of invasion from any foreign nation or Indian tribe, it shall be lawful for the President of the United States to call forth such number of the militia of the State or States most convenient to the place of danger or scene of action as he may judge necessary to repel such invasion, and to issue his orders for that purpose to such officer or officers of the militia as he shall think proper.

“That is not the exercise of the power under the guarantee clause, but it is the exercise of another power in the Constitution, the power to call forth the militia:—”

The Congress shall have power to provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions.

“That is one of the powers of Congress under section eight of the first article.

“Now, what is that power? It is not a power, as in the case of the suspension of the writ of *habeas corpus*, to decide when the public safety requires the suspension of the writ. It is not expressed in such words as require Congress to decide whether the *corpus* has arisen or not; but it is a power to provide—to provide how?—to provide by law in anticipation of such a case; and therefore under that Congress might well enough provide for a calling forth the militia. It is a curious thing; so jealous were our fathers of the rights of the States that the Constitution did not give Congress the power to call forth the militia as a matter of course, but only the right to call them when it was necessary, as this clause specifies, to execute the laws of the Union, suppress insurrection, and repel invasion. But there is the power to provide for calling them forth whenever it may be necessary. It is necessary to execute the laws of the Union all the time whether Congress is in session or is not. It is necessary to provide to suppress insurrection at all times whether Congress is in session or not. It is necessary to provide for repelling invasion at all times whether Congress is in session or not. But it is not necessary to provide for the suspension of the writ of *habeas corpus* at all times whether Congress is in session or not; and so jealous were our forefathers of that that they did not say that Congress should have power to provide for the suspension of the writ of *habeas corpus* in case of insurrection or invasion. There is no such language as that, that Congress shall have power to provide for the suspension of the writ of *habeas corpus*; but the words are mandatory, and negative, and pro-

hibitory that the privilege of the writ shall not be suspended unless when in cases of rebellion or invasion the public safety shall require it. It is a very different thing from a provision that Congress may provide for calling forth the militia to execute the laws of the Union which must be executed all the time, or to suppress insurrections which must be suppressed whenever they occur, or to repel invasions which must be repelled whenever they happen.

“So much for that. Now we come to the next clause:—”

And in case of insurrection in any State against the government thereof, it shall be lawful for the President of the United States, on application of the Legislature of such State, or of the Executive (when the Legislature cannot be convened), to call forth such number of the militia of any other State or States, as may be applied for, as he may judge sufficient to suppress such insurrection.

“We have seen that that relates to insurrection, and comes under the same clause of the Constitution, ‘to provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions;’ and that refers not only to insurrection taken in connection with another clause of the Constitution to suppress insurrections against the General Government, but also insurrections against a State, but with this difference: that in regard to insurrection against a State there is no power (and this very act is drawn upon that theory) to call forth the militia where the insurrection is simply against the authority of a State and not against the Federal Government, unless the State shall require it. Let us turn, therefore, to the guarantee clause of the Constitution:—”

The United States shall guarantee to every State in this Union a republican form of government, and shall protect each of them against invasion, and, on application of the Legislature, or of the Executive (when the Legislature cannot be convened), against domestic violence.

“‘The United States shall guarantee,’ it ‘shall protect each of them against invasion.’”

Mr. Carpenter: “Whether Congress is in session or not?”

Mr. Thurman: “Yes, whether Congress is in session or not, and in that case whether the State applies for it or not; but, so far as insurrection against the State is concerned, it is only to act in case the Legislature when in session, or the Executive when the Legislature cannot be convened, shall apply to the Government of the United States. This provision of the Constitution makes the application by the Legislature of a State or by the Executive of a State conclusive evidence of the fact that there is such an insurrection.

“But, Mr. President, I was speaking of this clause:—”

The privilege of the writ of *habeas corpus* shall not be suspended, unless when in cases of rebellion or invasion the public safety may require it.

“We admit that the power to suspend is a

legislative power. That being the case, if you can authorize the President in his discretion to suspend it for six months, you may authorize him to suspend it by a law which has no limit upon it at all, and therefore in legal contemplation is to exist for all time. If you can authorize him to suspend it from now until the 4th of March next, you may make it a permanent statute on your statute-book, which implies that it is to last as long as the Government shall endure. If you can do that, then Congress has given up its legislative power, has been guilty of a perfect self-abnegation in that respect, and that great privilege, which was so sacred in the eyes of our forefathers, that they did not allow it to be suspended even by Congress when there was flagrant war with a foreign nation, unless our soil was invaded, may be given into the hands of a single man.

"When is it proposed to pass this bill? When a presidential election is pending, when the man into whose hands this power is given is a candidate for reelection to that office; then his supporters in the Congress of the United States, more regardless of his success in the election and the perpetuation of the power of their own party than of the welfare of the country and the principles of the Constitution, are for yielding up the power the Constitution vests in them and devolving it upon a man who can use it in order to reflect himself.

"Mr. President, nothing that I can say could present this measure in a stronger light than these few words. I say that my friend from Wisconsin, with all his ingenuity, and with all his diligence, has utterly failed to justify this bill."

Mr. Hamilton, of Maryland, said: "Mr. President, I object to this bill because it is for the legislative department of this Government to determine when the public safety requires the suspension of the writ. I would clothe no Executive with such power. I would not clothe the best man in Christendom with it. I would not have clothed George Washington with this power under any circumstance; nor was he ever clothed with it. Much less would I undertake to clothe the present Executive with it, with his surroundings, and with the faint conception he has manifested in his administration for the personal rights of the people. The other discretion, that is as to the facts declared by the original act to constitute a rebellion, is not so material. But there is another matter to which I do object, and that is to this constructive rebellion. Senators know well that in ages gone by these doctrines of construction were without limitation. Constructive treasons were both feared and fought by our ancestors for centuries. They fought against constructive treasons as those of us who are opposing this bill are now fighting against constructive rebellions. We know what a rebellion is by much experience; lately by sad and bloody experience do we know

what a rebellion is. Our ancestors who made the Constitution knew what constituted a rebellion, for they had just come out of one in every respect a rebellion. They knew what the Monmouth rebellion was; they knew what the rebellion of 1680 was; they lived in the midst of the great French rebellion and were familiar with the history of rebellions; then they were identified with their own experience as marked almost every page of history they read, and therefore they wanted no critical definition of it in the Constitution. What is it? *Re and bellare—to war again*; it is armed resistance to that authority to which you owe allegiance. That is what constitutes rebellion. A rebellion is in itself as much fixed in its proportions and known to the world as any other fact can be. To attach to the fact that an individual is deprived of the privilege of voting for any cause, or is deprived of any high right as a citizen or as a person, or to say that a combination or conspiracy, if you please, of two or more persons for any such purposes does constitute a rebellion is beyond my comprehension of what a rebellion really is. We have just passed through one mighty in all its parts, and then to compare it, nay, even the smallest fragment of it, to the rebellion that Congress would create by the statute to which this bill is proposed as an amendment, makes the contrast so supremely ridiculous that one could hardly suppose that the representatives of the American people could dignify such legislation with the forms of law.

"Constructive rebellion should be condemned as constructive treasons are now. This bill proposes to continue in force the fourth section of the original act, and this fourth section declares that the occurring of certain things 'shall be deemed' a rebellion, and that thereupon, and if he considers the public safety as requiring it, the President shall exercise this power of suspension. Why, sir, if you have a legislative power to determine what a rebellion is, and to say that certain things committed by individuals, or a combination of two or more of them, shall be rebellion, although wanting the characteristics of a rebellion, as by the common assent of mankind rebellion is known, and as it was incorporated in the Constitution, is the end of written, defined, limited, constitutional government. It is going back centuries, even before the days of Edward III., when what constituted treason depended upon the opinions of judges, and when there was no limit to either general or legislative power."

Mr. Saulsbury, of Delaware, said: "Mr. President, I did not intend to occupy any of the time of the Senate on this question. I discussed at some length the subject when the original bill was before us at the last session, and have no disposition to do so now; but I cannot consent that a measure of this kind shall pass this body without at least entering

my protest against its enactment. Sir, I take occasion to say that I am proud to be associated with gentlemen on this floor who are raising their voices in protest against a measure so iniquitous and monstrous. While we are in a minority here, we have struggled to oppose this legislation which is striking down the very liberties of the people of this country; we have interposed by our votes and by our voice in behalf of the rights of the people and in defence of that liberty secured to us by our fathers.

"Now, Mr. President, what is proposed by this bill? The bill now under consideration proposes to continue the enactment of April, 1871. What are the provisions of that law? It undertakes in substance to declare that certain crimes enumerated therein shall be deemed rebellion. 'Rebellion' has a fixed and definite meaning, and was understood at the time of the adoption of the Federal Constitution to be armed resistance to rightful authority. It is something different from the mere existence of ordinary crimes; and yet the language of the act of April, 1871, is that certain acts, therein enumerated, shall be deemed rebellion, not that they are rebellion, not that they have ever been considered rebellion by any civilized country in the world, but for the purposes of that enactment those crimes are to be deemed rebellion. That is the provision of your law.

"In order to justify the power with which you mean to clothe the President, you declare that the acts which you enumerate in certain sections of the law shall be deemed rebellion, and then confer upon the President absolute power to suppress that rebellion which you yourselves create. You call that rebellion which never has been regarded as rebellion under any law in any civilized country; and, to suppress the rebellion which you have thus proclaimed by your statute, you clothe the President of the United States not only with the power of employing the Army and the Navy, but you clothe him with a frightful power of declaring martial law and suspending the writ of *habeas corpus*, and denying to the people of this country the rights which were secured to them by their fathers in the adoption of the Constitution.

"Sir, the right to the writ of *habeas corpus* is a right which is the heritage of freemen. It came to us not by the adoption of the Federal Constitution. It descended to us as our inheritance from our forefathers; and for two hundred years that writ has been sacred in England. In the days of Charles II. even his prime-minister, Clarendon, dared not advise Charles to suspend the writ of *habeas corpus*, but, in order to evade it, he sent British subjects out of the reach of the benefit of that writ, and he was impeached by the British Parliament because he attempted to deprive the citizens of England of the benefit of *habeas corpus*. And yet, in the American Senate to-

day, you propose to clothe the President of the United States with the fearful power of depriving the citizens of this free country of the benefit of the writ of *habeas corpus*. You confer upon him immunity to do that which led to the impeachment of Clarendon, and which if attempted by Charles would have cost him his head. And why do you propose to confer upon the President this power?

"The excuse is made that crimes are committed in certain Southern States. I am not here to deny that crime may exist in the Southern States; but, let me ask, whose fault it is that it does exist? I say it here, and I say it in the presence of the majority of the Senate, that a large measure of the crimes which may exist in the Southern States exist there because of the legislation of the majority of Congress. That people after the termination of the war, though despoiled of their property, though mourning their dead, were comparatively peaceful and happy. But you stepped in with your legislation. In order that you might control the politics of the country, you stirred up strife between the white men and the negroes; and you ought to take to yourselves the unwholesome and unpleasant recollection that at least a portion, and a large portion, of whatever crimes may exist there is justly attributable to the legislation which you yourselves have enacted.

"But suppose crime does exist there, have you not Federal courts in every State in this Union, and are not those courts clothed with ample power to suppress it? You have the judges, you have the marshals, you have all the machinery for extirpating crime in every State in this Union, and, if you do not do it through the medium of the Federal courts, it is your fault; it is not the fault of the Democratic party."

The Presiding Officer: "The question is on ordering the bill to be engrossed and read the third time."

The bill was ordered to be engrossed for a third reading, and was read the third time.

The yeas and nays were ordered.

The Chief Clerk proceeded to call the roll on the passage of the bill, and the result was announced as follows:

YEAS—Messrs. Ames, Anthony, Boreman, Caldwell, Carpenter, Chandler, Clayton, Cole, Conkling, Corbett, Edmunds, Ferry of Michigan, Flanagan, Frelinghuysen, Hamlin, Logan, Morrill of Maine, Morrill of Vermont, Nye, Osborn, Patterson, Pomeroy, Poole, Pratt, Robertson, Sawyer, Scott, and Spencer—28.

NAYS—Messrs. Alcorn, Bayard, Blair, Caserly, Cooper, Davis of West Virginia, Hamilton of Maryland, Johnston, Kelley, Ransom, Saulsbury, Sprague, Stevenson, Thurman, and Vickers—15.

ABSENT—Messrs. Brownlow, Buckingham, Cameron, Cragin, Davis of Kentucky, Fenton, Ferry of Connecticut, Gilbert, Goldthwaite, Hamilton of Texas, Harlan, Hill, Hitchcock, Howe, Kellogg, Lewis, Morton, Norwood, Ramsey, Rice, Schurz, Sherman, Stewart, Stockton, Sumner, Tipton, Trumbull, West, Wilson, Windom, and Wright—31.

So the bill was passed.

In the House, on May 28th, Mr. Poland, of Vermont, moved "that the rules be so suspended as to take from the Speaker's table and pass at this time Senate bill No. 656, to extend the provisions of the fourth section of the act approved April 20, 1871."

The question was then taken, and resulted as follows:

Yea—Messrs. Ames, Averill, Banks, Barber, Beatty, Beveridge, Bigby, Bingham, Buckley, Buffinton, Burdett, Benjamin F. Butler, Roderick H. Butler, Coburn, Coglian, Conger, Darrall, Dawes, Dickey, Duell, Dunnell, Eames, Elliott, Charles Foster, Wilder D. Foster, Frye, Halsey, Harmer, George E. Harris, Hawley, Hays, Gerry W. Hazelton, John W. Hazelton, Hill, Hoar, Hooper, Houghton, Kelley, Killinger, Lamport, Lansing, Lynch, Maynard, McGrew, McKunkin, McKee, Mercur, Merriam, Monroe, Moore, Leonard, Myers, Negley, Orr, Packard, Packer, Palmer, Isaac C. Parker, Pendleton, Pierce, Aaron F. Perry, Poland, Prindle, Ranney, Ellis H. Roberts, Ruess, Sargent, Sawyer, Scofield, Sessions, Shanks, Shellabarger, H. Boardman Smith, John A. Smith, Snyder, Thomas J. Spear, Sprague, Starkweather, Stevenson, Stowell, St. John, Taffe, Thomas, Washington Townsend, Trichell, Tyner, Upson, Wakeman, Walden, Waldron, Wallace, Walls, Williams of Indiana, Jeremiah M. Wilson, and John T. Wilson—94.

Nay—Messrs. Acker, Ambler, Archer, Arthur, Beck, Bell, Biggs, Bird, Austin Blair, James G. Blair, Braxton, Bright, Brooks, Burchard, Caldwell, Campbell, Carroll, Comingo, Conner, Cotton, Creba, Critcher, Crossland, Donnan, Dox, Du Bose, Duke, Eldredge, Ely, Farnsworth, Finkelnburg, Forker, Henry D. Foster, Garfield, Garrett, Gets, Giddings, Golladay, Goodrich, Griffith, Haldeman, Hale, Hamblison, Hancock, Handley, Hanks, Harper, John T. Harris, Hay, Hersford, Herndon, Hibbard, Holman, Kellogg, Kendall, Kerr, King, Lewis, Lowe, Manson, Marshall, McClelland, McCormick, McCrary, McHenry, McIntyre, McNeely, Merrick, Mitchell, Morgan, Morphis, Niblack, Peters, Potter, Price, Randall, Read, Edward Y. Rice, John M. Rice, Ritchie, William R. Roberts, John Rogers, Sion H. Rogers, Roosevelt, Sheldon, Slater, Slocum, Sloos, Worthington C. Smith, R. Milton Spear, Stevens, Staughton, Strong, Sutherland, Swann, Sypher, Terry, Tuthill, Van Trump, Waddell, Warren, Wells, Whiteley, Whitthorne, Willard, Winchester, Wood, and Young—108.

Not Voting—Messrs. Adams, Barsum, Barry, Boies, Clarke, Cobb, Cox, Creely, Crocker, Davis, De Large, Farwell, Havens, Ketcham, Kinsella, Lamson, Leach, McKinney, Benjamin F. Myers, Morey, Hosea W. Parker, Peck, Eli Perry, Platt, Porter, Robinson, Seeley, Sherwood, Shober, Shoemaker, Snapp, Storm, Dwight Townsend, Turner, Vaughan, Voorhees, Wheeler, and Williams of New York—38.

So (two-thirds not voting in favor thereof) the rules were not suspended.

Mr. Poland: "I desire to say, in connection with the bill just voted upon, that the same bill was reported to the House and the Senate respectively by the joint select Committee on the Condition of the late Insurrectionary States. That bill having passed the Senate, I felt it my duty to call it to the attention of the House and have a vote upon it. Our committee having leave to report at any time, had a majority voted in favor of the bill upon the vote just taken, I should immediately have

offered the bill that was reported by the committee to the House, which is identical with the Senate bill. But, inasmuch as this vote has disclosed that a majority of this House are opposed to the bill, I shall not offer the House bill."

Among the important measures adopted at this session of Congress was one for the apportionment of Representatives to Congress among the several States according to the census of 1870. By this act the number of members of the House of Representatives was fixed at 286. These were distributed as follows:

STATE.		STATE.	
Alabama.....	7	Missouri.....	13
Arkansas.....	4	Nebraska.....	1
California.....	4	Nevada.....	1
Connecticut.....	4	New Hampshire.....	3
Delaware.....	1	New Jersey.....	7
Florida.....	1	N.....	20
Georgia.....	6	N.....	8
Illinois.....	10	O.....	20
Indiana.....	12	O.....	1

Kentucky.....	10	S.....	3
Louisiana.....	5	T.....	8
Maine.....	2	T.....	6
Maryland.....	6	Vermont.....	2
Massachusetts.....	11	Virginia.....	0
Michigan.....	9	West Virginia.....	3
Minnesota.....	2	Wisconsin.....	8
Mississippi.....	6		

The admission of a new State will increase the total number of Representatives. The Tuesday next after the first Monday in November, in the year eighteen hundred and seventy-six, is fixed and established as the day, in each of the States and Territories of the United States, for the election of Representatives and Delegates to the Forty-fifth Congress; and the Tuesday next after the first Monday in November, in every second year thereafter, is fixed and established as the day for the election, in each of said States and Territories, of Representatives and Delegates to the Congress commencing on the fourth day of March next thereafter.

The act further provides that no State shall hereafter be admitted to the Union without having the population necessary to entitle it to at least one representative.

It is further provided that if any State should deny or abridge the right of any of the male inhabitants of such State, being twenty-one years of age, and citizens of the United States, to vote at any election named in the amendments to the Constitution, article fourteen, section two, except for participation in the rebellion or other crime, the number of Representatives apportioned in the act to such State shall be reduced in the proportion which the number of such male citizens shall have to the whole number of male citizens, twenty-one years of age, in such State.

An act to remove political disabilities imposed by the fourteenth article of the amendments of the Constitution was passed and approved by the President on May 22d. It removes all political disabilities imposed by

the third section of the fourteenth article aforesaid from all persons whomsoever, except Senators and Representatives of the Thirty-sixth and Thirty-seventh Congresses, officers in the judicial, military, and naval service of the United States, heads of Departments, and foreign ministers of the United States.

The import duties on tea and coffee were abolished by an act which took effect on July 1st.

This session of Congress terminated on the 10th day of June.

CONNECTICUT. Besides the Democratic and Republican, two other parties appeared, as distinct political bodies in this State; held State Conventions; adopted platforms, and nominated their candidates for the several State offices at the general election in April, 1872.

The Temperance party, represented by about one hundred delegates from different sections of the State, met at New Haven on the 13th of December, 1871, and nominated a full State ticket, as follows: For Governor, Francis Gillette, of Hartford; Lieutenant-Governor, A. S. Beardsley, of Plymouth; Secretary of State, Hiram P. Lawrence, of Norfolk; State Treasurer, George Greenman, of Mystic Bridge; Comptroller, Dabney Carr, of Bridgeport.

The following platform was adopted:

Assembled to organize a political party for the legal suppression of the liquor-traffic and for the accomplishment of such other reforms as will promote the welfare and enhance the happiness of the State, we adopt, as expressive of our principles and purposes, the following resolutions:

Resolved, That the foundation principle of the State is public virtue, and its supreme interest the public safety, and that, therefore, that is hostile to the State which corrupts the one or impairs the other.

Resolved, That nothing so corrupts public virtue, or impairs the public welfare, as the traffic in intoxicating liquors, and therefore that traffic is the foe of the State, and should be by it destroyed.

Resolved, That such is the depravity of those engaged in supporting the traffic, that its suppression can be effected only by force of executed law, and such is its organized power, that it sets private assault upon it at defiance; therefore the State, as in duty bound to protect its citizens, should enact all laws needful for its suppression, and should execute such laws through its own officers, and by its own organized powers.

Resolved, That the record of the existing political parties of the State forbids the hope that either of them can be relied on, if charged with the administration of the State, to execute its laws against the liquor-traffic, and therefore those injured by that traffic should now no longer rely on those parties, but act directly and independently for their own protection.

Resolved, That, in organizing for this end, we make a clear distinction between temperance as an enterprise for the moral reformation of men, and prohibition as a measure of civil protection of the State; that as a reformatory work it should be prosecuted only by moral means; and therefore, while feeling in it as such work the deepest interest, and recognizing our undiminished obligation as individuals to labor in it, and bidding it, as conducted by the various reformatory organizations of the State, the warm and heartiest "God speed," with it, as such an enterprise, we, as a political party, have nothing to do.

Resolved, That while the temperance work is thus to be conducted by moral means, the civil protection of citizens from wrongs and injuries in their persons and property from the liquor-traffic can be secured only through law, and that therefore such protection is a proper subject of political action, and this is the case of the liquor nuisance, as in that of any other public nuisance of the State.

Resolved, That to the suppression of the liquor-traffic by these means this organization is pledged, and that it will prosecute it with all its energy and resources until it is accomplished.

Resolved, That out of the liquor-traffic, as its source, comes largely that special peril of our institutions, the prevailing public corruption of our time; it inflames the passions, clouds the intellect, and weakens the conscience, thus brutalizing the man. Having thus personally demoralized him, it then plies him with the influences of public corruption, beguiling him with its offers, and intimidating him with its threats. It is the aim of this party to reform this corruption, and to this end it will demand uprightness of character in its candidates for public office, and integrity in the administration of public affairs, that the same principles of morality and accountability shall rule in public and in private life, and it will array itself as an implacable foe against public selfishness and dishonesty, and use its utmost endeavors to weed out all rascals from positions of public trust, and put in their places honest men.

Resolved, That in this connection we especially commend the fidelity and ability with which the *Hartford Evening Post* exposes and pursues the corruptions of the lobby system of the State, and we encourage it to persevere in this necessary and *nasty* work till this Augean stable is thoroughly cleansed.

Resolved, That one of the most formidable perils of the future is a system of gigantic consolidations now coming over the land, and that the virtue of the people and the wisdom of the Legislature should be combined in an endeavor to break its threatened power.

Resolved, That the laborer is worthy of his hire, and his hire should be such as will compensate him for his labor, and this while it allows him time for due enjoyment of his home and of society, and for the intellectual and virtuous culture of himself as a man.

Resolved, That, as women and helpless children are the chief sufferers from the liquor-traffic, their rights should be considered in dealing with it, and their wishes be expressed in all proper ways.

Resolved, That the success of republican institutions is conditioned on the virtue and intelligence of the people, therefore education, both intellectual and moral, should constitute one of the foremost concerns of the State.

Resolved, That, in the progress of civilization, the time has come when the old, barbarous method of settling national difficulties by war should come to an end, and we hail with profound satisfaction the conclusion of the treaty of peace between this nation and the mother-country, and we express the hope that the friendly relations thus established between these two great members of the English-speaking race may continue while their history endures.

Resolved, That the name of this party shall be, the Union Reform party of Connecticut, and it shall be constituted of those who adopt its principles and associate themselves together to realize them.

Resolved, That our reliance in the enterprise in which we are engaged is on the truth and justice of our cause, the intelligence and virtue of the people, and above all on the almighty power of God, whom we recognize as the friend of every good cause, and on him humbly confess our dependence, and devoutly implore his aid.

Resolved, That we are in favor of a reform in the civil service of the country, by which qualifications for the office shall be required of every applicant for

a position under the Government, and by which no office-holder shall be turned out of his office save for misconduct or inability.

The Labor-Reform party held their convention at Bridgeport, on the 3d of January, 1872, the delegates in attendance being 31. The call issued for the meeting required that "each delegate, before taking his seat, should pledge himself to leave the political party with which he might previously have been identified, and to support the platform of the General Convention." The pledge was accordingly subscribed by all of the delegates. The following candidates were nominated: For Governor, A. R. Harrison, of New Haven; Lieutenant-Governor, W. R. Goodenough, of Hartford; Secretary of State, E. M. Graves, of Hartford; Treasurer, James Craig, of Middletown; Comptroller, T. H. Laramie, of Bridgeport. The resolutions adopted were of the following import: The preamble sets forth that the right condition of labor is the basis of progress, prosperity, and wealth; that the burden of maintaining the government rests upon those engaged in productive labor; that the interests of the producing classes have long been held to be of secondary importance by legislative powers in contravention of the organized law of this State; that all men, when they form a social compact, are equal in rights; and that no men or set of men are entitled to extensive public emoluments or privileges from the community.

The resolutions claim that the two prominent political parties have broken their pledges to the wealth-producing classes, and that therefore it was their duty to form and maintain a political organization, under the name of the 'Labor-Reform party' of Connecticut; adopt the platform of the Labor Congress held in St. Louis, last year, as the basis of national politics; approve the presidential one-term amendment to the Constitution of the United States; propose the abolition of the rotten borough system of representation in the State; call for such congressional legislation as shall secure the abolition of land monopoly; complain of the unwarrantable exercise of judicial power as to the rights of working-men; call for the establishment of a Labor Bureau in the State; assert that fifty dollars of working-men's wages should be exempt from attachment; that the attempt on the part of the capitalists to control the votes of employes a base attempt to corrupt the purity of the ballot-box, and should be punished by imprisonment in the penitentiary; complain that the competition of convict-labor with that of honest men is a grievance that should not be allowed; demand a legal provision for a more equitable assessment of taxes in this State; charge upon the present Executive and the last Legislature of the State the attempt to secure a higher rate of legal interest on money, and thereby the attempt to impose additional burdens upon labor and the perpetuation of an

oppressive system of robbery and public plunder; complain of the provision of the laws of this State which provides one hundred dollars' fine and imprisonment for using means to intimidate the working-man, with intent to oblige him to leave his employer, as a law wholly in the interest of capital; denounce legislative lobbyists as thieves and robbers, and those who assist them as participators in their crimes, and claim that all legislation for the incorporation of capital should tend to give labor the right to its share of the profits of its production.

The Republican Convention assembled at Hartford on the 24th of January, 1872, when they unanimously renominated the persons who then held the several State offices for another term, namely: For Governor, Marshall Jewell, of Hartford; Lieutenant-Governor, Morris Tyler, of New Haven; Secretary of State, Hiram Appleman, of Groton; Treasurer, David P. Nichols, of Danbury; Comptroller, James W. Manning, of Putnam. The following is the platform:

The Republicans of Connecticut, in State Convention assembled, declare as follows:

1. We again express our cordial adherence to the doctrines and principles of the Republican party as manifested in our former statements and in the national platforms, and we reflect with increasing pride upon its wonderful work. It proved that a free government, based on the will and affection of a free people, is the strongest known form of government. It suppressed a great rebellion, freed millions of laborers, established equal rights, perfected the national Constitution, and justified the Declaration of Independence. By its great reduction of the army and navy, the party proved that it had neither desire nor expectation of war. Having incurred a great debt, for the best reason the nation ever gave it, it resolutely began an immediate reduction of that debt. Yet, having cut down expenses, it has been yearly cutting down taxation. Notwithstanding the marvellous sacrifices of men and money, the nation has steadily grown in wealth and population.

2. During the existing Administration the debt has been reduced nearly three hundred millions of dollars; peace and order have made great progress in the lately rebellious regions; a new policy toward the Indians has been adopted, marked by firmness, justice, and good faith; the rights of all, especially the poor and friendless, of whatever race or wherever found, have been scrupulously protected; a self-respecting yet peaceful policy has been pursued toward all the world, and our controversy with Great Britain has been treated in a manner greatly creditable to both nations.

3. That we have undiminished confidence in the patriotism, integrity, and ability of President Grant, and for great and good work done in the country's behalf we heartily thank him and his Cabinet and the two Houses of Congress.

4. The future must be as honorable as the past to deserve and keep its lead of the world. The Republican party must be free to examine and criticize and utterly without fear, favor, or partiality in attacking all fraud, dishonor, and corruption, legislative, executive, or judicial, in the nation or State. We demand economy, industry, and honesty, in our political affairs, and rejoice at the brightening prospect of a thorough reform of the civil service. For the President's efforts and pledges in this matter we tender him our cordial thanks, and therein we pledge him an enthusiastic, unwavering support.

5. In national affairs we urge: first, a large reduction of taxation; second, constant study and labor

to bring about a resumption of specie payments, that the evil of a depreciated paper currency may be removed, and the best possible measure of value furnished us; third, retaining a tariff sufficient to raise the needed revenue, we would have it carefully adjusted to favor American industry, working rather to interests widely extended than to merely local and limited pursuits; fourth, a perfected system of national banks, with abundant security to the billholder, and inflexible and peremptory laws for prompt redemption; fifth, the abolition of the franking privilege; sixth, that public lands shall no more be granted to corporations, but given in limited quantities to actual settlers.

6. For fifteen years the Republican party has controlled the legislation of Connecticut. Let the record show whether it is the friend and promoter of peace, law, order, charity, temperance, industry, and education. What it has been it will be, only better. To any measure that on mature deliberation promises to aid the interests of temperance, education, and labor, we will give our warmest support.

7. We unreservedly commend the General Assembly for its firm execution of a constitutional process in correcting infamous election frauds last year. To the best of its ability the Republican party saw to it that every honest vote, and none other, was counted once and no more. The happy ruin of the Tammany Ring encourages us to believe that the work will be easier hereafter.

8. That in addition to the legitimate duties and rights of counsel and citizens in appearing before the legislative committees and urging action upon the legislators, there have grown up corrupt and dangerous practices in the lobby, which call for a renewal of watchfulness in the Legislature, and a higher tone of public sentiment.

9. That it is the duty of the State to be vigilant in the protection of the rights and interests of the people against the encroachments of powerful corporations, and especially in holding corporations strictly to the responsibilities and duties contemplated in their charters.

10. While recognizing the fundamental principles which have brought unparalleled success to our country, and believing that only a republic should exist on this continent, we would urge upon our representatives in Congress to keep before them the great ideas of liberty and freedom which have been so identified with our great party of progress from its birth; and we would earnestly desire to extend all sympathy and aid consistent with our ability to other nations and people struggling to be free.

11. We unqualifiedly approve of the administration of Governor Jewell and his associates, of which we give the highest evidence in our power by unanimously recommending them for reelection and pledging our utmost efforts to secure that end.

The Democrats assembled in State Convention at Hartford, on the 6th of February, 1872, and unanimously nominated the following candidates for the State offices: For Governor, Richard D. Hubbard, of Hartford; Lieutenant-Governor, Charles Atwater, of New Haven; Secretary of State, John W. Stedman, of Norwich; Treasurer, Milo B. Richardson, of Salisbury; Comptroller, Thomas Sanford, of Redding. The resolutions adopted were as follows:

Resolved, That the Democrats of Connecticut regard emancipation, equality of civil rights, and enfranchisement, as established facts, now embodied in the Constitution, and deserving the support of good citizens of all parties.

Resolved, That true and lasting peace can come only from such profound reconciliation as enfranchisement has brought to the State of Missouri; nor can those governments be pure or great in which the

tax-payers have no active part. We therefore demand, with equal suffrage for all, complete amnesty for all—that the intellect and experience of every State may be welcomed to active service for the common welfare.

Resolved, That no form of taxation is just or wise which puts needless burdens upon the people. We demand a genuine reform of tariff, so that those duties shall be removed, which, in addition to the revenue yielded to the Treasury, involve an increase in the price of domestic products, and a consequent tax for the benefit of favored interests.

Resolved, That the shameless abuse of government patronage for the control of conventions and elections, whether in the interest of an individual faction or of a party, with its consequent corruption and demoralization of political life, demands a thorough and genuine reform of the public service. Those who would suppress investigation forget they owe a higher duty to the country than to party. We honor those Senators whose courageous course has compelled the disclosure of gross misdeeds, and they deserve the thanks and hearty support of all good citizens.

Resolved, That local self-government, with impartial suffrage, will guard the rights of all citizens more securely than any centralized authority. It is time to stop the growing encroachments of the executive power, the use of coercion or bribery to ratify a treaty, the packing of a Supreme Court to relieve rich corporations, the seating of members of Congress not elected by the people, the resort to unconstitutional laws to cure the Ku-klux disorder. We demand for the individual the largest liberty consistent with public order, for the State self-government, and for the nation the return to the methods of peace and the limitation of power.

Resolved, That it is alike the duty of honest men of all parties to expose corruption, denounce the usurpation of power, and work for reforms necessary for the public welfare. The times demand an uprising of honest citizens to sweep from power men who prostitute their official positions to selfish interests.

Resolved, That we repudiate with scorn the oft-repeated slander of our opponents, that the Democracy of Connecticut are in favor of repudiating any portion of the national debt, even so much as has been fastened upon us by extravagance and fraud, and that we are for paying that debt to its last dollar.

Resolved, That the Democratic party, remembering the example of their fathers in the expression of their sympathy for the struggling republics of South America, as well as for the oppressed Greeks, and grateful for the aid which the founders of our own republic received from the countrymen of Lafayette, Montgomery, Steuben, and Pulaski, feel impelled by these considerations, as well as our obligations to our common humanity, to lift up our voices in behalf of the suffering Cubans, now desperately struggling for relief from their oppressors, who set at naught all the usages of civilized warfare in their savage butchery of captive men, women, and children.

Resolved, That we are in favor of a liberal system of free schools, and protest against all interference, by the General Government, with institutions so purely local and concerning so deeply and tenderly the ties which bind them to our homes and to the State.

Resolved, That we look back with pride and satisfaction to the government of our State, while administered in its executive department by our distinguished citizen, James E. English, under whose name we have won brilliant victories in defence of the constitution, and whom we should have been glad to have as our leader again, if it had been consistent with his private concerns to yield his consent.

Resolved, That in presenting the Hon. Richard D. Hubbard for Governor, and his associates on the State ticket, to the citizens of this State for their suf-

frages at the coming State election, we cordially endorse the sentiments embodied in the foregoing resolutions.

The election resulted in the choice of the Republican ticket, on April 1st. The average majority given to each of the Republican candidates over the Democratic respectively, was a little more than 500, except that of the Governor, Mr. Jewell, who received less than 80 votes more than Mr. Hubbard. The whole number of votes cast at this election was 93,098, which was about 9,000 less than a full vote.

At the beginning of the fiscal year, there was in the Treasury cash on hand amounting to \$845,194.14; whereby the actual debt of the State, which was \$5,804,610.93 in the previous year, was reduced to \$4,923,405.86.

The State revenue, during the same fiscal year, amounted to \$2,091,035.63; made up by \$231,522.19 from the two-mill tax; \$421,120.86 from the savings-banks; \$265,890.92 from mutual-insurance companies; \$314,101.73 from railroads; \$217,133.63 from the Federal Government on the State war-claims; \$34,296.28 from non-resident stockholders; \$24,459.14 from interest on deposits; the rest from miscellaneous sources. The total expenditure was \$1,978,596.74—namely, \$756,600, interest on the public debt; \$380,304, interest on bonded debt; \$199,211.56, Juvenile Reform School, \$7,118.65, Board of Education; \$123,118.77, soldiers' orphan children; \$82,958.03, public buildings and benevolent institutions; \$102,836, General Assembly; \$55,550, paid to counties for the 50 cents *per capita* on children of school-age.

The estimated revenue from all sources, for the coming year, is set down at \$2,662,730.40; and the expenditures at \$1,688,600, leaving an estimated surplus of \$974,130.40 in the Treasury on March 31, 1873.

The collection of the tax of two mills on the dollar was considered necessary to be continued for the ensuing year. The State claims against the General Government for war purposes, on which amount it received above \$200,000 last year, are regarded as finally settled.

The taxable property in Connecticut amounted, on the 1st of October, 1871, to \$339,782,733, which is \$11,346,132 more than on the same date in 1870. It is asserted that the same kind of property is very unequally assessed for taxation purposes in different counties of the State, the taxed value being in some much higher in proportion to the actual than in others; and the establishment of county boards of equalization, consisting of three members chosen in each county from among its own residents, is suggested, their respective chairmen to constitute, with the State Treasurer at their head, a State Board of Equalization, whose decisions should be final.

Town and city indebtedness seems to be growing steadily larger. The aggregate

amount, in 1870, was \$9,813,000, and is now supposed to have increased two or three millions.

There are 72 savings-banks in the State, with deposits amounting to a total of \$62,717,814.77, which is about \$1,500,000 above their deposits in the preceding year. As these institutions severally charge different rates of interest on money loaned, the Governor recommended the enactment of some stringent laws to compel them to lend their money at a uniform rate.

Trustees or officers of the savings-banks are in the habit of taking a commission from the borrower for the money lent to him, or of handing to him, as money, bonds at par, which are not worth it. This practice, the Governor says, should be prohibited by law.

Four banks still remain, in Connecticut, which do business under the laws of the State; their aggregate capital amounts to \$1,400,000. They are respectively located in Hartford and New Haven, and, being prevented by the laws of the United States from issuing notes for circulation, they confine their operations to discounting and loaning their capital and deposits, in which they seem to carry on a profitable business. The Bank Commissioners, in their last report, say that, except some irregular practices charged against the president of one of these institutions, timely detected and remedied, "there has been nothing to censure in the management of any of them;" that they are wisely and prudently conducted; and that "notwithstanding the sharp competition of the 'national' banks and trust companies in obtaining deposits, they have been able to pay to their stockholders remunerative dividends, and have afforded to their customers as extensive accommodations as the other institutions."

A law was enacted by the General Assembly, at the session of 1871, relative to the insurance companies, having in view the protection of both the insuring and insured parties in their reciprocal relations, and creating the office of an Insurance Commissioner for the State. The new law went into operation on the first of September the same year, and the effects of its working are regarded as most satisfactory. There are 94 fire-insurance companies doing business in the State, 16 of which are Connecticut companies, with 891 agencies in the State. Their assets, in the aggregate, amount to \$69,922,213, with risks of \$3,514,088,333, of which \$199,467,344 are in the State; the premiums in the year were \$1,820,864.

The Insurance Commissioner states that, among the large number of insurance companies involved in the conflagration which destroyed Chicago in October, 1871, 11 were Connecticut companies; and of these he thus speaks: "But four of them, the *Ætna*, *Hartford*, and *Phoenix*, of Hartford, and *Fairfield* County, were able to pay losses in full, and

but one of the rest, the Connecticut, has succeeded in resuming business. The aggregate loss to the Connecticut companies was a little over \$11,000,000, of which the four solvent companies paid \$6,229,000, and of the balance about \$1,669,850 were paid by the others, thus making an aggregate of \$7,888,850, or 71.71 per cent., paid Chicago by Connecticut companies. The three solvent Hartford companies reduced their stock one-half, but subsequently increased it to the former amount, the old stockholders coming forward to make good the impairment."

The number of life-insurance companies doing business in the State is 40, of which ten are Connecticut companies. The whole amount of their assets is \$241,645,692; of their risks, \$1,576,497,000. They have 96 agencies in the State. Their aggregate premium receipts for the past year were \$65,847,327.83.

The School Fund, amounting to \$2,046,958.03, is well cared for. Except about one-tenth part of it, which is in bank-stock, the rest is loaned on real-estate securities, for about seven-eighths at 6 per cent. per annum, in Connecticut; for the remainder at 7, in New York and Ohio.

The free school law, now in operation in the State, is regarded as having produced very satisfactory results. The number of registered children, between four and sixteen years, in 1871, was 131,748, or 3,280 more than in the previous year. A *per capita* dividend of one dollar for each child was distributed the same year out of the interest of the School Fund. Of the said number of children, "123,588 were registered as attending the public schools; 8,754 as attending private schools; and 11,947 as attending no school at all." The number of public schools in Connecticut is 1,630, and of teachers 2,420, both supported by the State, at an aggregate expense last year of \$1,496,980.95. "There has been an increase in the length of the school year, in the number of scholars in attendance, in the salaries of the teachers, and in the money raised for school purposes." The average amount of teachers' salaries, which has been steadily increasing for several years, is now 66.58 per month for male teachers, and 32.69 for female; the ratio of their increase, as compared with what they were six years ago, being, respectively, 54.50 per cent. for men, and 44.58 per cent. for women.

The Normal School, destined for the education and preparation of teachers in the public schools, is stated to be in very successful operation under the present management. The number of scholars attending it in 1872 was 150. An appropriation of \$12,500 was made by the General Assembly, at the previous session, for the support of this school for one year.

The State scholarships for the Sheffield Scientific School at Yale College are 40, and all filled; but that school furnishes gratuitous

instruction to all applicants who cannot afford to pay for it.

The six seats in the Board of Corporation of Yale College, which had been previously occupied by the six senior Senators in the State Legislature, were given up to the Alumni by an act of the General Assembly, at their session in 1872. It is anticipated that the act will prove advantageous to the college, and satisfactory to the State.

In the General Hospital for the Insane, at Middletown, there were 272 patients on the 1st of April, 1872. During the year, there had been 73 applications made for admission, which could not be accommodated for want of room; and these applications would have been much more numerous, had it not been generally known that there were no vacancies. There are also 22 State beneficiaries at the Retreat at Hartford; eight at Providence; eight at Northampton; nine at Concord, New Hampshire; and five at Brattleboro. The insane poor in the State, yet uncared for, are above 800, most of them in almshouses. The Governor states that the erection of the new wing in the hospital building, for which an appropriation was made by the General Assembly, is progressing, and will probably be finished for less than the sum appropriated; but, considering the vast number of insane persons who must remain outside of the hospital, and need admission and treatment in it, he suggests that its other wing should be contracted for and constructed, and the building completed according to the original plan.

The School for Imbeciles, at Lakeville, is too small for the realization of the purpose intended in its establishment. The State beneficiaries in it number but 20, while there are many times that number in the State who need the advantages of the school. The appropriation made for its enlargement by the General Assembly remained unavailable, because of the conditions on which it was made to depend.

In the American Asylum for the Deaf and Dumb, which is under excellent management in all respects, there were 246 pupils, 53 of whom are from the State. The census of 1870 sets down the number of this unfortunate class in Connecticut at 221, among whom are 84 aged between five and 20 years; from which it would appear that 31 deaf-mutes of proper age are not receiving instruction at the asylum. It may soon be the duty of the State to assist this institution in the erection of a suitable building, with the improvements suggested by the experience of half a century.

From statistics collected in regard to the blind, it appears that, besides the 12 at the Perkins Institute at Boston, their number in Connecticut is 204. Many of these are blind from old age; and some not totally blind.

The Industrial School for Girls, at Middletown, has worked successfully, and accomplishes the purpose for which its establishment was intended. Its pupils have now reached

the number of 75, and the places are all filled. More room is needed for the reception of such girls as may apply for admission, and are entitled to it, or the number of admissions must be limited in some manner. The institution is now on a paying basis, and maintains itself, but has a debt of \$7,500, contracted for necessary expenses at its beginning.

The State Reform School for Boys, at Meriden, continues its successful work. Their number at the end of March, 1871, was 292; those received in the school during the twelve months ending March 31, 1872, were 152, making a total of 444 for the year. Of these, there were 150 discharged within the same period, leaving 314 in the school on April 1, 1872.

Of the 152 boys received, 138 were born in the United States, 5 in England, 4 in Ireland, one in Scotland, one in Canada; their ages being from nine to 16 years. Three were nine, five 16, and forty 13 years old. They were committed for theft, burglary, and other offences; one "for being a common drunkard."

Of the 150 discharged, 31 had "served their time;" 70 were returned to their parents or friends; 20 placed with farmers; 2 escaped; 8 died.

Its receipts in the year have been sufficient to pay expenses, and leave in the hands of its treasurer a surplus of \$839.84. The receipts were \$67,090.32; the expenses \$66,250.48.

The net proceeds of the labor of the boys during the year were \$11,967.86; of which sum \$10,203.36 was from their work at the chair-shops, where they are employed in caning; and \$1,704.50 from their work at the farm, which belongs to the establishment, and the products of which amounted in the year to \$9,858.47. Besides the above-mentioned sum earned by the boys at the chair-shops and the farm, they worked also at sewing coats, pants, shirts, and a great variety of other articles, in very large quantities; and were employed in "kitchen and other domestic work, much of which is performed by the inmates of the school."

The State Penitentiary appears to be under good management and effective discipline. The custom of inflicting corporal punishment on the convicts when refractory, or otherwise offending while in prison, has been lately abolished; and the satisfactory results which this change has already produced have proved its wisdom.

The number of convicts in confinement during the year ending March 31, 1872, and other particulars relating to them, are shown by the following extract from the warden's last report:

Whole number in confinement March 31, 1871, 211; since received, 88; total, 297. Discharged by expiration of sentence, 84; pardoned by Legislature, 9; pardoned by Secretary of the Navy, 5; transferred to Insane Hospital, 5; delivered for execution, 1 (James Wilson); died, 1; leaving in confinement March 31, 1872, 192. Of these, 175 are in for their

first offence, 11 for the second, 4 for the third, and 2 for the fourth.

There are 140 white males; 43 colored males; 8 white females and 1 colored female; 156 are Americans; 36 foreigners; 61 were born in Connecticut; under 20 years of age there are 20; between 20 and 30 there are 88; between 30 and 40 there are 51; between 40 and 50 there are 16; over 50 there are 17; and there are 19 sentenced for life.

The financial condition of the penitentiary is prosperous, owing almost exclusively to the earnings of the convicts.

Concerning the pardoning power, which is vested in the General Assembly, the Governor says in his message: "I desire to call your attention to the remarkable fact that there are now in our State-prison three convicts who have been once pardoned on by the General Assembly while serving a previous sentence, and that two of these are now applicants for legislative clemency." He observes that this pardoning power should be in the hands of the Governor instead of the Legislature; "but he should have an advisory board, which should recommend to him the proper subjects of executive clemency."

The amelioration of the penitentiary system has engrossed the attention of the General Assembly for several years. At the session of 1871 they passed an act, on the authority of which the Governor appointed three commissioners, giving them in charge "to look into all matters connected with the State-prison; its management; its discipline; the contract system; its sanitary and hygienic condition; moral training; whether the system should be reformatory, and to what extent."

The result of these observations, and the conclusions arrived at, the commissioners laid before the General Assembly, in a full report, which they close as follows: "In conclusion, we recapitulate the foregoing recommendations: 1. The appropriation of a sum not to exceed six thousand dollars, to be expended by the warden, in a few improvements necessary immediately, for the security and comfort of the prisoners, and the accommodation of the officers: 2. The erection, as speedily as may be, of a new State-prison, in a different and better place. 3. The creation of a non-partisan State Board of Charities, with such a tenure of office as is deemed expedient; and the immediate investigation of the jails, work-houses, and other penal, reformatory, and charitable institutions of the State, and an inquiry into the condition of the paupers in its limits."

As to the commission of crime in the State generally, it appears from statistics collected for the purpose that there were between ten and eleven thousand criminal prosecutions during the year 1871, of which 2,207 were in New Haven, 1,533 were in Hartford, 1,124 in Bridgeport, 318 in Norwich, and 188 in New London.

Eight towns report no prosecutions at all, and in each case give as a reason that no intoxicating liquors are allowed to be sold in the town.

The number of births in the State during the year 1871 was 13,114; their sex being, so far as reported, males 6,904, females 6,122. The illegitimate births were 138. The births from colored parents 244.

The marriages contracted within the same period numbered 4,882; of which 3,008 were between parties both American born; in 1,285, the parties were both foreign; in 525, one was American, the other foreign born; in 123, the parties were both colored; in one, they were white and black respectively.

The number of divorces granted was 409; of which 278 were granted upon the petitions of the wives; 131 upon the husbands'. The petitions were based, in 13 cases, on infidelity; in the rest, on other grounds.

There were 8,116 deaths in Connecticut in 1871; which is 779 less than in 1870. The number of deaths from epidemic diseases last year was smaller than in any of the 17 years next preceding.

There were 152 miles of railroad opened last year, which increased the whole length of miles in operation at present to 881. Of these, 120 are with a double track. They have a paid-up capital amounting in the aggregate to \$31,000,000, and a funded and floating debt of \$19,000,000. Their total earnings in 1881 were \$10,250,000. The number of passengers carried by them during the year was 9,250,000. Among them there was one killed; three were injured.

The Commissioners' on Fisheries state, in their last report, that their endeavors to multiply shad have proved successful; and anticipate similar results with salmon, though slower and less in number, owing to the comparative scarcity of this fish, as well as to the difficulty and time required for their hatching and growing. At the time of their report they had 24,000 of "healthy salmon-fry" on hand ready for distribution, which they intended to put in greater or smaller numbers in the State waters in different localities.

Some excitement arose in the Legislature on the election of a Senator to Congress, to enter upon office on the 4th of March, 1873. Two candidates, both Republicans, were the competitors for the office. The choice of the Republican party by a very large majority was Joseph R. Hawley; while some of that party, under the appellation of "Liberal Republicans," proposed as their candidate Orris S. Ferry, then Senator. The Democratic members of the General Assembly, in a body, joined the Liberal Republicans in this matter. The effect of this coalition was that at the balloting, which took place on the 14th of May, Mr. Hawley was elected in the Senate by a vote of 14 to 7, and defeated in the House of Representatives by a vote of 126 to 111. The different results of the separate voting of the two Houses rendered it necessary that they should meet together, and elect the Senator in joint convention. They met on the 15th,

when both the Senators and the Representatives voted as they had done in the respective halls on the preceding day; the whole number of votes given for either candidate at the joint convention was 125 for Mr. Hawley, and 133 for Mr. Ferry; who had thus a majority of 8 over his competitor, and was declared elected.

The purpose which the Liberal Republicans and the Democrats intended to accomplish by their coalition, on this occasion, appears to have been frustrated; as Mr. Ferry, after his reelection had taken place, wrote a letter, which was published, "repudiating the Liberal Republican nominee for President, and endorsing the Republican Administration."

Concerning the question whether Connecticut shall continue to have two capitals, with alternate sessions of the Legislature, at Hartford and New Haven, or only one at either city, or elsewhere, something has been done at the session of 1872, for submitting it to the decision of the people. On the 6th of May the Common Council of the city of New Haven adopted the following resolution:

Resolved, That the Senator of this district and Representatives of this town be requested to offer to the State of Connecticut, in behalf of the city of New Haven, and at its expense, a State-House, which shall cost a sum not exceeding a million dollars, and that said Senator and Representatives request the State to accept the same: *Provided* such proposition or offer be accepted by a majority of the legal voters of this city.

In behalf of the city of Hartford, a resolution having been offered to the House of Representatives, proposing "an amendment to the constitution, making Hartford the sole capital of the State, to be submitted to the decision of the people by their suffrages," it was laid on the table at the sitting of May 21st.

On the 22d, a Representative from New Haven proposed for the adoption of the House a series of four resolutions, headed by a preamble embodying the above-recited resolution of the Common Council of that city, the first of them being, "That the offer of the city of New Haven of a State-House, to be erected in and by said city, at an expense not exceeding one million dollars, be, and the same is hereby, accepted;" and moved to refer them to the Committee on Constitutional Amendments. Thereupon another Representative from New Haven called up the resolution for an amendment to the Constitution making Hartford the sole capital, and moved to refer it to the same committee. After a warm debate, it was referred. The matters were subsequently discussed with great animation for several days, when they were disposed of by a final vote with the following results: Resolution for a constitutional amendment making Hartford the sole capital of the State, to be submitted to the people; passed—yeas 126, nays 103.—Resolution authorizing the city of New Haven to build a State-House, postponed on a motion to continue over—yeas 114, nays 96.

On September 11, 1872, the Democratic and Liberal Republican parties in the State met at Hartford, and adopted the following resolutions:

Whereas, The issues upon which for twenty years parties in this country have divided are closed and settled forever, and the demoralizing tendencies and abuses of power of the party now dominant in the Government have brought us to confront the vital question whether the republic shall live and reach forward toward a new career, or shall sink in the hands of blind guides to the level of their own corruption; and—

Whereas, In the face of this new issue, we the representatives in convention of a popular desire for reform, reconciliation, and peace, have assembled to assert the purpose of the future; therefore—

Resolved, That we reaffirm the address to the people and the platform adopted by the National Conventions held at Cincinnati and Baltimore as the expression of our opinions and views. That address and pledge being as follows:

[Here follow Cincinnati platform and address.]

Resolved, That, to this arraignment of the wickedness and weakness of the Administration and party in power, we add our most earnest protest against the intolerant despotism of party which, in a republic of free thought and in a State that boasts the largest liberty of political action, undertakes, by all the appliances known to corrupt and unscrupulous politicians, to bind the freemen of Connecticut to the action of a convention which in no sense represented them; that we demand for ourselves and all others such absolute freedom of opinion and liberty of choice between parties as will relieve the voter from the strain of partisan allegiance and free him from the pressure, in the canvass and at the polls, of the postmaster, the tide-waiter, and the assessor; that while we enter upon this contest with a profound conviction that the interests of morality and purity demand a change in the national Administration, that the interests of good government demand a change of policy that shall substitute reconciliation and equal rights for hatred and organized oppression—the reign of law and the establishment of order for the rule of the carpet-bagger and the thief—and while we unite with all good men in demanding reforms in the Administration and in the civil service—we are still more earnestly impressed with the necessity of asserting, against party bigotry, narrowness, and intolerance, the God-given right of free thought and free opinion. Against the party that intimidates the weak and hesitating, and bribes the venal, while it uses its power to crush the opposing voter, no matter what its record of the past or its promise for the future, we make uncompromising war.

Resolved, That we commend to the voters of Connecticut the ticket for presidential electors this day nominated in support of Horace Greeley for President and B. Gratz Brown for Vice-President of the United States.

According to the Federal census of 1870, the total number of manufacturing establishments in the State was 5,128, using 711 steam-engines of 25,979 horse-power, and 1,988 water-wheels of 54,395 horse-power, and employing 89,523 hands, of whom 61,684 were males above 16, 20,810 females above 15, and 7,029 youth. The total amount of capital employed was \$95,281,278; wages, \$38,987,187; materials, \$86,419,579; products, \$161,065,474. There were 826 religious organizations; edifices, 902; sittings, 338,735; value of property, \$13,428,109. The leading denominations were as follows:

DENOMINATIONS.	Organizations.	Sittings.
Baptist.....	116	45,150
Congregational.....	990	132,175
Episcopal.....	139	50,983
Methodist.....	184	63,975
Presbyterian.....	7	3,875
Roman Catholic.....	44	26,418
Second Advent.....	7	1,380
Universalist.....	14	6,850

The total number of libraries in the State was 63, with an aggregate of 285,987 volumes. The number of newspapers was 71, with an aggregate circulation of 203,725; copies annually issued, 17,454,740. Of these there were 16 daily, circulation 35,730; 1 semi-weekly, circulation 800; 43 weekly, circulation 107,395; 2 semi-monthly, circulation 900; 7 monthly, circulation 56,400; 1 bi-monthly, circulation 1,150; and 1 quarterly, circulation 1,850.

CORNING, ERASTUS, a distinguished citizen, manufacturer, railroad manager, and politician of New York, born in Norwich, Ct., December 14, 1794; died in Albany, N. Y., April 9, 1872. During his childhood his father removed, with his family, to Chatham, Columbia County, N. Y., and engaged in farming there. At the age of thirteen, Erastus left home, and entered the hardware-store of his uncle Benjamin Smith, at Troy. Seven years later he removed to Albany, where he became first the clerk, and afterward the partner, of James Spencer. He inherited part of his uncle's property, and soon became the head of an extensive firm in the hardware-trade. His enterprising spirit led him into other pursuits. He acquired the principal interest in the Albany Iron Works, which, under his management, became one of the great industrial establishments of the country. He next engaged in banking, and was eminently successful. The development of the railroad system of the State, however, was his greatest work, and attended with the most generous reward. He became president of the pioneer Albany & Schenectady line; he contributed to its extension, and was the master-spirit of the consolidation which made the great New York Central. He presided over that corporation twelve years, and to the day of his death was associated as director with other great lines of communication. Mr. Corning had little taste for politics, but was influential in the councils of the Democratic party. His practical talents and extensive interest in public affairs naturally suggested him for public positions. He was first chosen Alderman, and then Mayor, of Albany. In 1841, he was elected to the State Senate, and served four successive years. In 1856 he was elected to Congress in the Fourteenth District, defeating the Whig and American candidates. In 1860 and in 1862 he was again sent to Congress, from the same district, and thus served in the councils of the nation through almost the entire duration of the war. He supported the war measures of the Administration, and was, at one time, on the

Committee of Ways and Means. He seldom spoke in the House, and was too much engrossed with other affairs to be able to take part in the minor details of its business. In 1866 Mr. Corning was elected a member of the Constitutional Convention, wherein he filled an honorable place on the Committee of Finance. The infirmities of age, however, prevented him from taking a very active share in its proceedings. In 1833 he was appointed a regent of the University, and was, probably, the oldest member in service on the Board. Besides his connection with that body, he evinced a warm interest in diffusing education, and contributed liberally for that purpose. Mr. Corning acquired great wealth. The fortune which he has left to his only son and child is estimated at not less than \$8,000,000. Some of his property consisted of Western lands, including a single timber-piece of 8,000 acres. He was a man of the kindest nature, and was held in high esteem in Albany, having been for a half-century conspicuously identified with the growth and prosperity of that city. He retained his vigor of intellect to the closing years of his active life, and, during the last few years, added largely to his already great accumulations.

COSTA RICA (REPÚBLICA DE COSTA RICA), an independent state of Central America, lying between 8° and 11° 5' north, and longitude 81° 20' and 85° 53' west. It is bounded on the north by Nicaragua; on the east and south-east by the Caribbean Sea, and the United States of Colombia, and on the west by the Pacific Ocean. The area of the republic is about 22,000 square miles, and the population is estimated at 167,000; of which 100,000 are whites, 50,000 mestizoes, 4,000 negroes, and the remaining 13,000 Indians. The capital, San José, has probably 26,000 inhabitants. Many of the descendants of Europeans are of pure Spanish blood, and dwell for the most part in a comparatively small district on the Rio Grande. President, J. M. Guardia, reelected in 1872 for a term of four years. President of the ministry, Dr. Montufar, Minister of Foreign Affairs; President of the Legislative Congress, Mattheu; President of the Chamber of Deputies, M. A. Bonilla; President of the Senate, T. M. Montealegre; Regente of the Supreme Court, M. Alvarado; Commandant-General of the army, General J. Salazar. Bishop of San José, A. Llorente (1851).

By far the most important article of export from Costa Rica is coffee; the largest proportion of which is taken by Great Britain; next in order come hides, cedar (logs, and planks), pearl-shells, deer-skins, India-rubber, plants, etc. Almost the whole of the hides, deer-skins, and India-rubber, go to the United States; while the remaining articles are sent in pretty equal proportions to the latter country, South America, and Europe.

The following table shows the exports for the year ending September 30, 1871:

ARTICLES.	Quantities.	Value in U. S. Gold.
Coffee (sacks).....	187,125	\$3,250,000
Hides.....	9,463	22,500
Cedar (logs—planks).....	1,526	9,500
India-rubber (packages).....	104	1,550
Deer-skins (packages).....	89	2,400
Pearl-shells, plants, etc.....	2,500
Total.....	198,373	\$3,268,450

The total crop of coffee was 212,000 sacks, or 2,756,000 lbs.

The value of the imports for the same year was estimated at \$2,225,000 United States gold; about 70 per cent. of which was from Great Britain, 20 per cent. from France, Germany, etc., and 5 per cent. each, from the United States and the other Central American republics. An aggregate of 80 steamers, with 125,466 tons, and 35 sailing-vessels, with 1,254 tons, entered at the port of Punta Arenas in 1871, and 80 steamers, with 125,466 tons, and 34 sailing-vessels, with 12,232 tons, cleared. Of the total tonnage arrived, 188,007, by steam and by sail, 126,417 tons were under the United States flag; but, of the 145,598 packages landed, 94,790 were in foreign bottoms, mostly British. By far the greater part of the 25,684 packages brought from Panama by American steamers were likewise from Europe, and were chiefly valuable goods, less precious commodities being received by sail *via* Cape Horn.

The two following tables give the items of the national revenue and expenditure for the financial year ending April 30, 1871:

REVENUE.	
Tobacco monopoly.....	\$256,641 86
Liquor.....	408,613 78
Gunpowder.....	5,324 25
Stamped paper.....	14,055 49
Post-office.....	10,143 50
Internal revenue.....	86,113 48
Subsidies.....	13,578 64
Export duties on coffee.....	94,587 06
Import duties.....	253,943 32
Court of justice fees.....	6,850 83
Licenses.....	11,351 45
Church funds.....	11,740 93
Mint, and bullion-office.....	144,894 68
Sale of beer.....	4,714 21
Cattle-fines.....	345 62
Public laws and titles.....	7,375 98
Proceeds of loans.....	104,440 00
Sundries.....	119,747 66
Total.....	\$1,501,738 94

EXPENDITURES.	
Government and legislature.....	\$111,717 73
Court of justice.....	46,351 73
War Department.....	131,547 54
Public works, etc.....	190,116 23
Custom-house and post-office.....	525,300 49
Diplomatic and consular corps.....	12,356 83

In 1862 the foreign debt of Costa Rica was merely nominal; in 1867 the republic owed \$104,500 to Peru; and vigorous efforts were made, during the two years immediately follow-

ing, to liquidate the whole public debt, amounting to about \$3,000,000, of which \$2,895,000 were internal. The Costa Rica Government contracted in 1872 a loan of £2,400,000 in London, at the house of Knowles & Foster, at 7 per cent., and at the rate of 82 per cent. exchange.

The national income and expenditure for the month of September, 1872, amounted respectively to \$289,826.91, and \$249,919.06, leaving a surplus of \$39,707.85.

In addition to the steamers of the Panama Railway Company making tri-monthly trips between Panama and all the Central American ports on the Pacific, the Pacific Mail Steamship Company's steamers plying between Panama and San Francisco now touch once a month at Punta Arenas, a circumstance regarded as very important, it being presumed that San Francisco, before long, will be the market for the major part of the coffee of Costa Rica and Guatemala, the production of which is rapidly and steadily increasing.

One of the most important events, if not the most important, that has ever occurred in Costa Rica, was the commencement of the work on a railway to connect the capital, San José, with the Atlantic coast, where an important port (Limon) is about to be opened. This line, 120 miles in length, will afterward be extended to the Pacific. A telegraph from Cartago to Punta Arenas is constantly in operation, and the Costaricenses have already begun to appreciate its usefulness. The two banks in the capital, the National and the Anglo-Costa Rica, discount business paper freely, at the legal rate of interest, 12 per cent., to which rate the National Bank is restricted, while with the other the rate is optional.

In the early part of the year, the impression among the other Central American states was that, notwithstanding the great benefits likely to accrue from the railway, a deficiency of food might follow the sudden increase of the population, consequent upon the import of a large number of laborers.

The introduction of fire-arms and ammunition was prohibited in January, until further notice. Dr. Lorenzo Montufar was appointed corresponding member of the *Real Academia* of Madrid. The gold-mines of Aguacate were expected to yield \$10,000,000.

A temporary prohibition was laid upon the extraction of India-rubber in the national forests, and its exportation to Nicaragua, which measure was followed by reprisals on the part of the Government of the latter country, whence the exportation of cattle to Costa Rica was forbidden. An interview between the Presidents of the two republics resulted, however, in the restoration of cordial relations. In February a treaty was made with Guatemala, the object of which was to draw still closer the bonds of friendship which unite the two countries, and to contribute to maintain and render more uniform the liberal character of Central-American policy.

Such was the prosperous condition of the treasury, that the Government increased by about 25 per cent. the salaries of all the official employés; besides which, and the disbursement of \$400,000 for internal improvements, there was still a surplus of \$800,000 above all claims; Costa Rica bonds stand very favorably, and the prospects of the country are hopeful and encouraging on every side.

The question of boundaries with Nicaragua was still the subject of an important discussion in March, and some unpleasant feeling was awakened by the refusal by Nicaragua to allow Costa Rica vessels to navigate Lake Nicaragua; in case this policy should be persisted in, the Costa Rica Government would close the Colorado River to Nicaragua, that river being the chief outlet from San Juan to the ocean.

A telegraph was to be established from Cartago to the new port of Limon. The great insufficiency of laborers to carry on the various public works was, and is still, a cause of much anxiety to the Government. Some economists recommended the importation of coolies, and emigration agents have been established in most countries in which Costa Rica has consul or representative. The Government having consented to the introduction of Chinese laborers, a leading commercial house in San José was appointed, and received special privileges for carrying out the scheme: the first draft of 500 coolies was expected to arrive by the end of the year. A rupture between San Salvador and Honduras being apprehended, President Guardia addressed a note to the Government of the former republic, saying that it was desirable, before precipitating hostilities, to await the friendly intervention of the sister states, adding that it mattered little if a few of the Spanish-American republics were at peace, because, in the eyes of foreign nations, revolution and disturbance in *one* threw discredit upon all.

The ground destined for the port of Limon was to be distributed in lots to those who wished to build thereon, and do so within a certain time after entering into possession. The formation of a great immigration company, to be called the Talamanca Company, was contemplated. One of its purposes also is to examine into the vegetable and mineral productions of that almost unknown region which lies between the uninhabited parts of Costa Rica to the south and the border of the United States of Colombia. It was the mines of this region that gained for Costa Rica the name she is known by.

Two nominal loans of \$500,000 had been obtained in England for the railway.

In May Costa Rica declared the project of the canal treaty with Nicaragua null and void, and the feelings between the two Governments were neither cordial nor united.

A new town was founded in May, in the midst of great festivities, notwithstanding the

name given to the place, *Los Desamparados*—the Forsaken.

In October, a conspiracy against the Government was discovered and defeated.

Costa Rica refused an asylum to the Jesuits banished from the neighboring republics.

The attention of the Legislative Assembly in September was chiefly occupied, among other subjects, by the following: A bill to authorize the executive power to cause authentic copies to be made of various documents on account of the state Treasury.

A bill extinguishing in the state certain classes of entails.

A bill "on executive judgment by coactive jurisdiction."

A bill "establishing a new way of contributing toward personal subsidiary labor."

A bill "on the locality for erection of the statue of Christopher Columbus."

COTTON. The total production of cotton in the United States for the year ending August 31, 1872, amounted to 2,974,351 bales, showing a decrease of 1,377,966 bales from the production of the previous year; the exports were 1,957,314 bales, and the home consumption 1,137,540 bales, leaving a stock on hand at the close of the year of 54,521 bales. The production by States, with that of the previous year, as made up from the exports, receipts, and stock on hand at the beginning of the year, was as follows:

STATES.	1870-'71.	1871-'72.
	Bales.	Bales.
Alabama.....	404,673	288,012
Florida.....	13,948	19,359
Georgia.....	726,406	450,539
Louisiana.....	1,446,490	967,538
North Carolina.....	94,320	53,528
South Carolina.....	350,563	271,241
Tennessee.....	560,502	341,080
Texas.....	321,804	197,956
Virginia.....	342,353	276,098
	4,361,077	2,864,351
Consumed in the South.....	91,240	120,000
Total for the year.....	4,253,317	2,974,351

The statement for Louisiana, South Carolina, and Virginia, includes the following shipments from Tennessee, which were not included in the product of the last-named State:

	1870-'71.	1871-'72.
	Bales.	Bales.
Shipped from Memphis to New Orleans.....	61,637	58,416
Shipped from Memphis, etc., to Charleston and Norfolk.....	159,381	124,410

The total crop of Sea Island, the past year, was 16,845 bales, of which 5,624 bales were produced in Florida, 1,667 in Georgia, 8,755 in South Carolina, and 899 in Texas.

The crop of Sea Island during former years has been as follows:

Years.	Bales.	Years.	Bales.
1855-'56.....	44,512	1866-'67.....	23,228
1856-'57.....	45,314	1867-'68.....	21,275
1857-'58.....	40,566	1868-'69.....	18,683
1858-'59.....	47,592	1869-'70.....	26,507
1859-'60.....	46,649	1870-'71.....	31,009
1860-'66.....	no record.	1871-'72.....	16,845

The bulk of the total crop of each year finds an outlet at the great shipping-ports of the South, Galveston, New Orleans, Mobile, Fernandina (Fla.), Savannah, Charleston, Norfolk, etc., whence it is shipped North and to foreign ports. The extent of the shipments from these ports for the past two years has been:

	1870-'71.	1871-'72.
	Bales.	Bales.
From Galveston to foreign ports....	212,563	115,835
Mexico.....	7,359	763
Coastwise.....	94,864	87,684
Total.....	316,106	204,221
From New Orleans to foreign ports....	1,302,535	888,976
Coastwise.....	238,534	198,477
Total.....	1,541,359	1,087,453
From Mobile to foreign ports.....	267,074	137,977

Total.....	93,154	53,271
From Virginia to foreign ports.....	5,417	3,807
Coastwise.....	337,148	272,126
Total.....	342,565	275,945

There is also a large overland movement of cotton brought from the interior to points on the Mississippi and Ohio Rivers, and shipped thence by railroad direct to manufacturers, and to the leading markets of the East. These shipments for the year 1871-'72 amounted to 842,186 bales, of which 122,065 bales were shipped direct to consuming mills, and 219,015 were received in Eastern markets as follows: 105,875 bales in New York, 46,241 in Baltimore, 32,458 in Boston, 80,129 in Philadelphia, and 4,312 in Portland. St. Louis is a Southern point in this overland movement, the receipts for the year, at that port, amounting to 36,421 bales. North of this point on the Mississippi the shipments are made by the Illinois Central Railroad, which receives cotton at Cairo, Mound City, and over its branch at Carbondale, and its new branch at Chester. Proceeding north, the next points of shipment are Shawneetown and Evansville, on the Ohio River; from the former cotton is carried by the Springfield & Illinois South-eastern Railroad, and from the latter by the Evansville and Crawfordsville lines. The next lines of railroad, carrying cotton North, are opposite Louisville, viz.: the Ohio and Missis-

issippi Branch and the Jefferson, Madison & Indianapolis, including the Madison branch. At Cincinnati cotton is received from the South by the river, and by the Louisville, Cincinnati & Lexington Railroad, and is thence shipped by railroad North and East. Above Cincinnati no railroad has taken any cotton from the Ohio River. There is, however, a small amount of cotton, estimated at 18,000 bales, in 1872, consumed by mills along the river both above and below Cincinnati. East of the Alleghenies no cotton is transported overland, but it is sent North through the Virginia ports. The details of the overland movement for the year are given in the following statement:

Receipts at St. Louis.....	26,431
Carried north over Illinois Central Railroad, etc.	23,643
Carried north over Springfield & Illinois Southwestern, from Shawneetown.....	6,897
Carried north over Evansville & Crawfordville, from Evansville.....	15,007
Carried north over Jeffersonville, Madison & Indianapolis.....	21,157
Carried north over Ohio & Mississippi Branch	30,943
Shipped through Cincinnati by the Louisville, Cincinnati & Lexington Railroad	69,033
Receipts at Cincinnati by the Ohio River.....	53,103
Shipped to points above Cincinnati, without touching at Cincinnati, and consumed by mills adjacent to the river, etc.....	18,000

Total carried overland.....	341,186
Deduct receipts overland at New York, Boston and Philadelphia, etc.....	319,015
Deduct shipments at New Orleans, north by railroad (counted at New Orleans).....	1,106—230,121

Leaving the direct overland movement (none of which appears at New York, Boston, Baltimore, Philadelphia and Portland) 129,065

The following table will afford a comparison of the total crop of the United States, in 1872, with those of preceding years:

	1868-'69.	1869-'70.	1870-'71.	1871-'72.
Received by Northern mills.....	918,806	906,960	1,008,958	977,540
Received by Southern mills.....	80,000	90,000	81,340	190,000
Increase of stock in mills.....	50,000	...	80,750	...
Decrease of stock in mills.....	...	33,876	...	40,000
Total consumption by mills.....	1,048,806	990,786	1,190,948	1,187,540

The last year shows a marked decrease in the exports of cotton to foreign ports, as appears from the following statement for the year ending August 31st:

From—	1869.	1870.	1871.	1872.
New Orleans..	612,594	1,005,580	1,302,535	888,978

1850-'51.....	2, 34	1824.....	569,349
1849-'50.....	1, 51		

There has been a very marked increase in the consumption of cotton in the United States during the past year. The stock on hand at the commencement of the year (September 1, 1871) amounted to 144,290 bales, which, added to the year's crop, 2,974,851 bales, gave a total supply during the year ending August 31, 1872, of 3,118,641 bales. Of this supply 1,957,314 bales were exported to foreign ports, 3,500 sent to Canada by railroad direct from the West, 1,000 burned, and 59,287 were on hand at the close of the year, leaving the amount taken by spinners in the United States 1,097,540 bales, of which 977,540 bales were taken by Northern and 120,000 by Southern mills. Applying the increase and decrease of stock believed to be held by mills, the estimated consumption in the United States, for four years, is shown in the following statement:

	Bales.
Liverpool.....	1,406,766

Total	1,957,314

According to the annual statement of the eminent statistician, M. Ott-Trümpler, of Zurich, the amount of cotton in Europe, September 30, 1872, was the largest stock ever held at the end of the cotton season. This stock in the ports covered by M. Ott-Trümpler's tables, which do not include Russia, Sweden, and Spain, amounted to 1,486,000 bales, being an increase of 726,000 bales over the stock held at the close of the preceding year; to this must be added, for the countries omitted, at least 84,000 bales, making a total of 1,570,000 bales; while the stock of 1860 following the great crop of 1859-'60 (4,865,000) reached a total of only 1,260,000 bales. The tables above mentioned show the following important items:

Importations into Europe for the Years 1870-'72.

The probable weight of cotton in sight, September, 30, 1872, was 1,777,000 bales of 342 lbs. each, making 608,000,000 pounds; September 30, 1871, 1,371,000 bales of 368 lbs. each, amounting to 505,000,000 pounds.

The following tables, compiled with the greatest exactness by M. Ott-Trümpler, show the imports and consumption of cotton in thousands of bales in Europe, for 1872, and afford valuable comparisons with preceding years:

	American.	Indian.	Brazil.	Egypt.	Sundry.	Total.

The receipts at the ports of Spain, Sweden, and Russia, and the consumption in Italy of native cotton, are not included in the above tables.

"The consumption of Russia, Sweden, and Spain," says M. Ott-Trümpler, "is estimated at 8,000 bales per week, or 416,000 bales for

the year, and I find that these countries have received very nearly one-half from England, and from ports on the Continent, comprised in my table, and the remaining half direct from the places of production, this remainder not being included in my statement. To determine, therefore, the consumption of all

Europe, there should be added to my estimate of consumption 208,000 bales."

The most noticeable facts in the history of cotton, in the English market during the last year, have been the high price in the raw material, and the absence of prosperity among manufacturers. During the year the price of cotton at Manchester ranged upward of 23 per cent. higher than in 1871, and 81 per cent. higher than what is popularly known as its "normal" price, viz., 6*d.* per pound for mid-ling Orleans. The prices per lb., in pence at Liverpool, were:

	Middling Orleans.	Fair Dollars.	Fair Egyptian.
October 1, 1871.....	9½	7½	9½
September 30, 1873.....	9½	6½	9½
Lowest.....	9½	6½	9½
Highest.....	11½	8½	11½
Average of the season.....	10.78	7.6	10.83

A prominent cause for the absence of prosperity in the trade is, that many important markets were very liberally supplied with cotton-goods during 1871. The comparatively low price of cotton then prevailing, and the check given by the Franco-German war to manufactures on the Continent, tended to improve the position of English spinners and manufacturers, not only by withdrawing competition for the then abundant supply of the raw material, but also by yielding to them a freer command of the markets for goods. This improved position had its natural fruit in an extension of manufacturing power, induced by the prosperous condition of the trade, and aided by low prices and machinery. But the expansive force exceeded its due limit. The change adversely to the interests of manufacturers and spinners began about the middle of the year. The markets of the East were over-supplied, which, with other causes, occasioned great losses, glutted markets, and a sudden fall in prices at Manchester. At the same time the cost of making cotton yarn and goods was greatly enhanced by the advance in iron, coal, and other supplies, and in wages.

To afford a comparison of this most important industry, with its condition prior to the war, the following totals for the United States are given:

MILLS, ETC.	1870.	1860.	1850.
Establishments.....	956	1,001	1,004
Looms.....	157,810	126,318
Spindles.....	7,132,415	5,335,737
Hands.....	135,369	123,028	92,286
Capital.....	\$140,706,391	\$98,586,390	\$74,500,981
Wages.....	\$39,044,132	\$28,988,326
Raw cotton, lbs.....	398,302,257	432,704,975	388,553,000
All materials.....	\$111,736,936	\$27,385,534	\$34,835,056
All products.....	\$177,489,739	\$115,681,774	\$65,501,697

A comparison of the figures of 1870 with those of 1860 presents several notable circumstances, chief among which is a falling off in the number of establishments in 1870 of about 12½ per cent. This may be attributed to the natural tendency of industries of this nature to concentrate in great establishments; and

also to the fact that at the beginning of the war many cotton-factories were transformed into woollen-mills. This view is strengthened by the fact that the number of looms was 24½ per cent., and the number of spindles more than 28 per cent., greater in 1870 than in 1860. The increase in the amount of capital employed was about 80 per cent., which has been attributed to the increased value of land, buildings, and machinery, while the increase in the amount of wages paid amounted to nearly 43 per cent. In 1870, as compared with 1860, there was a decrease in the quantity of raw cotton consumed amounting to 24,402,718 pounds, or nearly six per cent., while there was an increase in the value amounting, for all materials, to \$54,451,402, or more than 94 per cent. The increase in the total cost of labor and raw materials amounted to \$69,557,296, or about 85 per cent. The value of the goods produced in 1870 was \$61,807,965, or 53 per cent. greater than in 1860. Although direct comparison cannot be made between the quantities produced in 1870 and 1860, owing to the paucity of the details in the returns of the latter year, it will appear, however, from the following statement, that, in 1870, a greater quantity of goods was produced from a smaller amount of raw material, which is explained by the average lighter weight of the fabrics produced:

MILLS, ETC.	1870.	1860.
Products stated in lbs.....	67,005,978	60,309,539
" stated in yards.....	1,146,607,323	1,148,363,406
" stated in pieces.....	3,393,959
" stated in dozens.....	11,530,341

In 1870, 13,841 more hands were employed to manufacture into goods 24,400,000 pounds less cotton than in 1860. The average annual wages was \$288 *per capita* in 1870, and \$196 in 1860, showing an increase of \$92 per head per annum, or 47 per cent. In 1870 the value of the product per head of operatives was \$1,341, and in 1860 \$948, showing an increase in value of the *per capita* production of \$393, or 38½ per cent. With this gain of 38½ per cent. in the value of the product of each hand, the average hand gets 47 per cent. more wages.

The Indian crop of cotton for the year 1872-'73 has been estimated at 1,700,000 bales, or 339,000 bales less than the crop of 1871-'72; and that of Egypt 853,000 bales, as against 316,000 in 1871-'72; while, from Brazil and the small producing countries, a supply equal to that of 1871-'72, 1,325,000 bales, is expected.

The crop of the United States for the season of 1872-'73 has been estimated by the Bureau of Agriculture as follows: Total number of acres, 8,482,905; number of pounds of fibre, 1,600,816,816; number of bales of 465 pounds each, 3,442,612.

Through the courtesy of General Francis A. Walker, Superintendent of the Census, the following special statistics of cotton manufactures in the United States are given from advance sheets of the census of 1870:

D

DALLING AND BULWER, WILLIAM HENRY **LYTTON EARLE**, first Baron, G. C. B., an English diplomatist and author, better known as Sir Henry Bulwer, born in 1804, in Norfolk, England; died in London, May 26, 1872. He was an elder brother of the famous novelist, Lord Lytton. He was educated for public life, and was an *attaché* of the British embassy at Berlin as early as 1827, and in 1829 was a member of the embassies at Vienna and the Hague. In 1830 he was sent on a special mission to Brussels, to watch the course of the Belgian Revolution, and the same year he was returned to the House of Commons for Wilton. He sat for Coventry in 1831 and 1832, and for Marylebone from 1834 till 1837. In 1835 he was made secretary of legation and *chargé d'affaires* at Brussels; in 1837, secretary of embassy at Constantinople, where he negotiated the commercial treaty between England and the Porte. He was appointed secretary of the embassy in Paris, in 1839, and, in the course of that and the following year, was thrice gazetted as interim minister at the court of France, during the absence of the ambassador. In 1843 he was minister plenipotentiary at the court of Madrid, and was instrumental in bringing about the peace between Spain and Morocco in the following year. During the troubles in the Spanish capital, in 1848, Mr. Bulwer was frequently the medium of the remonstrances of his Government upon the arbitrary system followed by Narvaez. As his firmness and candor were found inconvenient, the soldier-minister determined upon his removal; and, after having in vain sought to discredit him with the English Cabinet, pretended to have discovered his complicity in plots laid against the Spanish Government, and upon this pretext suddenly ordered him to leave Madrid. The English Government marked its sense of this indignity by declining to name his successor, and for two years no English minister was accredited to the court of Spain. Both parties in the House of Commons approved Mr. Bulwer's conduct, and the Queen made him a Knight Grand Cross of the Bath. The hasty Spaniard subsequently made the *amende honorable* in a note on the subject, the terms of which were dictated by Lord Palmerston. In April, 1849, he was sent as ambassador to the United States, and the year following negotiated the Clayton-Bulwer treaty, providing for extending the protection of both countries over any ship-canal which may be opened across the continent in Central America, and also for the abandonment of British territorial pretensions, and the withdrawal of the British establishments on the coast of Central America. Sir Henry Bulwer remained three years at Washington, and

in 1852 was transferred to Tuscany, where he acted as envoy extraordinary until 1856. He was recalled in that year, and during the ensuing three was engaged in special diplomatic duties in Turkey and in the Danubian states. In 1858 he was appointed ambassador to Turkey, and remained there seven years. In 1868 he was elected to Parliament by the borough of Tamworth, and acted with the Liberals. He was a frequent and fluent speaker in the House, and was regarded as authority upon foreign questions. In 1871 he was raised to the peerage as Baron Dalling and Bulwer. Lord Dalling and Bulwer had achieved some reputation as an author. His principal works were: "An Autumn in Greece," 1824; "France, Social, Literary, and Political," 2 vols., about 1832; "The Monarchy of the Middle Classes," 2 vols., 1834-'36; "A Life of Lord Byron," prefixed to a Paris edition of his lordship's works; and, recently, a "Life of Lord Palmerston," not quite completed, we believe, at Lord Bulwer's death.

DAVIS, GARRET, a Kentucky statesman and Senator, born in Paris, Ky., September 10, 1801; died there, of gangrenous inflammation of the lungs, in September, 1872. He studied law in his native State of Kentucky, and was admitted to the bar in 1823. His career was reckoned a successful one, and he soon became engaged in politics, being active in the Whig party. In 1833 he was elected to the State Legislature, and was twice reelected. When the convention to revise the State constitution was chosen in 1839, he was one of its most prominent members. In the same year he was elected to the Lower House of Congress and served in that capacity until 1847, contesting his district in 1845 with Hon. Thomas F. Marshall, whom he defeated after one of the most brilliant and hardly-fought canvasses on record. At the end of his third term he returned home and devoted himself to agricultural pursuits, to which he was much attached. He was quoted as high authority throughout the State on agricultural matters. In 1861 he was elected to the United States Senate as an Old Line Whig opposed to secession, and served on the Committees on Foreign Relations, Pensions, Territories, and Claims. He succeeded John C. Breckinridge. In January, 1867, he was reelected to the Senate, and served on several important committees, though latterly his failing health incapacitated him from much public labor. Mr. Davis was of a passionate and enthusiastic temperament, indomitable in his purposes, and of keen susceptibilities. Early in life he became a familiar friend of Henry Clay's, and to the day of his death his proudest boast was that he had been honored with the confidence and

friendship of that great statesman. In person Mr. Davis was small, slight, and of delicate build, but he possessed wonderful powers of endurance, and he has often entertained the Senate for many hours at a time with a speech of great laboriousness and learned length. He was bitter in his prejudices and fierce in invective and sarcasm. His famous scheme for dividing New England, and practically leaving that group of States "out in the cold," will be remembered as one of his favorite plans of revenge, which had, after all, more of the appearance of a practical joke than a serious measure. At the time of his death, we believe, Mr. Davis was one of the Regents of the Smithsonian Institution. His term of office would have expired March 8, 1873.

DELAWARE. The financial condition of the State of Delaware is quite satisfactory. The public debt at the beginning of the fiscal period of two years, ending on the 15th of December, was \$1,462,000, of which \$1,110,000 consisted of bonds issued to pay bounties to volunteers during the war and for substitutes; and the balance of \$352,000 bonds loaned to the Junction & Breakwater Railroad Company, secured by a first mortgage on the road and its equipments. Bonds have also been loaned to the Delaware Railroad Company, guaranteed by the Philadelphia, Wilmington & Baltimore Railroad Company, but these are not reckoned among the liabilities of the State, as the payment of both principal and interest has been amply provided for by the corporation itself. The interest on the State bonds has been paid regularly and promptly, and \$187,000 of the principal has been redeemed during the past two years, leaving the debt at present \$1,825,000. The State has investments, other than those appropriated to the free public schools, as follows:

Mortgage on the Junction & Breakwater Railroad Company.....	\$400,000
1250 shares Farmers' Bank stock at \$50 per share.....	62,500
20 shares National Bank of Delaware, at \$465 per share.....	9,300
Total.....	\$471,800

The investments appropriated to the support of free schools are as follows:

500 shares Farmers' Bank stock, at \$36 per share.....	\$180,000
Loan to Philadelphia, Wilmington & Baltimore Railroad Company.....	85,000
Loan to Sussex County.....	5,000
2,639 shares Farmers' Bank stock, at \$50 per share.....	131,950
37 shares of stock National Bank of Delaware, at \$465 per share.....	17,305
114 shares of Bank of Smyrna stock, at \$80 per share.....	9,120
254 shares of Union National Bank stock, at \$36 per share.....	9,144
Invested in Newcastle & Wilmington Railroad Company, paying 7 per cent.....	25,000
Total.....	\$452,419

If all these assets of the State be deducted from the debt, the balance would be \$400,781. The interest derived from investments amounts to about \$27,000 semi-annually. Of the outstanding bonds, \$165,000 will mature January 15, 1875. The remainder falls due January,

1885, with the exception of the \$352,000 loaned to the Junction & Breakwater Railroad, which run till 1890. The receipts of the Treasury from January 18, 1871, to December 15, 1872, were as follows:

From Vacant Land.....	\$119 07
Interest on Investments.....	26,273 50
Clerks of the Peace, for Licenses.....	55,587 73
Fines and Forfeitures.....	441 63
Railroads.....	45,858 62
Tax on Bank Shares.....	5,695 76
County Treasurers.....	53,762 84
County officers (Clerks of Courts).....	4,448 53
Tax on Insurance Companies.....	1,650 00
Oyster Fund.....	5,685 80
Belonging to the School Fund.....	5,189 71
Total.....	\$304,708 17

The expenses during the same period were:

Railroad Instalment.....	\$1,150 00
Attorney-General.....	1,195 00
Coupons and Bonds.....	169,671 60
Judiciary.....	7,900 00
Executive and Secretary of State.....	2,800 00
Printing Laws, and Printing.....	602 39
Librarian.....	150 00
Legislative Committee.....	1,000 00
Resolutions of General Assembly.....	46 00
For Second Volume of Houston's Report.....	1,000 00
Incidental Expenses.....	16 43
Total disbursements, as above.....	\$186,311 61

On the 15th of December, the Treasurer had deposited in the Farmers' Bank at Dover, to the credit of the State, \$58,046.82, and on January 15, 1873, the following sums became due to the State:

From Interests on Investments.....	\$26,273 50
Tax on Railroad Earnings and Capitation.....	22,508 96
Tax on Bank Shares.....	5,695 76
Tax from the several Counties.....	53,762 84
Tax from County Officers and miscellaneous sources.....	4,000 00
Total.....	\$112,940 06

Fair progress has been made during the year on the Wilmington & Western Railroad, which is in course of construction. The portion running from Wilmington to Landenberg, about 20 miles, was formally opened in October. The Peach-bottom road, from Oxford to York, is nearly all under contract. It will be about 60 miles long, and will probably be completed in the course of the next year. A new road has been located from Broad Top Coal-Fields to York. Considerable progress has also been made in draining the swamp and submerged lands along the Delaware River. Over 200 acres have already been reclaimed.

The number of acres of improved land in the State is 698,115, of which 216,958 are in Kent County, 203,169 in Newcastle, and 277,990 in Sussex. There are 854,207 acres of unimproved land, of which 295,162 are woodland. The value of farms in the three counties is, for Kent, \$13,167,760; Newcastle, \$24,573,079; Sussex, \$8,972,031; the value of farm machinery in the State, \$1,201,644; estimated value of farm productions per year, \$3,171,677.

One of the principal interests is that of peach-growing. The aggregate amount of this fruit shipped over the various railroads during the last season was 3,569,526 baskets.

The average price above commissions and freight-charges was 40 cents per basket, which would give as the total return to growers, \$1,327,810. This is without taking into account the home consumption or the distillation of peach-brandy, which is carried on to a considerable extent in some localities. From May 23d to June 17th, 3,472,000 quarts of strawberries were shipped from the State, which at 8 cents a quart yielded \$227,260. The fruit-growers have held several meetings to concert measures for a reduction of freights, but thus far without any practical result.

A warm controversy arose during the year regarding the right of citizens of New Jersey to take fish from the waters of the Delaware River within what is known as the "twelve-mile circle," that is, a circle with a radius of 12 miles, having its centre at the town of Newcastle. Delaware claims that this circular line was the original northern boundary of the State, and that within it her jurisdiction is exclusive to the low-water mark on the New-Jersey side of the stream. As a license is required from the citizens of other States fishing in her waters, she holds that no fish can be taken from the river even adjacent to the New Jersey shore where it comes within that circle, unless such license is first obtained. Certain New Jersey fishermen venturing within that line were arrested in the early part of the year, and this led to a correspondence between the Governors of the two States, which resulted in an interview at Philadelphia, and an agreement to bring the subject before the Legislatures of the two States, with a recommendation that commissioners be appointed to settle the matter in dispute. This recommendation was made by Governor Ponder in his annual message to the Legislature of 1873.

The city of Wilmington gives evidence of continued growth and prosperity, as will be seen from the following table, showing the capital employed and value of articles produced during the year from October, 1871, to October, 1872, in the city and suburbs:

ARTICLES MANUFACTURED.	Capital employed.	Value of Articles manufactured.
Powder and chemicals.. . . .	30	\$1,300,000
Paper.. . . .	30	1,200,000
Cotton-goods.. . . .	30	1,100,000
Railroad cars.. . . .	30	1,000,000
Iron-ship building.. . . .	30	1,000,000
Machine-work.. . . .	30	2,000,000
Morocco.. . . .	30	2,000,000
Carriages.. . . .	30	1,400,000
Flour, corn-meal, etc.. . . .	30	1,300,000
Leather, other than morocco.. . .	30	200,000
Iron.. . . .	30	1,300,000
Foundry-work and car-wheels.. .	30	1,000,000
Tobacco, snuff, spices, and parlor matches.. . . .	475,000	700,000
Brush, blinds, etc.. . . .	100,000	200,000
Bricks.. . . .	150,000	200,000
Boots and shoes.. . . .	100,000	120,000
Barrels, cooperage, etc.. . . .	100,000	120,000
Fertilizers.. . . .	20,000	300,000
Miscellaneous (not above enumerated).. . . .	1,000,000	2,000,000
Total.. . . .	\$12,975,000	\$20,120,000

Population of city proper.. . . .	57,000
Population of city and suburbs.. . .	62,000
Present annual increase about.. . .	2,000
Value of real estate in city.. . . .	\$25,000,000
Estimated value of personal property.. .	12,000,000
Number of buildings erected from October, 1871, to October, 1872.. . . .	61
Estimated value of buildings erected.. .	\$1,450,000

Rate of city tax for 1872, 18 per cent. on 6 per cent. of the assessed value, equal to a direct tax of about 7 mills on property.

The bonded debt of the city is \$464,200, the cancellation of which is provided for by a sinking fund. The city has no floating debt. Area of city proper, 6 square miles.

Number of churches.. . . .	6
Number of public schools.. . . .	15
Number of private academies, seminaries, etc.. . .	10
Number of banks.. . . .	1
Number of newspapers published regularly.. . .	10
Institutions for the relief and support of the aged, friendless, orphans, and the poor.. . . .	5
Number of insurance companies.. . . .	1
Number of loan associations.. . . .	10
Number of secret societies—Masonic, Odd-Fellows, etc.. . . .	6

A convention of the Republicans of the State was held at Dover, on the 9th of May, to choose delegates to the National Convention of the party at Philadelphia. A long platform was adopted, which, besides a hearty and explicit indorsement of the various acts of the national Administration, contained the following resolutions:

Resolved, While we view with satisfaction the general prosperity of the country, we are pained and mortified to realize that the State of Delaware, under the rule of a party which has been and still is in antagonism with the great national movement of the last decade, has not relatively participated in the general improvement and progress; but on the contrary has suffered in every material interest, and in her character and reputation as a commonwealth of free and enlightened people.

Resolved, That having foisted on the people an enormous debt, necessitating heavy taxation, the ruling party has shown its utter incompetency to devise a system of revenue that shall meet the financial exigencies without oppressing the people and crippling our productive energies, and that relief from ruinous and reckless expenditures and intolerable taxation demands the removal of this party from power, and its substitution by one pledged to retrenchment, and to a revision of our system of taxation, and its adjustment in accordance with the principles of justice and equality.

Resolved, That in the persistent opposition of their representatives in Congress, their press and their legislators, to all measures looking to the improvement of our school system, this Bourbon party has committed itself thoroughly against popular education, and a reform in this direction, that shall place the blessings of good schools within the reach of rich and poor alike, can only come through the success of the Republican party, and to this reform we pledge the Republicans of Delaware.

Resolved, That a wise political economy, as well as common justice and humanity, demands that legislation shall protect, as far as practicable, the poor and unfortunate, and that our present statutes for the collection of debts, under which the last dollar's worth of property may be seized and sold, and the helpless victims left to abject penury and want, are unwise and inhuman, and that such a law should be enacted as will secure a liberal exemption of property from seizure and sale for debt.

Resolved, That security to the public and honesty in officials demand that those intrusted with the

people's money shall be required to render frequent, clean, and precise exhibits of all receipts and disbursements, to the end that those interested may ascertain at all times, and easily, what disposition is made of the funds committed to their custody; and that the determination manifested by our public servants to hide from the people the financial condition of our State and the counties is a standing insult to their intelligence, and a sign of conscious incompetence, or guilt, on the part of those servants, well calculated to arouse the fears and incite the vigilance of the people.

Resolved, That the conferring of office upon men for mere party service, who are devoid of integrity and capacity, as is constantly done in this State, is a reckless and dangerous perversion of the spirit of popular government, and deserving the severest reprobation of every good citizen.

Resolved, That, as a practical people, we believe that constitutions are made for man, and not man for constitutions and laws, and we owe no tribute of veneration to old institutions, except in so far as the same may be adapted to present wants; and that we favor a policy adjusted in all things in harmony with the requirements of the times, and which tends to promote the moral and material advancement of the Commonwealth.

Resolved, That we invite our fellow-citizens, who favor an honest, progressive, and economical rule, to lay aside all mere partisan prejudices, and unite with us in rescuing our noble Commonwealth from the corrupt and incompetent hands into which she has fallen, and in placing her side by side with the first and foremost in the nation in character and prosperity, in civilization and patriotism.

Resolved, That the principle of representation according to population lies at the basis of all popular governments and we recognize the inequality of representation in the representative branch of the Legislature of this State under the present system, and affirm our desire that this question shall be established on a fair and equal basis whenever in our power to do so.

Resolved, That we affirm our continued devotion to the policy of "protection to American industry" as indispensable to the prosperity of the nation; that the whole history of the country demonstrates its benefits, and the ruinous effect of "free trade" upon all our national interests; and that the unexpected facility with which we have been enabled to surmount the enormous financial difficulties, growing out of the war, is largely due to the policy so wisely restored at the beginning of the struggle.

The Democratic Convention, for the appointment of delegates to the National Convention at Baltimore, was held at Dover, on the 11th of June. The resolutions adopted were as follows:

1. That President Grant has committed treason against the liberties of the American people.

2. That the Democratic party stands now, as heretofore, on the principles of the Declaration of Independence and the Constitution of the United States, and alone desires to regulate its actions thereby.

3. That we pledge ourselves to leave no honorable means untried to elevate to the chief magistracy of the republic a true exponent of Democratic principles.

That the so-called thirteenth, fourteenth, and fifteenth amendments to the Constitution of the United States were not proposed to the States, and were not ratified by the States, in the just and true sense of the Constitution, and were not ratified by the full and fair consent of the people of three-fourths of the States, but were foully gotten up, and their ratification forced upon eleven of the States, by pains, penalties, and military power, and the State of Delaware

having rejected them, as a sovereign State, is not morally bound by them.

Another convention was held in August, in which an attempt was made to secure an acceptance of the nominations for President and Vice-President made at Baltimore, but without success. The following resolutions were warmly discussed, and finally laid on the table:

Resolved, That in accepting the nomination of Horace Greeley and B. Gratz Brown by the Baltimore Convention for President and Vice-President, thus placing themselves in harmony, in reference to candidates, with the national Democracy, they neither change nor modify their views heretofore enunciated by the party in this State, on any question now or hereafter likely to come before the people of the country.

Resolved, While we hold that the government of the country was formed by our fathers in the interest of the white race, and ought to be under the control of white men alone, we will not hinder or molest the colored race in the exercise of the elective franchise so long as it is conferred upon them by the forms of law; nevertheless, we hereby declare our purpose to preserve our party in this State unsullied by political affiliation with negroes, and will neither admit them into our organization, nor solicit their suffrages for our party or as candidates.

The following was offered as a substitute, and also tabled:

Resolved, That the Democracy of Delaware are in accord with the Democracy of the nation, and will unite heartily with it in securing the election of its standard-bearers, Horace Greeley, of New York, and B. Gratz Brown, of Missouri, on the platform adopted by the National Convention at Baltimore.

A second Republican Convention was held on the 10th of September, which, after nominating presidential electors, and naming James R. Lofland as candidate for member of Congress, adopted the following platform:

Resolved, That we proclaim our adhesion to the Republican party, and accept, as the declaration of its principles, the platform of the Philadelphia Convention.

Resolved, That the Administration of Ulysses S. Grant has been a most triumphant vindication of the wisdom that prompted his selection; that his success in the conduct of the civil affairs of the nation has not been less marked than his military skill displayed in the suppression of the rebellion, and that, whether as General or President, he is entitled to the admiration and gratitude of the American people.

Resolved, That Henry Wilson is a notable example of the capacity and tendency of republican institutions to dignify mankind; humble in his birth, without fortune or friends, from the shoemaker of Natick, he has raised himself by industry and patient toil to the elevation of Senator and future Vice-President of the United States. Constant in his devotion to his country, unwearied in his efforts to advance the public interests in all the terms of his public life, and especially by his arduous labors as the chairman of the Military Committee of the Senate, he has earned a title to be associated with Ulysses S. Grant in the government of a free and grateful people.

Resolved, That we congratulate our fellow-citizens of the late Democratic party upon their acceptance of the true principles of republican government; that, in the recantation of their errors, we have their complete recognition of the truth of all our teachings, and, though their conversion has been some-

what sudden, we hope that it is genuine, and that, in due time, they will bring forth fruits meet for repentance.

Resolved, That the maladministration of the affairs of this State, by those to whom its government has been intrusted, demands condemnation; that the condition of the people requires a return to the sure and economical ways of our fathers; that the public burdens have become a load intolerable to be borne, and, having vainly protested against the constantly-increasing expenditures and consequent taxation, we earnestly ask that all who desire economy instead of extravagance will unite with us in applying the only effectual remedy—the removal of those through whom the evil has come, and by whom it will be continued. It is idle to grumble so long as we support them, or to quarrel so long as we encourage them by our votes.

A slight conflict between the authority of the State and the national Government arose during the canvass, owing to the peculiarity of the Delaware election laws. The payment of a county tax, which shall have been assessed at least six months' before the election, is one of the qualifications of an elector, and under this many negroes in Newcastle County were deprived of the right of suffrage by the Levy Court. This result was assumed to be in violation of the fourteenth amendment of the Federal Constitution, and the members of the court and some of the collectors of the county were indicted under the enforcement act, and one of the collectors was tried and convicted. On this subject the Governor says, in his message to the Legislature of 1878:

I cannot, as the executive of the State, withhold the expression of regret at the unwarranted assumption of power by Congress in the enactment of the law under which these proceedings were had. From the formation of the Union until the enactment of this law, no such claim of power for Congress was ever practically asserted. The right of the States to select their own officials, and to regulate their actions without any Federal supervision, had never been denied, and for more than three-quarters of a century that right had been exercised by this State without Federal interference. This assumed power of Congress to interfere in such local affairs is predicated upon the recent amendments to the Constitution; but it would be a forced construction of these amendments, and certainly far more than was claimed by their advocates before they were engrafted upon the fundamental law, that would warrant a power so adverse to the theory of the government, as well as to all the rights of the States over their own domestic affairs. If the fourteenth amendment confers upon Congress the fearful power assumed in the enactment of the law under which these indictments were found, it is difficult to find a limit to its authority. There is but one step between the exercise of Federal supervisory power over the officers of the State and the power to appoint them, and at no distant day it may be found that the exercise of the one suggests, if it does not necessitate, the other. It is to be regretted that one by one the safeguards of liberty are disappearing in rapid succession, and the limitations upon Federal authority so weakened or disregarded as to form but a feeble defense against consolidated despotism. But regrets are vain, and protests are unavailing. The strides of Federal power are unstayed, and its portentous shadow casts a gloomy pall over the future history of the country.

There was no election for State officers this year. The total vote for presidential electors

was 21,821, of which those chosen to vote for Grant and Wilson received 11,115, those for Greeley and Brown 10,206, and those for O'Connor and Adams 460; majority for Grant, 909. James R. Lofland was elected as Representative in Congress by a majority of 362, out of a total vote of 22,392, receiving 11,377 votes. The Legislature of 1873 consists of 8 Democrats and 1 Republican in the Senate, and 14 Democrats and 7 Republicans in the House of Representatives.

The principal local issues which divide parties in the State are those of providing for a more equal representation from the different counties and hundreds, equalizing taxation, repealing the tax on travel, and improving the school system.

Among the internal improvements proposed is a ship-canal to connect the Chesapeake with Delaware Bay. Examinations have been under way to determine the practicability of the enterprise, and the most favorable route.

Among the barbarous practices not yet extinct in the State of Delaware is that of publicly flogging criminals, and placing them in the pillory. On the 23d of November eight men, one white and seven colored, were pilloried and whipped in the court-yard of the county-prison at Newcastle, in the presence of many spectators. Most of the culprits were serving terms in the prison for larceny, and received on this occasion sixty lashes, besides being forced to stand one hour in the pillory.

According to the Federal census of 1870, there were in the State 698,115 acres of improved, 295,162 of woodland, and 59,045 of other unimproved land. The cash value of farms was \$46,712,870; of farming implements and machinery, \$1,201,644; total amount of wages paid during the year, including value of board, \$1,696,571; total (estimated) value of all farm productions, including betterments and additions to stock, \$8,171,667; value of orchard products, \$1,226,898; of produce of market-gardens, \$198,075; of forest products, \$111,810; of home manufactures, \$33,070; of animals slaughtered or sold for slaughter, \$997,408; of all live-stock, \$4,257,928. There were 16,770 horses, 3,584 mules and asses, 24,062 milch-cows, 6,888 working-oxen, 19,020 other cattle, 22,714 sheep, and 39,818 swine. The chief productions were 895,477 bushels of wheat, 10,222 of rye, 3,010,390 of Indian-corn, 554,388 of oats, 1,799 of barley, 1,349 of buckwheat, 3,123 of peas and beans, 362,724 of Irish and 85,809 of sweet potatoes, 58,316 pounds of wool, 1,171,963 of butter, 1,552 gallons of wine, and 758,608 of milk. Sold 65,908 of sorghum molasses, 83,151 pounds of honey, and 41,890 tons of hay. The total number of manufacturing establishments was 800, using 164 steam-engines of 4,318 horse-power, and 234 water-wheels of 4,220 horse-power, and employing 9,710 hands, of whom 7,705 were males over sixteen, 1,190 females over fifteen, and 806 youth. The amount of capital employed

was \$10,839,093; wages paid during the year, \$3,692,195; materials used, \$10,206,897; value of products, \$16,791,882.

The total number of religious organizations was 267, having 252 edifices, with 87,899 sittings, and property valued at \$1,623,950. The leading denominations were as follows:

DENOMINATIONS.	Organizations.	Sittings.
Baptist.....	8	2,950
Episcopal.....	29	8,975
Friends.....	8	3,435
Lutheran.....	1	300
Methodist.....	178	51,594
New Jerusalem.....	1	300
Presbyterian.....	23	13,375
Roman Catholic.....	13	6,000

The total number of libraries was 478, having 183,423 volumes. Of these, 221, with 91,148 volumes, were private; and 252, with 92,275 volumes, were other than private. There were 17 newspapers and periodicals, with a total circulation of 20,860; copies annually issued, 1,607,840. Of these, there was 1 daily with a circulation of 1,600; 3 semi-weekly, circulation 3,660; 12 weekly, circulation 13,600; and 1 monthly, circulation 2,000.

DENMARK, a kingdom in Europe. King, Christian IX., born April 8, 1808; succeeded King Frederick VII., November 15, 1863. Heir, Prince Frederick, born June 3, 1843; married to Princess Louisa of Sweden, July 28, 1869; oldest son, Prince Christian, born at Copenhagen, September 27, 1870. The new Cabinet appointed May 28, 1870, was partly modified in June, 1872, and was then composed of the following members: Count Holstein-Holsteinborg, President of the Council; Rosenørnlehn, Foreign Affairs; Haffner, War and Marine, *ad interim*; Fonnesbech, Interior; Krieger, Finance; Hall, Public Worship; Klein, Justice and President of the Marine and Commercial Court. Area of Denmark Proper, 14,698 English square miles; of the dependencies, Faroe, Iceland, Danish settlements in Greenland, the islands of St. Croix, St. Thomas, and St. John, in the West Indies, 40,214 square miles. Minister of the United States in Denmark, M. J. Cramer (November, 1870). *Chargé d'Affaires* and Consul-General of Denmark in the United States, Baron Hegeman Lindencrona, appointed in 1872.

The religious statistics of the kingdom, in 1870, were as follows: Lutherans, 1,769,583; Reformed, 1,433; Catholics, 1,857; Baptists, 3,223; Mormons, 2,128; Jews, 4,290; Free Congregation, 1,211; 260 Methodists, 349 Irvingites, 74 Anglicans, 28 Friends, 12 Greek Catholics, 88 of different other sects, and 205 without any definite creed. The Lutheran State Church is divided in its administration into eight stifts, each under a bishop. The Roman Catholics are placed under the Bishop of Osnabrück in Prussia, as Vicar-Apostolic.

In the budget for the year 1872-'73, the revenue is estimated at 20,954,063 rix-dollars; the expenditures at 20,568,526. The public

debt, on March 31, 1872-'73, amounted to 116,370,350 rix-dollars. The army, in 1872, was composed as follows:

	First Call (Line and Reserve).		Second Call.	
	Officers.	Men.	Officers.	Men.
Infantry.....	730	26,750	287	12,127
Cavalry.....	136	2,123
Artillery.....	139	6,533	37	2,391
Engineers.....	86	580	23	740
Total.....	1,081	35,975	346	15,358

On a war-footing the total army numbered 52,656.

The fleet, in 1872, consisted of 29 steamers, inclusive of 7 iron-clads, with an aggregate of 287 guns, 2 sailing-vessels, 8 gunboats, and 20 transports.

The emigration from Copenhagen, in 1871, amounted to 6,422 persons, of whom 3,906 were Danes. The emigrants, with few exceptions, were bound for the United States.

The imports and exports were, from 1869 to 1871, as follows:

YEAR.	Imports.	Exports.
1869-1870.....	18,290,000 cwt.	8,220,000 cwt.
1870-1871.....	19,770,000 "	10,360,000 "

The movement of shipping from 1869 to 1870 was as follows:

YEAR.	INLAND COURSE.		OUTWARD COURSE.	
	Vessels.	Tons Foreign Vessels.	Vessels.	Tons.
1869-1870.....	43,036	623,374	36,113	1,023,178
1870-1871.....	46,061	615,893	36,755	1,099,742

The merchant navy, exclusive of vessels of less than four tons:

	Vessels.	Tons.
1869.....	2,842	178,504
1870.....	2,808	178,646
1871.....	2,735	181,494

According to the official census of February 1, 1870, the area and population of Denmark and its dependencies, in 1870, were as follows:

DENMARK PROPER.	Area.	Population.
Zealand Möen, Samsø.....	2,834	637,711
Fühnen, Langeland, Arroe.....	1,315	236,311
Lolland, Falster.....	640	90,706
Bornholm.....	225	31,894
Jutland.....	9,738	768,119
Total.....	14,752	1,784,741
DEPENDENCIES.		
Faroe Islands.....	510	9,992
Iceland.....	39,758	69,763
Greenland.....	46,774	9,826
St. Croix.....	75	37,821
St. Thomas.....	23	
St. John.....	21	
Total.....	87,161	127,401

The most important dependency of Denmark is Iceland. The majority of the people of this island desire to make it an independent state, and to be connected with Denmark only by a personal union. The Althing (Legislature) of Iceland, on August 19, 1871, rejected the prop-

osition for a special constitution of the island, as made by the Danish Government.

The railroads in operation in 1870 numbered 453.87 miles. The length of the telegraph-lines in 1869 amounted to 1,215.62 miles, while the length of the wires was 3,160.14 miles. Number of telegraph-offices, 150; number of internal telegrams, 218,832; foreign telegrams, 86,720; telegrams passing through the country, 108,071; in all, 513,623.

The plan to make Denmark a neutral state, and to give to the kingdom the same guaranteed position as enjoyed by Belgium and Switzerland, has been discussed in various places. It seems that it was first mooted in the *Moscow Gazette*, the well-known organ of the ultra-Russian party. Mr. Katkoff, the editor of the *Gazette*, discussed the question chiefly as connected with the balance of power in the Baltic, and strongly recommended the neutralization of the Danish kingdom. Several German papers (the *Augsburg Gazette* among the number) treated the measure as a solution for which Denmark ought to be very grateful, and to obtain which it would be worth its while to renounce every right to be derived from the fifth article of the Treaty of Prague (of the year 1866) as to the restoration of Northern Schleswig. The Danish press does not appear to look upon the neutralization of its country as a great boon, or as an unconditional advantage. It takes the ground that the confidence of the Danes in written treaties and European guarantees has been greatly shaken, and that a declaration of neutrality, even if acceded to by all the neighboring states, would not enable Denmark to reduce in any sensible degree its armaments on sea, or on land. Since the war of 1864 every thing has been done to bring up the means of defence to the highest perfection. A new military law has entirely reorganized the army; Remington guns of a very perfect pattern have succeeded the different sorts of "Brown Bess;" the efficiency of the soldiers has been improved by yearly camps; and, if the immense cost of modern plated ships has prevented Denmark from keeping pace with the rapid development of Prussia or Germany on the sea, all efforts have been made to enable her to defend the Sounds and inner waters. The 30,000 or 40,000 men of all weapons who form the army, and the dozen of small plated vessels which are all that remain of the once so stately Danish Navy, would still be necessary to defend, in case of need, the threatened frontiers. Belgium and Switzerland have not been able to disarm because their neutrality has been recognized by the European powers; neither would Denmark be. On the other hand, the Danes regard the fulfilment of the promise made by Prussia in the Treaty of Prague as a condition for the very existence of their country; and they see therein only a real guarantee of their independence.

The session of the Danish Diet, the last of

the triennial period, was closed on March 23d, and new elections for the Folkething (Second Chamber) took place throughout the kingdom on September 20th. The interest taken in them was livelier than usual, a most intense agitation having been carried on by the partisans of the so-called "United Left." To the efforts of what has hitherto been regarded as the most radical party was added this year the agitation of the socialistic elements which were called into life by the Paris Commune, and which organized themselves as a branch of the International. In the beginning, these two tendencies were kept very distinct, but, on the eve of the election, there was a coalition of the two parties in several districts. The result of the election was a small accession of strength to the "United Left," which gained a small majority in the new House (consisting of 102 members). The three ministers sitting in the Second Chamber were all reelected. On the other hand, the "United Left" succeeded in excluding several politicians of merit and ability; foremost among these being Bishop Monrad, the Premier from 1864, who has returned from his voluntary exile at New Zealand to his former bishopric, and had accepted an invitation to stand for Roeskilde. This politician is not exactly popular, and he is driven by a feverish restlessness to strange vagaries; but he is a man of indisputable genius, endowed with rare qualities of mind, and in the possession of a truly miraculous power for working, and his being vanquished by a peasant, without any parliamentary ability at all, was looked upon as a public scandal. On the whole, the most deplorable phenomenon in the political life of Denmark is the ever-sinking standard of ability in the representation, the great mass of electors looking far more to the political creed and aptitude for passive obedience of a candidate than to his insight, or experience, or eloquence.

The Rigsdag was opened by the King, on October 7th, in the presence of the Queen, the hereditary Grand-duke, the princesses, and the court. The royal speech described the past year as one of happy progress, referred to the splendid harvest, the Scandinavian Exhibition, scientific congresses, the joint Monetary Commission, the birth of a prince, and spoke of the King of Sweden's death with deep sorrow, stating that he was Denmark's true friend. A confident hope was expressed that the cordial friendship between the two kingdoms would continue under King Oscar's enlightened reign. The foreign situation remained unchanged. "The Schleswig question," the royal speech said, "is still pending, but the hope of a satisfactory solution is undiminished. Bills have been prepared for a reform of the public schools, in the direction of a more popular system of education, and for law reform. A revision of army law will also be proposed." On October 9th the Rigsdag was prorogued to December 2d.

On June 18th a Scandinavian Industry and Arts Exhibition was opened at Copenhagen, with great solemnity, in the presence of the King, the Crown Prince, and the Crown Princess. After a cantata by Niels Gade, the opening speech was delivered by the premier, Count Holstein. There were 4,000 exhibitors, and the exhibition was a decided success.

On July 4th a congress of Scandinavian statesmen and scientific celebrities was opened at Christiansborg Palace, Copenhagen, to discuss certain prominent questions of political economy. The King and Crown Prince were present. The abolition of the existing mint system, and a transition to the English or the German gold coinage system, were specially discussed.

DICKSON, SAMUEL HENRY, M. D., LL. D., an eminent physician, professor, and medical writer, born in Charleston, S. C., September 20, 1798; died in Philadelphia, March 31, 1872. He prepared for college in the schools of his native city, and entered Yale College at the early age of twelve years, graduating thence in 1814. On his return to Charleston, he immediately commenced the study of medicine with Dr. P. G. Prioleau, and, during the terrible epidemic of yellow fever there in 1817, though but nineteen years of age, he was actively engaged in practice. He subsequently attended a course of lectures at the University of Pennsylvania, and received the degree of M. D. in 1818. He returned to Charleston, and opened an office in July of the same year. Through his instrumentality a medical college was established in Charleston in 1824, and he was called to the chair of the Institutes and Practice of Medicine, which he filled until 1832. He then withdrew, but, on the reorganization of the institution in 1833, as the Medical College of the State, resumed his position. From 1847 to 1850 he occupied the corresponding chair in the University of the City of New York, but his health obliged him to return to his former post in Charleston. In 1858 he was called to the chair of Practice of Medicine in Jefferson College, Philadelphia, where he continued till his death. He received the degree of LL. D. from the University of the City of New York in 1858. Though devoted to his profession during the whole of his long public life, Dr. Dickson was a man of wide and general literary culture; a poet, a philosopher, and a remarkably brilliant conversationalist. He wrote much for magazines, reviews, and other periodicals, for many years, and, though most of his published works are professional, yet not one volume was devoted to his orations, essays, etc., outside of his profession. His medical works are remarkable, not only for their acuteness of observation, their professional exactness and orthodoxy, and their logical ability, but for a rare finish and elegance of style, of which there are fewer examples than there should be among the members of that profession. Dr. Dickson's published

works were: "Dengue: its History, Pathology, and Treatment," 1826; "Essays on Pathology and Therapeutics," 2 vols., 8vo., 1845; "Manual of Pathology and Practice of Medicine," 1848; "Essays on Slavery, and Sundry Orations and Addresses," 1845; "Essays on Life, Sleep, Pain," etc., 1852; "Elements of Medicine," 1855. It is a fact worthy of notice that he delivered the first temperance lecture or oration ever heard in the Southern States.

DIPLOMATIC CORRESPONDENCE AND FOREIGN RELATIONS. Such of the correspondence, for the year 1872, of the Secretary of State with foreign governments as it has been considered desirable to publish, is contained in the volumes relating to foreign relations, which accompany the annual message of the President to Congress.

The most important diplomatic event of the year has been the happy conclusion of the labors of the Tribunal of Arbitration at Geneva. The award of the tribunal in favor of the United States, and the record of the proceedings which led to this acceptable result, are interesting and highly-valuable additions to the literature of international law.

With the conclusion of the sessions of the tribunal at Geneva, and the publication of its award, there was removed, in a manner satisfactory to the United States Government, a difficult and perplexing question, which, until it was finally answered, suspended the possibility of cordial good feeling between the two countries interested.

The spectacle of two of the most powerful and highly-civilized nations of the earth submitting their grievances to a common arbiter, for examination and determination, is something so unusual in the history of the world, and reflects such high honor upon the wisdom of the distinguished persons who were instrumental in conceiving and giving effect to this great principle of peace, which many are sanguine to hope will usurp the functions of war, that here are inserted, without abridgment, some of the principal papers relating to the progress and termination of the arbitration.

Under the date of September 21, 1872, Mr. J. C. Bancroft Davis, the agent of the United States, writes from Paris to Mr. Hamilton Fish, the Secretary of State, as follows:

PARIS, September 21, 1872.

SIR: I transmit herewith, in a separate enclosure, the original award of the Tribunal of Arbitration, and, in another separate enclosure, the original protocols of the conferences.

Having now conducted to a successful termination the interests intrusted to me by the President, I respectfully ask permission to make a statement respecting them.

At the conference of the joint high commissioners at Washington, in which the subject of the Alabama claims was first considered, the American commissioners, in their opening statement, defined the demands of the United States against Great Britain, growing out of the acts of the Alabama and the other cruisers, which were to be the subject of the negotiations, in the following language, namely:

Extensive direct losses in the capture and destruction of a large number of vessels, with their cargoes, and in the heavy national expenditure in the pursuit of the cruisers; and indirect injury in the transfer of a large part of the American commercial marine to the British flag, in the enhanced payment of insurance, in the prolongation of the war, and in the addition of a large sum to the cost of the war and the suppression of the rebellion.

At the same time, they indicated the manner in which some of these claims could be substantiated, namely: the claims for the loss and destruction of private property in the ordinary manner; the cost of the pursuit of the cruisers, "by certificates of Government accounting-officers," and what they styled "indirect losses," by estimates. All the subsequent negotiations proceeded from this starting-point.

It has been shown, beyond possible question, in the argument of General Cushing, Mr. Evarts, and Mr. Waite, presented to the tribunal on the 15th of June last, that this definition of our claims was in strict accordance with all previous negotiations between the two governments, with the action of the Senate of the United States, and with the official expressions of the President to Congress.

The British members of the Joint High Commission took no exception to the definition when it was made by their American colleagues. They acquiesced in it.

When I had the honor to receive the directions of the President to prepare the case of the United States for submission to the tribunal, I regarded myself as bound by the definition of the words "Alabama Claims," which the American commissioners had given in the opening conference, which they had adhered to throughout the negotiations, and which had been placed in the protocol by the joint act of all the commissioners. I looked in vain in the treaty for any waiver or remission of those claims. On the contrary, I found an express provision that the United States were to have the judgment of the tribunal on *all* their claims growing out of the acts of the cruisers.

The question was a practical one; for the claims for "enhanced rates of insurance" were among those which had been classified as "indirect" in the statement, which had received the approval of all the members of the Joint High Commission. Many claims of this character were presented at the Department of State, and a circular was issued, under the immediate direction of the Secretary of State, informing claimants that *all* claims growing out of the acts of the cruisers would be presented to the tribunal, leaving that body to determine on their merits.

It was impossible for me to prepare the case and, at the same time, to direct in person the details of the arrangement of the evidence respecting the national and individual claims. Mr. Charles C. Beaman, Jr., of New York, was employed to do the latter, under general directions from me, and did his work with admirable fidelity. Thus, the evidence already collected, together with important new materials from the archives of the several Departments, and the proof of the losses suffered by individual claimants, were arranged and stated in the manner marked out by the American members of the Joint High Commission, namely:

1. The evidence offered by individual claimants for the loss and destruction of property, and for enhanced rates of insurance, was analyzed and tabulated, and a full abstract of each case was prepared by the clerks.

2. The national claims for the pursuit of the cruisers were stated and tabulated at the Navy Department, and were inserted by us exactly as received from that Department.

3. No proof was offered of the national losses by the transfer of the commercial marine, or by the prolongation of the war, but they were left to be esti-

mated by the Tribunal of Arbitration, should Great Britain be found responsible for them.

The case, which was reserved for my own work, was constructed on the following theories of fact and of law—theories which have received the sanction of the eminent counsel of the United States; which have been adhered to in all the arguments, and which have, to no small extent, been adopted by the arbitrators:

- (a.) That the Tribunal of Arbitration was a judicial body, substituted by the parties to take the place of force, and empowered to try and determine issues which otherwise could be settled (if at all) only by war.

- (b.) That the injuries of the United States should be stated, therefore, with the fullness necessary to a determination in a court of law, and with the same frankness with which they would be stated in case of an appeal to force. I did not think that the United States could obtain full justice at the hands of the arbitrators, if any appreciable part of their wrongs were left untold.

- (c.) That the Government of Great Britain, by its indiscreet haste in counselling the Queen's proclamation recognizing the insurgents as belligerents, by its preconceived joint action with France respecting the declarations of the Congress of Paris, by its refusal to take steps for the amendment of its neutrality laws, by its refraining for so long a time from seizing the rams at Liverpool, by its conduct in the affair of the Trent, and by its approval of the course of its colonial officers at various times; and that the individual members of the Government, by their open and frequent expressions of sympathy with the insurgents, and of desires for their success, had exhibited an unfriendly feeling, which might affect their own course, and could not but affect the action of their subordinates; and that all this was a want of the "due diligence" in the observance of neutral duties which is required at once by the treaty and by international law.

It seemed to me that such facts, when proved, imputed with the character of culpable negligence many acts of subordinates in the British service for which, otherwise, the Government might not be held responsible; as, for instance, acts of the collector of customs at Liverpool respecting the Florida and the Alabama; acts of the authorities at Nassau respecting the arming of the Florida at Green Bay, and subsequently respecting her supplies of coal; acts of the authorities at Bermuda respecting the Florida; and acts of the authorities at Melbourne respecting the Shenandoah. There were many such acts of subordinates which, taken individually and by themselves, would not form a just basis for holding culpable a government which was honestly and with vigilance striving to perform its duty as a neutral; but which, taken in connection with each other, and with the proofs of animus which we offered, established culpability in the Government itself.

- (d.) That the insurgents established and maintained, unmolested throughout the insurrection, administrative bureaux on British soil, by means of which the several cruisers were dispatched from British ports, or were enabled to make them bases of hostile operations against the United States, and that the British Government was cognizant of it.

- (e.) That Great Britain, from the outset, denied, and to the last persisted in denying, that the departure of vessels like the Alabama and the Florida, under any circumstances, could be a breach of international duty; and had refused to exercise diligence to prevent such departure.

- (f.) That in point of fact no such diligence had been exercised; and that, while there were particular facts as to each vessel, tending to fix responsibility upon Great Britain, these general indisputable facts were sufficient to carry responsibility for the acts of all the cruisers.

The treatment of this line of argument exhausted

five chapters of the case. These five chapters were printed in a memorandum form, and were submitted to several gentlemen, some of whose names I may mention without violating confidence; only remarking, in justice to them, that they should not be held responsible for the views in this part of the case, by reason of having read it in advance:

1. They were sent to President Woolsey, who made many valuable suggestions, most of which were adopted.

2. Mr. William Beach Lawrence, the eminent publicist, permitted me to consult him, not only after these chapters were written, but also during their composition. I did not adopt his well-known views respecting the Queen's proclamation and the unfriendliness of the British Cabinet; nor do I suppose that he, knowing my convictions to be otherwise, had any idea that I would adopt them. I did, however, receive from him valuable hints, which improved the work.

3. Mr. E. R. Hoar, one of the members of the Joint High Commission, read these chapters at my request, and expressed his general approval. I think that he made several suggestions, and that all were adopted.

4. The veteran statesman and scholar, General Cushing, made several valuable contributions, all of which were embodied in the work.

5. The different members of the Cabinet were consulted, and, so far as they made suggestions, their views were adopted. It is within your own knowledge that I received several valuable contributions or hints from you.

It was not until I had thus received and acted on the advice of a wide circle of statesmen, jurists, and publicists, competent to criticise the work, of whose patriotic desire to have the interests of their country represented with dignity at Geneva no one could doubt, that the final chapter of the work was written. This chapter contained the formal statement of the claims submitted for adjudication under the treaty. Among them were those which have since become known as "the indirect claims." To prevent misapprehension, it should be said that this chapter was not sent out for criticism as the others had been. The statements were presented in the exact language of the protocol made by the two parties jointly for the purpose of defining the claims to be submitted to the tribunal. They were accompanied by references to the proofs respecting the individual claims, and the national claims for the pursuit of the cruisers; and with a request that the tribunal would estimate the national losses in the transfer of the commercial marine, and in the prolongation of the war. And, in order that the statement might be complete, some reasons were added why, should the tribunal be of opinion that Great Britain was responsible for the prolongation of the war, the prolongation should be dated from July, 1863.

The case, as thus revised, was reprinted, and was, in accordance with the terms of the treaty, taken to Geneva, and there delivered to the arbitrators and to the British agent in the official English (and also in a French translation, made for the convenience of the arbitrators), together with seven volumes of accompanying documents, correspondence, and evidence.

The facts which were disclosed in the case were, undoubtedly, such as called for the reprobation of just-thinking persons; but these facts were told, so far as I was able to do so, in simple and temperate language, without harshness or violence. Nothing could have been further from my expectations than the outburst which followed.

In about a fortnight after we left Geneva, it began to be said in the London newspapers that the good faith of the British Government was called in question in the American case, and soon the whole press, with the exception of the newspaper universally recognized as the leading journal, opened an attack upon the chapter on unfriendliness.

The *Standard* thought we had "sacrificed the consistency and dignity of our pleadings to satisfy popular prejudice at home." The *Telegraph* spoke of the "effrontery" with which the American demands were set forth, and said that "it must be borne in mind that General Grant seeks reelection." The *Saturday Review* spoke of the narrative as "perverted and spiteful," and "a malignant composition," and said that "if the Americans wish to express still more hostile feelings, they must discontinue verbal controversy." The *Pall-Mall Gazette*, usually fair and courteous, though hostile, charged that the claims had been bought up by "American legislators and officers of state even among the higher and more influential grade." The *Spectator* charged us with "sharp practice," and a "discreditable forcing of the natural meaning of the treaty in order to win popularity at the elections." The *Daily News* called the claims "extravagant demands intended as an electioneering card," and complained that the case was a "long and passionate pleading," in which "chapter after chapter is devoted to the presumed motives of our [British] public men."

In fact, fault was found indiscriminately with nearly every thing in the case except the one thing afterward made the main subject of complaint, namely, the allegation that it contained demands which were not included in the submission in the treaty. That was an objection which did not appear in the British press until weeks after the exchange of the documents at Geneva, and, so far as I am aware, was not taken by any person entitled to speak by the authority of the Government until a still later day.

Even as late as the middle of January negotiations were going on between the respective agents and counsel regarding the times and the manner of making supplemental arguments at Geneva (should the tribunal call for any), without an intimation that there might be a difference as to the subjects to be argued. It was not until the 3d of February that the ministry announced officially that they had not anticipated that the claims which have improperly become known as the "indirect claims" would be presented at Geneva.

Indeed, there is some evidence that the British Government was occupied with the parts of the case which had offended the British press; for I gather from General Schenck's telegram of the 27th of February, reporting to you an interview with Lord Granville, that the Cabinet had under consideration at one time the propriety of asking for the absolute withdrawal of the American case, on other grounds than its presentation of the "indirect claims."*

For several weeks, I may say months, the London press continued to discuss our national claims. This discussion was conducted with a vehemence, and with insinuations or charges of bad faith, which attracted the attention of the Continental press. In all the principal capitals of Europe, the Alabama claims became the subject of comment. The unanimity of the verdict in favor of our construction of the treaty was as complete as was the unanimity of the English press in favor of Great Britain, and it was universally conceded that England could not retire from the arbitration without dishonor. I enclose a variety of extracts on this subject.

During all this time I was occupied in Paris in the preparation of the counter-case, and the other duties of the agency. On the 15th of April I was able to comply with the requirements of the treaty and the

* "He [Lord Granville] then said to me that in his note of the 3d he had stated the views of her Majesty's Government as to indirect claims; that there were other portions of [the] American case they regret, and some of which appear to introduce matters not germane to reference; that he has not been able to consult Cabinet here, but is individually prepared to recommend to them, and he thinks with reasonable expectation of success, that they should not press for withdrawal of American case if the Government of the United States," etc., etc.—(Correspondence respecting Geneva Arbitration, page 5.)

directions of the tribunal by delivering the counter-case and accompanying documents to Mr. Favrot for the British agent and for the arbitrators. The volume of evidence accompanying the counter-case was selected and arranged under the directions of the counsel. At the same time I delivered French translations of these documents, and also two volumes containing French translations of selected pieces from the seven volumes of evidence submitted with the case in December.

This, and much of the subsequent work, could not have been completed in season had not the secretaries been willing, when called upon, to work day and night for the purpose.

Lord Tenterden met me at Geneva in April with unreserve, and in the spirit of conciliation. Under instructions from his government, he lodged with the secretary of the tribunal a notice to the individual arbitrators of the action taken by her Majesty's Government on the 3d of February, in order that the act of filing the British counter-case should not be deemed to be a waiver of that action. But he did not conceal his own strong desire to save the treaty, and he left on my mind the conviction that the judicial solution which the tribunal subsequently made of the political difficulty raised by the British note of the 3d of February would be accepted by the British Government.

The time between the 15th of April and the 15th of June was occupied by the counsel in the preparation of their argument. This argument has attracted great attention throughout Europe, and has received universal praise as a masterly vindication of our rights.

On the 15th of June the tribunal reassembled, the agents and counsel on both sides being present. The argument of the United States was duly delivered (together with the French translation made for the convenience of the arbitrators); but the British agent, instead of filing the British argument, asked for an adjournment of several months, in order to enable the two governments to arrange politically the questions in dispute.

I had already discussed with General Cushing the probability of adjusting these differences by the action of the tribunal. Instead of assenting to the proposed adjournment, I therefore, with the full concurrence of the counsel, asked for an adjournment of two days, in order to give us time to consider the position. Before the tribunal convened again, steps were taken for removing the difficulty through the action of that body. In the proceedings which followed we acted as a unit on our side. Happily they resulted in a solution by the tribunal, which proved to be acceptable to both governments. The arbitrators announced their opinion that the claims known as the indirect claims did not constitute, on principles of international law applicable to such cases, good and sufficient foundation for an award of compensation or computation of damages between nations. On the side of Great Britain the solution was a practical one; no damages were to be awarded for this class of claims. On our side the solution was reached in the manner pointed out by the treaty, viz., by the action of the court. On the suggestion of the other side, this unofficial act was then formally entered as an official judgment, in the following language:

Count Sclopis, on behalf of all the arbitrators, then declared that the said several claims for indirect losses mentioned in the statement made by the agent of the United States on the 25th instant, and referred to in the statement just made by the agent of her Britannic Majesty, are, and from henceforth will be, wholly excluded from the consideration of the tribunal, and directed the secretary to embody this declaration in the protocol of this day's proceedings.

In all these proceedings, I found the British agent and counsel sharing our sincere and earnest desire to save the treaty.

The British argument was next filed, with my

consent, and an effort was then made on their side to reopen argument and secure a new hearing on the whole question. This was successfully resisted, and the tribunal took a recess for a fortnight.

On Monday, July 15th, it reassembled. The efforts on the part of Great Britain to secure reargument were renewed. The neutral arbitrators said that they had examined the whole case, and that they wanted no rehearing. It was decided by the tribunal to give the opinion of the arbitrators *seriatim* on each cruiser, beginning with the Florida.

Sir Alexander Cockburn presented the facts and reasoning affecting this vessel at an extreme length, holding Great Britain free of blame. The other arbitrators held her responsible, reserving, however, the question as to the effect of a commission.

Sir Alexander Cockburn, then, in vigorous language, and with great warmth of manner, urged the tribunal to permit an argument upon the meaning of the words "due diligence," upon the effect of a commission, and upon the law respecting the supplies of coal. The tribunal granted the request. I was, myself, in favor of allowing further arguments, within some defined scope. I thought that we had nothing to lose by an argument, in which we had the reply, in the hands of such masters of discussion as General Cushing, Mr. Evarts, and Mr. Waite.

The hearings were ordered, and, before the dissolution of the tribunal, arguments had been made (always on the suggestion of England), on the following points, the British counsel leading, and ours following: 1. On the meaning of the words "due diligence;" 2. On the effect of a commission on the offending vessel; 3. On supplies of coal; 4. On the recruitment of men for the Shenandoah, at Melbourne; 5. On the effect of the entry of the Florida into the port of Mobile; 6. On the subject of interest; 7. On the general subject of the statement of claims. These arguments were presented generally both in the English and the French languages.

The protocols which accompany this dispatch show the order in which these various papers were delivered, and the order in which the arbitrators considered the various cruisers. It was not until after the arguments on the first four subjects, that the formal votes required by the treaty were taken separately upon the responsibility of Great Britain as to each cruiser. The tribunal decided unanimously that there was responsibility for the acts of the Alabama. Count Sclopis, Mr. Stämpfli, and Mr. Adams, held that there was responsibility for the acts of the Shenandoah after leaving Melbourne, but not before. Great Britain was released from responsibility as to the other vessels, except the Florida; Mr. Adams holding that there was responsibility for the acts of the Retribution, and Mr. Stämpfli holding that there was responsibility for the acts of that vessel only so far as related to the Emily Fisher. The formal vote on the Florida was taken at a subsequent conference, after argument by counsel on the special question of the effect of the entry into Mobile. Count Sclopis, Viscount d'Itajuba, Mr. Stämpfli, and Mr. Adams, held there was responsibility for her acts.

The deliberations of the tribunal, on the subject of damages, were held with closed doors. The arbitrators asked each party for comparative tables, which were furnished. On our side, we limited ourselves to the request of the tribunal. On the other side, new tables were put in with new and elaborate criticisms upon our list of claims. We did not object to this irregular criticism, but claimed the right of reply given by the treaty.

The tribunal, at length, announced that a result had been reached, that fifteen and a half millions of dollars would be awarded as a gross sum, to be paid by Great Britain to the United States. It does not appear in the protocols how the arbitrators arrived at this amount. I am informed that it was reached by mutual concessions.

The neutral arbitrators and Mr. Adams, from the

beginning of the proceedings, were convinced of the policy of awarding a sum in gross. For some weeks before the decision was given, I felt sure that the arbitrators would not consent to send the case to assessors until they should have exhausted all efforts to agree themselves upon the sum to be paid. We therefore devoted our energies toward securing such a sum as should be practically an indemnity to the sufferers. Whether we have or have not been successful, can be determined only by the final division of the sum.

It is due to our counsel to state, that in all the proceedings which were taken since their arrival in Europe, no step was made without their advice and consent, and many important ones were taken on their suggestion and origination. That their labors have been incessant, any one may imagine who sees the mass of able papers which came from their pens.

The opinions which the neutral arbitrators presented, bear testimony to the sagacity, good judgment, and knowledge of the principles of law and fact at issue, which they brought to bear on the case, and to the untiring labor with which they mastered the varied and difficult questions submitted by the parties for their decisions. It only remains to say, that they exhibited throughout marked patience and good temper, and that these admirable qualities were sometimes needed. These opinions will undoubtedly be read with interest. I take the liberty, in closing, to make a few remarks upon the main points at issue, as they are treated in the opinions of the different arbitrators.

1. Due Diligence.

We maintained in the case that the diligence of the neutral should "be proportioned to the magnitude of the subject, and to the dignity and strength of the power which is to exercise it" (page 158), and that it should be "gauged by the character and magnitude of the matter which it may affect, by the relative condition of the parties, by the ability of the party incurring the liability to exercise the diligence required by the exigencies of the case, and by the extent of the injury which may follow negligence" (page 152). We thought, for instance, that it would not be just to hold Brazil, with its extended coast, sparse population, and feeble means of internal communication, and Great Britain, with its compact population, its net-work of railways and telegraphs, and its administrative system always under the control of the central government, to an identical standard of active vigilance. On the other side it was said:

Her Majesty's Government knows of no distinction between more dignified and less dignified powers; it regards all sovereign states as enjoying equal rights, and equally subject to all ordinary international obligations; and it is firmly persuaded that there is no state in Europe or America which would be willing to claim or accept any immunity in this respect, on the ground of its inferiority to others in extent, military force, or population.

Count Sclopis, in his opinion, says:

The words "due diligence" necessarily imply the idea of a relation between the duty and its object. It is impossible to define *a priori* and abstractly an absolute duty of diligence. The thing to which the diligence relates determines its degree. * * * As to the measure of activity in the performance of the duties of a neutral, I think the following rule should be laid down: that it should be in a direct ratio to the actual danger to which the belligerent will be exposed through the laxity of the neutral, and in an inverse ratio to the direct means which the belligerent can control for averting the danger.

The tribunal, in its award, says:

The due diligence referred to in the first and third of the said rules ought to be exercised by neutral governments in exact proportion to the risks to which either of the belligerents may be exposed from a failure to fulfill the obligations of neutrality on their part. * * * The circumstances out of which the facts constituting the subject-matter of the present controversy arose, were of a nature to call for the exercise, on the part of her

Britannic Majesty's Government, of all possible solicitude for the observance of the rights and duties involved in the proclamation of neutrality issued by her Majesty, on the 13th of May, 1861.

2. Toleration of Insurgent Operations in England, and English Feeling against the United States.

Count Sclopis says, respecting this point:

The British Government was fully informed that the Confederates had established in England a branch of their means of attack and defence against the United States. Commissioners representing the Government of Richmond were domiciled in London, and had put themselves in communication with the English Government. Lord Russell had received these Confederate representatives in an unofficial way. The first visit took place on the 11th of May, 1861, that is to say, three days before the Queen's proclamation of neutrality, and four days before Mr. Adams arrived in London as the minister of the United States. And, further, the English Government could not but know that great commercial houses were managing the interests of the Confederates at Liverpool, a town which, from that time, was very openly pronounced in favor of the South. In Parliament itself, opinions were before long openly expressed in favor of the insurgents. The Queen's ministers themselves did not disguise that, in their opinion, it would be very difficult for the American Union to reestablish itself before * * * It results from this, in my opinion, that the English Government found itself, during the first years of the war of secession, in the midst of circumstances which could not but have an influence, if not directly upon itself, at least upon a part of the population subject to the British Crown. No government is safe against certain waves of public opinion, which it cannot master at its will. I am far from thinking that the *entire* of the English Government was hostile to the Federal Government during the war. Yet there were grave dangers for the United States in Great Britain and her colonies, which there were no direct means for averting. England, therefore, should have fulfilled her duties as a neutral, by the exercise of a diligence equal to the gravity of the danger. * * * It cannot be denied, that there were moments when its watchfulness seemed to fail, and when feebleness in certain branches of the public service resulted in great detriment to the United States.

Viscount d'Itajuba has not placed on record his opinion on this subject, unless it can be gathered from a single passage in his remarks upon the effect of a commission on an offending cruiser, when he says: "By seizing or detaining the vessel the neutral only prevents the belligerent from deriving advantage from the fraud committed within its territory by the same belligerent; while, by not proceeding against a guilty vessel, it exposes itself to having its good faith justly called in question by the other belligerent."

It would seem from some of Mr. Adams's expressions that he did not concur in these views of his colleagues. While regretting that he did not do so, because the views seem to me to be in accordance with the facts, and also in accordance with general principles which all maritime powers would desire to maintain, I must bear testimony to the perfect and dignified impartiality with which, not only in this respect, but throughout the proceedings, Mr. Adams maintained his position as a judge between the two contending nations. Of him, at least, it may be said that his love of country never controlled his sense of justice, and that at no time did he appear as an advocate.

3. Duty to detain an Offending Cruiser when it comes again within the Neutral's Jurisdiction, and Effect of a Commission upon such Cruiser.

It was maintained in the American case that, by the true construction of the second clause of the first rule of the treaty, when a vessel like the Florida, Alabama, Georgia, or Shenandoah, which has been especially adapted within a neutral port for the use of a belligerent in war, comes again within the neutral's jurisdiction, it is the duty of the neutral to seize and detain it. This construction was denied by Great Britain. It was maintained in the British papers submitted to the tribunal, that the obligation created

by this clause refers only to the duty of preventing the original departure of the vessel, and that the fact that the vessel was, after the original departure from the neutral port, commissioned as a ship-of-war, protects it against detention.

To this point we rejoined, that a commission is no protection against seizure in such case, and does not operate to release the neutral from the obligation to detain the offender.

The Viscount d'Itajuba seemed to favor the American construction. He said:

According to the latter part of the first rule of Article VI. of the Treaty of Washington, the neutral is bound also to use due diligence to prevent the departure from its jurisdiction of any vessel intended to cruise or carry on war as above [viz., against a belligerent], such vessel having been specially adapted, in whole or in part, within its jurisdiction to warlike use. * * * If, then, a vessel built on neutral territory for the use of a belligerent, fraudulently and without the knowledge of the neutral, comes again within the jurisdiction of the sovereign whose neutrality it has violated, it ought to be seized and detained.

Count Sclopis says, on this point:

It is on the nature of these special circumstances that the first rule laid down in Article VI. of the Treaty of Washington specifically rests. The operation of that rule would be illusory, if it could not be applied to vessels subsequently commissioned. The object in view is to prevent the construction, arming, and equipping of the vessel, and to prevent her departure when there is sufficient reason to believe that she is intended to carry on war on behalf of one of the belligerents; and, when probability has become certainty, shall not the rule be applicable to the direct and palpable consequences which it originally was intended to prevent?

In the award, the tribunal says that—

The effects of a violation of neutrality committed by means of the construction, equipment, and armament of a vessel are not done away with by any commission which the government of the belligerent power, benefited by the violation of neutrality, may afterward have granted to that vessel; and the ultimate step by which the offence is completed cannot be admissible as a ground for the absolution of the offender, nor can the consummation of his fraud become the means of establishing his innocence. The privilege of exterritoriality, accorded to vessels of war, has been admitted to the law of nations, not as an absolute right, but solely as a proceeding founded on the principles of courtesy and mutual deference between different nations, and therefore can never be appealed to for the protection of acts done in violation of neutrality.

It will be observed that the tribunal, instead of adopting the recognition by the Viscount d'Itajuba of a *positive obligation* on the part of the neutral to detain the vessel, in the case supposed, limited itself to expressing the opinion that, in such case, the neutral would have the *right* to make such detention.

4. Supplies of Coal.

It was maintained in the American case that the proofs showed that the insurgent cruisers were permitted to supply themselves with coal in British ports in greater quantities and with greater freedom, and with less restrictions than were imposed upon the United States; and it was insisted that, in consequence of these facts, there was an absence of neutrality, which made those ports bases of hostile operations against the United States under the second rule of the treaty.

On this point the award says that—

In order to impart to any supplies of coal a character inconsistent with the second rule, prohibiting the use of neutral ports or waters as a base of naval operations for a belligerent, it is necessary that the said supplies should be connected with special circumstances of time, of persons, or of place, which may combine to give them such character.

It does not appear by the terms of the award that Great Britain is held responsible for the acts of any vessel solely in consequence of illegal supplies of coal. The question is, therefore, a speculative one, so far as relates to this controversy. The opinions

of the four arbitrators who signed the award furnish, however, the explanation of what they mean when they speak of "special circumstances of time, of persons, or of place."

Mr. Adams says:

I perceive no other way to determine the degree of responsibility of a neutral in these cases, than by an examination of the evidence to show the *intent* of the grant in any specific case. Fraud or falsehood in such a case poisons every thing it touches. Even indifference may degenerate into wilful negligence, and that will impose a burden of proof to relieve it before responsibility can be relieved.

Count Sclopis says:

I will not say that the simple fact of having allowed a greater amount of coal than was necessary to enable a vessel to reach the nearest port of its country constitutes in itself a sufficient grievance to call for an indemnity. As the Lord-Chancellor of England said on the 12th of June, 1871, in the House of Lords, England and the United States equally hold the principle that it is no violation of the law of nations to furnish arms to a belligerent. But if an excessive supply of coal is connected with other circumstances which show that it was used as a veritable *res hostilis*, then there is an infraction of the second article of the treaty. * * * Thus, for example, when I see the Florida and the Shenandoah choose for their fields of action, the one the stretch of sea between the Bahama Archipelago and Bermuda, to cruise there at its ease, and the other Melbourne and Hobson's Bay, for the purpose immediately carried out, of going to the arctic seas, there to attack the whaling-vessels, I cannot but regard the supplies of coal, in quantities sufficient for such services, infractions of the second rule of Article VI.

Mr. Stämpfli says of the Sumter:

The permission given to the Sumter to remain and take in coal at Trinidad does not of itself constitute a sufficient basis for accusing the British authorities of having failed in their duties as neutrals, because the fact cannot be considered by itself, since the Sumter both before and after that time was admitted into the ports of many other states where it stayed and took in coal * * * so that it cannot be held that the port of Trinidad served as a base of operations.

But of the Shenandoah he says:

A supply of coal was not a necessary condition of neutral asylum, and in supplying her with so large a quantity of coal, the capacity of the ship for making war was increased just as much as by the recruitment of her crew, which took place.

The Viscount d'Itajuba, at the thirty-first conference, while signing the decision, remarked with regard to the recital concerning the supply of coals, that he is of the opinion that every government is free to furnish to the belligerents more or less of that article.

5. The Municipal Laws of England.

It was maintained in the American case that the liability of Great Britain should be measured by the rules of international law; and that it could not be escaped by reason of any alleged deficiencies in any internal legislation enacted for the purpose of enabling the government to fulfil its international duties.

The pleadings and arguments on the part of Great Britain are filled with denials of this proposition in every possible way, from the opening case to the last supplemental argument of Sir Roundell Palmer.

The award says: "The Government of her Britannic Majesty cannot justify itself for a failure in due diligence on the insufficiency of the legal means of action which it possessed."

6. The Sumter, the Nashville, etc.

It was maintained in the American case that, under the terms of the Treaty of Washington, the parties had agreed to submit to the decision of the tribunal of arbitration, not only the claims growing out of the acts of the Florida, the Alabama, the Georgia, and the Shenandoah, which originally proceeded from ports of Great Britain, but also all claims growing out of the acts of other cruisers, such as the Nashville, the Sumter, etc., which could in any way be shown to have used British ports as bases of supplies. The

British case and counter-case strenuously contended that the submission was limited to the four vessels first above named. The tribunal unanimously, including Sir Alexander Cockburn, took no notice of this claim of Great Britain, and considered all the claims presented, and decided them upon their merits.

7. *The Dissenting Opinion of Sir A. Cockburn.*

The frankness with which Sir Alexander Cockburn confesses, in this opinion, that he sat on the tribunal, not as a judge, but as, "*in some sense the representatives of Great Britain*," one of the parties to the controversy, places before the world the knowledge of a fact of which, otherwise, it would have been better to take no public notice.

The chief-justice calls legal propositions made by General Cushing, Mr. Evarts, and Mr. Waite, over their signatures and under the responsibility of counsel, "strange misrepresentations," and "assertions without the shadow of a foundation." He says that "their imaginations must have been lively, while their consciences slept." He finds in a portion of their argument "an extraordinary series of propositions," and the "most singular confusion of ideas, misrepresentations of facts, and ignorance both of law and history, which were, perhaps, ever crowded into the same space." He calls the part of their argument on which he was commenting, "an affront offered to this tribunal, by such an attempt to practise on our supposed credulity or ignorance," and says that he "is at a loss to understand how counsel, familiar with English law, can take upon themselves to make statements of this sort."

I need not assume in the United States to vindicate the accuracy of statements or the soundness of reasonings which have the guarantee of the names of our distinguished counsel. The charges are sanctioned by the chief-justice alone. I have no hesitation in expressing my conviction that they would have been indignantly repudiated by each and all of his colleagues, had the paper in which they are made been publicly read, or had its contents been made known at the time when the tribunal ordered it to be recorded. This voluminous paper was, in fact, not read in the tribunal; its author presented it in bulk without any statement respecting its character; no one had any reason to imagine its contents; and it was not made public until several days after the dissolution of the tribunal and the separation of its members. As Sir Alexander Cockburn says of the charges of unfriendliness which were made in the American case against members of Lord Palmerston's Cabinet, "The world must judge between the accusers and accused."

The British arbitrator also charges that the case of the United States "pours forth the pent-up venom of national and personal hate." He speaks of the "abuse" it "freely bestows," and complains of the "hostile and insulting tone thus offensively and unnecessarily adopted toward Great Britain, her statesmen, and her institutions."

These charges appear to be founded upon the proof of the desire of various members of the British Government for the success of the insurgents in the South, taken from the mouths of the speakers and presented for the consideration of the tribunal, and upon the legitimate application, which was made of that proof in the issue respecting "due diligence," which was pending before the tribunal at Geneva.

A complete vindication of the line of argument in the case (if any were needed) could be drawn from Sir Alexander Cockburn's paper: "There can be no doubt," he says, "that these speeches not only expressed the sentiments of the speakers, but may be taken to be the exponent of the sentiments generally entertained at that time;" and he adds: "though partiality does not necessarily lead to want of diligence, yet it is apt to do so, and in case of doubt would turn the scale." With such an admis-

sion as this, it is surprising that a man of the robust sense of the chief-justice should have reproduced the rash imputations of the British press.

That I charged individual members of Lord Palmerston's Cabinet with a partiality for the insurgents, is true; equally true is it that I supported the charge by proof from their own lips.

But I never questioned their right to entertain such partiality, or to express it in any manner that suited them. I never even assumed to criticise its justice before a tribunal created to try other issues. I confined myself strictly to the issues before that body, and I argued that this partiality of individual members of the Government would be apt to lead to want of diligence, and in case of doubt would turn the scale—a line of argument which is now admitted to be just.

If I argued that these acts of individual members of the British Government were inconsistent with the "due diligence" required by the treaty, I did only what Lord Russell had said to Mr. Adams must be the inevitable result of an arbitration: "*Here the British Government acted with due diligence, or, in other words, with good faith and honesty?*" was the question by which he said the liability of England was to be determined.

If I urged that, in any instance, the neutrality of Great Britain was not sincere, I did but pursue the line of argument which Lord Westbury had defended in advance in the House of Lords, and I did it nearly in his own language.

I find no fault that Sir Alexander Cockburn does not agree with me, and with most of the world outside of England, as to the force of the evidence which was presented respecting these points. That is a subject on which persons may honestly differ. But I must be permitted to express some surprise that a lawyer of his deservedly great reputation should have made such a disagreement the cause of totally unfounded allegations against the case of the United States and its author.

With the exception of these personal remarks, this long dissenting opinion (twice the length of the American case) adds little or nothing new to the arguments previously put forth by Great Britain in vindication of her course toward the United States. There are several material errors in its statements of facts, but I shall not follow its example of injustice in attributing them to design. All right-thinking persons will heartily echo the wish with which the paper closes, "that in the time to come no sense of past wrong unredressed will stand in the way of the friendly and harmonious relations which should subsist between two great and kindred nations."

Thus, surrounded by difficulties which at one time seemed insuperable, this great cause has reached its conclusion. Nations have, ere now, consented to adjust by arbitration questions of figures and questions of boundaries; but the world has had few, if any, earlier examples of the voluntary submission to arbitration of a question in which a deep-seated conviction of injuries and wrongs which no possible award could compensate, animated a whole nation. It is out of such sentiments and feelings that wars come. The United States elected the path of peace. Confident of receiving justice, they laid the story of their wrongs before an impartial tribunal. This story, so grievous in its simple truthfulness, threatened for a time to break up the peaceful settlement which the parties had promised each other to make. Notwithstanding all obstacles, however, the great experiment has been carried to a successful end; and hereafter it cannot be denied that questions involving national sentiment may be decided by arbitration, as well as questions of figures.

The commander who had been permitted, by Providence, to guide some of the greatest military events in history, has thus, in civil life, assisted in presenting to the nations of the world the most conspicuous example of the settlement of international disputes by peaceful arbitration.

It is within my personal knowledge that your own counsels have also had a large share in shaping this great result.

I have, etc., J. C. BANCROFT DAVIS.
Hon. HAMILTON FISH, Secretary of State.

PROTOCOLS OF THE CONFERENCES OF THE ARBITRATORS.

PROTOCOL I.

Record of the Proceedings of the Tribunal of Arbitration under the Provisions of the Treaty between the United States of America and Her Britannic Majesty, concluded on the 8th of May, A. D. 1871, at the First Conference held at Geneva, in Switzerland, on the fifteenth day of December, in the year of our Lord one thousand eight hundred and seventy-one.

The conference was convened at the Hôtel de Ville at Geneva, in compliance with notices from Mr. J. C. Bancroft Davis, agent of the United States, and Lord Tenterden, agent of her Britannic Majesty, in the form following:

The undersigned, having been appointed agent of the United States to attend the Tribunal of Arbitration, about to be convened at Geneva under the provisions of the treaty between the United States and Great Britain of the 8th of May last, has the honor to acquaint Count Sclopis that it is proposed by the Government of the United States that the first meeting of the tribunal should be held at Geneva, if not inconvenient to the arbitrators, on the 15th instant.

J. C. BANCROFT DAVIS.

The arbitrators who were present and produced their respective powers, which were examined and found to be in good and due form, were: Charles Francis Adams, Esquire, the arbitrator named by the President of the United States of America; the Right Honorable Sir Alexander Cockburn, the Lord Chief Justice of England, the arbitrator named by her Britannic Majesty; his Excellency Count Sclopis, the arbitrator named by his Majesty the King of Italy; Mr. Jacques Stämpfli, the arbitrator named by the President of the Swiss Confederation; and his Excellency the Baron d'Itajuba, the arbitrator named by his Majesty the Emperor of Brazil.

J. C. Bancroft Davis, Esquire, attended the conference as the agent of the United States; the Right Honorable Lord Tenterden attended as the agent of her Britannic Majesty.

Mr. Adams proposed that Count Sclopis, as being the arbitrator named by the power first mentioned in the treaty after Great Britain and the United States, should preside over the labors of the tribunal.

The proposal was seconded by Sir Alexander Cockburn, and was unanimously adopted, and Count Sclopis, having expressed his acknowledgments, assumed the presidency.

On the proposal of Count Sclopis the Tribunal of Arbitration requested the arbitrator named by the President of the Swiss Confederation to recommend some suitable person to act as the Secretary of the Tribunal.

The Swiss arbitrator named M. Alexandre Favrot as a suitable person, and M. Alexandre Favrot was thereupon appointed by the Tribunal of Arbitration to act as its secretary during the conferences, and entered upon the duties of that office.

Mr. J. C. Bancroft Davis then presented in duplicate, to each of the arbitrators and to the agent of Great Britain, the printed case of the United States, accompanied by the documents, official correspondence, and other evidence on which they rely.

Lord Tenterden in like manner presented to each of the arbitrators and to the agent of the United States the printed case of the Government of her Britannic Majesty, accompanied by the documents, official correspondence, and other evidence on which it relies.

The Tribunal of Arbitration thereupon directed that the respective counter-cases, additional documents, correspondence, and evidence, called for or

permitted by the fourth article of the treaty, should be delivered to the secretary of the tribunal at the hall of the conference in the Hôtel de Ville at Geneva, for the arbitrators and for the respective agents on or before the 15th day of April next.

The arbitrators further directed that either party desiring, under the provisions of the fourth article of the treaty, to extend the time for delivering the counter-cases, documents, correspondence, and evidence, shall make application to them through the secretary, and that the secretary shall thereupon convene a conference at Geneva at an early day, to suit the convenience of the respective arbitrators, and that the notice thereof shall be given to the agent of the other party.

The Tribunal of Arbitration proceeded to direct that applications by either party, under the provisions of the fourth article of the treaty, for copies of reports or documents specified or alluded to, and in the exclusive possession of the other party, shall be made to the agent of the other party with the same force and effect as if made to the Tribunal of Arbitration.

The Tribunal of Arbitration further directed that, should either party, in accordance with the provisions of the fourth article, call upon the other party, through the arbitration, to produce the originals or certified copies of any papers adduced as evidence, such application shall be made by written notice thereof to the secretary within thirty days after the delivery of the cases, and that thereupon the secretary shall transmit to the agent of the other party a copy of the request; and that it shall be the duty of the agent of the other party to deliver said originals or certified copies to the secretary, as soon as may be practically convenient.

The arbitrators also agreed that, for the purpose of deciding any question arising upon the foregoing rules, the presence of three of their number shall be sufficient.

The conference was adjourned to the following day, 16th of December, at 3 o'clock P. M.

J. C. BANCROFT DAVIS.
TENTERDEN.
ALEX. FAVROT, Secretary.

PROTOCOL II.

Record of the Proceedings of the Arbitration at the Second Conference held at Geneva, in Switzerland, on the 16th day of December, A. D. 1871.

The conference was held pursuant to adjournment. All the arbitrators were present.

Mr. J. C. Bancroft Davis and Lord Tenterden attended the conference as agent of the United States and of her Britannic Majesty, respectively.

The record of the proceedings of the conference held on the 15th instant was read and approved, and the secretary was directed to attest it. Mr. J. C. Bancroft Davis and Lord Tenterden were requested also to sign this and all subsequent records as agents of their respective governments.

The Tribunal of Arbitration directed that when an adjournment of the conference should be entered, it should be entered as an adjournment until the 15th day of June next, subject to a prior call by the secretary as provided for in the proceedings at the first conference.

The tribunal then directed the secretary to make up the record of the proceedings at the second conference as far as completed, which was done, and the record was read and approved.

The Tribunal of Arbitration then adjourned to meet at Geneva, on the 15th day of June next, unless sooner convened by the secretary, in the manner provided in the proceedings at the first conference.

J. C. BANCROFT DAVIS.
TENTERDEN.
ALEX. FAVROT, Secretary.

PROTOCOL III.

Record of the Proceedings of the Tribunal of Arbitration at the Third Conference held at Geneva, in Switzerland, on the 15th day of June, 1872.

The conference was held pursuant to adjournment. All the arbitrators were present.

Mr. J. C. Bancroft Davis and Lord Tenterden attended the conference as agents of the United States and her Britannic Majesty, respectively.

Mr. J. C. Bancroft Davis then delivered in duplicate to each of the arbitrators, and to Lord Tenterden, the agent of her Britannic Majesty, a printed argument, showing the points and referring to the evidence on which his government relies.

Lord Tenterden then, on behalf of her Britannic Majesty's Government, presented the note, of which a copy is annexed, requesting an adjournment of the tribunal for the reasons therein stated, for such a period as might enable a supplementary convention to be concluded and ratified between the United States and her Britannic Majesty.

Mr. Bancroft Davis stated that he could not say what would be the views of his government on this motion until he should know the time for which the adjournment was asked.

Lord Tenterden stated that her Britannic Majesty's Government believed that, in order to afford time for the consideration of a supplementary convention by the Senate of the United States in their session commencing in December next, and for its subsequent consideration by her Britannic Majesty's Government, and for its ratification by the high contracting parties respectively, it would be requisite that the adjournment should be for a period of eight months, but that power might be reserved for the arbitrators to meet at any earlier date, upon being convened for that purpose by the secretary of the tribunal, upon the joint request, in writing, of the agents of the two governments.

Mr. Bancroft Davis said that his instructions did not yet enable him to state to the arbitrators the views of the Government of the United States on this motion in full. He said that he was in telegraphic communication with his government, and he asked an adjournment until Monday, the 17th instant.

The tribunal decided that the protocols should be signed by the president and secretary of the tribunal, and the agents of the two governments.

The conference was then adjourned to Monday, the 17th day of June, at 2 o'clock.

FREDERICK SCLOPIS.
J. C. BANCROFT DAVIS.
TENTERDEN.
ALEX. FAVROT, Secretary.

ANNEX.

The undersigned, agent of her Britannic Majesty, is instructed by her Majesty's Government to state, to Count Sclopis,* the arbitrator named by his Majesty the King of Italy, that they regret to be under the necessity of informing the arbitrators that the difference between her Majesty's Government and the Government of the United States, referred to in the note which the undersigned had the honor to address to Count Sclopis when presenting the British counter-case on the 15th of April last, has not yet been removed.

Her Majesty's Government have, however, been engaged in negotiations with the Government of the United States, which have continued down to the present time, for the solution of the difficulty which has thus arisen; and they do not abandon the hope that, if further time were given for that purpose, such a solution might be practicable.

Under these circumstances, the course which her Majesty's Government would respectfully request the tribunal to take is to adjourn the present meet-

* A similar note was addressed to each of the arbitrators.

ing for such a period as may enable a supplementary convention to be still concluded and ratified between the high contracting parties.

Having lodged the present application, the undersigned is instructed to withhold the written or printed argument which the undersigned, as agent of her Majesty, is directed to put in under the 5th article of the treaty, although that argument has been duly prepared and is in the hands of the undersigned.

The undersigned is further directed to say that her Majesty's Government (while they would consider the tribunal to have full power to proceed at the end of the period of adjournment, if the difference between the high contracting parties should then have been removed, notwithstanding the non-delivery on this day of the argument by the undersigned) continue, while requesting this adjournment, to reserve all her Majesty's rights, in the event of an agreement not being finally arrived at, in the same manner as was expressed in the note addressed by the undersigned to Count Sclopis on the 15th of April.

The undersigned has the honor to renew to Count Sclopis the assurance of his highest consideration.

GENEVA, June 15, 1872.

TENTERDEN.

PROTOCOL IV.

Record of the Proceedings of the Tribunal of Arbitration at the Fourth Conference held at Geneva, in Switzerland, on the 17th day of June, 1872.

The conference was held pursuant to adjournment. All the arbitrators were present.

Mr. J. C. Bancroft Davis and Lord Tenterden attended the conference as agents of the United States and her Britannic Majesty, respectively.

The protocol of the last conference was read and approved, and was signed by the president and secretary of the tribunal and the agents of the two governments.

Mr. Bancroft Davis stated that he was still without definite instructions from his government regarding the request of the British agent for adjournment, and suggested a further adjournment of the tribunal until Wednesday, the nineteenth instant.

Lord Tenterden said that he could make no objection. The conference was then adjourned to Wednesday, the 19th instant, at 2 o'clock.

FREDERICK SCLOPIS.
J. C. BANCROFT DAVIS.
TENTERDEN.
ALEX. FAVROT, Secretary.

PROTOCOL V.

Record of the Proceedings of the Tribunal of Arbitration at the Fifth Conference held at Geneva, in Switzerland, on the 19th of June, 1872.

The conference was held pursuant to adjournment. All the arbitrators were present.

Mr. J. C. Bancroft Davis and Lord Tenterden attended the conference as agents of the United States and her Britannic Majesty, respectively.

The protocol of the last conference was read and approved, and was signed by the president and secretary of the tribunal, and the agents of the two governments.

Count Sclopis, as president of the tribunal, inquired whether Mr. Bancroft Davis had yet received definitive instructions from his government.

Mr. Bancroft Davis replied that he had not.

Count Sclopis then, on behalf of all the arbitrators, made the following statement:

The application of the agent of her Britannic Majesty's Government being now before the arbitrators, the president of the tribunal (Count Sclopis) proposes to make the following communication on the part of the arbitrators to the parties interested:

The arbitrators wish it to be understood, that in the observations which they are about to make they have in view solely the application of the agent of her Britannic

Majesty's Government, which is now before them, for an adjournment, which might be prolonged till the month of February in next year; and the motives for that application, namely, the difference of opinion which exists between her Britannic Majesty's Government and the Government of the United States as to the competency of the tribunal, under the Treaty of Washington, to deal with the claims advanced in the case of the United States in respect of losses under the several heads of—1. "The losses in the transfer of the American commercial marine to the British flag;" 2. "The enhanced payments of insurance;" and 3. "The prolongation of the war, and the addition of a large sum to the cost of the war and the suppression of the rebellion;" and the hope which her Britannic Majesty's Government does not abandon, that if sufficient time were given for that purpose, a solution of the difficulty which has thus arisen, by the negotiation of a supplementary convention of the two governments, might be found practicable.

The arbitrators do not propose to express or imply any opinion upon the point thus in difference between the two governments as to the interpretation or effect of the treaty; but it seems to them obvious that the substantial object of the adjournment must be to give the two governments an opportunity of determining whether the claims in question shall or shall not be submitted to the decision of the arbitrators, and that any difference between the two governments on this point may make the adjournment unproductive of any useful effect, and, after a delay of many months, during which both nations may be kept in a state of painful suspense, may end in a result which, it is to be presumed, both governments would equally deplore—that of making this arbitration wholly abortive. This being so, the arbitrators think it right to state that, after the most careful perusal of all that has been urged on the part of the Government of the United States in respect of these claims, they have arrived, individually and collectively, at the conclusion that these claims do not constitute, upon the principle of international law applicable to such cases, good foundation for an award of compensation or computation of damages between nations, and should, upon such principles, be wholly excluded from the consideration of the tribunal in making its award, even if there were no disagreement between the two governments as to the competency of the tribunal to decide thereon.

With a view to the settlement of the other claims to the consideration of which by the tribunal no exception has been taken on the part of her Britannic Majesty's Government, the arbitrators have thought it desirable to lay before the parties this expression of the views they have formed upon the question of public law involved, in order that after this declaration by the tribunal it may be considered by the Government of the United States whether any course can be adopted respecting the first-mentioned claims which would relieve the tribunal from the necessity of deciding upon the present application of her Britannic Majesty's Government.

Count Sclopis added that it was the intention of the tribunal that this statement should be considered for the present to be confidential.

Count Sclopis then asked whether the agents or either of them wished to say any thing touching the declaration just made.

Mr. Bancroft Davis said that he was necessarily without instructions to meet the contingency which had arisen from the action thus taken by the arbitrators. He therefore left it with the tribunal to say whether, in view of this fact, it ought not of its own motion to make an adjournment sufficient to afford time for the proper consideration of the new position created by the announcement of the tribunal.

The tribunal then ordered this conference to adjourn until Wednesday, the 26th instant, at 2 o'clock in the afternoon.

FREDERICK SCLOPIS.
J. C. BANCROFT DAVIS.
TENTERDEN.
ALEX. FAVROT, Secretary.

PROTOCOL VI.

Record of the Proceedings of the Tribunal of Arbitration at the Sixth Conference held at Geneva, in Switzerland, on the 25th of June, 1872.

The conference was held pursuant to a call by the president, Count Sclopis. All the arbitrators were present.

Mr. J. C. Bancroft Davis and Lord Tenterden at-

tended the conference as agents of the United States and her Britannic Majesty, respectively.

Count Sclopis, as president of the tribunal, stated that he had received from Mr. Bancroft Davis the information that he was prepared to communicate to the tribunal the action authorized by his government respecting the declaration made by the arbitrators at the last conference.

Count Sclopis added that, being desirous of advancing the work of the tribunal, he had, therefore, convoked the conference this day, instead of Wednesday, the day to which the adjournment had been made.

Mr. Bancroft Davis stated as follows:

The declaration made by the tribunal, individually and collectively, respecting the claims presented by the United States for the award of the tribunal for—1. "The losses in the transfer of the American commercial marine to the British flag;" 2. "The enhanced payments of insurance;" and 3. "The prolongation of the war and the addition of a large sum to the cost of the war and the suppression of the rebellion;" is accepted by the President of the United States as determinative of their judgment upon the important question of public law involved.

The agent of the United States is authorized to say that, consequently, the above-mentioned claims will not be further insisted upon before the tribunal by the United States, and may be excluded from all consideration in any award that may be made.

Lord Tenterden then said:

I will inform my government of the declaration made by the arbitrators on the 19th instant, and of the statement now made by the agent of the United States, and request their instructions.

The conference was then adjourned to Tuesday, the 27th instant, at 11 o'clock in the morning.

FREDERICK SCLOPIS.
J. C. BANCROFT DAVIS.
TENTERDEN.
ALEX. FAVROT, Secretary.

PROTOCOL VII.

Record of the Proceedings of the Tribunal of Arbitration, at the Seventh Conference, held at Geneva, in Switzerland, on the 27th of June, 1872.

The conference was held pursuant to adjournment. All the arbitrators were present.

Mr. J. C. Bancroft Davis and Lord Tenterden attended the conference as agents of the United States and her Britannic Majesty, respectively.

The protocol of the last conference was read and approved, and was signed by the president and secretary of the tribunal, and the agents of the two governments.

Count Sclopis, as president of the tribunal, inquired whether Lord Tenterden had received the instructions from his government for which he had said that he would apply at the last conference.

Lord Tenterden then read the following statement:

The undersigned, agent of her Britannic Majesty, is authorized by her Majesty's Government to state that her Majesty's Government find in the communication on the part of the arbitrators, recorded in the protocol of their proceedings of the 19th instant, nothing to which they cannot assent, consistently with the view of the interpretation and effect of the Treaty of Washington hitherto maintained by them; and being informed of the statement made on the 25th instant by the agent of the United States, that the several claims particularly mentioned in that statement will not be further insisted upon before the tribunal by the United States, and may be excluded from all consideration in any award that may be made; and assuming that the arbitrators will, upon such statement, think fit now to declare that the said several claims are, and from henceforth will be, wholly excluded from their consideration, and will embody such declaration in their protocol of this day's proceedings; they have instructed the undersigned, upon this being done, to request leave to withdraw the application made by him to the tribunal on the 15th instant for such an adjournment as might enable a supplementary convention to be concluded and ratified between the high contracting parties; and to request leave to deliver

the printed argument, now in the hands of the undersigned, which has been prepared on the part of her Britannic Majesty's Government under the fifth article of the treaty with reference to the other claims, to the consideration of which by the tribunal no exception has been taken on the part of her Majesty's Government.

TENTERDEN.

Mr. Bancroft Davis said that he made no objection to the granting of the request made by Lord Tenterden to be permitted to withdraw his application for an adjournment, and to file the argument of her Britannic Majesty's Government.

Count Sclopis, on behalf of all the arbitrators, then declared that the said several claims for indirect losses mentioned in the statement made by the agent of the United States on the 25th instant and referred to in the statement just made by the agent of her Britannic Majesty, are, and from henceforth shall be, wholly excluded from the consideration of the tribunal, and directed the secretary to embody this declaration in the protocol of this day's proceedings.

He at the same time informed Lord Tenterden that the tribunal assented to his request for leave to withdraw his application for a prolonged adjournment, and also to his request for leave to deliver the printed argument which had been prepared on the part of her Britannic Majesty's Government.

Lord Tenterden then presented copies of the argument in duplicate to each of the arbitrators and to the agent of the United States.

Count Sclopis stated that the tribunal no longer desired the proceedings to be considered confidential, so far as publication of them by the United States and British Governments is concerned.

He then proceeded to read an address as follows :

Messieurs : Au moment où le monde qui menaçait d'entraver pour longtemps encore l'exécution du traité de Washington vient d'être si heureusement tranché, à l'heure où nos travaux vont prendre un cours libre et régulier, permettez-moi de vous dire, messieurs et très-honorés collègues, combien j'apprécie l'honneur de siéger avec vous dans ce tribunal d'arbitrage, sur lequel sont fixés aujourd'hui les regards du monde civilisé.

Laissez-moi ensuite vous exprimer tout ce que j'éprouve de reconnaissance pour la marque flatteuse de confiance qu'il vous a plu de m'accorder en m'appelant à occuper ce fauteuil.

Je comprends parfaitement tout le prix de cette distinction si peu méritée; mais je comprends mieux encore le besoin que j'aurai d'être soutenu par le concours de vos lumières, et par l'appui de votre indulgence dans l'exercice des fonctions que vous m'avez confiées. Ce sera à vous que je le devrai, si je ne vais pas paraître trop au-dessous de ma tâche.

La réunion de ce tribunal d'arbitrage signale, à elle seule, une nouvelle direction imprimée aux idées qui gouvernent la politique des nations les plus avancées sur la voie de la civilisation.

Nous sommes arrivés à une époque où, dans les sphères les plus élevées de la politique, l'esprit de modération et le sentiment d'équité commencent partout à prévaloir sur les tendances des vieilles routines d'un arbitraire insolent ou d'une indifférence coupable. Diminuer les occasions de faire la guerre, atténuer les malheurs qu'elle entraîne à sa suite, placer les intérêts de l'humanité au-dessus des ceux de la politique, voilà l'œuvre vers laquelle se dirigent toutes les grandes intelligences, tous les cœurs haut placés. Aussi avec quel bonheur n'a-t-on pas salué vos si noblement exprimés par le congrès de Paris en 1856, que les États entre lesquels s'élèverait un dissentiment sérieux, avant d'en appeler aux armes, eussent recours, en tant que les circonstances l'admettraient, aux bons offices des puissances amies! Que de bons effets n'avait-on pas à attendre de la déclaration de ce même congrès concernant l'abolition de la course, et le respect de la propriété privée? Enfin nous ne saurions oublier ici cette convention de Genève, qui parvint à placer sous la protection spéciale du droit des gens les élan de la charité sur les champs de bataille.

On a bien dû regretter que les vœux si chastes et si sages du congrès de Paris n'aient pas été promptement secondés par les événements. De cruels démentis ont été donnés aux aspirations des âmes délitte; * mais l'autorité

morsale des principes proclamés à cette époque ne s'est point affaiblie.

Grâce à l'initiative des hommes d'état qui président aux destinées de l'Amérique et de l'Angleterre, cette idée généreuse commence à porter ses fruits.

Le grand esai de l'application des règles austères et calmes du droit aux questions ardentes de la politique va se faire. L'histoire contemporaine racontera à la postérité que, même dans la chaleur des plus vives récriminations, on a toujours songé des deux côtés de l'Atlantique à tenir ouvertes les voles d'un accommodement acceptable par les amis de la paix et du progrès.

A travers des négociations nécessairement longues, sous l'action des courants variables de l'opinion publique, inévitables chez les gouvernements à base populaire, le but de ces magnanimes efforts ne fut jamais perdu de vue. Personne, certes, ne pouvait en contester l'utilité; mais d'en venir au point d'accepter purement et simplement le système de l'arbitrage, de renoncer à ce privilège, si cher aux ambitions vulgaires, de se faire justice de sa main, voilà ce qui exigeait une rare fermeté de conviction, un dévouement à toute épreuve aux intérêts de l'humanité. Aussi le premier ministre d'Angleterre a-t-il eu raison de parler du traité de Washington dans des termes qui caractérisent à la fois la grandeur et les difficultés de l'entreprise. "Il se peut," disait-il, "que ce soit une espérance trop éclatante pour être réalisée dans ce monde de misères où nous vivons; l'expérience du moins est digne de l'effort. On recherche, si il est possible, de soumettre ces conflits d'opinion entre deux nations au jugement d'un tribunal de raison, au lieu de l'arbitrage sanglant des armes. L'histoire se souviendra à l'égard des États-Unis et du Royaume-Uni que, ayant à vider de sérieux conflits, et se sentant bien disposées de part et d'autre à céder le terrain, ils se sont néanmoins appliqués à assurer la paix, et non-seulement à régler leurs propres conflits, mais aussi à donner un exemple qui sera fécond en bienfaits pour les autres nations."

On a dit que le triomphe d'une idée utile n'est jamais qu'une question de date. Félicitons-nous, messieurs, d'assister à la réalisation d'un dessein qui doit être fécond des meilleurs résultats; espérons qu'il tiendra dans l'avenir tout ce qu'il promet aujourd'hui.

Nous avons entendu ce cri terrible "la force prime le droit;" c'est un défi porté à la civilisation. Nous voyons maintenant la politique s'adresser à la justice, pour ne pas abuser de la force; c'est un hommage que la civilisation doit recevoir avec bonheur.

Ne nous plaignons pas trop si les questions que nous sommes appelés à résoudre nous arrivent à la suite d'agitations prolongées. Reconnaissons plutôt l'importance des documents qui nous ont été fournis et des raisonnements dont ils ont été accompagnés.

Les longues investigations préparent les meilleures solutions. On navigue plus sûrement sur les rivières qui ont été le mieux sondées.

Le droit des gens a été trop souvent regardé comme un sol mobile, sur lequel, au moment où l'on croit avancer, le pied glisse en arrière. Serait-ce un espoir indécrot que celui de parvenir par nos efforts à rendre ce sol un peu moins raïssant?

L'objet de nos délibérations demande des études aussi variées que sérieuses. Nous aurons à l'examiner à des points de vue différents. Ce sera tantôt avec la large perception de l'homme d'état, tantôt avec l'œil scrutateur d'un président aux assises, toujours avec un profond sentiment d'équité et avec une impartialité absolue.

Nous nous promettons beaucoup de l'aide empressée des agents des deux puissances qui ont eu recours à ce tribunal; leur haute intelligence et leur zèle éclairé nous sont également connus.

Enfin le tribunal se confie dans l'assistance des conseils des hautes parties présentes à la barre, de ces jurisconsultes éminents dont le nom vaut un éloge. Nous nous attendons qu'ils coopéreront franchement avec nous dans ce qui doit être, non-seulement un acte de bonne justice, mais encore un travail de grande pacification.

Puissions-nous répondre complètement aux louables intentions des puissances qui nous ont honorés de leur choix; puissions-nous remplir, avec l'aide de Dieu, une mission qui mette fin à de longs et pénibles différends; qui, en réglant de graves intérêts, apaise de douloureuses

des *Commentaries upon International Law*, 1871. "I am obliged to close this chronicle of events by the admission that the suggestion contained in the last protocol to the Treaty of Paris, 1856, has remained a dead-letter, except perhaps in the case of Luxemburg. Neither of the belligerents in the present horrible war would listen to the suggestion of such an arbitration."

† Discours prononcé par Monsieur Gladstone au banquet d'installation du nouveau lord-maire, le 9 novembre, 1871.

* "In the performance of a melancholy duty," dit Sir Robert Phillimore dans la préface à la deuxième édition

émotions, et qui ne soit pas sans quelque heureuse influence sur le maintien de la paix du monde et le progrès de la civilisation.

Vos vœux, très-honorés collègues, s'accorderont sans doute avec les miens pour que l'essai que l'on va faire serve à écarter dans l'avenir les occasions de luttes sanglantes et à raffermir l'empire de la raison.

Dans cette douce prévision, j'aime à rappeler ces paroles du héros de l'Amérique, de George Washington: "S'il y a une vérité fortement établie, c'est qu'il y a ici-bas un lien indissoluble entre les pures maximes d'une politique honnête et magnanime et les solides récompenses de la prospérité et du bonheur public."⁴

Lord Tenterden then stated that Sir Roundell Palmer, her Britannic Majesty's counsel, had prepared, for the consideration of the tribunal, a statement of certain points of importance, as to which he desires to have an opportunity of submitting to the tribunal further arguments, in answer to those contained in the argument of the United States delivered on the 15th inst., and that Sir Roundell Palmer would now, with the permission of the tribunal, read such statement, of which, with a translation which would be prepared without delay, copies will be delivered to the several arbitrators and to the agent of the United States in the course of the day; and, as the preparation of any further arguments on those, or any other points, will necessarily require some time to be allowed, he begged respectfully to suggest that the counsel on both sides should be informed of the time which the tribunal will be willing to allow, before requiring their further attendance for the purpose of any arguments. If the interval so granted can be extended to the 1st of August next, it is believed that this will meet the views of the counsel and agents of both parties, and may probably enable the counsel, when again before the tribunal, to discharge their duty in a shorter time than might otherwise be requisite.

Sir Roundell Palmer then read a statement.

Mr. Bancroft Davis then said that upon being furnished with a copy of the paper, now presented on the part of her Britannic Majesty's counsel, he would lay the same before the counsel of the United States, and would present their views to the tribunal after such consultation.

Count Sclopis then stated that the tribunal had, at the request of the agent of her Britannic Majesty, granted permission to Sir Roundell Palmer to read the statement requesting the tribunal to authorize him to furnish the arbitrators with further arguments on the points therein specified, and that, with reference to this request, Mr. Adams, as one of the arbitrators, had suggested a preliminary question, viz., whether under the terms of Article V. of the Treaty of Washington, it is competent for the agents or counsel to make requests of this nature, and that the tribunal, after discussion, and having in view the precise terms of the treaty, had decided that the arbitrators alone have the right, if they desire further elucidation with regard to any point, to require a written or printed statement or argument, or oral argument by counsel upon it, under the terms of the said article.

The conference was then adjourned until Friday, the 28th instant, at 11 o'clock A. M.

ALEX. FAVROT, Secretary.

PROTOCOL VIII.

Record of the Proceedings of the Tribunal of Arbitration at the Eighth Conference, held at Geneva, Switzerland, on the 23rd of June, 1872.

The conference was held pursuant to adjournment. All the arbitrators and the agents of the two governments were present.

The protocol of the last conference was read and

* Discours prononcé le 30 avril 1789 dans la séance du Sénat américain, lors de la proclamation de Washington à la présidence, et de John Adams à la vice-présidence, des États-Unis.

approved, and was signed by the president and secretary of the tribunal and the agents of the two governments.

Sir Alexander Cockburn, as one of the arbitrators, then proposed to the tribunal to require a written or printed statement or argument by the counsel of the two governments for further elucidation on the following points, viz.:

1. What is the "due diligence" required from a neutral state, according to the general rules of international law, and according to the rules of the sixth article of the Treaty of Washington?
 2. What were the international obligations of neutral states in respect to the construction, sale, and fitting out within neutral territory, of ships intended for warlike use by a belligerent, independently of the municipal legislation of the neutral state, and of the rules laid down by the Treaty of Washington?
 3. What rights are conferred upon a belligerent power by the municipal legislation of a neutral state for the maintenance of its neutrality, if such legislation exceeds the limits of the obligations previously imposed upon neutral states by international law?
 4. Is a neutral state under any international obligation to detain in, or exclude from its ports, vessels fitted out in violation of its neutrality, after such vessels have been commissioned as public ships-of-war by a belligerent power, whether such power be or be not recognized as a sovereign state?
 5. Whether her Majesty's proclamation of neutrality, recognizing the belligerency of the Confederate States, is in any, and what way, material to the question of the liability of Great Britain for losses sustained by the United States, in consequence of the acts of the vessels referred to in the Treaty of Washington?
 6. Whether the laws of Great Britain, during the civil war, were, or were not, sufficient, if properly enforced, for the fulfilment of her Britannic Majesty's neutral obligations?
 7. If a vessel, which has been fitted out in violation of the neutrality of a neutral state, has escaped from the neutral territory, through some want of due diligence on the part of the neutral government, ought such neutral state to be held responsible to the other belligerent for captures made by such vessel?
- If so, to what period does this responsibility extend? May it be modified or terminated by circumstances afterward supervening (as, for instance, by assistance afterward rendered to the vessel by an independent power, without which her capacity for warlike purposes would have ceased, or by her entrance into a port of the belligerent to whom she belongs), or does it necessarily extend to the end of the war?

Furthermore, does this responsibility still exist, when the persons who made such captures were insurgent citizens of the state, against which they waged war, to whom, upon the conclusion of the war, such illegal acts have been condoned?

8. If a vessel, which has not been fitted out or armed in violation of the neutrality of a neutral state, is afterward permitted to receive supplies of coal and repairs in a neutral port, does the neutral state, in whose port she receives such supplies and repairs, incur on that account a responsibility for her subsequent captures, or any of them?

After deliberation a majority of the tribunal decided not to require such statement or argument at present.

The tribunal then decided that, in the course of their discussions and deliberations, the agents should attend the conferences, accompanied by the counsel of their respective governments, except in cases when the tribunal should think it advisable to conduct their discussions and deliberations with closed doors.

The tribunal then determined to permit publicity to be given to the statement made by the agent of her Britannic Majesty at the third conference, the declaration of the arbitrators made at the fifth con-

ference, the subsequent statements of the agent of the United States made at the sixth conference, and of the agent of her Britannic Majesty made at the seventh conference, and the address of the president of the tribunal delivered at the seventh conference.

The tribunal then adjourned until Monday, the 15th proximo, at 2 o'clock in the afternoon.

PROTOCOL IX.

Record of the Proceedings of the Tribunal of Arbitration, at the Conference held at Geneva, in Switzerland, on the 15th of July, 1872.

The conference was held pursuant to adjournment. All the arbitrators and the agents of the two governments were present.

The protocol of the last conference was read and approved, and was signed by the president and secretary of the tribunal, and the agents of the two governments.

Count Sclopis, as president, said that it would be necessary in the first place to determine the method and order of proceeding, in the consideration of the subjects referred to the tribunal.

Mr. Stämpfli stated that he had prepared, and proposed to submit, for the adoption of the tribunal, a written programme on this question.

After discussion, the consideration of this programme was deferred to the next conference.

The tribunal then adjourned until Tuesday, the 16th instant, at 2 o'clock in the afternoon.

C.—Détermination du tribunal d'adjuger une somme en bloc.

D.—Examen des éléments pour fixer une somme en bloc.

E.—Conclusion et adjudication définitive d'une somme en bloc.

Sir Alexander Cockburn, one of the arbitrators, submitted the following propositions to the consideration of the tribunal.

I. That the complaint of the Government of the United States is of a threefold character, and may be stated under the three following heads, namely:

1. That, by want of due diligence on the part of the British Government, vessels-of-war were suffered to be equipped in ports of her Majesty, and to depart therefrom, to the injury of American commerce.

2. That such vessels, having been again found in British ports or waters, were not seized or detained, but were suffered to go forth again on the same destructive service.

3. That such vessels received undue assistance, or were permitted to remain an unduly long time, in ports within her Majesty's dominions.

II. That on each of these heads of complaint, the decision of the tribunal must depend, not only on the facts relating to each vessel, but also on the principles of international law applicable to the particular subject.

III. That the rational, logical, and most convenient course to be pursued will be, before proceeding to deal with each of these heads of complaint, to consider and determine what are the principles of law applicable to the subject, and by which the decision of the tribunal must ultimately be determined.

IV. That it will be convenient to take the three heads of complaint separately, and in the order hereinbefore stated.

V. That there is nothing in the VIIIth Article of the treaty which prevents the adoption of this mode of proceeding, the only object and effect of that article being to insure the separate consideration of the facts relating to each vessel, and a separate and distinct judgment of the tribunal on the complaints specifically referable to each in particular.

VI. That the consideration of the first-mentioned head of complaint, reference being had to the VIIIth Article of the treaty, and the rules therein laid down, necessarily involves three questions of law: the first, what effect is to be given to the term "due diligence," with reference to the different allegations of the want thereof put forward by the United States Government; the second, whether the general principles of international law, referred to in such VIIIth Article, have relatively to the rights and duties of neutrals any and what effect in determining what constitutes due diligence or the want of it, or in extending or limiting the liability of a neutral state with reference to this head of complaint; the third, whether a government, acting in good faith, and honestly intending to fulfil the obligations of neutrality, is to be held liable by reason of mistake, error in judgment, accidental delay, or even negligence on the part of a subordinate officer.

VII. That it will be convenient, and indeed necessary, to commence our proceedings with the consideration of these questions of law.

VIII. That, looking to the difficulty of these questions, and the conflict of opinion which has arisen among distinguished jurists on the present contest, as well as to their vast importance in the decision of the tribunal on the matters in dispute, it is the duty, as it must be presumed to be the wish of the arbitrators, in the interest of justice, to obtain all the assistance in their power, to enable them to arrive at a just and correct conclusion. That they ought, therefore, to call for the assistance of the eminent counsel who are in attendance on the tribunal, to assist them with their reasoning and learning, so that arguments scattered over a mass of documents may be presented in a concentrated and appreciable form, and the tribunal may thus have the advantage of all the light which can be thrown on so intricate and difficult a matter, and that its proceedings may hereafter appear to the world to have been characterized by the patience, the deliberation, and anxious desire for information on all

the points involved in its decision, without which it is impossible that justice can be duly or satisfactorily done.

After discussion, the tribunal decided to proceed with the case of the Florida at the next meeting, according to the programme of Mr. Stämpfli.

The tribunal then adjourned until Wednesday, the 17th inst., at 1 o'clock in the afternoon.

ALEX. FAVROT, Secretary.

PROTOCOL XI.

Record of the Proceedings of the Tribunal of Arbitration, at the Eleventh Conference, held at Geneva, in Switzerland, on the 17th of July, 1872.

The conference was held pursuant to adjournment. All the arbitrators and the agents of the two governments were present.

The protocol of the last conference was read and approved, and was signed by the president and secretary of the tribunal, and the agents of the two governments.

On the proposal of Sir Alexander Cockburn, it was decided that the written opinions or statements read by the arbitrators to the tribunal should be printed, and distributed to the arbitrators and to the agents and counsel of the two Governments.

The tribunal then proceeded with the consideration of the case of the Florida.

The conference was adjourned until Friday, the 19th inst., at one o'clock in the afternoon.

FREDERICK SCLOPIS.
J. C. BANCROFT DAVIS.
TENTERDEN.
ALEX. FAVROT, Secretary.

PROTOCOL XII.

Record of the Proceedings of the Tribunal of Arbitration at the Twelfth Conference, held at Geneva, in Switzerland, on the 19th of July, 1872.

The conference was held pursuant to adjournment. All the arbitrators and the agents of the two governments were present.

The protocol of the last conference was read and approved, and was signed by the president and secretary of the tribunal, and the agents of the two governments.

The tribunal continued with the consideration of the case of the Florida.

The tribunal decided that the meetings should, for the present, be held on Mondays, Tuesdays, Wednesdays, Thursdays, and Fridays.

The conference then adjourned until Monday, the 22d inst., at half-past 12 o'clock.

FREDERICK SCLOPIS.
J. C. BANCROFT DAVIS.
TENTERDEN.
ALEX. FAVROT, Secretary.

PROTOCOL XIII.

Record of the Proceedings of the Tribunal of Arbitration at the Thirteenth Conference, held at Geneva, in Switzerland, on the 22d of July, 1872.

The conference was held pursuant to adjournment. All the arbitrators and the agents of the two governments were present.

The protocol of the last conference was read and approved, and was signed by the president and secretary of the tribunal, and the agents of the two governments.

The tribunal continued with the consideration of the case of the Florida.

Sir Alexander Cockburn, as one of the arbitrators, proposed to the tribunal under the fifth article of the Treaty of Washington, to call for the assistance of counsel upon the effect of the term of "due diligence," and as to the principles of international law applicable to the case under the terms of that article.

After deliberation, a majority of the tribunal de-

cided that it does not at present require the assistance of the agents and counsel upon the point proposed by Sir Alexander Cockburn; but that it reserves the right of requiring that assistance on any point, if necessary, according to the fifth article of the treaty.

The tribunal also decided to consider at the next conference the case of the Alabama, and the questions of "due diligence," and the effect of a commission in connection with that vessel.

The conference was adjourned until Thursday, the 25th inst., at half-past 12 o'clock.

PROTOCOL XIV.

Record of the Proceedings of the Tribunal of Arbitration at the Fourteenth Conference, held at Geneva, in Switzerland, on the 25th of July, 1872.

The conference was held pursuant to adjournment. All the arbitrators and the agents of the two governments were present.

The protocol of the last conference was read and approved, and was signed by the president and secretary of the tribunal, and the agents of the two governments.

On the proposal of Baron d'Itajubá, as one of the arbitrators, the tribunal decided to require a written or printed statement or argument from the counsel of Great Britain upon the following questions of law:

1. The question of due diligence, generally considered;

2. The special question, as to the effect of the commissions of Confederate ships-of-war entering British ports;

3. The special question, as to supplies of coal in British ports to Confederate ships;

With the right to the other party to reply either orally or in writing, as the case may be.

Baron d'Itajubá proposed that when a proposition should be made to the tribunal, the discussion of that proposition should always be put off to the next following conference; which was agreed to.

The tribunal then proceeded with the case of the Alabama.

The tribunal also decided to consider at the next conference the cases of the Sumter, Nashville, and Chickamauga, successively.

The conference was then adjourned until Monday, the 29th inst., at half-past 12 o'clock.

FREDERICK SCLOPIS.
J. C. BANCROFT DAVIS.
TENTERDEN.
ALEX. FAVROT, Secretary.

PROTOCOL XV.

Record of the Proceedings of the Tribunal of Arbitration at the Fifteenth Conference, held at Geneva, in Switzerland, on the 29th of July, 1872.

The conference was held pursuant to adjournment. All the arbitrators and the agents of the two governments were present.

The protocol of the last conference was read and approved, and was signed by the president and secretary of the tribunal, and the agents of the two governments.

Lord Tenterden, agent of her Britannic Majesty, announced that he had already delivered to the secretary a written statement or argument from the counsel of her Britannic Majesty, upon the three questions of law required by the tribunal at the preceding conference.

The tribunal then proceeded with the cases of the vessels, the Sumter, the Nashville, and the Chickamauga, as decided at the last meeting.

The tribunal also decided to consider at the next conference the cases of the Olustee or Tallahassee, the Retribution, and the Tuscaloosa.

The conference was then adjourned until Tuesday, the 30th instant, at half-past 12 o'clock.

FREDERICK SCLOPIS.
J. C. BANCROFT DAVIS.
TENTERDEN.
ALEX. FAVROT, Secretary.

PROTOCOL XVI.

Record of the Proceedings of the Tribunal of Arbitration at the Sixteenth Conference, held at Geneva, in Switzerland, on the 30th of July, 1872.

The conference was held pursuant to adjournment. All the arbitrators and the agents of the two governments were present.

The protocol of the last conference was read and approved, and was signed by the president and secretary of the tribunal, and the agents of the two governments. The tribunal then proceeded with the cases of the vessels the Tuscaloosa, the Tallahassee, and the Retribution.

The tribunal also decided to devote the next conference to receiving the written or oral statement or argument of the counsel of the United States, in reply to the argument presented at the last conference by the counsel of her Britannic Majesty.

The conference was then adjourned until Monday, the 5th of August, at half-past 12 o'clock.

FREDERICK SCLOPIS.
J. C. BANCROFT DAVIS.
TENTERDEN.
ALEX. FAVROT, Secretary.

PROTOCOL XVII.

Record of the Proceedings of the Tribunal of Arbitration at the Seventeenth Conference, held at Geneva, in Switzerland, on the 5th of August, 1872.

The conference was held pursuant to adjournment. All the arbitrators and the agents of the two governments were present.

The protocol of the last conference was read and approved, and was signed by the president and secretary of the tribunal, and the agents of the two governments.

The tribunal proceeded with the hearing of the oral argument by Mr. Evarts, counsel of the United States, in reply to the argument presented by Sir Roundell Palmer, counsel of her Britannic Majesty, at the fifteenth conference.

The tribunal then adjourned until Tuesday, the 6th instant, at half-past 12 o'clock.

FREDERICK SCLOPIS.
J. C. BANCROFT DAVIS.
TENTERDEN.
ALEX. FAVROT, Secretary.

PROTOCOL XVIII.

Record of the Proceedings of the Tribunal of Arbitration at the Eighteenth Conference, held at Geneva, in Switzerland, on the 6th of August, 1872.

The conference was held pursuant to adjournment. All the arbitrators, and the agents of the two governments were present.

The protocol of the last conference was read and approved, and was signed by the president and secretary of the tribunal, and the agents of the two governments.

Mr. Evarts concluded the oral argument on the part of the counsel of the United States in reply to the argument on the part of the counsel of her Britannic Majesty.

Mr. Cushing delivered to the tribunal a written argument on the part of the counsel of the United States in reply to a portion of the argument presented by the counsel of her Britannic Majesty.

The tribunal then adjourned until Thursday, the 8th instant, at half-past 12 o'clock.

FREDERICK SCLOPIS.
J. C. BANCROFT DAVIS.
TENTERDEN.
ALEX. FAVROT, Secretary.

PROTOCOL XIX.

Record of the Proceedings of the Tribunal of Arbitration at the Nineteenth Conference, held at Geneva, in Switzerland, on the 8th of August, 1872.

The conference was held pursuant to adjournment. All the arbitrators, and the agents of the two governments were present.

The protocol of the last conference was read and approved, and was signed by the president and secretary of the tribunal, and the agents of the two governments.

The tribunal concluded the examination of the case of the Retribution.

Mr. Waite delivered to the tribunal a written argument on the part of the counsel of the United States, in reply to a portion of the argument presented by the counsel of her Britannic Majesty.

The tribunal then adjourned until Wednesday, the 14th instant, at half-past 12 o'clock.

FREDERICK SCLOPIS.
J. C. BANCROFT DAVIS.
TENTERDEN.
ALEX. FAVROT, Secretary.

PROTOCOL XX.

Record of the Proceedings of the Tribunal of Arbitration at the Twentieth Conference, held at Geneva, in Switzerland, on the 14th of August, 1872.

The conference was held pursuant to adjournment. All the arbitrators and the agents of the two governments were present.

The protocol of the last conference was read and approved, and was signed by the president and secretary of the tribunal, and the agents of the two governments.

Mr. Bancroft Davis, in reply to an inquiry from Count Sclopis on behalf of the tribunal, stated as follows:

The claims for losses growing out of the acts of the *Salle*, the *Jeff Davis*, the *Music*, the *Boston*, and the *V. H. Joy*, are respectfully submitted for the determination of the tribunal.

The agent of the United States has no instructions regarding them, except what appears in the list of claims presented on the 15th of December last, and in the revised list of claims presented on the 15th of April last.

The tribunal directed this statement to be recorded, and passed to the consideration of the question of "due diligence," generally considered.

The conference was adjourned until Thursday, the 15th instant, at half-past 12 o'clock.

FREDERICK SCLOPIS.
J. C. BANCROFT DAVIS.
TENTERDEN.
ALEX. FAVROT, Secretary.

PROTOCOL XXI.

Record of the Proceedings of the Tribunal of Arbitration at the Twenty-first Conference, held at Geneva, in Switzerland, on the 15th of August, 1872.

The conference was held pursuant to adjournment. All the arbitrators and the agents of the two governments were present.

The protocol of the last conference was read and approved, and was signed by the president and secretary of the tribunal and the agents of the two governments.

The tribunal proceeded to consider the effects of the commissions of Confederate ships-of-war entering British ports, and the supplies of coal in British ports to Confederate ships.

Lord Tenterden, as agent of her Britannic Majesty, submitted the following statement:

As the tribunal is now approaching the consideration of the case of the *Georgia*, I beg respectfully to submit that, in the argument of the United States, with respect to that vessel (pp. 224, 225), it is (for the first time) suggested that the British Government ought to have informed themselves, by inquiry, what ships were being built in February, 1863, for the Emperor of China; and certain inferences appear to be drawn from the (assumed) fact that they omitted to do so.

In consequence of this unforeseen suggestion, documents have become material, which did not appear to be so, when the appendices to the British case and counter-case were prepared, and which were, therefore, not included in those appendices. To elucidate this point, I have now in my possession, and am desirous of delivering to the arbitrators, copies of four letters:

No. 1. From Mr. Hammond to Mr. Lay, the agent of the Emperor of China, dated February 28, 1863 (in which the inquiry, which the United States suggests as proper to have been made, was actually made by Earl Russell's direction).

No. 2. From Mr. Lay to Mr. Hammond, dated March 2, 1863 (communicating the information desired).

No. 3. From Earl Russell to Mr. Adams, dated March 5, 1863 (communicating to Mr. Adams the information so obtained from Mr. Lay); and—

No. 4. From Mr. Adams to Earl Russell, dated March 11, 1863 (acknowledging the receipt of No. 3).

Mr. Bancroft Davis, as agent for the United States, stated in reply:

I have examined the letters which Lord Tenterden wishes to present. They appear to contain nothing which we regard as important, in themselves; but we can find no authority in the treaty authorizing the tribunal either to call for or to admit new evidence from either party at this stage of the proceedings. I must leave the tribunal to act upon the application as in its judgment it may see fit.

The tribunal decided to receive the letters from Lord Tenterden, who thereupon presented them.

The tribunal also decided to consider the case of the Georgia at the next meeting.

The conference was then adjourned until Friday, the 16th instant, at 12 o'clock.

FREDERICK SCLOPIS.
J. C. BANCROFT DAVIS.
TENTERDEN.
ALEX. FAVROT, Secretary.

PROTOCOL XXII.

Record of the Proceedings of the Tribunal of Arbitration at the Twenty-second Conference, held at Geneva, in Switzerland, on the 16th of August, 1872.

The conference was held pursuant to adjournment. All the arbitrators and the agents of the two governments were present.

The protocol of the last conference was read and approved, and was signed by the president and secretary of the tribunal and the agents of the two Governments.

The tribunal considered the case of the Georgia.

The tribunal decided to proceed with the consideration of the case of the Shenandoah at the next meeting.

The conference was adjourned until Monday, the 19th instant, at half-past 12 o'clock.

FREDERICK SCLOPIS.
J. C. BANCROFT DAVIS.
TENTERDEN.
ALEX. FAVROT, Secretary.

PROTOCOL XXIII.

Record of the Proceedings of the Tribunal of Arbitration at the Twenty-third Conference, held at Geneva, in Switzerland, on the 19th of August, 1872.

The conference was held pursuant to adjournment. All the arbitrators and the agents of the two governments were present.

The protocol of the last conference was read and approved, and was signed by the president and secretary of the tribunal, and the agents of the two governments.

The tribunal considered the case of the Shenandoah.

Count Sclopis having expressed some doubts concerning the chief point of this discussion, requested the tribunal to permit the counsel to afford further elucidation with regard to that point.

The tribunal decided to hear these explanations at the next conference.

In compliance with the request of the tribunal, Mr. J. C. Bancroft Davis, as agent of the United

States, and Lord Tenterden, as agent of her Britannic Majesty, respectively, presented to the tribunal tables of figures relating to the losses for which compensation is claimed by the United States, with explanatory statements and observations.

The conference was adjourned until Wednesday, the 21st instant, at half-past 12 o'clock.

FREDERICK SCLOPIS.
J. C. BANCROFT DAVIS.
TENTERDEN.
ALEX. FAVROT, Secretary.

PROTOCOL XXIV.

Record of the Proceedings of the Tribunal of Arbitration at the Twenty-fourth Conference, held at Geneva, in Switzerland, on the 21st of August, 1872.

The conference was held pursuant to adjournment. All the arbitrators and the agents of the two governments were present.

The protocol of the last conference was read and approved, and was signed by the president and secretary of the tribunal, and the agents of the two governments.

The tribunal continued the consideration of the case of the Shenandoah, by hearing explanations from Sir Roundell Palmer and Mr. C. Cushing.

At the close of his remarks, Mr. C. Cushing requested to be informed by the tribunal whether the questions outside of that of enlistment, on which the elucidation called for specially turned, remain open before the tribunal.

After deliberation, a majority of four to one declared the tribunal sufficiently enlightened.

Count Sclopis then concluded the statement of his opinions, which he had not completed at the meeting of the 19th instant.

Sir Alexander Cockburn, as one of the arbitrators, then proposed to the tribunal to require further elucidation by counsel upon the following question:

The legal effect, if any, of the fact that the Florida, after leaving the Bahamas, did, before entering on her employment as a vessel-of-war, and taking any vessel of the United States, go into Mobile, a Confederate port, and after a delay of four months, proceed from thence on her cruise against the shipping of the United States, under the circumstances appearing in the evidence.

The tribunal decided to adopt the proposal. The conference was then adjourned until Friday, the 23d instant, at half-past 12 o'clock.

FREDERICK SCLOPIS.
J. C. BANCROFT DAVIS.
TENTERDEN.
ALEX. FAVROT, Secretary.

PROTOCOL XXV.

Record of the Proceedings of the Tribunal of Arbitration at the Twenty-fifth Conference, held at Geneva, in Switzerland, on the 23d of August, 1872.

The conference was held pursuant to adjournment. All the arbitrators and the agents of the two governments were present.

The protocol of the last conference was read and approved, and was signed by the president and secretary of the tribunal, and the agents of the two governments.

Lord Tenterden, as agent of her Britannic Majesty, read the following statement:

As agent of her Britannic Majesty, I have the honor respectfully to represent to the tribunal that the tables of claims which were *pro forma* presented to the arbitrators by the agent of the United States on Monday, the 19th instant, but of which I was only furnished with copies on the night of the 24th instant, contain new and additional claims of the following description:

1. *a.* Claims for wages of crews of captured vessels from time of capture.
- b.* Claims for loss of personal effects of officers and crews.

There is no evidence as to the number of the crews, nor as to the long and varying periods for which their wages are calculated, nor as to any such personal effects having been in fact lost.

In short, these claims are only conjectural in amount, and unsupported by any evidence whatsoever.

2. Additional claims for shares of vessels not claimed for up to the present time, e. g.: where an individual claimant has only claimed for four-fifths of the value of a vessel, an arbitrary claim is now advanced for the first time on the part of the United States Government for the value of the remaining fifth.

It is not alleged that the part owner who had not previously claimed has now given any authority for this claim to be advanced. The strong presumption, indeed, is that he may have already received the value of his share from English or other foreign insurance companies, with whom it was insured, and who are not entitled under the treaty to advance any claim.

3. Claims previously presented have been increased in amount without any ground appearing for such increase.

The total amount of these three classes of claims, which are now for the first time advanced on the part of the United States Government, appears, in round numbers, to be at least two millions of dollars.

Independently of the fact that these additional claims are unsupported by any evidence, it is my duty respectfully to submit to the tribunal that the additional statement of any new claims whatever, in this stage of the arbitration, for the purpose of influencing or affecting the judgment of the tribunal upon any matter within its authority, is contrary to the provisions of the treaty.

The treaty contemplates that the statements of facts and evidence, constituting the whole case of each party, should be brought before the tribunal within the times and in the manner specified in Articles III., IV., and V., subject only to such further statements or arguments as under Article V. the arbitrators may think fit to require or permit for the elucidation of any point contained in, or arising out of, the documents previously put in by either party.

I have also to submit that the introduction of such additional claims is not authorized by the request made by the arbitrators.

This request was, that comparative statements of the results in figures of the claims already made, as appearing in the papers previously presented, according to the views of the respective parties, should be prepared, with explanatory observations, and laid before the tribunal, and it could not have been intended to afford the opportunity for bringing forward new, or increasing former, claims.

Under these circumstances, I respectfully request the arbitrators to disallow, as unauthorized by them, and as contrary to the treaty, the tables containing such additional claims, presented by the agent of the United States, and the memorandum relating to them, without prejudice to his right to present other tables, accompanied by any explanatory observations, which shall be limited to the particular claims already set forth in the case and counter-case of the United States, and the appendices thereto.

The tribunal decided to adjourn the consideration of this matter until the next conference.

Sir Roundell Palmer, as counsel of her Britannic Majesty, then read the argument required by the tribunal on Sir Alexander Cockburn's proposal, upon the question of law mentioned in Protocol XXIV., and Mr. Evarts, as counsel of the United States, replied to it.

On the proposal of Viscount d'Itajuba, one of the arbitrators, the tribunal decided to adjourn until the next conference the further discussion upon the Florida, and to proceed with the definitive vote on each vessel separately.

The tribunal then decided that it had to consider only such vessels with regard to which claims were presented in the case and counter-case of the United States; every other question being consequently understood as dismissed from consideration.

Count Sclopis, as president of the tribunal, having read Article VII. of the Treaty of Washington, asked the tribunal whether, as to the Sumter, Great Britain has, by any act or omission, failed to fulfil any of the duties set forth in the three rules mentioned in Article VI. of the treaty, or recognized by the principles of international law, not inconsistent with such rules.

The tribunal unanimously replied, "No."

The same question was asked as to the Nashville, and the tribunal unanimously replied, "No."

The same question was renewed as to the Retribution.

Mr. Adams answered, "Yes, for all the acts of this vessel."

Mr. Stämpfli answered, "Yes, as to the loss of the Emily Fisher."

Sir Alexander Cockburn, Viscount d'Itajuba, and Count Sclopis answered, "No."

The same question was asked as to the Georgia, and the tribunal unanimously answered "No."

The same question was repeated as to the Tallahassee and Chickamauga, separately, and the tribunal unanimously answered, "No" for each of these vessels.

The same question having been repeated as to the Alabama, the tribunal unanimously answered, "Yes."

The same question was renewed as to the Shenandoah, and Mr. Adams, Mr. Stämpfli, and Count Sclopis answered, "Yes; but only for the acts committed by this vessel after her departure from Melbourne on the 18th of February, 1865." Viscount d'Itajuba and Sir Alexander Cockburn answered, "No."

The definitive vote on the Florida was adjourned until the next meeting.

The conference was then adjourned until Monday, the 26th instant, at half-past 12 o'clock.

FREDERICK SCLOPIS.

J. C. BANCROFT DAVIS.

TENTERDEN.

ALEX. FAVROT, Secretary.

PROTOCOL XXVI.

Record of the Proceedings of the Tribunal of Arbitration at the Twenty-sixth Conference held at Geneva, in Switzerland, on the 26th of August, 1873.

The conference was held pursuant to adjournment. All the arbitrators and the agents of the two governments were present.

The protocol of the last conference was read and approved, and was signed by the president and secretary of the tribunal, and the agents of the two governments.

Lord Tenterden, as agent of her Britannic Majesty, delivered to the tribunal and the agent of the United States tables of figures relating to the claims contained in the tables presented on the part of the United States on the 19th instant.

The tribunal concluded the discussion of the question concerning the entrance of the Florida into Mobile, and her stay at that port, and proceeded to the definitive vote on this vessel.

Count Sclopis, as president of the tribunal, having asked, under the VIIIth Article of the Treaty of Washington, whether, as to the Florida, Great Britain had, by any act or omission, failed to fulfil any of the duties set forth in the rules mentioned in Article VI. of the treaty, or recognized by the principles of international law not inconsistent with such rules, Mr. Adams, Viscount d'Itajuba, Mr. Stämpfli, and Count Sclopis answered "Yes," and Sir Alexander Cockburn answered, "No."

As a question of principle, the tribunal then unanimously declared that Great Britain should be considered as responsible for the tenders in the same degree as for the vessels to which they were attached.

The same question as had been put with regard to the Florida, was next asked by Count Sclopis as to the Tuscaloosa, a tender to the Alabama, and the tribunal unanimously answered, "Yes."

The same question was asked separately as to the Clarence, the Taony, and the Archer, as tenders to the Florida, and Mr. Adams, Mr. Stämpfli, Viscount d'Itajuba, and Count Sclopis, answered, "Yes" for each of these vessels, and Sir Alexander Cockburn answered, "No" for each of these vessels.

The tribunal then proceeded to the consideration of the representation made by the agent of her Britannic Majesty at the last conference.

Mr. J. C. Bancroft Davis, as agent of the United States, read the following statement in reply:

L'agent de sa Majesté britannique a présenté au tribunal un memorandum destiné à critiquer le résumé des indemnités demandées par les États-Unis, et dans lequel le tribunal est prié de remettre ce résumé à l'agent des États-Unis comme non avenu.

L'agent des États-Unis soutient respectueusement que son résumé est parfaitement en règle et en tout conforme aux droits des États-Unis aussi bien qu'à la demande particulière du tribunal.

1. Les objections de l'agent de sa Majesté britannique portent sur les points suivants :

a) Les gages des équipages des navires capturés par les vaisseaux armés des confédérés ;

b) Les pertes des personnes de ces équipages, tant officiers que matelots ;

c) Des parties indivisées d'un navire qui ne paraissent pas expressément dans les a-baux originaux ;

d) Augmentation prétendue du montant total des réclamations.

2. L'agent de sa Majesté britannique objecte aussi :

a) En matière de forme ;

b) En matière de compétence.

Nous répondrons *seriatim* à toutes ces objections :

I. Quant à la forme, il est évident que les arbitres, pour faciliter leurs investigations, ont désiré avoir sous les yeux un abrégé comparatif de ce que les États-Unis réclament et de la critique de ces réclamations par l'Angleterre, critique portant sur les chiffres aussi bien que sur les chefs des réclamations. Ces résumés faits par les deux parties ne lient d'aucune manière les arbitres : ce sont tout simplement des renseignements propres à guider le tribunal à travers la masse de chiffres et de détails renfermés dans les mémoires et les pièces justificatives des deux gouvernements.

L'agent de sa Majesté britannique prétend que les États-Unis doivent calquer leur résumé sur le modèle du résumé de l'Angleterre, non-seulement quant à la forme, mais aussi quant au fond. C'est-à-dire que, s'il plaît à l'Angleterre d'omettre dans son résumé quelque chef de réclamations, l'Amérique doit aussi l'omettre. Ce serait une étrange table synoptique.

La raison requiert l'explication des différences qui existent entre les chiffres de chaque chef de réclamations. Mais elle requiert aussi l'explication des différences qui existent entre les chefs mêmes des réclamations. Sans cela, l'Angleterre n'aurait qu'à supprimer dans son résumé le chef des assurances, ou celui des frets, ou celui d'un navire quelconque, pour soustraire ce chef à la connaissance des arbitres. Ce ne serait pas le moyen de renseigner le tribunal, mais plutôt celui de le tromper. Une telle idée a l'air d'une plaisanterie, et nullement d'une objection sérieuse au tableau des États-Unis.

Le tribunal examinera les résumés des deux gouvernements. À la lumière de ces résumés, le tribunal examinera tous les documents relatifs compris dans les mémoires et contre-mémoires des deux gouvernements. C'est le droit et c'est le devoir de chaque gouvernement de soumettre au tribunal les preuves respectives sans retranchement d'un côté et sans suppression de l'autre. Alors le tribunal jugera.

II. Quant à la compétence :

a) Le traité comprend toutes les réclamations des États-Unis qui sont désignées sous le nom générique de réclamations de l'Alabama.

b) Le tribunal, par son opinion préliminaire, a limité la généralité de ces mots, en écartant des réclamations certaines pertes nationales alléguées par les États-Unis.

Mais, à la suite de cette opinion, le tribunal resta saisi de la question de toutes les réclamations faites par les États-Unis dans l'intérêt des individus lésés, et comprises sous le nom générique de réclamations de l'Alabama.

Les pertes des officiers, et en général des équipages des navires capturés, ne sont pas moins valables que celles des armateurs et des assureurs. Le doute est impossible à cet égard.

c) Des réclamations pour les pertes personnelles des équipages navires capturés sont formulées de la manière la plus explicite dans le mémoire des États-Unis, comme suit :

« Réclamations pour dommages ou mauvais traitements infligés aux personnes, et qui ont été le résultat de la destruction des vaisseaux appartenant, aux deux classes précédentes. »

« Il est impossible à présent pour les États-Unis de soumettre au tribunal un état détaillé des dommages ou mauvais traitements personnels qui sont résultés de la destruction de chaque classe de vaisseaux. Les officiers et l'équipage de chaque vaisseau avaient droit à la protection du drapeau américain ; leurs réclamations doivent être incluses dans la somme totale que le tribunal peut allouer. D'après les éléments d'appréciation qui leur

sont fournis, il ne sera pas difficile aux arbitres de connaître les noms et le tonnage des bâtiments détruits, de déterminer le nombre de ces hardis marins sans ressources qui ont été privés ainsi de leurs moyens de subsistance et de fixer la somme totale qui de ce chef devrait être placée dans les mains des États-Unis. Elle ne peut pas être inférieure à des centaines de mille dollars et elle peut s'élever à des millions. (Traduction française, pp. 377, 378.)

d) Nous prions les arbitres de lire ces extraits attentivement. Ils verront que les États-Unis ont présenté les réclamations de cette classe de la manière la plus claire et la plus positive, comme un chef capital des indemnités demandées à la Grande-Bretagne.

Nous ajoutons que ce sont des réclamations réelles et méritées.

L'incertitude du chiffre ne nuit pas à sa réclamation.

Nous aurons plus tard quelque chose à dire à ce sujet. e) Les pertes d'effets, soit d'officiers, soit de matelots, sont expressément réclmées dans plusieurs cas. Dans les autres, ces pertes sont estimées d'après le chiffre des pertes actuellement exprimées.

Quant aux gages et au chiffre des équipages, nous avons essayé de rassembler tous les renseignements possibles, et nos estimations sont fondées sur les faits développés dans les pièces justificatives.

Nous distinguons entre les gages des équipages des baleiniers et ceux des navires marchands proprement dits.

Pour les deux classes de navires les gages ont été perdus, ou par les armateurs qui les avaient payés, ou pour les équipages qui ne les avaient pas reçus.

Pour les baleiniers, la perte était plus sérieuse, parce que dans la plupart des cas le montant des gages se fixait, en tout ou en partie, selon les bénéfices, et les familles des matelots recevaient de l'armateur une partie notable de ces gages pendant le temps du voyage.

Dans ces cas, les matelots des baleiniers avaient été victimes des frais des six ou neuf premiers mois d'un voyage, en attendant les bénéfices qui devraient être reçus dans les trois mois à venir.

De deux choses l'une ; pour indemniser ces gens, il faut leur allouer, ou des bénéfices en perspective, ou des gages se rapportant à ces bénéfices.

Pour les navires marchands, il peut se faire que la question des gages des matelots soit compliquée de la question des frets. En supposant que les indemnités demandées sous le chef de fret soient, comme nous le croyons, les pertes actuelles des armateurs dans cette relation il s'ensuit que nous avons droit à être indemnisés pour les gages.

Pour la plupart des navires, les États-Unis réclament sous le nom de gages la perte du temps des matelots, aussi bien que les frais de leur transport du lieu de capture aux lieux respectifs de leur résidence habituelle ; et sous ce chef nous allouons des gages durant six mois ou durant neuf mois, selon que la capture a été faite dans les eaux de l'Atlantique ou bien dans celles du Pacifique.

En effet, nous donnons des gages doubles, pendant trois mois pour le premier cas et pendant quatre mois et demi pour le second cas. Quoique ceci ne soit qu'une estimation, le résultat est au-dessous de la vérité plutôt qu'au-dessus.

Nous avons estimé le chiffre de l'équipage de chaque navire conformément aux données qu'on trouve dans nos pièces justificatives, en distinction du chiffre des baleiniers, qui nécessitent un plus grand nombre d'hommes que les navires marchands.

III. Les États-Unis réclament pour toutes les parties indivisées d'un navire, soit que le propriétaire d'une partie mineure quelconque paraisse ou non, parce que les États-Unis auront à répondre à tous les propriétaires dans le cas où le tribunal accorderait en bloc une somme aux États-Unis. Sans cela, il y aurait injustice évidente. L'objet du traité est d'indemniser les États-Unis pour toutes les pertes subies par leurs citoyens, et non d'imposer une partie de cette indemnification aux États-Unis eux-mêmes.

IV. L'agent de sa Majesté britannique objecte que nous avons augmenté le montant des réclamations en ajoutant les chiffres appartenant aux trois chefs suivants :

Gages	\$399,397
Effets	441,030
Intérêts indivisés	42,373

\$1,422,920

Il s'agit de moins d'un million et demi, et non des deux millions allégués dans le memorandum de l'agent de sa Majesté britannique.

Il est vrai de dire qu'il y a de plus une addition à la valeur de certains navires. C'est une méprise de l'expert employé dans les calculs relatifs à ces navires. Cette erreur est expliquée et corrigée dans une note placée à la suite de ce memorandum.

Mais, en même temps, nous avons mis de côté les réclamations fondées sur des bénéfices en perspective, qui est le double des additions faites.

V. Enfin, et pour résumer le débat :

L'Angleterre a composé un tableau, non des faits actuels, mais tout d'estimations, d'appréciations et de moyennes arbitraires et supposées.

Notre tableau est composé de faits actuels et prouvés, pour la plupart, avec un petit nombre d'appréciations très-simples, et celles-ci fondées sur des preuves et des analogies évidentes et appuyées par les documents.

Nous avons pleinement le droit de nous plaindre du tableau tout entier présenté au nom de l'Angleterre : elle n'a à critiquer que quelques chiffres secondaires du même ordre appartenant au memorandum des États-Unis.

L'agent de sa Majesté paraît supposer que les États-Unis ont eu l'intention, dans tout ceci, de préparer notre estimé de manière à exercer une influence fâcheuse sur la conscience des arbitres. Est-ce le tribunal qu'on soupçonne ? Est-ce l'agent des États-Unis ? On pourrait s'y méprendre. On pourrait même imputer de tels motifs à l'agent de sa Majesté. Mais ce ne serait digne ni de lui, ni de nous, en vue des relations courtoises des agents et des conseils des deux gouvernements.

Mais à quel bon cette critique de part ou d'autre ?

Si les arbitres allouent une somme en bloc, cette somme sera nécessairement une appréciation en partie ; sans quoi le résultat des travaux des arbitres ne serait pas une indemnification réelle des États-Unis.

S'il y a quelques défauts secondaires dans les preuves des États-Unis, il y a un manque presque total de preuves déclinées de la part de la Grande-Bretagne.

Mais si le tribunal renvoie ces réclamations à des assesseurs, l'Angleterre sera tenue par les stipulations du traité de payer aux États-Unis la somme adjugée par les assesseurs, sans restriction, ni de preuves affirmatives, ni de preuves négatives. Alors, les matelots qui n'ont pas présenté leurs réclamations, et même les armateurs, assureurs ou autres, auront le droit de réclamer devant les assesseurs. Tel est le sens évident du traité.

En attendant, tout ce qui se fait, soit de la part de l'Amérique, soit de la part de l'Angleterre, tend à essayer d'éclairer, par les moyens qui sont à notre disposition, le jugement du tribunal.

Enfin, nous protestons contre certaines appréciations du traité de Washington, qui sont ou exprimées ou implicites dans le mémoire d'agent de la Grande-Bretagne, sans nous arrêter pour les discuter ici.

NOTE.

A.—Les réclamations pour les gages des baleiniers et des pêcheurs des navires détruits ou détenus par l'Alabama, par le Florida, ou par le Shenandoah après sa sortie de Melbourne (la correction étant faite des erreurs notées dans le memorandum qui accompagne nos tableaux), estimées d'après les preuves soumises, s'élèvent à..... \$588,947 50

Ce montant doit être soustrait de la somme totale dans le sommaire annexé, si le tribunal accorde les réclamations des baleiniers pour la pêche perspective et pour l'interruption du voyage.

B.—Les réclamations pour les gages des officiers et des hommes des navires marchands ainsi détruits ou détenus, estimées d'après les preuves soumises, s'élèvent à..... 408,070 00

Quelques-uns des navires détruits ou détenus étaient sur lest. En tous cas pareils, nous insistons sur ce que le tribunal nous accorde le total des gages réclamés. Plusieurs, ou même la plupart, des navires étaient chargés de fret. Dans tous les cas où le tribunal est convaincu que le fret réclamé est fret pur, il doit accorder les réclamations pour gages ; mais dans tous les cas où le tribunal est convaincu que la réclamation pour fret est pour fret brut, il doit refuser d'accorder les réclamations pour gages. Ceci est exposé d'une manière très-précise dans le memorandum qui accompagne nos tableaux.

C.—Les estimations des réclamations pour les effets personnels des officiers et des hommes des navires ainsi détruits ou détenus s'élèvent à..... 431,000 00

Les États-Unis insistent sur ce qu'il leur soit accordé la somme totale de ces réclamations. Les tableaux présentés par l'agent des États-Unis comprenaient tous les navires détruits par le Shenandoah. Depuis que ces tableaux ont été terminés le tribunal a décidé que la Grande-Bretagne n'est pas responsable des actes du Shenandoah avant sa sortie de Melbourne. Le montant des réclamations à déduire par suite de cette décision s'élève à..... 458,290 49

E.—Il y a une erreur palpable de la part du comptable dans le tableau intitulé "Shenandoah, supplément, classe A." La valeur estimée de huit navires détenus (c'est-à-dire, \$80,000 chacun) fut retenue par le comptable par mégarde, et jointe aux chiffres de la colonne des totaux de pertes.

Dans la discussion détaillée devant le tribunal, on se serait aperçu tout de suite de cette erreur, qui était demeurée inaperçue dans la hâte des préparatifs pour rédiger les tableaux. On fournit ci-joint un tableau nouveau sous le même titre. Le montant de cette erreur, qui se trouve corrigée ici, est de..... 640,000 00

F.—L'exposé révisé ci-joint : totaux des réclamations comparées, exhibe ces corrections : c'est-à-dire, que les montants D et E, qui s'élèvent à \$1,098,309.49, sont déduits.

C'est au tribunal à décider si une partie quelconque des montants A et B doit être déduite.

TOTAUX DES RÉCLAMATIONS COMPARÉES.

		Montants réclamés dans les tableaux américains.	Montants accordés dans le rapport joint à l'argument britannique.
Alabama.....	Classe A	\$1,514,266 99	\$460,898 00
	Classe B	1,396,490 88	618,588 00
	Classe C	3,309,876 10	2,004,376 00
	Classe D	418,288 88	186,021 00
	Classe E	123,807 78	47,850 00
	Classes E et F		
		\$6,577,690 03	\$3,267,678 00
Florida, y compris le Clarence et le Tacony.	Classe A	\$228,941 92	\$108,569 00
	Classe B	539,179 10	644,709 00
	Classe C	3,889,410 08	1,776,375 00
	Classe D	188,989 17	44,570 00
	Classe E et F	278,618 63	61,350 00
	Classe G	91,225 10
		\$4,616,308 98	\$2,685,573 00

* Le comptable, qui a fait l'arrangement des navires dans nos tableaux, a placé dans la classe C deux navires qui auraient dû être dans la classe B, savoir :

L'Onelda.....	\$471,849 12
Le Windward.....	22,506 00
	\$494,447 12

Cette erreur corrigée, la somme totale de la classe B (sous le nom du Florida) serait de \$1,083,626.22, et de la classe C, \$2,344,982.90. Comme les sommes totales des réclamations sous le nom du Florida ne seraient aucunement changées par la correction de cette erreur, purement formelle, j'ai pensé qu'il ne valait pas la peine de changer les tableaux détaillés.

En tous cas il faut ajouter l'intérêt de 7% par an jusqu'au jour du paiement indiqué par les termes du traité.

After deliberation, the tribunal gave its decision as follows:

The tribunal does not see fit to order the withdrawal of the tables presented on the part of the United States as requested by Lord Tenterden: but it declares that it considers these documents only as simple elucidations, such as were required by one of the arbitrators, Viscount d'Itajubá, to which the tribunal will give such attention as is right.

The tribunal determined to devote the next conference to the consideration of the questions concerning the claims for "expenditure incurred in pursuit of the cruisers, prospective profits, freights, and interest," and decided to deliberate with closed doors.

Sir Alexander Cockburn, as one of the arbitrators, declared that he objected to this latter decision.

The conference was then adjourned until Thursday, the 29th instant, at half-past 12 o'clock.

FREDERICK SCLOPIS.
J. C. BANCROFT DAVIS.
TENTERDEN.
ALEX. FAVROT, *Secretary*.

PROTOCOL XXVII.

Record of the Proceedings of the Tribunal of Arbitration at the Twenty-seventh Conference, held at Geneva, in Switzerland, on the 29th of August, 1873.

The conference was held with closed doors, pursuant to adjournment. All the arbitrators were present.

The protocol of the last conference was read; the approval and signing of the same was deferred until the next meeting.

The tribunal proceeded to consider the questions concerning the claims for "expenditure incurred in pursuit of the cruisers, prospective profits, and freights."

As to the claims for expenditure incurred in pursuit of the cruisers, a majority of the tribunal decided to reject them as comprised in the costs of the war: Mr. Stämpfli and Mr. Adams declared them to be admissible, as belonging to the direct losses, reserving to appreciate their amount according to the bases laid down in the table at page 120 of the seventh volume of the appendix to the case of the United States.

As to the claims for prospective profits, the tribunal unanimously decided to reject them, reserving, however, the questions as to the wages for the whal-

ers and the interest for the value of the vessels and their outfit.

As to the claims for freights, the tribunal unanimously decided not to admit of the gross freight, but only the net freight.

The tribunal also decided to consider at the next conference the questions concerning the valuation of the destroyed vessels and the claims for interest.

Lastly, the tribunal decided to adjourn this conference until Friday, the 30th instant, at 12 o'clock, and to deliberate again with closed doors.

FREDERICK SCLOPIS.
ALEX. FAVROT, *Secretary*.

PROTOCOL XXVIII.

Record of the Proceedings of the Tribunal of Arbitration at the Twenty-eighth Conference, held at Geneva, in Switzerland, on the 30th of August, 1873.

The conference was held with closed doors, pursuant to adjournment. All the arbitrators were present.

The protocol of the twenty-sixth conference having been corrected was approved, and the protocol of the last conference was read and approved, and was signed by the president and secretary of the tribunal.

On the proposal of Sir Alexander Cockburn, as one of the arbitrators, the tribunal permitted that the counsel of her Britannic Majesty should present, on the question of interest, a note which should be directly communicated by the agent of her Britannic Majesty to the agent of the United States, in order that the latter may prepare a reply to it, if he thinks fit.

The tribunal desired that these two communications on the part of the respective agents should be presented at the conference which will be held with closed doors on Monday, the 2d of September, at half-past 12 o'clock.

The tribunal proceeded to the consideration of the matters submitted to them, and unanimously declared that the "double claims" should be dismissed.

The tribunal having discussed in general the award of a gross sum, requested Mr. Stämpfli, one of the arbitrators, to present for the next conference copies of a synoptical table which he has prepared on the subject.

The conference was then adjourned until Monday, the 2d of September, at half-past 12 o'clock.

FREDERICK SCLOPIS.
ALEX. FAVROT, *Secretary*.

PROTOCOL XXIX.

Record of the Proceedings of the Tribunal of Arbitration at the Twenty-ninth Conference, held at Geneva, in Switzerland, on the 2d of September, 1872.

The conference was held with closed doors, pursuant to adjournment. All the arbitrators were present.

The protocol of the last conference was read and approved, and was signed by the president and secretary of the tribunal. Count Solopis, as president of the tribunal, acknowledged the receipt, by the arbitrators, of the note presented by the agent of her Britannic Majesty on the question of interest, and of the reply to the same, presented by the agent of the United States.

The tribunal then proceeded to consider that question, and a majority of four to one decided that interest should be admitted as an element in the calculation for the award of a sum in gross.

Mr. Stämpfli, as one of the arbitrators, presented to the tribunal copies of the synoptical table which he had prepared as a proposition for the determination of a sum in gross:

ESTIMATE OF MR. STÄMPFLI FOR THE DETERMINATION OF A SUM IN GROSS.

	After the Last American Table.	British Allowance.	Mean.
Amount of claims..	\$14,437,000	\$7,074,000	\$10,905,000
Expenditure in pursuit.....	6,735,000	940,000	Struck out
Prospective profits and interruption of voyage.....	4,009,100	Struck out as such, but for wages.... 25 per cent. on the values of vessels.....	588,000 400,000
			\$11,893,000
Round sum.....			\$12,000,000
<i>Interest from Jan. 1, 1864, to Sept. 15, 1873.</i>			
1. At 5 per cent. during eight years and eight and one-half months.	$8 \times \$600,000 = \$4,800,000$ $8\frac{1}{2} \times 50,000 = 425,000$		\$5,225,000
			17,225,000
Eventually one year's interest more.			\$17,893,000
2. At 6 per cent. during eight years and eight and one-half months	$8 \times \$720,000 = \$5,760,000$ $8\frac{1}{2} \times 60,000 = 510,000$		6,270,000
			\$18,270,000
Eventually one year's interest more.....			\$18,990,000
3. At 7 per cent. during eight years and eight and one-half months	$8 \times \$840,000 = \$6,720,000$ $8\frac{1}{2} \times 70,000 = 595,000$		7,315,000
			\$19,815,000
Eventually one year's interest more.....			840,000
			20,155,000
Round sum.....			\$20,000,000

Sir Alexander Cockburn, as one of the arbitrators, then presented the following memorandum on Mr. Stämpfli's estimate:

MEMORANDUM ON MR. STÄMPFLI'S ESTIMATE.

The figures in Mr. Stämpfli's paper require some material corrections, as to which, as soon as they are pointed out, there can be no doubt.

The total claim by the United States, of \$14,437,000, will be found, on an inspection of the United States tables, to include the following amounts:

a. All the double claims, without exception, notwithstanding the clear expression of opinion on the part of

the tribunal that they were to be struck out. These double claims amount to \$1,083,248.

b. The gross freights of the merchant-vessels, amounting to \$1,007,153, as to which the tribunal has decided that, at the utmost, only half, that is to say \$503,576, should be allowed.

c. The new claim of \$1,450,000, advanced for the first time on the 19th of August last, as to which claim Mr. Stämpfli declared he would exclude it from consideration. It is important to observe that this new claim comprises, over and above the entirely unsupported claims for shares of vessels, and for additional personal effects, the claims for wages extending over very long and varying periods. The tribunal has decided that one year's wages in respect of the whalers are to be allowed in lieu of prospective catch. For this one year's wages, Mr. Stämpfli has made a separate allowance of \$588,000 (an allowance which can be shown to be excessive by at least \$38,000), and he has therefore included in his calculation the claim for wages twice over.

It is therefore clear that Mr. Stämpfli, while he excludes some of the items of claim which the tribunal has disallowed, has omitted to strike out the other items against which the tribunal has pronounced its opinion; but it is equally clear that all the disallowed items must be excluded before a comparison can be fairly or usefully made between the United States claim and the British estimate.

It is necessary, therefore, in the first place, to deduct from the United States claim the three amounts specified in paragraphs a, b, and c, respectively, which will leave, as is shown by the annexed table, a properly-reduced claim of \$10,801,334, as against the British estimate of \$7,465,764. If the difference between paper and gold currency be for the present purpose disregarded.

It must, however, be carefully borne in mind that the claim of \$10,801,334 includes the following items:

1. A claim of \$532,081 for secured earnings, which ought, beyond a doubt, to be reduced by an amount equivalent to the wear and tear of the whalers and their outfits, and the consumption of stores, which must have taken place before these earnings could be secured, and for which a deduction should be made, inasmuch as the full original values of the vessels and their outfits have been allowed.

2. The claims in respect of the Merchant-vessels.—These are valued in the United States tables at more than \$60 per ton, on the average, although, according to the well-known official report presented to Congress in 1870, the cost of a first-class, perfectly new American vessel, made ready for sea, did not average that amount per ton, and although, according to the same report, the average value of American vessels engaged in the foreign trade was, in 1861, only \$41, and has been since only \$45 per ton.

3. The claims in respect of cargoes, the insurances, commissions, and profits of the same, which profits are sometimes claimed at the rate of twenty, fifty, and even one hundred per cent. The various important considerations mentioned at page 13 of the British report, and the fact that numerous claims for cargoes, presented for the first time in April last, are unsupported by any vouchers, bills of lading, or like documents, undoubtedly require that a very considerable reduction should be made under this head.

4. Several large claims not supported by any affidavit or declaration on oath.

5. Numerous clearly extravagant claims specified in the British reports, such as the claim of \$7,000 by a harpooner, for personal injuries; the claim, by a passenger, of \$10,000, for loss of office as consul; all the numerous claims by the masters of whalers for wages, sometimes at the rate of \$15,000 or \$20,000 a year, and which are, of course, superseded by Mr. Stämpfli's allowance of \$588,000; and many other equally exorbitant claims, more particularly specified in the British reports.

From these considerations, it is manifest that more than ample justice will be done to the United States by taking a mean between the claim of \$10,801,334 and the British estimate of \$7,464,764, and by adding thereto the allowance of \$588,000 in lieu of prospective catch.

Mr. Stämpfli has also added, for some unknown reason, 25 per cent. on the values of the whalers, an addition which can be easily shown to be equivalent to altogether allowing, over and above the original values of the whalers and their outfits, a percentage exceeding 90 per cent, and this although the question of interest is still left open to the decision of the tribunal.

Admitting, however, this extraordinary addition of 25 per cent., and the excessive estimate of the wages, it is shown by the annexed tables that, if Mr. Stämpfli's figures be properly corrected, the estimate would scarcely exceed \$10,000,000, even without any allowance being made for the great difference between the values of the paper and the gold currency.

Mr. Stämpfli's calculations of interest (supposing interest to be allowed) are made at the alternative rates of 5, 6, and 7 per cent., for the period of eight and one-half years, from the 1st of January, 1864, to the 15th of September, 1872.

But to this he proposes to add another year's interest for the period of delay in payment after the date of the award which is allowed by the treaty.

The tribunal has no power, under the treaty, to award payment of a gross sum with interest. The amount awarded is to be paid without interest, and, if the tribunal were to add a year's interest to the gross sum which they would otherwise award, in respect of the year al-

lowed for payment by the treaty, they would be doing indirectly what they have no authority to do directly, and would (it is submitted) be contravening the true intent of the treaty, and charging interest where it was the intention of the treaty that interest should not be paid.

This is the more objectionable because it is proposed to charge a whole year's interest, at either 5, 6, or 7 per cent., whereas the British Government has the option, under the treaty, to pay the sum awarded at any time *within* the year allowed for that purpose, and might certainly raise the money (if that operation were necessary) at a considerably lower rate of interest than 5 per cent.

TABLE IN REFERENCE TO THE ESTIMATE OF MR. STÄMPFLI.

Total United States claim in the last revised tables.....	\$14,437,143
Necessary reductions to be made from the above supposed total:	
Double claims.....	\$1,632,243
New claims.....	1,450,000
One half-gross freight.....	508,576
	<hr/> 3,635,819
Making the total reduced claim.....	<hr/> \$10,801,324
As against the British estimate of.....	<hr/> 7,464,764
The mean of these two sums is.....	<hr/> \$9,133,044
Add to this Mr. Stämpfli's allowances in lieu of prospective catch:	
One year's wages.....	\$588,000
Twenty-five per cent. on the values of vessels.....	400,000
	<hr/> 988,000
	<hr/> \$10,121,044

The tribunal also considered the question of the award of a sum in gross.

After a detailed deliberation, a majority of the tribunal of four to one decided, under the VIIth Article of the Treaty of Washington, to award in gross the sum of \$15,506,000, to be paid in gold by Great Britain to the United States, in the time and manner provided by the said article of the Treaty of Washington.

The conference then adjourned until Friday, the 6th inst., at half-past 12 o'clock, to be held with closed doors. FREDERICK SCLOPIS.

ALEXANDER FAVROT, Sec'y.

PROTOCOL XXX.

Record of the Proceedings of the Tribunal of Arbitration at the Thirtieth Conference held at Geneva, in Switzerland, on the 6th of September, 1872.

The conference was held with closed doors pursuant to adjournment. All the arbitrators were present.

The protocol of the last conference was read and approved, and was signed by the president and secretary of the tribunal.

The tribunal proceeded to consider a draught of their decision.

At the request of the tribunal, Mr. Adams and Sir Alexander Cockburn kindly undertook to provide for the translation into English of the French text of this act of decision.

The conference was then adjourned until Monday, the 9th instant, at half-past twelve o'clock, to be held with closed doors.

FREDERICK SCLOPIS.

ALEX. FAVROT, Secretary.

PROTOCOL XXXI.

Record of the Proceedings of the Tribunal of Arbitration at the Thirty-first Conference held at Geneva, in Switzerland, on the 9th of September, 1872.

The conference was held with closed doors pursuant to adjournment. All the arbitrators were present.

The protocol of the last conference was read and approved, and was signed by the president and secretary of the tribunal.

Mr. Adams and Sir Alexander Cockburn presented the English translation of the act of decision, which they had kindly undertaken to prepare.

The tribunal definitely adopted the act of decision, which was considered at the last conference, and decided to have it printed.

Viscount d'Itajuba, as one of the arbitrators, made the following statement:

Viscount d'Itajuba, while signing the decision, remarks, with regard to the recital concerning the supply of coals, that he is of opinion that every government is free to furnish to the belligerents more or less of that article.

The tribunal resolved that the decision should be signed at the next conference, which was to be held with open doors, and adjourned until Saturday, the 14th instant, at half-past 12 o'clock.

FREDERICK SCLOPIS.

ALEX. FAVROT, Secretary.

PROTOCOL XXXII.

Record of the Proceedings of the Tribunal of Arbitration at the Thirty-second Conference held at Geneva, in Switzerland, on the 14th of September, 1872.

The conference was held with open doors, pursuant to adjournment. All the arbitrators and the agents of the two governments were present.

The protocol of the last conference was read and approved, and was signed by the president and secretary of the tribunal.

The president then presented the decision of the tribunal on the question of the "Alabama claims," and directed the secretary to read it; which was done, and the decision was signed by Mr. Charles Francis Adams, Count Frederick Sclopis, Mr. Jacques Stämpfli, and Viscount d'Itajuba, arbitrators, in the presence of the agents of the two governments.

A copy of the decision thus signed was delivered to each of the agents of the two governments, respectively, and the tribunal decided to have a third copy placed upon record; they further decided that the decision should be printed and annexed to the present protocol.

Sir Alexander Cockburn, as one of the arbitrators, having declined to assent to the decision, stated the grounds of his own decision, which the tribunal ordered to be recorded as an annex to the present protocol.*

* This paper was not annexed to the official protocol delivered to the agent of the United States. A paper entitled "Reasons of Sir Alexander Cockburn for dissenting from the Award of the Tribunal of Arbitration" was published in the supplement to the *London Gazette* of September 24, 1872, and a copy of this number of the *Gazette* was transmitted to the agent of the United States as the paper that should have been annexed to the protocol.

The tribunal resolved to request the Council of State of Geneva to receive the archives of the tribunal and to place them among its own archives.

The president, Count Sclopis, then directed the secretary to make up the record of the proceedings of the tribunal at this thirty-second and last conference, as far as completed; which was done, and the record having been read and approved, was signed by the president and secretary of the tribunal, and the agents of the two governments.

Thereupon the president declared the labors of the arbitrators to be finished and the tribunal to be dissolved.

FREDERICK SCLOPIS.
J. C. BANCROFT DAVIS.
TENTERDEN.
ALEX. FAVROT, Secretary.

DECISION AND AWARD

Made by the Tribunal of Arbitration constituted by Virtue of the First Article of the Treaty concluded at Washington the 8th of May, 1871, between the United States of America and her Majesty the Queen of the United Kingdom of Great Britain and Ireland.

The United States of America and her Britannic Majesty having agreed by Article I. of the Treaty concluded and signed at Washington the 8th of May, 1871, to refer all the claims "generically known as the Alabama claims" to a tribunal of arbitration to be composed of five arbitrators named:

One by the President of the United States,
One by her Britannic Majesty,
One by his Majesty the King of Italy,
One by the President of the Swiss Confederation,
One by his Majesty the Emperor of Brazil;

And the President of the United States, her Britannic Majesty, his Majesty the King of Italy, the President of the Swiss Confederation, and his Majesty the Emperor of Brazil having respectively named their arbitrators, to wit:

The President of the United States, Charles Francis Adams, Esquire;

Her Britannic Majesty, Sir Alexander James Edmund Cockburn, baronet, a member of her Majesty's Privy Council, Lord Chief Justice of England;

His Majesty the King of Italy, his Excellency Count Frederic Sclopis, of Salerano, a knight of the Order of the Annunciata, minister of state, senator of the Kingdom of Italy;

The President of the Swiss Confederation, M. James Stämpfli;

His Majesty the Emperor of Brazil, his Excellency Marcos Antonio d'Araújo, Viscount d'Itajuba, a grandee of the Empire of Brazil, member of the Council of the Emperor of Brazil, and his envoy extraordinary and minister plenipotentiary in France.

And the five arbitrators above named having assembled at Geneva (in Switzerland) in one of the chambers of the Hôtel de Ville on the 15th of December, 1871, in conformity with the terms of the second article of the Treaty of Washington, of the 8th of May of that year, and having proceeded to the inspection and verification of their respective powers, which were found duly authenticated, the Tribunal of Arbitration was declared duly organized.

The agents named by each of the high contracting parties, by virtue of the same Article II., to wit:

For the United States of America, John C. Bancroft Davis, Esquire;

And for her Britannic Majesty, Charles Stuart Aubrey, Lord Tenterden, a peer of the United Kingdom, companion of the Most Honorable Order of the Bath, Assistant Under-Secretary of State for Foreign Affairs;

Whose powers were found likewise duly authenticated, then delivered to each of the arbitrators the printed case prepared by each of the two parties, accompanied by the documents, the official correspondence, and other evidence on which each relied, in conformity with the terms of the third article of the said treaty.

In virtue of the decision made by the tribunal at its first session, the counter-case and additional documents, correspondence, and evidence referred to in Article IV. of the said treaty were delivered by the respective agents of the two parties to the secretary of the tribunal on the 15th of April, 1872, at the chamber of conference, at the Hôtel de Ville of Geneva.

The tribunal, in accordance with the vote of adjournment passed at their second session, held on the 16th of December, 1871, reassembled at Geneva on the 15th of June, 1872; and the agent of each of the parties duly delivered to each of the arbitrators, and to the agent of the other party, the printed argument referred to in Article IV. of the said treaty.

The tribunal having since fully taken into their consideration, the treaty, and also the cases, counter-cases, documents, evidence, and arguments, and likewise all other communications made to them by the two parties during the progress of their sittings, and having impartially and carefully examined the same,

Has arrived at the decision embodied in the present award:

Whereas, having regard to the VIth and VIIth articles of the said treaty, the arbitrators are bound under the terms of the said VIth article, "In deciding the matters submitted to them, to be governed by the three rules therein specified and by such principles of international law, not inconsistent therewith, as the arbitrators shall determine to have been applicable to the case;"

And whereas the "due diligence" referred to in the first and third of the said rules ought to be exercised by neutral governments in exact proportion to the risks to which either of the belligerents may be exposed, from a failure to fulfil the obligations of neutrality on their part;

And whereas the circumstances out of which the facts constituting the subject-matter of the present controversy arose were of a nature to call for the exercise on the part of her Britannic Majesty's Government of all possible solicitude for the observance of the rights and the duties involved in the proclamation of neutrality issued by her Majesty on the 13th day of May, 1861;

And whereas the effects of a violation of neutrality committed by means of the construction, equipment, and armament of a vessel are not done away with by any commission which the government of the belligerent power, benefited by the violation of neutrality, may afterward have granted to that vessel; and the ultimate step, by which the offence is completed, cannot be admissible as a ground for the absolution of the offender, nor can the consummation of his fraud become the means of establishing his innocence;

And whereas the privilege of extraterritoriality accorded to vessels-of-war has been admitted into the law of nations, not as an absolute right, but solely as a proceeding founded on the principle of courtesy and mutual deference between different nations, and therefore can never be appealed to for the protection of acts done in violation of neutrality;

And whereas the absence of a previous notice cannot be regarded as a failure in any consideration required by the law of nations, in those cases in which a vessel carries with it its own condemnation;

And whereas, in order to impart to any supplies of coal a character inconsistent with the second rule, prohibiting the use of neutral ports or waters, as a base of naval operations for a belligerent, it is necessary that the said supplies should be connected with special circumstances of time, of persons, or of place, which may combine to give them such character;

And whereas, with respect to the vessel called the Alabama, it clearly results from all the facts relative to the construction of the ship at first designated by the number 290 in the port of Liverpool, and its equipment and armament in the vicinity of Terceira through the agency of the vessels called the Agrip-

pina and the Bahama, dispatched from Great Britain to that end, that the British Government failed to use due diligence in the performance of its neutral obligations; and especially that if omitted, notwithstanding the warnings and official representations made by the diplomatic agents of the United States during the construction of the said number 290, to take in due time any effective measures of prevention, and that those orders which it did give at last, for the detention of the vessel, were issued so late that their execution was not practicable;

And whereas, after the escape of that vessel, the measures taken for its pursuit and arrest were so imperfect as to lead to no result, and therefore cannot be considered sufficient to release Great Britain from the responsibility already incurred;

And whereas, in despite of the violations of the neutrality of Great Britain committed by the "290," this same vessel, later known as the Confederate cruiser Alabama, was on several occasions freely admitted into the ports of colonies of Great Britain, instead of being proceeded against as it ought to have been in any and every port within British jurisdiction in which it might have been found;

And whereas the Government of her Britannic Majesty cannot justify itself for a failure in due diligence on the plea of insufficiency of the legal means of action which it possessed:

Four of the arbitrators, for the reasons above assigned, and the fifth for reasons separately assigned by him,

Are of opinion—

That Great Britain has in this case failed, by omission, to fulfil the duties prescribed in the first and the third of the rules established by the VIth article of the Treaty of Washington.

And whereas, with respect to the vessel called the Florida, it results from all the facts relative to the construction of the Oreto in the port of Liverpool, and to its issue therefrom, which facts failed to induce the authorities in Great Britain to resort to measures adequate to prevent the violation of the neutrality of that nation, notwithstanding the warnings and repeated representations of the agents of the United States, that her Majesty's Government has failed to use due diligence to fulfil the duties of neutrality;

And whereas it likewise results from all the facts relative to the stay of the Oreto at Nassau, to her issue from that port, to her enlistment of men, to her supplies, and to her armament, with the coöperation of the British vessel Prince Alfred, at Green Bay, that there was negligence on the part of the British colonial authorities;

And whereas, notwithstanding the violation of the neutrality of Great Britain committed by the Oreto, this same vessel, later known as the Confederate cruiser Florida, was nevertheless on several occasions freely admitted into the ports of British colonies;

And whereas the judicial acquittal of the Oreto at Nassau cannot relieve Great Britain from the responsibility incurred by her under the principles of international law; nor can the fact of the entry of the Florida into the Confederate port of Mobile, and of its stay there during four months, extinguish the responsibility previously to that time incurred by Great Britain:

For these reasons,

The tribunal, by a majority of four voices to one, is of opinion—

That Great Britain has in this case failed, by omission, to fulfil the duties prescribed in the first, in the second, and in the third of the rules established by Article VI. of the Treaty of Washington.

And whereas, with respect to the vessel called the Shenandoah, it results from all the facts relative to the departure from London of the merchant-vessel the Sea King, and to the transformation of that ship into a Confederate cruiser under the name of the Shenandoah, near the island of Madeira, that the Government of her Britannic Majesty is not charge-

able with any failure, down to that date, in the use of due diligence to fulfil the duties of neutrality;

But whereas it results from all the facts connected with the stay of the Shenandoah at Melbourne, and especially with the augmentation which the British Government itself admits to have been clandestinely effected of her force, by the enlistment of men within that port, that there was negligence on the part of the authorities at that place:

For these reasons,

The tribunal is unanimously of the opinion—

That Great Britain has not failed, by any act or omission, to fulfil any of the duties prescribed by the three rules of Article VI. in the Treaty of Washington, or by the principles of international law not inconsistent therewith, in respect to the vessel called the Shenandoah, during the period of time anterior to her entry into the port of Melbourne;

And, by a majority of three to two voices, the tribunal decides that Great Britain has failed, by omission, to fulfil the duties prescribed by the second and third of the rules aforesaid, in the case of this same vessel, from and after her entry into Hobson's Bay, and is therefore responsible for all acts committed by that vessel after her departure from Melbourne, on the 18th day of February, 1865.

And so far as relates to the vessels called—

The Tuscaloosa (tender to the Alabama),

The Clarence,

The Tacony, and

The Archer (tenders to the Florida),

The tribunal is unanimously of opinion—

That such tenders or auxiliary vessels, being properly regarded as accessories, must necessarily follow the lot of their principals, and be submitted to the same decision which applies to them respectively.

And so far as relates to the vessel called Retribution,

The tribunal, by a majority of three to two voices, is of opinion—

That Great Britain has not failed by any act or omission to fulfil any of the duties prescribed by the three rules of Article VI. in the Treaty of Washington, or by the principles of international law not inconsistent therewith.

And so far as relates to the vessels called—

The Georgia,

The Sumter,

The Nashville,

The Tallahassee and

The Chickamauga, respectively,

The tribunal is unanimously of opinion—

That Great Britain has not failed, by any act or omission, to fulfil any of the duties prescribed by the three rules of Article VI. in the Treaty of Washington, or by the principles of international law not inconsistent therewith.

And so far as relates to the vessels called—

The Sallie,

The Jefferson Davis,

The Music,

The Boston, and

The V. H. Joy, respectively.

The tribunal is unanimously of opinion—

That they ought to be excluded from consideration for want of evidence.

And whereas, so far as relates to the particulars of the indemnity claimed by the United States, the costs of pursuit of the Confederate cruisers are not, in the judgment of the tribunal, properly distinguishable from the general expenses of the war carried on by the United States:

The tribunal is, therefore, of opinion, by a majority of three to two voices—

That there is no ground for awarding to the United States any sum by way of indemnity under this head.

And whereas prospective earnings cannot properly be made the subject of compensation, inasmuch as they depend in their nature upon future and uncertain contingencies:

The tribunal is unanimously of opinion—

That there is no ground for awarding to the United States any sum by way of indemnity under this head.

And whereas, in order to arrive at an equitable compensation for the damages which have been sustained, it is necessary to set aside all double claims for the same losses, and all claims for "gross freights," so far as they exceed "net freights;"

And whereas it is just and reasonable to allow interest at a reasonable rate;

And whereas, in accordance with the spirit and letter of the Treaty of Washington, it is preferable to adopt the form of adjudication of a sum in gross, rather than to refer the subject of compensation for further discussion and deliberation to a board of assessors, as provided by Article X. of the said treaty:

The tribunal, making use of the authority conferred upon it by Article VII. of the said treaty, by a majority of four voices to one, awards to the United States a sum of \$15,500,000 in gold, as the indemnity to be paid by Great Britain to the United States, for the satisfaction of all the claims referred to the consideration of the tribunal, conformably to the provisions contained in Article VII. of the aforesaid treaty.

And, in accordance with the terms of Article XI. of the said treaty, the tribunal declares that "all the claims referred to in the treaty as submitted to the tribunal are hereby fully, perfectly, and finally settled."

Furthermore it declares, that "each and every one of the said claims, whether the same may or may not have been presented to the notice of, or made, preferred, or laid before the tribunal, shall henceforth be considered and treated as finally settled, barred, and inadmissible."

In testimony whereof this present decision and award has been made in duplicate, and signed by the arbitrators who have given their assent thereto, the whole being in exact conformity with the provisions of Article VII. of the Treaty of Washington.

Made and concluded at the Hôtel de Ville of Geneva, in Switzerland, the 14th day of the month of September, in the year of our Lord one thousand eight hundred and seventy-two.

CHARLES FRANCIS ADAMS.

FREDERICK SCLOPIS.

STÄMPFLI.

VICOMTE D'ITAJUBA.

DISCIPLES OF CHRIST. The twenty-fourth anniversary of the *American Christian Missionary Society* was held in Louisville, Ky., in October. The board of managers presented a report which showed that the collections for home missions during the previous year had amounted to \$46,256.51, and that the missionary labors under the auspices of the Society had resulted in the addition of 5,968 persons to the Church, while, owing to local obstructions, the amounts subscribed in some of the States had fallen short of the subscriptions in 1870-'71; in other States contributions had been increased. In Iowa there had been a gain of about 100 per cent.; in Illinois, of 50 per cent.; in Indiana, of 100 per cent.; and in Michigan, of 150 per cent. The board of managers recognized among the indications of improvement and promises of future prosperity:

1. The increased interest in the general field manifested by the home ministry.

2. The growing disposition on the part of brethren generally to regard the Sunday-school as an important department of missionary work, and, as such, to push forward its interests.

3. The fact that a number of the State societies had

resolved to raise stated amounts for missionary work during the current year.

4. The growing manifestations of a religious spirit in all of the conventions, and the generally evinced desire to cease the war about plans, and earnestly labor in accordance with the plan which had been adopted.

The report treated favorably the efforts which had been made to establish the cause in large towns and cities. With the aid of the State missions, churches had been organized during the year in Buffalo, N. Y., Toledo, O., Fort Wayne, Ind., Peoria and Galesburg, Ill. The Board recommended the establishment of a church-edifice fund to grant loans for the erection of houses of worship; the endowment of orphan and Bible-schools; and the organization of a self-sustaining system of colportage.

At the previous meeting of the Society a fund had been subscribed for the establishment of a mission in Germany, provided a suitable man could be found for that field. No such person having been presented, the Board recommended the translation of tracts and pamphlets into German, and their circulation in that country. This recommendation was adopted by the convention. Owing to a scarcity of means, the mission in Jamaica had been almost entirely abandoned for the preceding two years. The brethren in that island were represented as still adhering to their faith, and as looking to the United States for aid. The report from the mission enumerated 15 stations, 673 members, 157 Sunday-school pupils, 60 day-school pupils, eight native preachers in good standing, and 24 additions recently in one of their churches.

The convention adopted resolutions declaring it to be its duty "to renew the work of foreign missions as soon as practicable, and to the extent practicable," and determined to revive the Jamaica mission. The women of the churches in the State of Indiana were expected to look after its financial interests.

The expenditures of the convention during the year had amounted to \$50,098.97, leaving the treasury empty, but not in debt.

The following statistics of Sunday-schools were presented:

STATES.	Number of Schools.	Officers and Teachers.	Scholars.
West Virginia.....	25	225	2,250
New York.....	40	860	8,500
Missouri.....	175	1,575	15,540
Kentucky.....	300	2,700	27,000
Ohio.....	315	2,835	28,000
Illinois.....	345	3,500	45,000
Indiana.....	500	6,000	65,000
All others.....	700	6,300	63,000
Total.....	2,450	28,495	253,290

Except from Indiana, Illinois, New York, and Ohio, these figures are estimated.

DOMINION OF CANADA. This Confederation has not yet reached the extent desired by the English Government, and authorized by the Imperial Act of 1867, (80 and 81

Victoria). The outlying colonies are Prince Edward's Island and Newfoundland, from neither of which has yet come any formal application to unite the interests of the islanders, political, financial, and social, with those of the larger provinces. A somewhat embarrassing amount of railway debt is said to exist just now, in Prince Edward's Island, and Dominion politicians, favorable to the acquisition of this crescent-shaped settlement (180 miles long by 34 wide), are whispering that the idea of the post, "My poverty, and not my will, consents," may soon again be realized in this world's affairs. British Columbia having stipulated, upon entering the union, that a railway leading from Ontario to the Pacific coast should be constructed within a stated period—ten years—preliminary steps to that end were taken at the last session of the Dominion Parliament. A "Pacific Railway" Act was passed (Cap. 71), providing that the road shall be built by a private company, to be subsidized by the Government, and shall extend from the south shore of Lake Nipissing through Manitoba and the Northwest territories, to the Rocky Mountains, and thence to the shore of the Pacific Ocean in British Columbia, the route to be subject to the approval of the Governor-General in Council. The company must be possessed of a capital of \$10,000,000; the work must be commenced before July 20, 1873, and completed on, or before the same date in 1881. Together with \$30,000,000 from the Dominion chest, land to the extent of 50,000,000 acres, in alternate blocks of 20 miles deep, in Manitoba, British Columbia, and the Northwest territories, is to be granted to the chosen company, land and money to be given in portions as the work progresses. The name of the company undertaking this, the grandest British colonial work ever entered upon, shall thereafter be "The Canadian Pacific Railway Company," and the capital of the Dominion, Ottawa, will be their chief place of business. It is computed that this railway, extending from the Atlantic to the Pacific, through British territory, will shorten the distance between China and the British possessions in the East and Great Britain not less than a thousand miles, thus, in all probability, making Canada the great highway of the Eastern and Western nations. The incidental advantages will, of course, embrace extensive emigration to the long line of country over which the road will extend. The alternate blocks of land retained by the Government, as well as those granted to the company, will, no doubt, be available for settlement on reasonable terms, and yet such as will justify the calculations as to remunerative returns now so confidently put forth. A measure so comprehensive, involving so many and such important interests as the Pacific Railway Bill could not become a law without opposition and debate. The anti-ministerial party in Parliament took im-

mediate exception to its main features. It was contended that the large control given to the Government was without parallel in the legislation of any country; was more extravagant than was ever sought for by a British ministry, or granted by a British Parliament; that its practical effect would be to render orders in Council superior to law; that the will of the Government would be substituted for the sanction of the people's representatives; and that a large amount of money, and an immense extent of land, would be disposed of by the administration of the day in secret and at pleasure. It was further predicted that, it being allowable under the bill for members of Parliament to become shareholders in the company, a certain risk of foul play—fraudulent expenditure, to be followed by further subsidies—was incurred. The proposed route of the road was also objected to, and with a force of argument that has met with much popular acceptance. It is easy to understand the desire of British statesmen to see such a railway passing exclusively through "British territory," but the question will and must arise on this continent. In what direction do the commercial advantages most abound? It is now scarcely denied that the English Government erred gravely in insisting upon what was deemed a "military line" for the Intercolonial Railroad, between Halifax and Quebec. The Canadian Governor-General of the day, Lord Elgin, and his Council, pointed out a different and shorter route, but the imperial authorities regarded it as too near the United States, and stated in a dispatch that they had in view a road that would be "peculiarly available for military purposes." The result of this policy has not only been, the immediate loss of many millions of dollars, but the burdening of the Dominion with a property, the business value of which must be looked for in the far-distant future. The opponents of the Pacific line not only argue from this experience, but contend that the military question has less application now than ever. The colonial policy of the empire has undergone an almost radical change: British troops have been nearly all withdrawn; and the forts of Quebec, Isle aux Noix, and Fort Henry, at Kingston, have been dismantled. It is fair to presume from this, and from the *entente cordiale* now existing between Great Britain and the United States, that all apprehension of an attack upon Canada has ceased to exist, and that military considerations no longer constitute an element in the imperial policy towards her. Why, then, should not a Dominion commercial policy have full and fair play? And, therefore, why should the commercial value and usefulness of the Pacific Railway be sacrificed to the sentimental desire of confining its route to the north side of Lake Superior? This question, and the general policy it involves, has recently been under consideration by the Dominion Board of Trade, at its

third annual meeting held at Ottawa, when it was boldly enunciated that "the commercial interests of the country, and especially of the Saskatchewan region, demand that the road should be constructed on the most direct line, on that best adapted for commerce, even if that line should pass through a portion of the United States." Should the present Dominion Government be defeated in the coming session of Parliament, as it is judged from the result of the general elections to the House of Commons, held in August last, they may be, one of the first changes will no doubt be, to give practical effect to those enlightened views. Following this act, on the official list, are the titles of several railway measures, proposing operations starting from various points between the Dominion and the Pacific coast, all evidently having in view connection with the grand interoceanic company; and it is noteworthy of several of those, as well as of other projects, for which charters have been sought at Ottawa, that Pembina is their point of departure.

The 3d day of May last will be long memorable in Canada, as that upon which Sir John A. Macdonald, acting as First Minister of the Dominion, introduced a bill to give effect to those clauses of the Treaty of Washington, negotiated between the United States and Great Britain in 1871, which affected the Dominion interests. Sir John's position, and that of his colleagues, in this important affair of state, was much exposed to attack. The act of ceding fishery-rights of almost priceless value, together with the sovereignty of the St. Lawrence, without reciprocity of trade being secured, or even an acknowledgment by the United States commissioners of the wrong of the Fenian incursions, was, at first blush, most distasteful throughout the length and breadth of the Dominion; so much so, that, although Sir John had, as joint high commissioner, been a party to the cession, he ultimately united with his colleagues in Council, at Ottawa, in an earnest protest against a policy so hurtful to the *amour propre*, and so prejudicial, as it was believed, to the best interests of his country. However, the timely guarantee by the Imperial Government of a Pacific Railway loan to the extent of £2,500,000 sterling, equal to more than \$12,000,000, had a pacific effect. Sir John announced that the Government had been favored with "a sober second thought," and his personal and political following in the House, boldly appealed to, "to accept the treaty for the sake of the peace of the empire," rallied to his support, and the bill was carried by a majority of 66, in an assemblage of 176 members. The debate was marked by extraordinary ability; the speech of Sir John A. Macdonald displayed almost incomparable skill; that of Mr. Blake, in opposition, was not more remarkable for clearness and force than for deep feeling—to this hour he denounces the treaty as an "appalling transaction."

Local railway enterprise was largely promoted, especially in the older provinces of Ontario and Quebec, during the past year. In the former, the roads intended to traverse the southern side of the peninsula are well advanced: the Wellington, Grey & Bruce Railway has been opened to Lake Huron; the narrow-gauge roads leading from Toronto have also made progress; the municipalities interested have voted bonuses to the Credit Valley Railway, a new Toronto enterprise, and to the Hamilton & Northwestern Railway, the object of which is to connect Hamilton with Georgian Bay; and like assistance has been promised to the Ontario & Quebec Railway. In the Province of Quebec, the North Shore & Northern Colonization scheme has just been perfected; the grant of \$1,000,000 in aid of it, by the city of Montreal, which, owing to legal difficulties, was not immediately available, has been legalized by the Quebec Legislature. The Intercolonial Railway is, despite many difficulties, making good progress; it is confidently expected that upward of 200 miles of it will be completed before the close of this year. Notwithstanding the gloomy prospect as to the financial future of this route, it would appear that the work of construction is done with great care. The bridges are all to be of iron, the material to be supplied by two eminent firms, the Fairbairn Engineering Company, in England, and the Phoenixville Bridge Company, in Pennsylvania; the rails will be throughout of steel, coming from the best rail-makers in England. The rolling-stock is also of the best description; so far, it consists of 42 engines; 6 first-class, 2 second, 8 baggage, cars, and a post-office.

In introducing his budget on the 30th of April last, the Minister of Finance, Sir Francis Hincks, submitted a series of statements of much interest: The debt of the Dominion was shown to be, in round numbers, \$80,000,000; there had been expended since confederation, \$8,081,908, while the debt had only increased \$1,977,876; the revenue for the year was \$19,335,560; the expenditure, \$15,623,081; in two years the imports and exports had increased 22 per cent.; Canada had risen to the sixth place among commercial nations. In consequence of proposed large expenditure for the widening of canals, etc., the only fiscal relief granted was the abolition of the tax on immigrants, and the tea and coffee duties, the latter because of a similar resolution having passed the United States Congress. The banking interests of the Dominion continue to increase, proportionately, of course, with commerce. In June, 1871, the paid-up capital of the chartered banks was upward of \$36,000,000; in June, 1872, it was near \$46,000,000; the discounts show an increase from \$82,199,708, in the first month of the fiscal year, to \$107,354,114 in the last; the probable total deposits are not less than \$71,250,000, not taking into account banks which decline to publish ac-

counts, not being required by their charters to do so. Immigration to the Dominion does not increase materially; the returns to this time show the number of arrivals in 1872 to be 48,938, and of these there were *en route* to the United States, so far as ascertained, 81,617, showing an increase over the figures of 1871 of not more than 9,000. The Minister of Agriculture accounts for this paucity by "the revival of trade in Great Britain, and the disturbed state of the Continent of Europe;" to which might be added the natural desire of the immigrant to seek his fortune in a land in which wealth seems most to abound, the Republic of the United States.

A change of administration took place in Ontario about the close of last year, the Hon. Edward Blake, as premier of what is known as a reform cabinet, replacing the Hon. John Sandfield Macdonald and his colleagues. Mr. Blake has since resigned, being unable under a recent law to hold seats both in the Dominion and the Provincial Parliaments, and with the view, no doubt, of taking a part, on an early occasion, in the larger affairs of the government at Ottawa. He has been succeeded by the Hon. Oliver Mowatt, who resigned his place as one of the Vice-Chancellors of Ontario for that purpose, a new and somewhat startling proceeding under the British system.

On the 14th June last the fifth and last session of the first Dominion Parliament was brought to a close; and, consequently, general elections soon after followed. The many contests throughout the several provinces partook of the character of a vital struggle, and yet were most orderly. The aggregate vote would seem to be favorable to the present cabinet, but it is certain that they are in a minority in the premier Province of Ontario. This will lead to embarrassment; possibly, to final defeat. In closing Parliament on the above date, the then Governor-General, Lord Lisgar, bade the country farewell. On the 22d of the same month, after attending a banquet at Montreal given in his honor, he sailed for England, bearing with him the reputation of a just and judicious ruler, and a man of blameless private life. Three days later, his successor, the Earl of Dufferin, also a peer of the realm, arrived at Quebec. This nobleman is already highly popular, and exhibits qualities that are likely to render his administration honorable and useful.

The most prominent names in the year's Canadian obituary are: The Hon. John Sandfield Macdonald, for four years Premier of Ontario; Hon. J. L. Hathaway, who had been Premier of New Brunswick; Hon. W. Garvie, of Nova Scotia; and Mr. T. C. Street, of Ontario.

E

EARTHQUAKES. Earthquake-visitations, in the year 1872, were frequent, and in some instances highly calamitous, involving a large destruction of life and property. The first (in time) of these phenomena was felt over a considerable part of Eastern New England and the St. Lawrence Valley, the limits being the Atlantic coast at Portland and Belfast, Me., and points about 200 miles northeast and 60 miles southwest of Quebec. The disturbance was most marked at Quebec: new walls were cracked, and large fissures caused in the ice-bridge above the river—the shock occurring there at 7.54 P. M., and lasting about 30 seconds, accompanied by a low, rumbling sound. There were two distinct shocks at Lancaster, N. H., each of a few seconds' duration. The vibrations were well defined in a direction nearly east and west. At Quebec, and Bangor, Me., slight tremors were felt, at 3 P. M., and 11 P. M. on the same day.

The city of Shamaka, Russia, was almost entirely destroyed by an earthquake, January 16th, and a large extent of surrounding country was much disturbed. It was intimated that over 100 persons perished in Shamaka, and scarcely a building was left standing.

In February slight shocks occurred in the vicinity of Wenona, Mich., and Cairo, Ill.; and on March 6th tremors were simultaneously felt in many parts of Prussia and Saxony.

California and Nevada suffered seriously from an earthquake, March 26th. The region most strongly affected was the eastern and western slopes of the Sierra Nevada, and the Sacramento, San Joaquin, and Tulare Valleys, the movement extending into Mexico. The time of the first shock noted at Visalia, Independence, and Jackson, was 2.10 A. M., and at White Pine, Nev., 2.45. The disturbance lasted about thirty hours, and fully 1,000 distinct shocks were felt. The direction of the vibrations was generally northwest and southwest. Owen's River Valley was the most afflicted. At the village of Lone Pine, about 18 miles south of Independence, some fifty adobe houses were shaken to pieces, and 27 persons killed and 84 much injured; frame houses did not fall. At Independence, many buildings were prostrated, and some lives lost. A loud rumbling sound, described as being "like a train of cars, or like distant artillery," preceded and accompanied the shocks. Fissures, miles in length, and 50 to 200 feet wide, were reported opened along the eastern base of the Sierra Nevada, near Big Pine Camp. At other places, the ground was heaped up in great ridges, large springs stopped running, and new springs burst forth. Heavy snow-slides occurred on the Sierras, and great rocks rolled down the mountain-sides, blocking up the stage-road. The schooner *Beal*, becalmed in the

straits off San Pedro, was so much injured that she reached port with difficulty. The following is a synopsis of facts reported in the Californian papers:

At Tibbet's Ranch, 15 miles above Independence, 40 acres of ground sank about seven feet below the surface of the surrounding country. Big Owen's Lake has risen four feet since the first shock. Owen's River run over its bank, depositing shoals of fish on shore; afterward it receded. For a distance of three or four miles through Lone Pine the earth is cracked. One side remained stationary, while the other sank seven or eight feet, leaving a wall of earth, extending over three miles in length, where formerly was a level plain. Innumerable cracks were made throughout the valley. Kern and Owen's Rivers turned and ran up-stream for several minutes, leaving their beds dry; finally, they returned with largely-increased volumes of water.

Some of the shocks were preceded by a deafening report, as though the mountains were being rent in two, while others were accompanied by a low, continuous rumble, as of a train of cars running underground. None of the sufferers ever experienced anything so frightful in all their earthquake experience. At the last accounts (Thursday morning), the explosions and heavings still continue, though not so violently. The most correct estimates place the number of killed at less than 80, while the wounded will probably foot up 100.

The *Visalia Delta* of March 28th says: "At about 2½ o'clock on Tuesday morning, our people were frightened out of bed and propriety by the occurrence of one of the most extraordinary earthquakes we have ever experienced or read of, at least in some of its particulars. Its duration was its most remarkable feature. The waves of tremble seemed to come from the southwest, and they were so near together, and followed each other so unremittingly, that one gentleman assures us that the first shock lasted between 15 and 20 minutes! And he is by no means alone in this estimate. He says he counted 32 distinct shocks before 4 o'clock. The motion was unlike that of any other we have felt. The great shakes of 1865 and 1868, as they visited San Francisco, consisted of a sort of rotary motion, as if things under the surface were being ground together as by the revolution of mill-wheels; but this seemed more as if some solid body were being projected against the house, the effect being like a series of bumps. It was accompanied by a great deal of noise, resembling the roar of distant cannonading, and this preceded the shocks as the flash of a cannon precedes the sound of its discharge; indeed, sometimes the roar and rumbling would be heard, and not be followed by any shock. We are most happy to say that, so far as we can learn, no personal injury was sustained by any one in this region.

"Dr. Atchison, from Pottersville, called on us, and thinks the rocking was more severe about his home than here. He mentions that many places in the bed of the Pottersville Slough were changed from dry sand to wet, boggy soil; in several instances, columns of water were lifted in the air, and sufficient raised to cover the bed of the slough, and made quite a stream. Large bodies of black soil and dead-wood chips were thrown to the surface from considerable depths, and in the hard road seams were opened for a hundred yards or so.

"A series of very severe earthquake-shocks took place on Tuesday morning, commencing with a heavy one at 2½ o'clock, which continued with a remarkably sensible oscillating motion for a period of time estimated from one to three minutes. It subsided, but there were occasional vibrations until after sunrise. The second heavy shock took place at 6¼ in the morning, and the same motion was noticed as in the first instance, though not so violent, nor as long continued. Several second and third-class shakes

occurred during the day and evening following—one at 2 P. M., one at 9, and another after midnight. Accounts vary as to the duration of the vibrations. Some insist that the earth was in a constant shiver for four or five hours. One man said he counted 25 distinct shocks from its commencement until sunrise; and another says 30. So far as heard from, it was much more severe than any thing of the kind which has ever been known in this region. It appears to have been more violent in the mountains than on the plains."

"At twenty-five minutes past 2 o'clock, Tuesday morning," says the *Calaveras Chronicle*, of March 28th, "the slumbering people of Mokelumne Hill were shaken out of the arms of Morpheus by three severe shocks of earthquake. The oscillations were northeast and southwest, and, collectively, were at least a minute in duration. The shocks followed each other in quick succession, and were accompanied by a low, rumbling sound, more like the mutterings of distant thunder than any thing else. The shocks were heavier than any that have previously visited this section of the country, and created considerable alarm and consternation. The most substantially built stone buildings were shaken to their foundations by the convulsions, while wooden structures rocked, heaved, and cracked, as if subjected to the fury of a tornado. Windows rattled in their casings as though shaken by a person in an ague-fit, and door-bells were violently rung. Subsequently, about 6 o'clock, another shock was experienced, so slight, however, that many did not notice it. So far as we can learn, no particular damage was done by the shake-up."

Prof. J. D. Whitney, in a paper contributed to the *Overland Monthly*, considers that the impulse by which the earthquake was originated was given somewhere nearly in the axis of the Sierras, at a depth of at least 50 miles, and at the same moment along a line of almost 100 miles north and south. The resulting waves were propagated in both directions from this mountain-axis and nearly parallel with it, and advanced on the surface at a rate of from 80 to 35 miles a minute, if measured in a line at right angles to the axis of the Sierras.

The most destructive earthquake of the year visited (April 30th) the ancient city of Antioch, which had suffered from a similar cause repeatedly, previous to and during the Christian era. The shock was felt all over Syria, from Diarbekir to Beyrout, and from the Mediterranean to the Euphrates. Its duration is variously given at from half a minute to a minute, during which time about half of Antioch was destroyed, and about 1,600 persons (estimated) lost their lives. Slighter vibrations continued till April 11th, and, on the 10th of that month, a second vigorous earthquake destroyed seven persons. Aleppo also received great injury, about forty buildings having been shaken down, and seven persons killed. Accounts differ materially as to the number of fatalities attending the earthquakes at Antioch, several registrars on the spot reckoning it anywhere from 250 to 1,800. The following extracts from letters to English papers give some of the particulars of the frightful catastrophe. Rev. W. Brown Kerr, late harbor chaplain at Bombay, says:

A severe shock of earthquake was felt here yesterday, precisely at 8 A. M., English reckoning, or

shortly before 2 in the day, Turkish time. The house in which I was shaken violently to and fro for four or five seconds, or, as one gentleman thinks, even more. A stove weighing nearly a hundred-weight was overturned; the walls of stone and plaster, with wood-work and beams, were cracked, and the plaster fell on all sides. Books were thrown from the cases, and a clock hurled from a bracket on the wall into an arm-chair a few feet distant, without breaking the glass-case or the clock-works. Outside the house-walls fell, the narrow streets (only about twelve or fifteen feet wide, and some less) being literally blocked up for long distances with the ruins of fallen houses, and a dense cloud of dust arose on all sides. Men, women, and children, ran hither and thither, wailing their own hurts or the loss of relatives. I went down to the bridge, southwest of the city, about two hours after—at 10 o'clock A. M.—and saw many dead persons brought out of the city and laid out for burial. Later, I counted fifteen new graves, all close by each other. Looking toward the town, ruins could be seen in all directions. Several aqueducts were broken, and telegraph-poles were thrown down and the wires broken. The Greek Church, a strong stone-arched structure, built only a few years ago, and capable of holding 500 or 600 persons, was utterly ruined—one side and the entire roof are gone. The American Protestant Church and premises are also greatly injured, and four persons of their small community were killed, though the mission families are all safe. The number of killed and injured cannot be ascertained with any approach to accuracy, and, of course, flying rumors are abundant, one man saying that he thought there must be 1,000 killed, while another said 500, and a third 250, which is, perhaps, within the truth. The city contains from 12,000 to 15,000 persons, it is said, but no accurate census exists. There was time from the beginning of the first shock to its close for many to escape the falling houses or walls, and during its continuance two or three persons in the house where I write walked across the room and (not very quickly) down-stairs while the shock lasted. Several smaller and lighter shocks occurred for an hour or two afterward, but not sufficiently strong to shake down buildings. The shocks have continued at intervals through the night, and another, more distinct and wave-like, was felt to shake the house, with a loud, hollow, rumbling noise, about 6.30 this morning. The first shock yesterday was immediately preceded by a rumbling and creaking of the joints of the window and door frames, to which a louder noise, like thunder, succeeded, and then walls and buildings fell. Several *minars* are cracked, but all yet stand, though some of the arched caravansaries and baths near them are fallen. The old Roman bridge of four arches is rent in several places until the water can be seen through it from above; a part of the parapet-wall has also been shaken off, and the arch above the city-door at its east end has been hurled down, and lies almost whole. Much damage has been done to houses in the lower part of the town, and many of the inhabitants are now to be seen encamping around in the fields or plain.

Another letter, dated Alexandretta, April 9th, contains the following:

I returned to Antioch yesterday, and came on to this place, about thirty-five miles, to-day. There is little harm done north of Antioch compared with the south side of the valley. Alexandretta was shaken, but no stones fell. Beylan, in the mountain-pass (Pylæ Syriæ), is also almost uninjured. The shocks have continued in and around the south of Antioch at irregular intervals at from a few minutes to two or three hours. The wind has been strong to-day, and I have not observed one, but yesterday two or three shocks were strong enough to make the men run from the walls of houses which they were pulling

down or excavating for furniture or goods. One man told me he counted forty-four shocks within twenty-four hours after the first one, which I can well believe. They were all accompanied by a noise like distant thunder or artillery, and produced a tremor of the ground; but no fresh ruin has, I believe, been made by any of them except the first great shock about 8 A. M. of the 3d instant. That shock, one man describes, not inaptly, as shaking a house just as a horse shakes himself in harness when loosed from a journey, and then came a shower of stones, falling walls, and roofs. Many of the houses—indeed, nearly all around Suadia and around Bitias—have fallen, and large boulders from the mountain knocked down some few trees. The house of Dr. Yates, used as a mission-school in Suadia, is in ruins, but the inmates were all saved. The house of the late Consul Barker is entirely destroyed, the man who kept it narrowly escaping with his life. The Protestant Mission Chapel at Bitias forms a singular exception; not a stone of it has fallen, though the native pastor's house and others around were levelled to the ground. "We are all safe *al-hamd-u-llah*" (thanks be to God), said the pastor, when I inquired for his family. Not so, however, in other cases. Some families have lost two or three of their number, and several are dead in every village to the south as far as Seleucia.

Later accounts say that 1,600 dead bodies were taken from the ruins of Antioch.

April 16th, 17th, and 18th, violent earthquake-shocks occurred at Hasvick, Iceland, destroying some houses, injuring several persons, but killing none.

A torrent of lava burst forth from Vesuvius, on the night of April 24th, succeeding an unusual outpouring of flames and smoke, which had lasted for several months. The eruption on the 25th was from the side of the cone, and the lava issued so suddenly and copiously as to overtake and destroy a number of persons who had gathered to witness the spectacle of the burning crater above. Two villages were also overwhelmed, and a large tract of country, under cultivation, was laid desolate. The flow lasted between two or three days. During the eruption, a shower of fine black dust, or iron-sand, fell all about Naples and the adjacent region, causing great annoyance to people in the open air, who were almost suffocated by it. The grains of sand were quite uniform in size, and would pass through a wire gauze, the apertures of which measured the $\frac{1}{100}$ th part of a square inch. A shower of stones, attended by an extraordinary quantity of the iron-sand, closed up the more striking phenomenon of the eruption. The streets of Naples were filled with the dust to the depth of several inches. A correspondent of the London *Times* writes, May 4th, as follows:

A short distance before one reaches Resina the road turns sharp off to the left in the direction of St. Ivrio, Sebastiano, and Massa, where the greatest amount of damage has been done. The road was still encumbered with ashes, and ton-loads were being swept off the roofs. Looking right and left over this once fertile tract of land, I never saw a scene of greater desolation. As far as the eye can search every thing is withered, and the budding promise of a rich harvest is reduced to what I might have taken in my hand and crumbled into dust. Tall trees, poplars, and cypresses, and mulberry, instead of quivering in the gentle breeze, are rigid and immov-

able. Rows of festooned vines, giving hopes only last week of an abundant vintage of that delicious wine called *Lachrymæ Christi*, seem as if they had been decorated for the tomb—all are dead; while underneath, just peeping above the bed of ashes, are beans and peas, and all the great variety of vegetables which abound in the Naples market, utterly destroyed. The same scene of desolation extends all round the mountain, and many thousands who are grateful for the preservation of their lives and homes are reduced to absolute want. We saw many of these on the road or at the doors of their cottages, imploring help and declaring now with more than usual truthfulness that they were dying of hunger. Such is the sad spectacle which this once rich and lovely district presents as far as the bed of lava which cuts off further progress. St. Ivrio, St. Giorgio, and Cremano, through which we passed, have had a narrow escape indeed. It is a favorite place of *villeggiatura* for the Neapolitans, who have handsome villas there, and the lava-stream stopped within half a mile of it. Judge what the apprehension of the inhabitants must have been when they saw the river of fire coming down upon them and heard the crackling of the *scoria* as they rolled over and over and looked on the shrubs and trees writhing in their agony! On approaching the lava the peasantry flock around us like locusts, each offering his services, and each anxious to earn a sou or two. We take a man from Resina, and under his guidance we cross the first stream, burning hot to the feet, and still emitting sulphurous cloudlets of smoke. "The hot lava," says our guide, "is still running down slowly underneath. I take up some pieces, shining with all the colors of the rainbow; but they are too hot to hold, and I throw them down. This was the stream which skirted St. Ivrio, and was flowing down toward Barra. Standing in the middle, I look up and down and see a mighty sheet covering many acres of rich ground from which smoke is still issuing from a hundred—nay, a thousand—flues. Like huge pieces of coals piled one on the other are the component parts of that river. It has crossed the high-road, on which we descend from our fiery eminence very carefully, to the great relief of our feet, and then, accompanied by a multitude of the peasantry, we traverse the interval between this sheet of lava and that which destroyed portions of San Sebastiano and Massa. We climb up, as best we can, over the *scoria* full twenty or thirty feet, until we arrive at the summit of the stream—nay, ocean. I tread on fragments of houses, intermingled with the *scoria*—gayly-painted fragments of houses not long since the abodes of happy, thriving families. How fiercely burns the lava beneath our feet; how the heat shimmers all around us; and how insufferably strong is the sulphurous odor of the vapor! It takes a long time to walk across this fiery sheet before we arrive at Massa, where the same scene of destruction is repeated. A church has been miraculously preserved here also, but all the houses nearest to the lava have been thrown down, broken into a hundred fragments, and intermingled with the *scoria*. The squalid poverty of these two townships it would be difficult to describe, for portions of each remain. Some have lost their dwellings, many their land; all have lost their industrial occupation, and the promised produce of the season. "No lives were lost in San Sebastiano," says our guide, "and only two in Massa, but full a hundred on various parts of the mountain; my eldest son was one. He was at the Hermitage on Thursday night, when a carriage with five persons drove up. He recommended them not to proceed further, but they insisted, and he was over-persuaded to accompany them. All were lost."

Rev. Titus Coan sends to the *American Journal of Science* a graphic description of the great outburst of Mauna Loa (Hawaii),

on the night of the 10th of August, when a grand and lofty pillar of light, supposed to be 2,000 feet high, showed itself over the great terminal crater. Mr. Coan says, under date of August 27th:

On the evening of the 13th we had the first perfect view from Hilo. The illuminated cloud of steam and gases, which hung over the crater, sometimes rose in a well-defined vertical column to a great height, and then the higher portion would expand, forming an inverted cone; again it seemed lighted up above the mountain, and spread out like an umbrella over the crater. The changes of form, the expansion, contraction, and convolutions of the illuminated pile, could be distinctly marked, and also the rapid variations in brilliancy dependent on the greater or less intensity of the fiery lavas in the abyss below. It is now seventeen days since we first saw the eruption, and still the great furnace is in full blast. The action is, evidently, intense. Of all the demonstrations made in this vast caldron on the summit of the mountain since our residence in Hilo, none have equalled this in magnitude, in vehemence, and in duration. As yet it is confined to the deep crater; and we know not whether the terrific forces now raging in this abyss will rend the walls of the mountain, and let out a flow of lavas to the sea, or spend their fury within the recesses of the mountain. Ten thousand feet below the summit fires is Kilauea. This crater has also been very active of late. The south lake has long been filled, and it has overflowed many times, sending off broad streams of incandescent lava, filling up the great basin of 1868, elevating the southern portion of Kilauea, raising cones that puff and screech, and throw out vapor, hot gases, and sulphur. The present activity looks like some kind of sympathy with the summit furnace. Along the shore, 4,000 feet below Kilauea, there was, on the 28d instant, a *tidal wave*. It occurred at 1 p. m. during a calm. The sea in our bay rose silently and rapidly, like an incoming tide, to the height of four feet two inches. In about six minutes it had subsided to a low point, and had returned again to the height of three feet. Quickly and quietly it retired again; and thus in the space of 14 hour it made fourteen oscillations, each succeeding one growing fainter, until the sea returned to its normal condition. We had no earthquake at the time. We have had occasional slight earthquakes of late, but no severe ones.

A correspondent of the *Pacific Commercial Advertiser*, who ascended Mauna to the place of eruption, thus describes the sight:

Flowing down the sides of the symmetrical cone, that the falling stream of lava was rapidly forming, were many bright rivers of liquid light that, spreading as they flowed away, and crossing and recrossing in a tangle of bright lines, formed a lake of rivulets that, ever widening, mingling, spreading, and interlacing, presented a unique and beautiful appearance. On the extreme right-hand verge of this lower basin, detached pools of fire showed that, while a dark crust was forming on the surface beneath, the entire area of the basin was overflowed by the melted lava. We watched steadily the grand fountain playing before us, and called frequently to each other to note when some tall jet, rising far above the head of the main stream, would carry with it immense masses of white-hot glowing rock, which, as they fell and struck upon the black surface of the cooling lava, burst like meteors in a summer sky. As soon as we had reached the summit level of the mountain, we heard the muffled roar of the long-pent-up gases as they rushed out of the opening which their force had rent in the basin's solid bed. And, now that we were in full view of the grand display, our ears were filled with the mighty sound, as of a heavy surf booming in upon a level shore, while ever and anon a mingled

crash and break of sound would call to mind the heavy rush of ponderous waves against the rocky cliffs that girt Hawaii. At night the jet looked loftier, and, gazing intently into the fiery column with a good glass that we had, we could see the limpid sparkling upward jet rising with tremendous force from out an incandescent lake. Following up the glowing stream, we saw it arch itself and pour over as it were in one broad beautiful cascade. While the ascending stream was almost silvery in its intense brightness, the falling sheet was slightly dulled by cooling, and thus the two were ever rising, falling, shooting up in brilliant jets, and showering down with mingled dashes of bright light and shooting spray, while in the lake out of which rose the fountain, and into which fell the fiery masses, danced and played a thousand mimic waves, and fiery foam swirled round and round. Upon its surface danced myriad jets and bubbles, and from its edge flowed out the rivulets of lava, that in a tangled maze of lines covered all the lake.

EASTBURN, Right Rev. MANTON, D. D., Bishop of the Protestant Episcopal Diocese of Massachusetts, born in England, February 9, 1801; died in Boston, Mass., September 12, 1872. He came with his parents to the United States in his childhood, and entered Columbia College in his thirteenth year, whence he graduated in 1817. He entered the General Protestant Episcopal Theological Seminary in New York soon after leaving college, and passed through the usual three years' course, distinguished for the thoroughness and accuracy of his scholarship. He was ordained priest in 1822, and for five years officiated as assistant minister in Christ Church, New York, whence, in 1827, he was called to become rector of the Church of the Ascension. For fifteen years he continued in this rectorship, greatly beloved by his people, and constantly growing in intellectual power and moral influence. Near the close of 1842 he was consecrated Assistant-Bishop of the Diocese of Massachusetts, then embracing also Maine, New Hampshire, and Rhode Island; and in February, 1843, on the death of the venerable Bishop Griswold, became bishop of the diocese. He came to the bishopric in a trying time. The Oxford Tract party were endeavoring, as they and their successors, the Ritualists, have been ever since, to lead the Protestant Episcopal Church toward Rome. On the other side, the heaven was already working which, a little later, in the "Essays and Reviews," permeated so large a portion of the Anglican Church, and seemed ready to affect the American church. Against the inroads of both these views Bishop Eastburn stood firm in opposition, and that, when to be courageous and firm cost him friends, influence, and popularity; but he remained steadfast, and had the satisfaction of seeing, in his diocese, that neither gained any considerable foothold. The bishop was thoroughly courteous and cordial in his intercourse with other denominations. In private life, he joined to the many fascinating qualities which rendered him ever welcome in society, the tenderest of hearts, the most thoughtful consideration, and the most genuine and manly per-

sonal piety. Bishop Eastburn's published works were: "Four Lectures on Hebrew, Latin, and English Poetry," delivered before the New York Athenæum, and published in 1825; a portion of a volume of "Essays and Dissertations on Biblical Literature," published in 1829; "Lectures on the Epistles to the Philippians," 1833; "Oration at the Semi-Centennial Anniversary of Columbia College," 1837; and numerous sermons and pastoral charges since. He also edited, with notes, "Thornton's Family Prayers." His property was bequeathed to benevolent objects; especially to Domestic Missions in Massachusetts, to the endowment of the Episcopal Theological School at Cambridge, and to the American Bible Society.

EASTERN CHURCHES. The Bulgarian question, which has been agitating the Greek Church for so many years, reached a crisis in 1872. A new conflict between the Bulgarians and the patriarchate arose, at the festival of Epiphany, 1872, when three Bulgarian bishops, in order to show their independence, celebrated mass, in spite of the prohibition of the Patriarch, in the Bulgarian Church of Constantinople. The Patriarch, on the next day, made a full report of this occurrence to the Turkish Government, which exiled the three bishops. He also called a meeting of the National Council, to which he explained the facts in the case, and read the report. The Council resolved to publish a proclamation to the nation, and to distribute it all over the country. The Bulgarians were not agreed as to the best course to adopt. The party of "Young Bulgarians" insisted on the immediate rupture of all negotiations with the patriarchate, and applied to the Porte for the appointment of a Bulgarian Exarch. The moderate party lamented the acts of the three bishops, and demanded the continuation of the negotiations with the Patriarch. The Turkish Government was, however, soon prevailed upon once more to take sides with the Bulgarians. On February 24, 1872, a decree of the Grand-Vizier proclaimed that the Government, in view of the efforts of the patriarchate to bring on a split between the Greek and Bulgarian population which the Porte had endeavored to prevent, would now establish the Bulgarian Exarchate in accordance with the imperial firman. The responsibility for this measure would wholly rest with the patriarchate, by which it had been provoked. Three prelates were recommended for the position: Passios, Anthimos, Metropolitan of Widdin, and Hilarion, Bishop of Toolcha. The Bulgarian Council elected Hilarion; but his election was not confirmed, as the Patriarch would not admit to the dignity of Exarch a priest who had repeatedly been censured for his liberal opinions, and had been twice excommunicated. It was then decided to elect the more moderate Metropolitan, Anthimos, of Widdin. The new Exarch had received his theological education in the seminary of the South Russian island of Chalka, and subsequently in Moscow. He

had then been for several years a teacher at the Seminary of Ohalka, and in 1861 had been appointed Metropolitan of Shumla; but as the Bulgarians, even at that time, were unwilling to recognize the bishops appointed by the Patriarch, he had not entered upon the administration of his diocese. In 1867 he was elected Metropolitan of Widdin, and fully supported the movement for the establishment of the National Bulgarian Church. After being elected Exarch, Anthimos at once made strenuous efforts to bring about an understanding with the Patriarch. The latter replied that he would give a respite of forty days, after the lapse of which the Exarch must return to the orthodox Church, and during which he must abstain from exercising any episcopal function, under penalty of the censures of the Church. The Exarch, indeed, abstained for a time from all ecclesiastical functions, although the Passover of the Greek Church took place within this period. But, in the latter part of May, he yielded to the pressure brought upon him by the leaders of the national Bulgarian party, and solemnly released the three excommunicated Bulgarian bishops from the excommunication. This induced the Patriarch to convoke a meeting of his synod and of prominent laymen, which declared the negotiations with the Bulgarians to be at an end, and Anthimos to have incurred the canonical censures. On the other side, the Exarch, on May 24th, left out in the liturgy the prescribed mention of the Patriarch, and substituted for it the words "the orthodox episcopate," which immediately called forth the reading of a pastoral letter by the Patriarch, excommunicating Anthimos, and pronouncing the great anathema against the three Bulgarian bishops. Notwithstanding these measures, the Bulgarian Church consolidated itself more and more. The Exarch soon consecrated a new bishop, and at Wodina, in Macedonia, the Bulgarians expelled the Greek bishop, and declared that, in accordance with Art. X. of the firman establishing the Bulgarian Exarchate (by which article it is provided that two-thirds of the inhabitants of a diocese have the power of demanding the connection of the diocese with the exarchate), they would join the Bulgarian Church. On September 10th, the "Great Synod" of the Church met in Constantinople. All the patriarchs and twenty-five archbishops and bishops were present. The Synod soon declared "phyletism," that is, the distinction of races and nationalities within the Church of God, as contrary to the doctrine of the Gospel and of the Fathers, and excluded six Bulgarian bishops, and all connected with the exarchate, from the Church. All the bishops signed the decree except the Patriarch of Jerusalem, who left the Synod before its close, and was, therefore, insulted by the Greek population of Smyrna, in Asia Minor, who, received him with shouts of "Traitor!" "Muscovite!" etc. The following is a liberal translation of the decree of excommunication, which

will forever remain an important document in the annals of the Greek Church:

Decree of the Holy and Grand Council, assembled at Constantinople in the month of December, in the year of grace 1872. The Apostle Paul has commanded us to take heed to ourselves and to all the flock over which the Holy Ghost hath made us overseers, to govern the Church of God, which He hath purchased with His own blood; and has at the same time predicted that grievous wolves shall enter among us, not sparing the flock, and that of our own selves shall men arise speaking perverse things to draw away disciples after them; and he has warned us to beware of such. We have learned with astonishment and pain that such men have lately appeared among the Bulgarian people within the jurisdiction of the Holy Œcumenical Throne. They have dared to introduce into the Church the idea of phyletism, or the National Church, which is of the temporal life, and have established, in contempt of the sacred canon, an unauthorized and unprecedented Church Assembly, based upon the principle of the difference of races. Being inspired in accordance with our duty, by zeal for God and the wish to protect the pious Bulgarian people against the spread of the evil, we have met in the name of our Saviour Jesus Christ. Having first besought from the depths of our hearts the grace of the Father of light, and consulted the Gospel of Christ, in which all treasures of wisdom are hidden, and having examined the principles of phyletism with reference to the precepts of the Gospel and the temporal constitution of the Church of God, we have found it not only foreign, but in enmity to them, and have perceived that the unlawful acts committed by the aforesaid phyletistical assembly, as they were severally recited to us, are one and all condemned.

Therefore, in view of the sacred canons, whose rulings are hereby confirmed in their whole compass; in view of the teachings of the apostles, through whom the Holy Ghost has spoken; in view of the decrees of the seven Œcumenical Councils, and of all the local councils; in view of the definitions of the Fathers of the Church, we ordain as follows: **ARTICLE I.** We censure, condemn, and declare contrary to the teachings of the Gospel and the sacred canons of the holy Fathers, the doctrine of phyletism, or of the difference of races and national diversity in the bosom of the Church of Christ. **ART. II.** We declare the adherents of phyletism, who have had the boldness to set up an unlawful, unprecedented Church assembly upon such a principle, to be foreign and absolutely schismatic, to the only holy, Catholic, and Apostolic Church. There are, and remain, therefore, schismatic and foreign to the orthodox Church, the following lawless men who have, of their own free-will, separated themselves from it, namely: Hilarion, ex-Bishop of Makariopolis; Panaretos, ex-Metropolitan of Philippopolis; Hilarion, ex-Bishop of Soshia; Anthimos, ex-Metropolitan of Widdin; Dorotheos, ex-Metropolitan of Sophia; Partheonios, ex-Metropolitan of Nyssava; Gennadios, ex-Metropolitan of Melissa, before deposed and excommunicated; together with all who have been ordained by them to be archbishops, priests, and deacons; all persons, spiritual and worldly, who are in communion with them; all who act in cooperation with them; and all who accept as lawful and canonical their unholy blessings and ceremonies of worship. While we pronounce this synodal decision, we pray to the God of mercy, our Lord Jesus Christ, the head and founder of our faith, that He will preserve His holy Church from all dangerous new doctrines, and that He will keep it pure, spotless, and fast on the foundations of the apostles and the prophets. We pray Him to grant the grace of repentance to those who have separated themselves from her, and have founded their unauthorized Church assembly upon the principles of phyletism,

so that they may some day nullify their acts, and return to the only holy, Catholic, and Apostolic Church, in order, with all the orthodox, to praise God, who came upon the earth to bring peace and good-will to all men. He it is whom we shall honor and worship, with the Father and the Holy Ghost, to the end of time. Amen.

The decree is signed by his Grace the Ecumenical Patriarch and the three former Patriarchs of Constantinople, the Patriarch of Alexandria, the Patriarch of Antioch, the Archbishop of Cyprus, and by twenty-five metropolitans and bishops. The refusal of the Patriarch of Jerusalem to sign the decree was not approved by his clergy, for the provincial Synod of Jerusalem not only indorsed the excommunication of the Bulgarians, but demanded the deposition of their Patriarch, who was looked upon as a schismatic. In November, the Patriarch of Constantinople prevailed upon the Turkish Government to ask the Bulgarian Exarchate to make propositions with regard to a change in the clerical dress of the Bulgarian clergy, so as to distinguish them from those in ecclesiastical communion with the Patriarch of Constantinople. The Exarch was afraid that the abandonment of a dress which the mass of the people looked upon as an integral part of the clerical dignity might be injurious to the interests of the Bulgarian Church, and he therefore refused to make the demanded proposition.

The Russians have of late gained considerable influence among the monks of Mount Athos. These monks number about 6,000, in 21 convents, who devote themselves to religious exercises and horticulture and agriculture. Russia has long been in the habit of sending popes to Athos, with rich presents, but the Russians have thus far willingly submitted to all the regulations of the Greek monks. Of late, attention has been called to the fact that gradually the number of Russian monks has become so large that they have now a majority in two monasteries.

The foreign missions of the Russian State Church in China, Japan, and other countries, are thus briefly stated: The Peikwan, or present ecclesiastical mission of the Church in Peking, occupies the site of a Buddhist temple, granted to Russian captives who were brought to Peking in 1685. A few years later, the church on this site—a part of the original temple—was consecrated. It was repaired in 1734, when a cupola, surmounted by a cross, was erected in the middle of the church. In 1837 the structure, which had fallen to ruins, was rebuilt on the old site, which, according to the Russian custom, could not be surrendered. The houses of the ecclesiastics, together with the legation, were rebuilt in 1865, and during the last year the schools were erected. The Archimandrite Palladius, now absent in Manchuria, in the service of the Geographical Society of St. Petersburg, who have placed ample means of exploration at his command, is said to be a most active and amiable man.

He has published a number of phrase-books, which have been of great service to Russian merchants in their intercourse with the Chinese. His report of the Tien-Tsin massacre was forwarded to the Synod of his Church, and published. The works produced by members of the mission show their extensive acquaintance with the Chinese language and literature. There are two schools connected with the Mission, one of boys, with about forty pupils, another of girls, which numbers thirty. The latter was begun eight years ago, and is presided over by a Chinese matron. The object of the mission, according to the direction of the Synod, is mainly the maintenance of Christianity among those already known as Christians. Chinese converts are received with great caution. The number annually added to the Greek Church in Peking varies from ten to forty. The entire number of Russo-Chinese Christians in and around Peking is estimated at 500. The only station outside of Peking is at Tung-ting-an, 100 li distant. This community was founded by Father Isaiah, in 1865. A large portion of the village expressed the wish to adopt Christianity, and the little church there has seventy-five members. The church was built from funds furnished by the merchants in Kiakhta. Close by it is a palace and the great Lamasery, with its 8,000 lamas, and the celebrated figure of Buddha, seventy-five feet high. At Peking, the Russians have ever occupied one of the more honorable among the eight banners under which the city is divided. In the prosperous days of the empire, imperial bounty was lavishly bestowed upon them. Wasteful state expenditure, however, has reduced the means from which they were once supplied. In Japan, the Greek Church has also, during the past year, established a mission much after the same style as that at Peking. It is provided with one archimandrite and three priests. Nor in Persia have the interests of the Greek Church been overlooked. It is, however, only of late years that it has had much success. Quite recently a missionary society has been established in Moscow, with auxiliaries in most of the provinces. Its object is to educate missionaries, and collect funds for their support. Its president is Innocentius, former Bishop of Kamtchatka, who is said to have been the means of converting 40,000 heathen. There are many mission-stations planted in different parts of the empire, including the Caucasus and Siberia. The number of converts, in 1869, was estimated at more than 18,000.

The idea of a closer connection with the episcopal Churches of Western Europe and America is evidently making remarkable progress. The following letters, called forth by a resolution of the General Convention of the Protestant Episcopal Church of the United States, show that the present Patriarch of Constantinople and the President of the Holy

Synod of Greece heartily approve of this inter-
communion movement :

Anthimus, by the Grace of God Archbishop of Constantinople, New Rome, and Ecumenical Patriarch :

✠ *To the Reverend Charles R. Hale, Rector of St. John's Church, Auburn, New York, Secretary of the Committee, etc., Greeting in the Lord :*

We received with pleasure your letter, with the resolution of the General Convention of the Church in the United States of America, and for the pious sentiments expressed through you toward our most Holy Ecumenical Throne rendering you no ordinary thanks, we offer praise to God, the Author of peace, that of His boundless love and goodness He hath deigned to smooth for us the way toward a nearer approach of our two Churches, a matter which first began to be agitated three years since, during the patriarchate of our revered predecessor, Gregory VI., who so well arranged for the administration of holy rites at the burial of the dead of your communion, and lately made more plain, through the manifestations of brotherly kindness toward the Most Reverend the Archbishop of Syria, in his recent visit to England.

Now, when the base designs of evil-minded men surrounding the Church of God do not cease, on every side, to hurl against her the poisonous darts of unbelief, it seems to us that the present is the fitting time to quench, by mutual concession, the feelings of division of the Churches, one from the other, which have till now held sway—for reasons known only to the Lord—on account of dogmatic difference; and that we should hold out friendly hands, in order to join together, by the help of the Almighty, what have been separated, and to fulfil the words of our Saviour which He spake, calling upon His heavenly Father just before His willing death, "That all may be one."—St. John, xvii. 21.

Announce, then, these things, and bring them before the right reverend bishops, and the others, clergy and laity, composing the Synod of the Anglican Church in America, and be an interpreter of our desires for mutual conference through writing, and that we shall not cease, so far as in us lies, to strengthen and draw closer, by a nearer fellowship, the holy bond of love, for we are persuaded that thus, and by evangelical love toward each other, we shall come, by the gift of God, to the God-wrought miracle of the unity of the Churches.

Since toward the original and archetype of our Orthodox Eastern Church your Church has shown a reverence beyond all other, we also, heartily loving it, give to its reverend members, as also to you, beloved, our prayers, and bless you with both our hands, invoking the best and saving blessings from God, the Giver of all good, whose grace and boundless mercy be with you.

September 9-21, 1872.

✠ [The Patriarch] of Constantinople, your fervent well-wisher in Christ.

ATHENS, September 20, 1872.

Reverend Charles [R.] Hale :

✠ We received with pleasure yours of the 24th of October, of the year past, in which we read with joy the resolutions of the most reverend of the American Church concerning their hearty desire for fellowship, in a spirit of Christian love, with the Eastern Orthodox Church of Christ.

This desire and the prayer of the Episcopal Church in America have been harbingers of unspeakable joy to my aged soul, in these last days at least of my life, beholding from afar the rising hope of a coming, prayed for, brotherly drawing near and reunion of the Churches of Christ, to the glory of the Lord whom the Gospel declares to us, our Saviour Christ, the unity of His holy Church.

The heart of every true Christian is rent at the

distressing sight of the present religious separation and dissension, and, sometimes, even the enmity of Christians, in the world of ideas and of the spirit in which all ought to make up again one loving flock, tended invisibly by the one Good Shepherd.

It is high time, then, that we all agree together in this, that it is altogether an unchristian and an unworthy thing that Christians should, in the name of Christ Himself, slander, hate, and persecute one another. It is time that, leaving to the world, and to its rulers, hates, passions, and manifold divisions and differences, in the supernatural dominion of the kingdom of Christ, we should be inspired by His Holy Spirit alone, all of us perfecting in variety a spiritual unity. Fortunately, no one can charge the Eastern Church with being a deserter and a renegade from these cardinal principles of Catholic Christianity. By almost all falsely accused, at times persecuted, and often treated with utter unfairness, to no one has she in an anti-Christian, brother-hating spirit returned the like, but from the first she continues holding up supplicating hands to God in behalf of those who persecute and oppress her.

Sorrowful so often as, for the safety of the divine principles of the Saviour, she is compelled to take in her hands the scourge to drive out of the temple those making "the house of God an house of merchandise," with gladness she offers most heartily her right hand to all desiring her spiritual fellowship.

Never seeking any worldly advantages, pursuing no devious or hidden political or national aim, leaning upon no earthly support, but being the pure, spiritual fellowship of the faithful wherever they may be, the Eastern Orthodox Church is neither Greek, nor Russian, nor Græco-Russ, nor Russo-Greek, as in your letter it is characterized, as I would it had not been, but one holy Catholic and Apostolic Church, binding together, and at the same time, raising up, all nations and all peoples into a spiritual unity above all distinctions of race. In this, reverend sir, consists the unity of the Eastern Church, manifold in its members, it is one in its cohesive force and life-giving spirit.

Unity, then, and union with the Orthodox Church is not a fusion or a taking away of the natural and ethical diversity inwrought by God, it is not a slavish subjection of some to others; it is not a despotic raising up or a tyrannical levelling of national peculiarities and differences, but a certain brotherly, harmonious binding together of spirit, manifested through a common creed, voluntarily accepted, of the fundamentals of the faith, which the Divine Scriptures, the Apostolic tradition, and the Ecumenical Councils of the undivided Church, have defined for us.

Those who, in all places, are thus bound one to another, realize the "one, holy, Catholic and Apostolic" Orthodox Church. But that Church, proceeding on the universal and eternal principles of Christian love, does not, by any means, being asked, deny even to those not thus realizing her Catholic integrity, her fraternal anxiety for Christian love, and the Christian performance of those fraternal offices to which our human nature gives a claim. In the Orthodox Church, to every one that asketh shall be given; to him that knocketh, it shall be opened.

Acquainting you, reverend sir, and the Right Reverend Bishops of the Church in America, of these things, in all love, and with the best hopes, I pray the All-wise and All-good God to pour out upon you, and upon the whole nation of the United States, His blessings, giving to you all brotherly greeting in the Lord, I remain, in the Lord, your fervent well-wisher,

✠ THEOPHILUS, of Athens,
President of the Holy Synod.

A work published by Prince Gagarin, a member of the Order of Jesuits, on "The Rus-

sian Clergy," contains the following statistical information on the priests, deacons, and clerks of the State Church of Russia:

The number of parishes in Russia is given as 36,000, and the aggregate of the incomes of the clergy is supposed to be about \$23,500,000, of which the national treasury contributes about \$3,000,000; "houses and properties belonging to parishes" yield \$500,000, and the rest arises from the "contributions of the parishioners." The average income of the clergy of each parish amounts, therefore, to about \$650. Of this the priest gets half, the deacon a quarter, and the remainder goes to the "two clerks" discharging the duties of sacristan, beadle, ringer, lector, etc.—that is to say, in parishes which are fully officered. As many districts, however, do not enjoy diocesan ministrations, the average income of a parish priest, arising from the sources which have been mentioned, may be fixed at about \$400. In addition to this, he derives from the share of land assigned to him an income, which, in a fertile district, may rise as high as \$200 a year, and he receives from his parishioners a "species of tithe paid in kind," the value of which varies according to the locality. The deacons of Russia are 12,444 in number, and these cost the country (at about \$160 a head) \$2,000,000, besides the value of lands allotted to them. Next to the deacons come the "63,421 clerks, who discharge the duties of readers, chanters, sacristans, beadles, and ringers. They form part of the clergy, take part of the perquisites, and, further, are enrolled in the caste." There are generally two in each parish, and "their maintenance costs \$3,000,000, or about \$50 per head. Each has, besides, four hectares to cultivate, and creates resources from cows, pigs, and poultry, kitchen-garden, etc. Sometimes they follow a trade, as that of a glazier, bookbinder, etc." One of the most essential accomplishments is the faculty of reading fast, for "the Eastern Liturgy is extremely long, and, if the reader read in an intelligible manner, the whole day would be passed in church." Accordingly, the reader hurries on at such a pace that it is impossible to understand any thing. Sometimes, indeed, "in order to proceed still faster, two read, at the same time, different parts." Father Gagarin suggests that the offices should be abridged, in which case one clerk would be sufficient, who might be "a layman of good life and manners." At present "the 63,000 families of these clerks form the great majority of the caste," and a serious obstacle to many of the attempts to reform it.

EATON, Rev. GEORGE WASHINGTON, D. D., LL. D., an eminent college president, professor, and pulpit orator, born near Huntingdon, Pa., July 3, 1804; died at Hamilton, Madison County, N. Y., August 3, 1872. His parents removed to Ohio in his youth, and he entered Union College from Delaware, Ohio, graduated in 1829, and was immediately appointed a tutor in Union College. In 1831 he was elected Professor of Languages in Georgetown College, Ky., and in 1833, Professor of Mathematics and Natural Philosophy in Hamilton Literary and Theological Institution (now Madison University). Subsequently he filled the professorships of Ecclesiastical and Civil History, and, after the death of Dr. Nathaniel Kendrick, that of Systematic Theology. In 1855 he succeeded Dr. Taylor as president of Madison University, the new title which, as the result of years of struggle and conflict, had been given by the State, to the Collegiate Institution which for thirty years had been

known as the "Hamilton Literary and Theological Institution." The university had received a considerable, though insufficient endowment, and its officers were determined to make the most of their scanty resources. President Eaton, besides giving instruction in the collegiate department, and bestowing what attention he could to the finances of the young university, also retained his professorship, though without salary in the Theological Seminary. He had already a wide reputation as a pulpit orator, and in the hope of aiding the University, for which all his sympathies were enlisted, he accepted many invitations to preach in the large cities. These multifarious labors proved too much for even his stalwart frame and fine constitution, and in 1867 he found himself compelled to resign the presidency of the university, and go abroad for his health. He still retained his professorship in the Theological Seminary, to which he returned the next year with greatly-improved health. His whole term of service in the university and Theological Seminary was thirty-nine years. Though a graceful and eloquent writer, Dr. Eaton has left but few published evidences of his ability. He was a frequent and always welcome contributor to the religious periodicals and reviews of his denomination; but, aside from these contributions, there are only some sermons, orations, occasional addresses, and pamphlets, in existence from his pen. Union College conferred on him the honorary degree of D. D. in 1844.

ECUADOR (REPÚBLICA DEL ECUADOR), an independent state of South America, comprised between latitude 1° 23' north, and 5° 30' south, and longitude 70° 15' and 81° 30' west. It is bounded north by the Pacific Ocean, the United States of Colombia, and Brazil, east by the empire just named, south by Peru, and west by the Pacific. The area of the republic is estimated at from 2,180,000 to 2,132,355 square miles; and the population in 1866 was 1,303,082, of which number 200,000 were aborigines in a wild state. There are, perhaps, 700,000 whites in Ecuador, for the most part descendants of the early Spanish settlers; the remainder of the population being made up of mestizos, negroes, and Indians.

The capital, Quito, has a population of 78,000 inhabitants. President, Dr. S. García Moreno; Minister of the Interior, and of Foreign Affairs, F. Leon, who is also Vice-President of the Republic according to the constitution of 1869; Minister of War and the Navy, General S. Darques; Minister of Finances, F. J. Equiguren; Governor of Guayaquil, V. de Santistevan; Archbishop of Quito, Dr. T. I. Checa.

The value of the exports in 1871 was \$3,045,684 American gold, divided as follows: Cacao, \$1,707,400; India-rubber, \$693,376; hats (so-called Panama hats), \$74,256; quinine, \$92,102; and cotton, \$30,816. In 1871 there were exported 1,700 quintals of cundurango. Little is known of the exact total value of the

imports; the value of the merchandise imported from Great Britain in 1870 was \$285,040. Nearly one-half of the revenue is generally derived from the customs. The receipts in 1870 amounted to \$1,451,096; and the expenditure to \$1,119,737. The customs receipts were as follows: In 1865, \$417,697; 1866, \$560,916; 1867, \$565,382; 1868, \$597,193; 1869, \$663,356; 1870, \$1,037,247; 1871, \$1,097,151. According to official returns, the national revenue for the first half of 1872 amounted to \$1,510,072; and the expenditure was \$1,446,787.

The army consists of 1,500 men.

At the beginning of the year, the press continued to be occupied in a warm discussion on the new tariff law promulgated in November, 1871, and to take effect from January 1, 1872; by virtue of this law, enormous duties were laid upon some of the most indispensable articles imported from foreign countries. They were imposts which in a manufacturing country would be equivalent to absolute prohibition. All articles required for agriculture and education are, however, admitted free of duty; while fire-arms, and every species of warlike instruments and commodities, are prohibited. It was generally supposed that fiscally, economically, and commercially, this new law would prove to be a failure. The wharves and streets of Guayaquil were lumbered with immense quantities of goods introduced in anticipation of the new law. The merchants of Guayaquil represented to the Government the necessity of an increase in the number of custom-house employes in the port of Guayaquil, in order to have a more speedy dispatch of the enormous quantity of goods existing in the warehouses.

The *Banco Hipotecario*, established in the course of the preceding year, was to commence business March 7, 1872, with a capital of \$500,000, and was expected to be fruitful in good results to the agricultural community of the country.

In pursuance of a decree bearing date January, 1872, the publication and introduction of books, pamphlets, prints, etc., offensive to religion and good morals, are prohibited; and all persons found with such objects on sale shall be treated as smugglers.

The advantages of the Guayaquil Normal School were to be extended to Indian children.

The Government declared that all coal-mines discovered on the coast of the province of Guayaquil should be considered as national property. The Governor of the province of Pichincha was ordered to take measures to impede the introduction of traders into the eastern provinces, in order to prevent the frauds and disorders occasioned by their taking advantage of the ignorance and simplicity of the aborigines. The directors of the gas company were allowed to introduce, free, tubes and other utensils required for the extension

of gas to the suburbs of Guayaquil. An earthquake was felt at Guayaquil, January 28d.

The Government directed that as soon as 500 quintals of cacao were collected on account of *diecimos* (tithes), they should be shipped to Europe and sold on account of the nation.

Messrs. Raimundo de Pieger and A. Jones made a proposal to the Government to provide the city of Guayaquil with good drinking water, bringing it from the river by means of machinery, and establishing fountains of filtered water in the Malecon, the Cathedral Square, and others, of unfiltered water, in the four streets parallel to the Malecon. These gentlemen bind themselves to finish the work in two years, for a sum of \$382,500, payable quarterly in advance. The Government ordered this proposal to be published, fixing the 2d of January for the celebration of the contract with the person who offers most advantages to the treasury, giving also the necessary securities. It was, however, believed that this contract, if accepted, would never be fulfilled, but be placed on the shelf of the archives, together with a certain contract for a railway in the eastern part of the republic.

The official periodical published the sums of money collected in England on behalf of the sufferers of Imbabura from the terrible earthquake of 1868; they amounted to \$77,018.41, and were delivered to the Junta of Beneficencia by the British legation in Quito.

A school of arts and sciences was to be established in Quito, as also a school of agriculture; and the Government was sparing neither pains nor expense for opening up highways leading from the coast to the interior.

The new law on banks, promulgated in 1871, was still productive of evil effects; the National Bank had disappeared from Guayaquil; and many of the shareholders of the Bank of Quito, foreseeing the difficulties and disastrous consequences to be apprehended from the application of too onerous laws upon a free banking institution, had sold out their shares. The bank was, however, to continue business, but under new statutes in accordance with the present Bank Act.

The production of indigo was receiving a considerable share of attention, and bids fair to become, in the course of a few years, a source of great wealth to the country. The indigo is of a superior quality, and requires but little cultivation.

A decree was issued appointing the first Sunday in April for the nomination of Senators and Deputies.

The postal service was extended by the establishment of post-offices in the parishes of Milagro, Samborondon, Morro, and Balao, all towns in a state of progress, especially the first, which will soon be the centre of the whole commerce of the interior.

The roads in process of construction in the republic were pushed on vigorously, especially that leading to the capital of Imbabura, which

was destroyed by the frightful catastrophe of 1868.

In Quito great improvements were made in the building destined for the Academy of Arts and the National Printing-Office.

The river Milagro was to be dredged by machinery and engines from England; the work was to begin about the middle of June.

The Indians who rebelled in the province of Chimborazo were quiet, and the state of siege had been removed.

The merchants of Guayaquil had asked the Government for its decision in reference to the duties on goods of which one-half was for consumption in the country, and the other half for reexportation, inquiring if they could be divided accordingly. The Government refused.

An American schooner from California had arrived with the necessary apparatus for recovering the treasure believed to be contained in the sunken frigate *Leocadia*, which for sixty years has been lying behind Punta Santa Helena. Of the millions of dollars expected to be still found in the remains of the hulk, the Government is to get five per cent. of what is taken out.

The minister of Ecuador in Washington informed his Government that, although the postal agreement between Ecuador and the United States of America was still in force, the post-office authorities in New York still continued to demand postage on the correspondence directed to the Ecuadorian legation. On this the Superintendent of Foreign Mails replied, that the post-office of Guayaquil is to blame in not complying with Article II. of the postal contract, which declares that a separate mail-bag must be sent to the United States consul in Panamá, whereas they continue to do as formerly, that is, before the conclusion of the contract for the British mail. The Government ordered an inquiry into the matter at Guayaquil.

\$4,706.50 were subscribed in Ecuador towards paying the war debt of France to Germany.

The programmes of the Schools of Obstetrics and Sculpture, to be opened in Quito under the direction of European professors, were published in April.

The Bank of Ecuador sent a circular to the merchants, recommending them to insure their goods, and to influence those persons who have business with them to do likewise. The bank stated that it would shortly have no mercantile transactions with merchants whose effects, which were to serve as guarantees, were not insured. It offered to facilitate, gratuitously, all the necessary steps to obtain policies. The frequent fires, or at least the constant alarms, were great drawbacks to mercantile transactions.

In the canton of Ambato fourteen primary schools were opened, and in less than a month the number of scholars had reached 907.

The political chief of the canton of Cañar asks that the fine imposed on drunkards should form part of the municipal rents.

A school for young ladies was established in Riobamba, capital of the province of Chimborazo, under the direction of the Sisters of the Sacred Heart.

Ibarra, the capital of the province of Imbabura, which was destroyed by an earthquake in 1868, was rehabilitated. All the civil authorities were present, with the ecclesiastic Cabildo, the bishop, and other notables. A numerous procession marched into the square of the destroyed city, and a blessing was pronounced over it, according to the present rites of the Church.

Three important decrees were issued in August concerning public instruction. The first was for the direction of the Polytechnic School; the second appointed the programme of studies and examinations in the colleges and lyceums; and the third prescribed periods of examinations, vacations, etc.

An Orphan Asylum is to be founded at Quito, under the charge of the Sisters of Providence.

By order of the Minister of Public Works, four youths from each province were to be sent, at the expense of the respective provincial governments, to attend the practical course in the cultivation and elaboration of indigo, to be held at Quito.

The Government was desirous of establishing a savings-bank for the soldiers of the army.

A bronze statue of Bolivar is to be erected in Guayaquil.

The President is using his best endeavors for the material improvement of the country, for which he spares no expense or personal fatigue. He lately spent three weeks in Guayaquil, principally taken up in seeing into and forwarding all works of public utility and beneficence, and especially all those measures having in view the safe navigation and the making of Guayaquil one of the finest ports and cities on the Pacific coast. The measures taken by him for the prompt dispatch of goods lying in the custom-house had the best effects. In less than a month the fiscal warehouses were cleared out, and the merchants received the goods detained there on account of the unusual importations of the year.

The bishop of the diocese received a commission from the President to take in charge the construction of an enlargement of the Charity Hospital, with the sum of \$20,000 for the expenses of the building.

The improvements on the Malecon are to be finished in two years.

EGYPT, a dependency of Turkey in Northern Africa. The present ruler, Ismail-Pasha, has the official title, Khedive-el-Masr; i. e., ruler of Egypt. The title Khedive, which was given to Ismail in reward for the services rendered to the Turkish Government during the Candian War, denotes in the list of Turkish titles more than "Viceroy;" the former

Turkish title of Ismail was Wali of Egypt. Ismail Pacha, born at Cairo, in 1880, is the second of the three sons of Ibrahim Pacha, his elder brother being Prince Achmed, who was drowned in the Nile. His younger brother is Mustapha Fazyl Pacha, now living in Constantinople. A *kattischerif* of February 13, 1841, had made the rule over the pachalic of Egypt hereditary in the family of Mehemet Ali, the oldest living male member of the family being entitled to succession, in accordance with the law which also predominates at Constantinople. According to this law, Ibrahim Pacha, who died in 1843, was succeeded by Abbas Pacha, a grandson of Mehemet Ali, born in 1813. When Abbas Pacha died in 1854, the fourth son of Mehemet Ali, Said Pacha, born in 1822, ascended the throne, who, in 1863, was succeeded by Ismail, the present Khedive. The successor of Ismail would have been his younger brother, Mustapha Fazyl Pacha; but, in 1866, the Sultan, at the request of the Khedive, changed the law of succession, so as to make the pachalic hereditary in the direct male line of the ruling prince. The Khedive has four sons: Mohammed Thewfik Pacha, twenty-one years old, heir-apparent according to the new law of succession, and President of the Council of State, has been educated at Cairo, partly by European instructors, and speaks French fluently; Hussein Pacha, twenty years old, Inspector-General of the Delta, has been educated at Paris; Hassan Pacha, nineteen years old, has been educated at London; Ibrahim Pacha, fifteen years old.

At the head of the administration is a Council of State, established in 1856. It was composed, in 1872, of the eldest son of the Khedive as president; of Mansur Pacha, son-in-law of the Khedive, Sherif Pacha, Nubar Pacha, Abdallah Pacha, Ragheb Pacha, and Ratib Pacha.

The Cabinet was reconstructed in September, 1872, and composed of the following members: Presidency, and Justice and Grace, Sherif Pacha; Foreign Affairs, Nubar Pacha; Finances, Omer Pacha Lutfi; Interior, Ismail Pacha Muffetish; Public Instruction and Public Works, Hussein Pacha; War, Kisim Pacha; Navy, Latif Pacha.

The area of Egypt is generally estimated at about 659,000 square miles; but E. de Regny, in his semi-official "*Statistique de l'Égypte d'après des documents officiels*" (Alexandria, 1872), claims 926,936. The area of Egypt proper is, in the official "*Guide Général d'Égypte*" (Alexandria, third year, 1869-'70), estimated at 216,235 square miles. Of these only 9,737 square miles are at present cultivated land, and only 2,040 square miles more are adapted for cultivation; the remainder are deserts and lakes.

The population of all Egypt is about 8,000,000; that of Egypt proper was, according to Regny, in March, 1871, as follows:

DIVISIONS.	Natives.	Foreigners.	Totals.
In Cairo and the other ports.....	571,014	53,555	624,569
In Lower Egypt.....	2,611,315	4,483	2,615,798
In Middle Egypt.....	599,596	599,596
In Upper Egypt.....	1,333,442	1,333,442
Total.....	5,115,367	58,038	5,203,405

According to the reports of the consuls, the foreign population amounted in 1871 to 89,792, embracing 84,000 Greeks, 24,052 Italians, 17,000 Frenchmen, 6,800 Austrians, 6,000 Englishmen, 1,100 Germans, 580 Persians, 253 Dutch, 185 Spaniards. The population of Cairo in 1871 was 853,851 (21,753 foreigners); of Alexandria, 219,602 (53,829 foreigners); Damietta, 28,918 (50 foreigners); Rosetta, 14,978; Suez, 13,625 (2,500 foreigners); Port Said, 8,859 (4,310 foreigners).

The total receipts for the year ending April 2, 1870, according to the official budget, amounted to 1,458,729 purses, and the total expenditure to 1,283,880 purses (500 piastres = 1 purse, 20 piastres = 1 American dollar). The public debt amounted, in January, 1871, to about £40,550,000. In April, 1872, the house of Oppenheim, in London, advanced to the Khedive £4,000,000 for eighteen months. The navy, in 1870, consisted of twelve steamers (8 yachts, 2 frigates, 2 corvettes, 4 screw-gunboats, and 1 aviso). The value of the commerce of Alexandria with foreign countries was, in 1871; imports, 560,900,000 piastres; exports, 999,500,000.

The periodical press in Egypt is almost confined to the city of Alexandria. There the following papers were published in 1870: *l'Égypte*, an official organ of the Egyptian Government, daily, political, and literary; *Le Nil*, tri-weekly, political, literary, and commercial; *L'Avvenire d'Egitto* and *L'Internazionale*, of the same character as the preceding one; *Le Progrès Égyptien*, semi-weekly, and as liberal as the press laws of Egypt will allow, brings occasionally valuable articles on the commercial, financial, and general condition of the country; *La Trombetta*, an organ of the commercial and navigation interests of the country; *Manifesto Giornaliero*, daily, political and commercial; *Écho*, a Greek journal. In Cairo is published, once a week, an Arabic paper, *Wadi-el-Nil* (Valley of the Nile). It appears on Friday, the holy day of the Mohammedans, and is read by many groups of Arabs sitting in the bazaars and the coffee-houses, at the wells and the mosques. A "Press Bureau" is connected with the Department of Foreign Affairs. A statistical year book was established in Alexandria in 1870 by E. de Regny ("*Statistique de l'Égypte d'après des documents officiels*;" the third volume appeared in 1872).

The cause of education has made considerable progress by the establishment in 1868 of government schools in the large towns of the country. These schools, in 1870, had an ag-

gregate number of 4,000 pupils who gratuitously received not only instruction, but support, inclusive of clothing. These schools embrace elementary as well as secondary education. The former embraces the reading and writing of Arabic, arithmetic, drawing, and French, or some other foreign language. From the primary classes the pupils pass over into the secondary school, which embraces the following sections: 1. The preparatory course, embracing a three years' course, the study of the Arabic, Turkish, French, English, and German languages, mathematics, drawing, history, and geography. 2. The special schools, which the pupil enters after finishing the above course. These special schools are—1. The Polytechnic School, the pupils of which, after finishing a course of four years, can choose, as in France, between the civil and military career; in the former case, he enters for two years into the "School of Administration" (which, in 1871, had 75 pupils); subsequently, into the service of the state; in the latter case, he enters the Military Academy of the Abbassieh at Cairo (with 750 pupils in 1870, against 500 in 1869). In 1871 the Polytechnic School had 80 pupils, against 60 for the preceding year. 2. The Law School, just organized, will embrace a course of four years, and teach not only the Mohammedan, but also the Roman law, and that of the Christian nations in general. 3. The Philological and Arithmetical School embraces mathematics, philology, rhetoric, prosody, and drawing. 4. The School of Arts and Industry, in Balak, established by Mehemet Ali, and greatly improved under Ismail Pacha; has a course of three years, and had, in 1871, about 100 pupils, against 50 in 1869. 5. The Medical School, with 75 pupils, with a School of Midwifery (with 65 pupils in 1871, against 40 in 1870), this is only one thus far existing in Eastern countries. 6. The Naval School, in Alexandria, which in 1869 had 31, and in 1871 85 pupils. Recently, Prof. Heinrich Brugsch, of the University of Göttingen, has been called by the Egyptian Government to Cairo, in order to establish there an academy for archæology, and, in particular, for Egyptological studies.

Voluntary schools for primary instruction are connected with the mosques. The number of their pupils is rapidly increasing, and while at the time of Mehemet Ali only one in a thousand received education, now the number of pupils is said to amount to 60,000, or about 6.10 of the entire population.

The University of Cairo, called el-Ashar (the Blossom), is visited by a large number of students from Turkey, Asia Minor, Arabia, various countries of Africa, and even from India and the Sunda Islands. The number of the students of the higher classes, in 1870, amounted to 5,000, under 40 professors. About one-half of the students are gratuitously supported. The preparatory classes, numbering

many thousand pupils, are instructed by 260 teachers. In former times the university was sometimes attended by as many as 20,000 pupils.

The arrivals in the three principal ports of Egypt, in 1871, were as follows:

PORTS.	Vessels.	Tons.	War Vessels.
Alexandria	2,849	1,362,603	73
Port Said	1,275	927,796	87
Suez	531	456,809	55

The length of state railroads in operation amounted to 1,047 kilometres (equal to 649 miles); of these roads, 286 miles have double tracks. The only private road is that from Alexandria to Ramleh (5 miles). The road from Cairo to Suez (90 miles) has been abandoned.

The Egyptian mail, in 1871, forwarded 1,490,033 letters and 197,739 newspapers to places in Egypt, and 72,723 letters and 4,456 newspapers to foreign countries. The Austrian mail brought 108,960 letters from Europe, and 30,996 from the Levant. The Italian post brought 164,000 letters and 173,000 newspapers, books, and pamphlets, from Europe, and forwarded 135,000 letters and 10,800 newspapers, etc., to Europe. The Greek mail brought 28,269 letters and 25,776 newspapers from Greece, and forwarded 29,958 letters and 1,946 newspapers.

The telegraphs in operation, in 1872, were (1 kilometre, equal to .621 mile):

TELEGRAPHS.	Lines.	Wires.
State Telegraphs	5,394	11,575
Private "	908	1,799
Total	6,307	13,374

The receipts of the Suez Canal for the year 1871 were 13,276,074 francs; the expenditures, 15,918,579 francs; the receipts during the first nine months of 1872, about 14,000,000 francs. The movement of shipping in the Suez Canal, in 1871, was as follows:

VESSELS.	Number.	Tons.
English	502	546,453
French	66	89,076
Egyptian	23	18,335
Austrian	63	83,729
Turkish	33	27,414
Italian	47	18,360
Other	33	38,173
Total	765	761,410

In June the Porte required the Khedive to restrain the Suez Canal Company from levying increased dues upon the gross tonnage of vessels passing through the canal, as had been proposed after the 1st of July, until some further arrangement would be made. In order to settle the pending difficulties, the Khedive, in June, proceeded to Constantinople, where he was well received, and appears to have fully attained his object. In September the Sultan issued a firman, making the dignity of Khedive hereditary in the family of Ismail Pacha. The firman, with a letter of the Sultan, brought by

Mustapha Bey, the aide-de-camp of the Sultan, was promulgated on September 30th.

In September reports of difficulties between Egypt and Abyssinia attracted considerable attention. According to a dispatch from Cairo, 4,000 men were sent by the Egyptian Government to the frontier, to reinforce the Egyptian troops stationed there, with orders to repel by force of arms every attempt of Prince Kassai to invade Egypt, but they were enjoined to avoid crossing the frontier. On the other hand, Prince Kassai, or, as he is called in the accounts from Abyssinia, King Johannes, sent General Kirkham as his special messenger to England, with letters for the Queen, asking the intervention of England against Egypt. The ambassador had also letters for France, Russia, and Germany. General Kirkham formerly served in the English army, and accompanied the English expedition against Abyssinia as army agent. His rank of general is derived from an Abyssinian patent. When the English expedition left Abyssinia, Kirkham offered his services to Prince Kassai. The English authorities at first refused to give him permission to enter the Abyssinian service, but subsequently consented that he should drill the troops of Kassai. At the same time, the English commander sold to Kassai 12 howitzers and 800 muskets. Kirkham at first drilled a division of 100 men, and the results he obtained were so satisfactory that soon Kassai placed 2,400 picked men under his instruction. These troops, under the command of Kirkham, secured the victory of Kassai over his rival Gobazie, and enabled him to proclaim himself and to be crowned King of Ethiopia. Of the origin of the difficulties between Egypt and Abyssinia, Kirkham gave, in communications to the English Government and the English press, the following account: The Khedive had appointed Werner Munzinger, a Swiss scholar, who had lived for twelve or thirteen years in that region, Governor of Massowah. While Kassai was engaged in quelling the insurrection of some native chiefs, 3,000 Egyptian troops were sent to Massowah, with the aid of whom Munzinger invaded the country of the Bogos, a district about 220 miles long, and 80 miles wide. Munzinger is married to the daughter of an Abyssinian chief, speaks all the languages of the country, and has a considerable influence upon the natives. After conquering the district of the Bogos, he fortified his position, and awaited an attack from Kassai, who, however, preferred to send General Kirkham to Europe, to implore the aid of the Christian powers against the Khedive of Egypt, whom he charges with the intention of annexing the entire country to Egypt, of bringing the Abyssinian Christians under Mohammedan rule, and of securing an important road for the slave-trade.

ELECTRICITY. *Telegraphy without Insulation.*—It is shown, by Mr. H. Highton, that water itself is so perfect an insulator for electricity of low tension that a long wire or a

plate of copper, charged with electricity, in that condition, and submerged, will retain the charge for hours, and, indeed, quite as obstinately as the glass of a Leyden jar retains a charge of high tension. He proposes to use as his instrument for telegraphy, on naked submerged wire, a light slip of gold-leaf, weighing from $\frac{1}{1000}$ th to $\frac{1}{100}$ th of a grain, acted on by a powerful electric magnet, and with its motions optically magnified. The delicacy of this arrangement is so great that simply looking at a thermopile will transmit a visible signal through the resistance of the Atlantic cable, and a kiss or grasp of the hand, a very strong signal. The use of the instrument gives an opportunity of employing electricity of the very lowest tension, which, besides other advantages, has a much less tendency to escape by faults of the wire than electricity of a higher tension. Mr. Highton asserts that a fault which caused the disappearance of all visible signals through a Thomson's speaking galvanometer, with a resistance of 500 units, or about 125 miles of Atlantic cable, would still allow intelligible signals to be transmitted, by his invention, with 10,000 units, or 2,500 miles, of resistance. When increased sensitiveness is required, the only thing necessary is to increase the force of the electro-magnet at the receiving end. The author concludes that, instead of the hundreds of thousands of units of insulation of the present cables, it would be feasible to work through a cable having only a single unit of insulation; and, if greater insulation were desirable, a wire might be used presenting much more resistance to the currents, such as a steel wire, possessing more strength, and much cheaper, than copper, and that, electrostatic induction being less injurious, and much cheaper, with less gutta-percha, cables might be used costing not more than a fifth or sixth of the present prices, and thus telegraphy be made much more available for the mass of mankind.

The Aerial Telegraph.—Congress has passed, and the President has signed, a bill organizing a company with authority to use the principle of aerial telegraphy, claimed to have been discovered by Mr. Loomis. No full description of the new method has been given to the public. It is reported that Mr. Loomis has succeeded in sending electric signals, through considerable distances, without the aid of any other conductor than an elevated stratum of air. His most successful experiment is said to have been made in the Blue Ridge Mountains. He flew a kite from one of the highest spurs of the range, using, instead of packthread, a small copper wire, by which he maintained a ground connection. From another spur or peak, 20 miles distant, he caused another kite, similarly connected with the earth, to be sent up. When the two kites had reached a suitable height (being then in an electrical stratum of the atmosphere, as the discoverer explains), it was found practicable

to exchange signals between the two, the electric current passing over the interval. Mr. Loomis conceives the bold idea of applying this principle to international telegraphy. He would build a high tower on the loftiest peak of the Rocky Mountains, and on that erect a flag-staff, put up a similar construction on one of the highest peaks of the Alps, attach his electric apparatus to each, and is hopeful of transmitting messages by sufficiently strong currents, between those points, through the theoretically favorable medium of the upper air. In the bill, as passed, there is a clause which seems to give the company a right to use any existing means of telegraphic intercourse, so that if the aerial telegraph should not be practically successful, the company could fall back on the common system of wires and poles. In order to introduce the telegraph into the different States, the company must obtain permission from the Legislatures thereof.

The Allegheny System of Time-Signals.—Mr. P. O. Langley fully describes this in the *American Journal of Science*. The plan was worked out for the managers of the Pennsylvania Central Railroad, in 1869, and has since furnished to that line its standard time, and also supplies time to Philadelphia and the East, as far as Lake Erie on the north, and Chicago on the west, besides regulating the clocks on a number of minor roads, over whose wires it goes, as well as those of the principal Southern lines connecting the Atlantic with the Mississippi, thus passing over several thousand miles daily. The observatory is on the summit of the ascent on the northern side of the valley of the Ohio, about two miles in a direct line from the offices of the Western Union Telegraph Company in Pittsburg. Observations for time are taken every fine night of the year, except on Sunday, from three to six stars, and the corrections made, if needed. Distant clocks are not controlled sympathetically (on a well-known plan) by the observatory clock, but only have the time furnished to them, so that they may be regulated twice a day. Mr. Langley concludes his paper as follows:

The necessity of a uniform standard of time over the whole country, which was alluded to in the outset as one of growing importance, has not been further directly touched upon in this article, which is yet, as a whole, devoted to describing the means of meeting it. The evident tendency, in thus sending the time from one standard over so large an extent of territory, is to diminish the number of local times, and so prepare the way for a future system, in which, at least between the Atlantic and the Mississippi, they shall disappear altogether.

A step in this direction has been contemplated by the managers of the roads uniting New York, Philadelphia, Pittsburg, and Chicago, who have intended to use the time of the meridian of Pittsburg between the two extreme points mentioned, running all trains from New York to Chicago by this time alone, in place of using successively the local times of Philadelphia, Altoona, and Columbus, as at present. Such a change would have already taken place during the last summer, except for an unexpected cause of delay, on whose removal it will be effected.

The labors of this and of other American observatories are tending to the same important end, that of the ultimate adoption of some single time for all the country east of the Mississippi, by which not only the railroads, but cities and the public generally, will regulate themselves. What point shall be chosen is of less importance than that some *one* shall be used, and universally.

The subject is one which has hitherto attracted little public attention, but it does not seem unsafe to make the assertion that the causes which have almost insensibly effected such a revolution in England, will, in a few years more, bring it about here.

Improved Electric Clocks.—Sir Chas. Wheatstone, by substituting magneto-electric currents obtained from permanent magnets, for the voltaic battery, has removed some of the imperfections and inconveniences pertaining to the old style of electric clocks. His system consists of two parts: the going clock, from which the magnetic currents are obtained, which is driven by a weight; and the sympathetic clocks, deriving their motion from the currents obtained from the going clock. Each of the sympathetic clocks is provided with an ordinary galvanometer coil and magnetized needles—the latter being attached to an axis having a pinion which gears into a crown-wheel. This wheel in turn gears into a train of wheels to which the clock-hands are attached. The action is then as follows: Suppose the needles to be parallel to the coils at starting, and the pendulum to be at one limit of its distance of oscillation, the pendulum, in swinging to its other limit, sends a current through the coil, and causes the needles of each of the clocks in circuit to be deflected; and, as the needles can move with very little friction with their axes, they are carried round, by their momentum, half a revolution or more. On the pendulum, now swinging the other way, a current is sent in the reverse direction, which, as the position of the poles of the needles with respect to the coils is now reversed, sends the needles round again another half-revolution in the same direction, so that, for each complete oscillation of the pendulum (backward and forward), the needles make one complete revolution, and thus a continual rotatory motion of the needles, and consequently of the hands of the clock, is kept up. It might be thought, perhaps, that some special contrivance would be necessary, in order that the needles should be only able to move just half a revolution for each current, lest the succeeding current should either not be able to give them a full impulse, or would have the effect of simply making them oscillate backward and forward without imparting a rotatory motion to them; such a contrivance, however, is not necessary, for it is found that when the clocks are started, after a few revolutions the rotatory motion of the needles becomes perfectly uniform, and continues so as long as the going clock works. The going clocks are provided with an arrangement by which any slight errors in their rate of going can, if necessary, be corrected by a standard

clock, so that all that is necessary to keep the clocks working is simply to wind up regularly the going clock, and the sympathetic clocks will for any length of time always keep precisely the same time as it.

Automatic Registration of Earthquake-Shocks.—At the observatory on Mount Vesuvius, Prof. Palmieri has arranged a seismograph for the registration of earthquake-shocks. The object of the instrument (says a writer in *Nature*) is twofold: first, to measure the direction and intensity of a shock; second, to record the history of an earthquake. The shock may be either vertical or horizontal, or partly vertical and partly horizontal. For the vertical shocks a fine metallic point is suspended by a coil of wire over a cup of mercury, the coil acting as a spring, and the slightest upward motion of the earth is sufficient to cause the point to dip into the mercury. This completes a galvanic circuit, which stops a clock at the exact half-second at which the shock occurred, and rings a bell to call the observer. There are three or four helices of iron of different strengths, which support small magnets above a cup of iron filings. When a vertical shock occurs, some of these magnets dip into the iron filings, and a light index attached measures the intensity of the shock. For horizontal shocks there are four glass tubes. Each of them is bent twice at right angles, so as to form a U-tube. One arm of this tube has more than double the diameter of the other, and is shorter. The four tubes point in the directions of the four cardinal points. Each tube has a certain quantity of mercury poured into it, and on the surface of the mercury, within the narrow arm of the tube, there rests a small weight attached to a silk fibre, which passes over a delicate ivory pulley, and has a counterpoise attached at the other end. Each pulley has an index and circular scale to mark the angle turned through. The extremity of a wire is fixed at a small distance above the surface of the mercury in each tube. If then a horizontal shock occur, the mercury rises in the corresponding tube; but it rises higher in that one which has its long arm to the north. The pulley is turned through a certain angle, which is measured by the index, and at the same time the mercury in rising comes in contact with the fixed wire, and so completes a galvanic circuit which rings a bell, and stops the clock at the exact half-second when the shock occurred. If the shock comes from some intermediate point two of the indices will be moved, and the direction and intensity can be measured by observing both of them. We have seen up to this point that the instrument will measure the direction and intensity of a shock, will mark the time at which the shock occurred, and will ring a bell to attract the attention of the observer on duty, who may register succeeding shocks, or, if the earthquake has ceased, may reset the apparatus.

But this is not all. The galvanic circuit, which is completed at the moment a shock occurs, releases at the same instant the pendulum of a second clock, which has been held out of the vertical by means of a detent. This clock allows a roll of paper to be unwound off a drum, as in any registering telegraph, at the rate of three metres an hour. A pencil rests nearly in contact with the strip of paper. It is connected with one arm of a lever, the other arm of which is slightly distant from an electro-magnet. As often as the current passes, this end of the lever is attracted to the magnet, and the pencil in consequence is made to press on the paper, to be released only when the current ceases. By this means then a continuous history of the earth's trembling is registered, a pencil-mark corresponding to a time of trembling, and a blank space to a period of cessation. This instrument is extremely delicate, and registers motions of the earth which are too slight to be perceptible to the human frame. While inspecting it some one happened accidentally to touch the casing of the instrument. The alarm was immediately given by the bell, and the two clocks were respectively checked and put in motion by the galvanic current.

The Magnetic Counter.—This is an instrument, invented by Mr. Wheatstone, for the purpose of counting and registering the periodical motions of any machine, whether rotary or oscillatory, and doing a variety of other enumerating work. The counting apparatus is the same as that used in ordinary mechanical registers, but is less liable to get out of order, and cannot be tampered with by persons in charge of the machine, and gives its indications at any point however distant. No voltaic battery is employed, the electric currents being produced by a small piece of iron attached to the moving part of the machine, working upon the poles of a magnet. Among the purposes to which this register has been applied are these: To count the number of impressions produced by any printing-machine; also the number of revolutions of the screw or paddle-wheels of a steamship; also the number of visitors who enter any public place. By its use the rate of working of any number of machines may be seen and compared by the overseer in a distant apartment.

The Electric Telltale.—Various plans have been devised to keep record of the movements of night-watchmen, with a view of insuring the faithful performance of their duties. Most of these have been unsuccessful. M. H. Caudesy, of Switzerland, has invented an electric telltale, which has been introduced in the Cantonal Penitentiary, at Lausanne, and is found to work well. In the director's room he placed a circular paper dial, having all the hours and minutes marked on it, and revolving by clock-work once in twelve hours. This is electrically connected with knobs (stationed at various points in the rounds made by the

watchmen); when the knob is pressed, the paper is punctured by a point, thus recording the very minute the watchman was at a given post.

Electro-Chemical Copying-Press.—An electro-chemical copying-press has been invented by Signor Zuccator, of Padua, having for its object the reduplication of any writing and printing to any desired extent. The upper bed of the press consists of a plate of copper, and the lower bed of plate of copper tinned, both resting on mahogany beds. These plates are placed in the ordinary way in the circuit of a battery, so that when brought into close contact the circuit is completed, and a current established over the whole of the surfaces. By the aid of a varnish (an insulating medium) applied to a steel plate, and removable by the action of a "style" by which the writing, etc., is executed, the electric current is confined to those portions any of which are so denuded of the insulating protection; and then it is made to leave record of its passage by its continued action on the steel plate, and sheets of copying-paper specially prepared and dampened by a solution of prussiate of potash. The electrolytic action causes the formation of ferro-prussiate, known as Prussian blue, producing a perfect fac-simile of the original design wrought on the varnished surface of the plate. The battery employed consists of a single cell, with zinc and carbon elements in an actuating solution of bichromate of potash and sulphuric acid; and its positive and negative poles are connected in the usual way, by spiral coils of insulated wire, with the upper and lower beds of the copying-press. The movable steel plates, on which the writing, drawing, or other design, to be copied, is made, has to be thoroughly cleaned and well and evenly varnished; care must also be taken, by a firm, steady pressure on the style, effectually to remove the varnish, leaving the writing, printing, or other pattern, in bright steel on a raised ground of varnish, affording perfect insulation everywhere else on the surface. By placing the copying-sheets, efficiently dampened with the prussiate solution, in any number from one to five or six, one over the other, superimposed on the prepared plate, a corresponding number of copies can be obtained, and so on, almost *ad infinitum*. Thus any required number of copies can be produced with perfect facility and ease—all being fac-similes of the original.

Duration of the Electric Spark.—A committee of the French Academy have reported favorably on the method adopted by MM. Lucas and Cazin to measure the duration of the electric spark (see ANNUAL CYCLOPÆDIA for 1870). The committee remark that the duration of the spark being determined by the number of coincidences seen by the observer, if the degree of the illumination of the lines were much diminished it is to be feared that the number of coincidences would not diminish equally in consequence of the enfeeblement

of the light corresponding to the end of the discharge. And they think it would be of use to ascertain the effect of variations in luminous intensity, as in discharges between electrodes of various metals, placed at different distances, in gases at different pressures. The proposers of the method have not been able to make appreciable the duration of a spark from an ordinary machine; but they found the duration of the discharges of condensers varies with the surface of these, with their arrangement, and the resistance of the circuit. It varies also with the striking distance, the nature of the balls, and the humidity of the air. In general, the duration increases with the condensing surface, and with the distance between the balls, and diminishes with the length of the circuit. The limits of duration given by their observations are four millionths of a second, and eighty millionths of a second—with a possible error of one six-millionth of a second.

Spectrum of Lightning.—Lieutenant E. S. Holden, of the West Point Academy, reports to the *American Journal of Science* his observations on the spectrum of lightning on three occasions, when the display occurred shortly after sunset, and presented rapid successions of sheet-lightning and frequent vivid flashes. He says:

In the sheet-lightning and in the fainter flashes the green and blue portions of the spectrum were visible, the violet and red cut off; in the brighter flashes a complete and continuous spectrum appeared and superposed on it bright lines. The red end of this spectrum (of vivid flashes) seemed to be shorter than that of the spectrum of a common gas-jet turned down low, with which it was constantly and almost instantaneously compared, without moving from the place of observation.

From the sheet-lightning I repeatedly obtained series of bright bands in the green, but the width and intensity of these bright bands continually changed. Of the bright and sharp lines I saw but three—1, line in green; 2, line in blue; 3, line in violet (or extreme blue?).

These were seen frequently, and sometimes those of one flash would be immediately succeeded by those of the following flash, thus giving me a means of assuring myself that the same lines appeared as well in position as in color.

Electrical Condition of Gas-Flames.—The following are some of the results obtained by Mr. Trowbridge, in experiments on the electrical condition of gas-flames. The flame operated on was that of a Bunsen burner, its electrical condition being determined by a Thomson's quadrant electrometer. Upon connecting the testing-plate of one pair of quadrants of the instrument with the metallic burner, and with the earth, the flame was found to be electrified negatively.

Experiment 1.—Flame twelve centimetres high; plate at the height of seven centimetres. A negative indication of 130° , very steady.

Experiment 2.—A platinum wire, substituted for the plate, and meeting the flame three centimetres above the burner, gave a deflection of 80° in a negative direction.

Experiment 3.—With the testing plate just above

the tip of the flame, the instrument showed a positive deflection of 70° to 80° .

Experiment 4.—With the testing-plate five millimetres from the outer surface of the flame, on all sides, a feeble positive charge was obtained, the air in contact with the flame being apparently charged positively, the indication in no case exceeding 50° or 60° on the scale of the electrometer.

Experiment 5.—The metallic tip of the burner was found to be charged positively, giving an indication closely agreeing in the number of degrees with that corresponding to the negative indication of the flame. The indication was quite constant.

Experiment 6.—When a glass tip was substituted for the metallic tip, no charge was found upon it. This was the case when any non-conducting body formed the tip.

Experiment 7.—A glass tip having been substituted for the metallic one, a platinum wire was inserted below the orifice and carefully pushed upward until it occupied the centre of the interior cone of flame. A very feeble indication of negative electricity was the result. While, with the Bunsen burner, the flame and the metallic tip are in decided electrical opposition, the one having a negative and the other a nearly equal positive charge, in spirit-lamp flames the two opposite states recombine, the wick of the lamp and the fluid contained in the vessel connecting the two charges. The flame, therefore, merely takes the potential of the atmospheric electricity at the place where it is situated.

The conclusions to which these experiments lead are thus given :

1. The flame of a Bunsen burner is negative, while positive electricity accumulates on the burner itself, if it is a good conductor. With orifices made of non-conductors, no charge was found upon the tip.
2. The stratum of air in contact with the outer cone of flame is slightly charged with positive electricity. The partly-consumed gas of the interior cone is neutral.
3. The pressure of flames tends to change the nature of the atmospheric electricity at the given place, reducing a positive tension to a feebly negative one. —*American Journal of Science.*

Passage of Electricity through Gases.—MM. Wiedemann and Ruhlmann have experimented on the passage of the electric current through various gases. The electricity was obtained from a Holtz machine, and the discharge produced within a cylindrical metallic vessel, in which the electrodes, insulated from the vessel, and terminating in metallic knobs, were confined. By a system of tubes, the air could be rarefied, and different gases introduced. The intensity of the currents was measured by a reflecting galvanometer, and the interval between the discharges determined by a heliometer and rotating mirror. The following are some of the results obtained :

Varying the velocity of the machine (other circumstances being the same), it was first of all observed that the quantity of electricity produced by a constant angular displacement, ϕ , of the plate of the machine is independent of the speed of rotation. When other circumstances varied, as, e.g., the degree of humidity in the air, or the distance between the two plates of the machine, the intensity of the current, as shown by the galvanometer, varied also (the speed of rotation being constant), and the intervals separating the discharges were found inversely proportional to the quantity of electricity, as measured by the galvanometer. Thus, the quantities of electricity which pass between the electrodes at each discharge are always the same, all the circumstances being equal.

The changes in appearance of the discharge, according to the nature and pressure of gas, are well known.

The intervals between successive discharges diminish as the pressure diminishes. At the lowest pressure employed, $\frac{1}{2}$ or $\frac{1}{4}$ mm., discontinuous discharges were still obtained, which were distinguished by the rotating mirror. Thus, a continuous electric discharge is not produced in rarefied gas, and requires for its production a determinate tension in such media.

As to pressure, the experiments (of which there were eight different series) were made with air, dry, and freed of carbonic acid. The experiments show that, for equal quantities of electricity in the electrodes, the interval between the successive discharges, and hence the quantity of electricity necessary to produce a discharge, increases in proportion to the pressure. This increase is most rapid at low pressures.

As to the nature of the gases : six gases were experimented with, the electrode balls being of platinum, about 3.40 mm. diameter each, distant 9.2 mm., and sometimes connected, sometimes disconnected, with the ground. It was found that, for a constant intensity of current, the interval between the discharges is nearly the same, in equal pressure, for air, oxygen, nitrogen, and carbonic acid ; it is much smaller in hydrogen, and much greater in sulphurous acid.

As to the nature of the electrodes : the same experiments were repeated with the six gases, varying the electrodes. It was found that, so long as the discharges are slowly transmitted by a rarefied gas, the substance composing the electrodes does not influence the interval of the discharges.

Two balls of brass were used, one 12.8 mm. in diameter, the other 2.65 mm., and their distance apart was varied, the intensity of the current remaining constant. The results obtained are represented by two curves, having for abscissae the distances of the electrodes, and for ordinates the intervals of the discharges. The form of these curves is seen to be completely different, according as the large ball is negative or positive. It was found that, when the distance between the electrodes has reached a certain extent, then, to produce a spark at such distance, a much greater quantity of electricity is necessary when the large ball is negative than when it is positive. Moreover, when the large ball is positive, the quantity of electricity necessary to a discharge quickly reaches a maximum, while it increases rapidly in the inverse case, in proportion as the distance between the electrodes increases.

Measuring Atmospheric Electricity.—Prof. Palmieri, in his observatory on Mount Vesuvius, has a delicate contrivance for this work. A disk of metal is placed above the roof of the observatory, and connected by an insulated metallic rod with a gold-leaf electroscope and a bifilar electrometer (in a room below), which are observed regularly. He deduces from his researches the following law : If, within a distance of about fifty miles, there is no shower of rain, hail, or snow, the electricity is always positive ; the single exception is during the projection of ashes from the crater of Vesuvius. During a shower he finds the following law universally to hold good : At the place of the shower there is a strong development of positive electricity ; round this there is a zone of negative, and beyond this again positive. The nature of the electricity observed depends upon the position of the observer with respect to the shower, and the phenomena will change according to the direction in which the shower

is moving. Sometimes negative electricity may be observed during a shower; but this is always due to a more powerful shower farther off. These conclusions have been supported by means of telegraphic communication with neighboring districts. It appears, then, that, except when the moisture of the air is being condensed, there is no unusual development of electricity.

Electricity of Plants.—Dr. Ranke, of Bavaria, has investigated the electricity of plants, taking, for his experiments, the petioles of the *Rheum undulatum*, and other plants, which, on account of their parallel fibrous structure, offered peculiar advantages for examination. The apparatus used in measuring the currents was similar to that employed by Du Bois Raymond, in his researches into animal electricity. Du Bois Raymond had demonstrated that, while the life of animal tissues continues, electrical currents pass through the organs according to definite laws, and in correspondence with the various phenomena of life. It was reasonable to expect that in plant organisms something analogous would be found to occur.

Du Bois Raymond named an imaginary cross-section, in the centre of a cylindrical piece of animal tissue, the equator, and a line through the middle of the cross-section, the axis. When he applied the electrodes to two points of the cross-section, which were symmetrical to the axis, or to two points of the longitudinal section, which were symmetrical to the equator, there was no current. But, if the points were not thus symmetrical, there was a current; in the one case, the point more distant from the axis being positive to the nearer; in the other the point nearer to the equator being positive to the more distant. In plants, something quite analogous is observed, the dissection of the currents, however (named like those of Du Bois Raymond, the weak currents), being reversed. Thus, in the case of plants, where two unsymmetrical points are taken in the cross-section, that which is farther from the axis is negative to that which is nearer. And of two unsymmetrical points on the longitudinal section, that which is nearer to the equator is negative to that which is more distant.

Further, in pieces cut of a rhombic form, currents were observed analogous to those Du Bois Raymond observed in similarly-cut muscles, from the acute to the obtuse angles; but, in the plants, the direction was reversed.

Another point of correspondence between animal and plant electricity is, that the currents only appear during the life of the tissue. The reaction of tissues which show animal electricity is always more or less alkaline, or neutral. After separation of the tissue from the living body, an acid reaction is gradually produced, and, when this has taken place, the electromotive action disappears. The living tissue of plants, on the other hand, is generally more or less acid, and, on the death of the tissue, an alkaline reaction is produced, and, then, also, the electromotive action is extinguished.

Dr. Ranke experimented with a large number of plants besides *Rheum*, and found, in each case, the same laws of electromotive action to hold good where the fibres were arranged parallel.

Experiments were also made with pieces in which the fibres were not parallel, as in the case of certain roots; and the normal electric currents were met with, if the shape of the root did not depart very much from the cylindrical, was not very conical. If,

for the point of application of an electrode, on the longitudinal section, a part of the root was chosen at which the tissue branched off, this acted as a cross-section, and the current might be reversed. The same remark applies to stems.

Dr. Ranke observes, in the conclusion of his paper, that the similarity which has been established between animal and plant electricity, warrants us in applying to the latter, with certain modifications, Du Bois Raymond's molecular hypothesis of animal electricity. We may suppose the interior of electromotive parts of plants filled with small peripolar molecules embedded in a conducting substance, the axes of these (joining the poles of each molecule) being parallel to the axis of that part of the plant containing them. The theory of animal electromotors supposes each of the molecules to have two negative polar zones, and one positive equatorial. The law of plant electricity requires, on the other hand, for each of the molecules, two positive polar zones and one negative equatorial.

New Forms of Battery.—A process of accumulating and transforming the electricity of the voltaic pile, by means of secondary batteries, has been discovered by M. Plante. The secondary batteries are formed of two sheets of lead rolled into a spiral, and separated from each other by India-rubber bands, instead of the coarse cloth used in former experiments. These spirals are then immersed in glass vases filled with acidulated water, the extremities of the two plates being connected to binding screws. Twenty of the elements thus arranged are placed in two rows of ten each, and their terminals connected to the springs of a commutator so adjusted that the elements could be connected up for surface or quantity when charging, and in series for intensity when discharging. The battery power used to charge the apparatus is from two to three Bunsen elements. When the commutator is turned so that the elements are joined up for quantity, the battery develops in each element an electromotive force equal to about one and a half time that of a single Bunsen or Grove's element; and, when connected up in series, for intensity, an electromotive force equal to thirty Bunsens could be produced, affording a current sufficiently powerful to fuse platinum wire, and make the electric light.

M. Bouman, of Holland, has effected an improvement in the Lelanche battery, rendering it much more constant. It consists of a plate of carbon and an amalgamated zinc rod, covered with woollen cloth, placed vertically in a glass jar which is two-thirds filled with the mixture employed for this description of battery, namely, coarsely-powdered carbon and manganic peroxide. The difficulty hitherto found in obtaining and preserving a good contact between the carbon pole and its conducting wire has been overcome, by cutting a slit in the carbon, and inserting a platinum wire. Mr. Higgs, by arranging a series of small-sized carbon and zinc cylinders, in alternate series, in one vessel, has been enabled to obtain, in a very small compass, a battery giving an electromotive force equal to ten Daniell's elements.

The following arrangement of a copper and

zinc battery has been devised by M. Kohlfurst, for giving a constant current, for one whole year, at a cost of 1½ lb. of crystals of sulphate of copper. A truncated hollow cone is thoroughly varnished inside, filled with crystals of sulphate of copper and placed mouth downward in a glass jar deeper than itself. This cone has notches round the rim, and has a small hole in the centre at the top. The positive pole is a thick cake of zinc suspended over the face of the cone; it is cast with a hole in the centre through which passes a gutta-percha covered wire, which is connected with the upper cone. The glass cylinder is filled with water, and it is evident that the rate of solution of the sulphate of copper depends upon the facility with which it is dissolved by the access of water through the notches in the cone, and, as this takes place at a uniform rate, the current given by the battery is uniform also. A dilute solution of sulphate of magnesia or common salt may be used instead of plain water, if it is required to diminish the internal resistance of the battery.

Mr. H. Highton describes, in the *London Chemical News*, a cheap and simple battery, said to be nearly 50 per cent. higher in potential than a Grove or Bunsen, and 150 per cent. higher than a Daniell.

For negative, carbon packed in granulated carbon, peroxide of manganese, and precipitated sulphur; the liquid should be dilute acid—sulphuric is best. For positive, zinc in caustic potash or soda. The potential is higher than any I know, excepting, of course, those which have magnesium, sodium, or potassium, for positives. The internal resistance is rather large; if common salt or chloride of potassium be used instead of caustic alkali, the internal resistance is much less, but the potential sinks to a little more than 10 per cent. higher than a Grove. With dilute sulphuric acid on both sides, the resistance is still less, but the potential is only a little higher than a Grove.

M. Gaiffe suggests the following simple form of an economical galvanic pile, somewhat resembling Calland's, but of different elements. It consists of a vessel into which are dipped two rods—one of lead, the other of zinc. The leaden one descends to the bottom; the zinc is one-half shorter. The bottom of the vessel is coated with red oxide of lead (minium); and the exciting liquid is water containing 10 per cent. of chlorhydrate of ammonia. The electromotive force of this pile is said to be about one-third of that of a Bunsen's pair; its internal resistance is slight, and varies little; the chloride of zinc formed does not sensibly alter the conductivity of the exciting liquid; its constancy is great; finally, the expense is almost nothing when the circuit is open.

ELECTRIC WAVES, VELOCITY OF. The velocity of electric waves through the Atlantic cables has been ascertained, by Prof. Gould, to be from 7,000 to 8,000 miles per second. Telegraph-wires, upon poles in the air, conduct the electric waves with a velocity more than double this. It is a curious fact that the rapidity of the transmission increases with the

distance between the wire and the earth, or with the height of the support. The *Journal des Telegraphes* says that wires, placed on poles slightly elevated, transmit signals with a velocity of 12,000 miles a second; and those at a considerable height give a velocity of 16,000 or 20,000 miles.

ELLIS, Rev. WILLIAM, an English missionary, traveller, and author, born in London in 1795; died in London, June 25, 1872. In January, 1816, after obtaining a good education at one of the dissenting colleges, he sailed with his wife for the South-Sea Islands, as a missionary of the London Missionary Society. He was stationed at Tahiti, or Otaheite, and set up there the first printing-press in the South-Sea Islands. He returned to England in 1824, on account of the illness of his wife, and was employed for some years at home in the business of the London Missionary Society, and from 1833 to 1840 was the Foreign Secretary of that society. His wife died in 1845, and in 1837 he married Miss Sarah Stickney, a distinguished teacher and author, residing at that time in Hoddesdon, in Hertfordshire, who had been educated among the Society of Friends, to which both she and her parents belonged. In 1853, while still retaining his connection with the London Missionary Society, Mr. Ellis was sent by its Board of Managers to Madagascar, to inquire into the condition and prospects for a resumption of their missions there, which had been suspended in consequence of the violent opposition and persecution of the reigning queen. He made three visits to the island within the next three years, and published a narrative, of great religious and scientific interest, of the results of his explorations—when, in consequence of the death of the pagan queen, and the favorable disposition of her son and successor to Christianity, the missions were re-established, and met with the most remarkable success. Mr. Ellis again (in 1865 or 1866) revisited the island, and spent some time in encouraging the missionaries and native Christians. Mr. Ellis published many works, nearly all having primary reference to missionary work, but containing a vast fund of interesting geographical and scientific information. The most important of these were: "Missionary Narrative of a Tour through Owhyhee," 1826; "Polynesian Researches," 2 vols., 8vo, 1829; "A Vindication of the South Sea Missions from the Misrepresentations of Otto von Kotzebue, with an Appendix," 1831; "History of Madagascar," 2 vols., 1838; "History of the London Missionary Society," 8vo, 1844; "Village-Lectures on Popery," 1851; "Three Visits to Madagascar during 1853-1856, with Notices of the People, Natural History, etc.," 1858; "Madagascar Revisited, describing the Events of a New Reign, and the Revolution which followed," etc., etc., 2 vols., 1867. He also edited "Stewart's Visit to the South Seas," and wrote an "Introductory Essay on

the Policy, Religion," etc., of China, prefixed to "Gutzlaff's Journal of Three Voyages along the Coast of China."

Mr. Ellis's wife, Mrs. SARAH STICKNEY ELLIS, survived him only three days, dying about an hour before the funeral services of her husband were to commence. She was, both before and after her marriage, very favorably and widely-known as an author, nearly all her books having been republished in the United States. She was about sixty years of age at her death. Mr. Allibone's list of her books contains twenty-one distinct titles, while several of the works have three or four volumes each. The most important of them are: "The Poetry of Life," 2 vols.; "Home, or the Iron Rule," 3 vols.; "Women of England," 1838; "Sons of the Soil, a Poem," 1840; "The Daughters of England," 1842; "The Wives of England," 1843; "The Mothers of England," 1843; "Family Secrets," 3 vols., 1841-'43; "Summer and Winter in the Pyrenees," 1841; "Voice from the Vintages," 1843; "Pictures of Private Life," 3 vols., 1844; "Look to the End, or the Bennetts Abroad," 2 vols., 1845; "Temper and Temperament," 2 vols., 1846; "Prevention Better than Cure," 1847; "Rawdon House: Hints on Formation of Character," 1848; "Fireside Tales," 4 vols., 1848-'49; "Social Distinction, or Hearts and Homes," 3 vols., 1849-'49; "My Brother; or, the Man of Many Friends," 1853. Her works have been collected in a number of uniform volumes.

EMERSON, Rev. BROWN, D. D., a learned and venerable clergyman of Salem, Mass., sixty-eight years pastor of the Old South Church in that city; born in Ashby, Mass., January 8, 1778; died in Salem, Mass., July 25, 1872. He prepared for college at New Ipswich and Boscawen, N. H., and graduated from Dartmouth College in 1802, being at his death the oldest graduate of the college. He was licensed as a Congregational preacher by the Essex North Association in 1804, and ordained as colleague pastor with Rev. Daniel Hopkins, D. D., at the Old South Church, Salem, April 14, 1805, having previously preached for that church for three months. On the death of Dr. Hopkins, in 1816, he became sole pastor, and continued so till 1849, when, at his own request, a colleague was settled. He received the degree of D. D. from Dartmouth College in 1835. In 1846 he visited Europe. Dr. Emerson was an able preacher, and a vigorous, logical writer, and until he was very far advanced in life his sermons were quite attractive to his people. He published little—nothing, beyond some occasional sermons, addresses, and orations.

EUROPE. The year 1872 was one of peace for all Europe; in Spain only, the Carlists rose again in an insurrection, which, though maintaining itself for several months, never assumed threatening dimensions. The latest statistical information on the population of Europe raised the aggregate number to 301,700,000 in 1872, against 300,900,000 in 1871,

while the area, by the new calculations made in several countries, is reduced from 3,816,400 to 3,787,097 square miles.

The Government of Germany continued to direct its chief attention to the consolidation of the newly-established empire. The "Particularists," who desire to strengthen the power of the governments of the separate states at the expense of the Central Government, at one time hoped for the reestablishment of their ascendancy in Bavaria; but the attempt to form a new Particularist ministry utterly failed; and the policy of Bavaria with regard to German unity remained unchanged. Great exertions were made by the Government of Germany to revive this feeling of German nationality in the new Reichsland Alsace-Lorraine, and good results are specially anticipated from the liberal reorganization of the University of Strasbourg, which was opened on May 1st, and from the reintroduction of the German language into all the secondary and primary state schools of the country. A declaration of the Government of Brunswick, that it regarded the ex-King of Hanover as entitled to succession, when (what is expected to take place ere long) the dual line of Brunswick becomes extinct, created toward the close of the year considerable uneasiness,* though no serious trouble, it is believed, can arise out of this question. More serious is the conflict between the Central Government of Germany and the Reichstag on the one hand, and the Roman Catholic Church on the other. The expulsion of the Jesuits from Germany, and other measures of that kind, called forth in the Catholic districts of Germany an intense dissatisfaction, and led to very severe complaints in the allocutions of the Pope.

The National Assembly of France remained throughout the year the battle-ground of the four great parties of the country, the Republicans, the Legitimists, the Orleanists, and the Bonapartists. The former gained some new members at the supplementary elections, and began an agitation for the dissolution of the National Assembly, because they expected a still greater accession of strength from a general election. The Legitimists made a political demonstration, by visiting in large numbers the Count de Chambord at Antwerp, Belgium, in February; but no real advantage appears to have accrued to this party from it. A fusion between the Legitimists and Orleanists continued to be discussed; and in January, 1873, the Legitimist papers announced that it had been consummated by the formal recognition of the Count de Chambord as King of France on the part of seven princes of the House of Orleans. The prospects of Bonapartism suffered a serious blow by the death of the ex-Emperor Napoleon.

* In the article BRUNSWICK, in the present number of the AMERICAN ANNUAL CYCLOPEDIA, we have given a "Genealogical Table of the House of Brunswick, Hanover, and Great Britain," which fully explains the question of succession.

The Government of Cis-Leithan Austria, after many years of indecision and vacillation, laid in December before the Reichsrath a new electoral law which introduced the principle of direct elections, and which is looked upon as the first of a series of radical measures for strengthening the powers of the Central Government, and reducing those of the provincial Diets.

The following table shows the area and population of the countries of Europe, arranged according to the density of their population at the close of the year 1872, and also the number of inhabitants per square mile:

COUNTRIES.	Sq. Miles.	Inhabitants.	Pop. Mile.
Belgium.....	11,874	5,087,105	447
Netherlands.....	12,680	3,518,916	279
Grand-duchy of Luxem- burg.....	999	197,539	197
Great Britain and Ireland... Helleland, Gibraltar, and Malta.....	121,115	31,817,108	268
Italy.....	114,205	25,712,809	224
Principality of Monaco.....	5	3,127	625
Republic of San Marino.....	23	7,308	318
Germany.....	303,519	41,056,196	135
France.....	304,001	36,394,838	119
Switzerland.....	15,998	2,659,147	167
Austria.....	340,843	35,904,435	105
Principality of Lichten- stein.....	69	8,230	119
Denmark.....	14,753	1,784,741	121
Färöe and Iceland.....	40,398	79,735	19
Portugal.....	34,501	3,995,158	117
Azores and Madeira.....	1,311	305,891	233
Spain.....	195,798	16,885,895	86
Canary Islands.....	169	12,000	71
Republic of Andorra.....	138,986	10,500,000	76
European Turkey.....	46,709	4,300,000	92
Roumania.....	16,817	1,806,674	107
Servia.....	1,709	190,000	111
Montenegro.....	19,353	1,457,894	75
Greece and Ionian Islands... Russia (exclusive of Finland) Sweden.....	2,059,298	71,195,394	34
Norway.....	170,563	4,304,177	25
Total.....	3,787,097	301,700,000	

The ecclesiastical statistics of Europe, at the close of the year 1872, are exhibited as follows:

COUNTRIES.	Roman Catholics.	Protestants and other Christian Sects.	Greek Catholics.	Jews.
Spain.....	16,088,000	8,000	8,000
Portugal.....	4,380,000	1,000	1,000
Italy.....	30,353,000	35,000	2,000	35,000
Belgium.....	5,005,000	20,000	2,000
Luxemburg.....	197,000	400	800
France.....	35,808,000	598,000	45,000
Austria (Cislei- thania).....	18,741,000	368,000	463,000	323,000
Poland.....	4,565,000	231,000	34,000	733,000
Ireland.....	4,143,000	1,361,000	300
Hungary.....	9,163,000	3,303,000	2,590,000	553,000
Switzerland.....	1,085,000	1,577,000	7,000
Netherlands.....	1,318,000	2,198,000	68,000
Germany.....	14,903,000	25,629,000	3,000	511,000
England and Scotland.....	1,378,000	34,784,000	45,000
Finland.....	1,000	1,790,000	42,000
Denmark.....	2,000	1,778,000	4,400
Norway.....	800	1,753,000	2,200
Sweden.....	1,000	4,300,000
Russia (with- out Poland).....	2,883,000	2,883,000	54,100,000	1,998,000
Roumania.....	45,000	30,000	3,978,000	150,000
Greece.....	10,000	2,000	1,442,000	3,000
Servia.....	4,000	500	1,395,000	2,000
Turkey.....	650,000	2,000	5,140,000	100,000
Total.....	147,800,000	71,800,100	69,100,000	5,000,000

The number of Mohammedans in Europe is about 8,915,000, of whom 4,550,000 are in European Turkey, 2,359,000 in Russia, 5,000 in Servia, 1,000 in Roumania, and a smaller number in Poland and Hungary. The number of pagans (in Russia and Turkey), and of those whose religion was unknown, amounted to about 5,000.

The revised Constitution of Switzerland, when submitted to the popular vote, was rejected by 257,000 votes against 252,000, and by thirteen cantons against nine. The friends of the revision were, however, not discouraged, but at once resumed the discussion of the subject in the Federal Assembly.

The *Gotha Almanac*, for 1873, gives the following table on the nationalities of Europe, which is a valuable aid in understanding the great conflicts arising out of the nationality question:

The Germanic nations constitute about 31.2 per cent. of the aggregate population of Europe; they comprise the German, Dutch, and Flemish (56,500,000, or 18.5 per cent. of the population of Europe), Anglo-Saxons (29,400,000, or 9.8 per cent.), and Scandinavians (8,000,000, or 2.7 per cent.).

The Romanic nations embrace the French (including Occitanians and Catalanians, 41,260,000, or 13.7 per cent.); Italians and Rheto-Roumanians (27,620,000, or 9.2 per cent.); Spaniards and Portuguese (16,820,000, or 5.4 per cent.); Daco-Roumanians and Macedo-Walachians (8,100,000, or 2.7 per cent.); Greeks (2,450,000, or 0.8 per cent.); Albanians (1,440,000, or 0.5 per cent.).

The Slavic nations embrace Russians and Ruthenians (54,580,000, or 18.1 per cent.); Poles (9,420,000, or 3.1 per cent.); Czechs and Vindes (6,900,000, or 2.3 per cent.); Servians, Croatians, and Sloventzi (7,200,000, or 2.4 per cent.); Bulgarians (4,080,000, or 1.4 per cent.).

Of other races not belonging to any of the three large groups, the table enumerates Kymrians and Celts, 8,400,000, or 1.1 per cent. (2,-

300,000 in Great Britain; 1,100,000 in France); Letts, Lithuanians, and Prussians, 2,880,000, or 0.9 per cent. (with the exceptions of 150,000 belonging to Germany, all living in Russia); Israelites, 5,000,000, or 1.7 per cent. (2,612,000 in Russia, 1,376,000 in the Austro-Hungarian monarchy, 511,000 in Germany, etc.); Magyars and Finns, 10,420,000, or 3.4 per cent. (5,450,000 in the Austro-Hungarian monarchy, 4,860,000 in Russia); Basques, Armenians, Gypsies, and Moors, 1,780,000, or 0.6 per cent.; Turks, Tartars, Mongolians, 4,200,000, or 1.4 per cent. (2,680,000 in Russia, 1,500,000 in Turkey), with the exception of the Magyars and Turks; these races have, however, lost all, or nearly all, the characteristics of distinct nationalities, and have become, or are fast becoming, absorbed in the predominant nationalities of the countries which they inhabit.

The foreign colonies of European states are exhibited in the following table:

COUNTRIES.	Area.	Inhabitants.
Great Britain.....	7,936,581	171,610,000
Turkey.....	1,731,733	27,213,000
Netherlands.....	675,069	28,438,000
Russia.....	5,944,693	10,730,000
Spain.....	117,310	6,419,000
France.....	457,606	6,240,000
Portugal.....	739,871	3,876,000
Denmark.....	87,169	137,100
Sweden.....	9	2,900
Total.....	17,669,839	250,050,000

EWELL, Lieutenant-General RICHARD STODDARD, one of the ablest officers of the Confederate army in the late civil war, born in the District of Columbia, though of a Virginian family, in 1820; died in Maury County, Tenn., January 25, 1872. He was nominated for a cadet in the Military Academy by President Jackson, in 1836, and graduated in 1840, ranking thirteenth in his class. He was brevetted second-lieutenant, in the First Dragoons, in July, 1840, and received his commission as full lieutenant in November, 1840. Five years later, he was promoted to be first-lieutenant. He served with distinction in the Mexican War, commanding a squadron at Churubusco, and being brevetted captain, in 1847, for gallant and meritorious conduct at that battle and at Contreras. He received his commission

as captain in August, 1849, and, from that time till 1861, was employed on frontier duty in New Mexico and Texas. At the commencement of the civil war—indeed, as soon as Virginia seceded, May 7, 1861—Captain Ewell resigned, and accepted the command of a division from the Confederates. He took part in the first battle of Bull Run, where his forces were twice repulsed by the Union troops. He did not, however, suffer in the estimation of his superior officers by this reverse. He was raised to the rank of major-general, and, at the head of a large force, was one of the first in beginning hostilities in 1862. In command of 5,000 men, he encountered General Fremont, near Union Church, June 8th. The engagement was indecisive. The Union troops lost 664 men, while Ewell reported a total loss on his side of 329. The troops expected to renew the fight next morning, but, during the night, Ewell evidently retired, carrying away all but his mortally wounded. He was next actually engaged in resisting McClellan's advance upon Richmond. General Lee sent him down the left bank of the Chickahominy to watch the road leading down the peninsula, and thus rendered him a participant in all the succeeding military movements consequent upon McClellan's retreat. In the hostilities which continued until the surrender at Appomattox, General Ewell took an active part, and was regarded as one of the most capable commanders on the Southern side. After the war, General Ewell, like his fellow corps-commander, Longstreet, frankly accepted the situation, and harbored no malice toward the United States Government. He had hazarded his life and prospects in life for the cause, and, having lost, he had no disposition to repine. On his death-bed, after making his will, he said to his attendants, with his characteristic frankness and simple-heartedness: "I don't want any monument raised over me—only a plain head-stone and foot-stone, like those over the graves of my father and my mother, in Virginia. My rank while in the Confederate service might be inscribed upon one of the stones, but I wish nothing in the inscription which will cast any reflection upon the Government of the United States."

F

FEVERS AND SEWERS. Notwithstanding the generally-acknowledged deleterious influence of defective sewers, it seems to be a well-established fact that men employed to cleanse and repair sewers, etc., are not only not carried off by fever, but appear to be singularly exempt from the ravages of that disease. The British *Medical Journal*, of a late date, says that, in consequence of what has been said with regard to the alleged cause of the late illness of the Prince of Wales, Dr.

Bowers, of the Metropolitan Board of Works of London, ordered a return on the subject, which presents a most unexpected array of facts which seem, at least, to controvert the generally-received views with regard to the connection of fevers with imperfect sewerage. Some of the details were as follows:

Out of five inspectors employed from 23 to 48 years, there has never been a case of fever. Out of 64 men engaged in cleansing and flushing the northern sewers, for periods varying

up to 84 years, only two have had fever, and their cases were typhus. Out of 47 men engaged in the sewer-work in the southern sewers, for periods varying from one to 24 years, there have only been two cases of fever, and these again typhus; and, in one of these cases, it is shown that the disease was contracted from the man's family. There are 86 penstock and flap keepers, who have been employed from one to 50 years. Of all these only one had any fever. He has been 16 years at work, and had typhoid in 1862. There are some curious notes about these men. One of them had been at this work 50 years, and has not had one day's illness of that time. One lived 25 years in the sluice-house over the King's Scholars' Pond sewer, but never had any fever. Another lived for 14 years in Penstock House, over the outfall sewer at Old Ford. Another lived 32 years in Great St. Paul's sluice-house. Another lived for 35 years in a house over Duffield sluice, and enjoyed good health. Out of 54 men employed at the pumping-stations, there has only been one case of typhoid fever. At Crossness, out of 54 men engaged during the last six years, there has not been one case of typhus or typhoid.

There have been eight cases of ague, but these are, of course, due to the low, marshy district, and they seem to have recovered rapidly. Out of seven men employed in cleansing ventilators, oiling side-entrances, gauges, etc., no case of fever has occurred, though one man has been at the work 23 years. Of 10 surveyors and chainmen, in the engineer's office, not one has ever had typhoid fever, although they have been almost daily engaged in the sewers for periods of from four to 24 years. These facts are very gratifying, and quite dispose of the allegation that the men in the sewers are decimated by fever. The statistics show, in fact, that fever is less prevalent among these men than the rest of the town population.

FINANCES OF THE UNITED STATES.

The general prosperity of the country was undiminished during the year 1872, and the finances of the Government were conducted with little variation from the preceding year. The revenues continued large, although there was a reduction in the rate of taxation, and an entire release of several sources of income to the Government. The reduction in the principal of the public debt was maintained at about the usual rate, with a tendency to a lower rate of interest on many portions of it. The monetary operations of the Government have been so large that nearly fourteen hundred persons were constantly engaged at Washington in handling its coin, notes, and securities.

During the year two hundred million of five per cent. bonds have been negotiated, and two hundred million of six per cent. five-twenty bonds have been redeemed. Thus making a reduction of one per cent. annual interest on that amount.

In the annual report of the Secretary of the Treasury, made December, 1871, there was presented a statement of the receipts and expenditures of the Government for the first quarter of the year ending June 30, 1872, and an estimate of the same for the remaining three-quarters of the year. The receipts and expenditures of the first quarter above mentioned, ending on September 30, 1871, were as follows:

Customs.....	\$62,299,329 37
Internal revenue.....	35,533,175 07
Lands.....	602,650 61
Miscellaneous sources.....	8,753,189 61
Total.....	\$107,186,374 66

The expenditures for the same period, excluding payment on account of the sinking fund, were as follows:

Civil and miscellaneous purposes.....	\$16,579,732 46
War Department.....	12,550,653 05
Navy Department.....	6,513,040 98
Indians and pensions.....	11,494,833 11
Interest on the public debt.....	36,736,134 37
Total.....	\$83,908,383 97

For the remaining three-quarters of the fiscal year, ending June 30, 1872, the estimated receipts were as follows:

Customs.....	\$148,000,000 00
Internal revenue.....	90,000,000 00
Lands.....	2,000,000 00
Miscellaneous sources.....	18,000,000 00
Total.....	\$358,000,000 00

The estimated expenditures for the same period are:

Civil and miscellaneous purposes.....	\$50,000,000 00
War Department.....	10,000,000 00
Navy Department.....	18,500,000 00
Indians and pensions.....	30,000,000 00
Interest on the public debt.....	85,000,000 00
Total.....	\$303,500,000 00

These estimates contemplated a balance applicable to the payment of the principal of the public debt, for the fiscal year ending June 30, 1872, of \$71,794,991.68.

The actual receipts into the Treasury during the fiscal year ending June 30, 1872, were as follows:

Customs.....	\$216,370,296 77
Public lands.....	2,575,714 19
Bank circulation tax.....	6,593,396 89
Internal revenue.....	180,642,177 72
Pacific Railway interest.....	749,661 87
Customs fines.....	1,136,442 84
Fees, consular, etc.....	2,284,095 93
Miscellaneous.....	4,412,254 71
Total ordinary receipts....	\$364,694,229 91
Premium on sales of coin.....	9,412,637 65
Total available cash.....	\$484,042,573 15

The net expenditures during the same period were:

Civil expenses.....	\$16,187,059 20
Foreign intercourse.....	1,839,369 14
Indians.....	7,061,728 82
Pensions.....	28,533,402 76
Military establishment.....	85,372,157 80
Naval establishment.....	21,240,809 99
Miscellaneous civil.....	42,958,329 08
Interest on public debt.....	117,367,889 72
Total, exclusive of public debt.	\$370,559,696 91

Brought forward.....	\$370,559,695 91
Premium on bonds purchased.....	\$6,958,366 76
Redemption of public debt..	99,960,253 54
	<u>106,918,530 80</u>
Balance in Treasury.....	\$377,478,216 21
	<u>106,564,356 94</u>
Total.....	\$484,042,573 15

Thus the net reduction of the principal of the public debt during the fiscal year was \$99,960,253.54. Deducting the ordinary receipts during the year from the ordinary expenditures and interest on the public debt, there remains a surplus of revenue amounting to \$94,134,534. If to this amount is added the amount of premium on sales of gold, and the reduction of the cash balance at the close of the year, the sum is \$99,960,253.54.

The reduction of the public debt, from March 1, 1869, to November 1, 1872, was as follows:

From March 1, 1869, to March 1, 1870.....	\$87,134,732 84
From March 1, 1870, to March 1, 1871.....	117,619,630 25
From March 1, 1871, to March 1, 1872.....	94,935,343 94
From March 1, 1872, to Nov. 1, 1872.....	64,047,337 84

Total..... \$363,696,999 87

And a reduction in the annual interest of \$24,187,851.

The receipts during the quarter ending September 30, 1872, which is the first quarter of the fiscal year ending June 30, 1873, were as follows:

Customs.....	\$57,729,540 27
Sales of public lands.....	737,324 57
Internal Revenue.....	34,169,047 23
Tax on circulation, etc., of national banks.....	3,307,233 69
Repayment of interest by Pacific Railways.....	119,093 73
Customs fines, etc.....	103,737 30
Consular, patent, and other fees.....	479,306 03
Proceeds of Government property.....	336,801 83
Miscellaneous sources.....	1,846,257 47

Net ordinary receipts.....	\$98,398,897 16
Premium on sales of coin.....	2,426,736 91

Total receipts.....	\$100,815,184 07
Balance in Treasury, June 30, 1872, including \$1,014 48 received from "unavailable".....	<u>106,568,371 43</u>

Total available..... \$307,350,505 49

The expenditures during the same quarter were as follows:

Civil and miscellaneous expenses.....	\$18,399,891 28
Indians.....	3,037,343 83
Pensions.....	9,135,389 71
Military establishment.....	12,376,983 41
Naval establishment.....	7,305 146 48
Interest on the public debt, etc.....	<u>36,196,894 88</u>

Total, exclusive of the principal and premium on public debt.....	\$86,351,648 54
---	-----------------

For premium on purchased bonds.....	\$1,702,568 53
Net redemption of the public debt.....	<u>16,332,138</u>
	18,634,707 25

Total net expenditures.....	\$105,486,355 79
Balance in Treasury Sept. 30, 1872.....	<u>101,994,149 70</u>
	\$307,330,505 49

For the remaining three-quarters of the same fiscal year, ending June 30, 1873, it was estimated that the receipts would be as follows:

Customs.....	\$125,000,000
Sales of public lands.....	1,500,000
Internal revenue.....	74,000,000
Tax on national banks.....	3,000,000
Pacific Railways.....	500,000
Customs fines, etc.....	800,000
Consular, patent, and other fees.....	1,700,000
Sales of public property.....	600,000
Miscellaneous sources.....	<u>1,400,000</u>

Total..... \$213,500,000

For the same period it was estimated that the expenditures would be as follows:

Civil expenses.....	\$13,000,000
Foreign intercourse.....	300,000
Indians.....	4,000,000
Pensions.....	23,000,000
Military establishment.....	23,000,000
Naval establishment.....	13,500,000
Miscellaneous civil.....	27,800,000
Interest on the public debt.....	<u>71,500,000</u>

Total..... \$173,700,000

According to this estimate there will be \$44,800,000 of surplus revenue applicable to the purchase or redemption of the public debt.

The reduction in taxation since the close of the war is estimated to have been as follows:

IN INTERNAL REVENUE.

Act of July 13, 1866.....	\$65,000,000
Act of March 2, 1867.....	40,000,000
Act of February 3, 1868.....	22,000,000
Act of March 31, 1869.....	45,000,000
Act of July 30, 1869.....	45,000,000
Act of July 14, 1870.....	55,000,000
Act of June 6, 1872.....	<u>20,651,000</u>

Total of internal revenue..... \$348,651,000

IN CUSTOMS.

Act of July 14, 1870.....	\$29,536,410
Acts of March 1 and June 6, 1872.....	<u>31,172,751</u>

Total of customs..... \$60,699,171

Total reduction..... \$309,350,171

The following table exhibits the aggregate amount of taxes returned from the several sources of revenue from the organization of the Internal Revenue Department to the close of the last fiscal year:

SOURCES.	Total collections, from September 1, 1862, to June 30, 1872.
1. ARTICLES AND OCCUPATIONS NOW TAXABLE, INCLUDING PENALTIES.	
Spirits.....	\$386,128,546
Tobacco.....	300,218,837
Fermented liquors.....	52,954,800
Banks and bankers.....	28,644,495
Adhesive stamps.....	181,673,669
Penalties.....	<u>7,334,218</u>
2. ARTICLES AND OCCUPATIONS NOW EXEMPT FROM TAX.	
Manufactures and productions.....	\$401,301,395
Gross receipts.....	55,924,677
Sales.....	<u>37,558,907</u>
Special taxes not relating to spirits, tobacco, and fermented liquors.....	85,437,647
Income.....	241,706,036
Special income tax of 1864.....	29,381,863
Gas.....	17,912,330
Legacies and successions.....	14,905,648
Articles in Schedule A.....	8,964,969
Miscellaneous.....	<u>8,250,998</u>
	1,001,394,394
Aggregate receipts.....	<u>\$1,768,343,399</u>

STATEMENT OF THE OUTSTANDING PRINCIPAL OF THE PUBLIC DEBT OF THE UNITED STATES,
JUNE 30, 1872.

TITLE.	Length of Loan.	When redeemable.	Rate of Interest.	Price at which sold.	Amount authorized.	Amount loaned.	Amount outstanding.
Old debt.....		On demand.....	5 & 6 p. ct.	\$57,665 00

Certificates of indebtedness of 1870.....	5 years.....	September 1, 1875.....	4 per cent.	Par.	75,000,000	85,150,000	678,000 00
Funded loan of 1881.....	10 years.....	May 1, 1881.....	5 per cent.	Par.	678,362	678,362	200,000,000 00
					500,000,000	200,000,000	\$2,258,251,828 78

The receipts from internal revenue during the fiscal year ending June 30, 1872, and the two previous years, including sums refunded and allowed on drawbacks, were as follows:

1870.....	\$185,235,967 97
1871.....	144,011,178 94
1872.....	181,770,946 73

The following is a statement of the number of persons who paid the income tax for the years 1871 and 1872, under the act of July 14, 1870, the exemption being \$2,000 and the rate of tax 2½ per cent.:

CLASSES.	Number of persons assessed for income in	
	1871.	1872.
Class 1, tax \$20 or less.....	25,479	22,619
Class 2, over \$20, and not over \$50..	19,795	18,897
Class 3, over \$50, and not over \$100..	12,917	12,335
Class 4, over \$100, and not over \$250	10,742	11,855
Class 5, over \$250, and not over \$500	3,707	4,264
Class 6, over \$500.....	2,135	2,489
Total.....	74,775	72,949

The following table exhibits a comparison of the receipts from incomes, or profits on capital, during the last two fiscal years:

	Receipts, fiscal year 1871.	Receipts, fiscal year 1872.	Increase.	Decrease.
BANKS AND BANKERS.				
Bank deposits.....	\$2,702,196 84	\$3,643,272 19	\$941,075 35
Bank capital.....	919,263 77	976,092 13	56,829 36
Bank circulation.....	22,781 92	8,864 62	\$13,917 30
Total.....	\$3,644,241 53	\$4,628,229 14	\$997,904 71	\$13,917 30
INCOME.				
Income from individuals, including salaries.....	\$15,322,211 94	\$8,711,250 52	\$6,510,961 42
Bank dividends and undistributed profits.....	1,542,667 75	2,163,564 31	619,896 56
Railroad companies' dividends and undistributed profits.....	1,121,439 59	1,851,296 30	729,856 71
Railroad companies' interest on bonds.....	974,345 35	1,201,036 68	316,691 33
Insurance companies' dividends and undistributed profits.....	943,305 21	270,531 14	27,326 93
All other collections from income.....	58,730 91	150,192 83	91,411 92
Total.....	\$19,162,650 75	\$14,436,861 78	\$1,785,172 45	\$6,510,961 42
Gas.....	\$2,573,122 92	\$2,331,718 56	\$258,595 64
Adhesive stamps.....	15,342,739 46	16,177,320 80	834,581 14

The increase on banks and bankers is \$983,988; on gas, \$258,596; and on adhesive stamps, \$834,581. The decrease in the receipts of income from individuals was \$6,510,961. \$1,785,172 were, however, offset by the increase in the returns from corporations, so that the balance shows a total decrease of only \$4,725,789. The large apparent falling off in the receipts of income from individuals is chiefly owing to a difference in the rate of tax. Of the \$14,434,950, exclusive of the salary-tax returned in 1871, \$10,680,967, or nearly 75 per cent. were collected at 5 per cent. under act of March 2, 1867, while the balance for that year and the whole amount for 1872 were returned under act of July 14, 1870, at 2½ per cent. Estimating 2½ per cent. on the taxable

income of the two years, there is a difference of only \$677,781 in favor of 1871. The collections on the annual and monthly lists of 1871 amounted to \$7,625,409. The receipts to date on the lists of 1872 are slightly in excess of \$8,000,000.

There has been a rapid increase of the capital of the banks of the country, and they are more widely diffused. The combined capital of the whole number, which is 1,619, was in October last \$480,000,000; State banks, \$60,000,000, an aggregate of \$540,000,000. The savings-banks of New England and New York held, at the same time, \$600,000,000 on deposit.

The comparative condition of the national banks for four years has been as follows:

	October, 1869, 1,616 Banks.	October, 1870, 1,615 Banks.	October, 1871, 1,767 Banks.	October, 1872, 1,919 Banks.

* Included in Virginia.

The debts of the several States, embracing those known as State, county, and town or city, as reported by the census of 1870, was in the aggregate \$868,676,758, of which the bonded debt is about seven-eighths, distributed as follows: State bonds, \$324,747,959; county bonds, \$157,955,880; town bonds, \$271,119,668. The unfunded debt is \$28,118,739 for the States; \$29,609,660 for the counties. These are small, but the town and city debts are larger, and amount to \$57,124,852, of which New York has \$10,355,669; Massachusetts, \$13,694,884; Louisiana, \$8,616,062; New Hampshire, \$5,226,820; Connecticut, \$2,969,486; Maine, \$2,174,227; Missouri, \$1,442,753; Iowa, \$1,833,740; Tennessee, \$2,023,680, and New Jersey, \$1,212,627. Much of this is now funded. The foregoing table gives the aggregates.

The issue of bonds since 1870 to the close of 1872 has been sufficient to advance the aggregate to more than \$900,000,000.

The decline in the carrying-trade of the country continued during 1872. The imports and exports of the United States, excluding gold and silver, amounted to \$1,070,641,163 for the fiscal year ending June 30, 1872, and of this vast trade only 28½ per cent. was in American vessels; in the year 1860 nearly 71 per cent. of our former commerce was in American ships, but in 1864 it had fallen to 46 per cent.; in 1868 to 44 per cent., and in 1871 to less than 38 per cent. The earnings of vessels engaged in the foreign carrying-trade probably exceed \$100,000,000 a year, of which less than one-third is earned under our own flag. On this subject the Secretary of the Treasury says: "The act of Congress allowing a drawback on foreign articles used in the construction of American vessels has given encouragement to ship-building, but I am of opinion that the measure is entirely inadequate. When we consider that nearly three-fourths of the foreign commerce of this country is under foreign flags, it is plain that there can be no considerable and speedy change unless the Government shall act at once, and in a liberal and comprehensive spirit. The rise in the price of iron, and the advance in the wages of labor in England during the past year, favor the Government and the people of the United States; but this advantage, due to natural causes, should not lead us to trust the future to the force of those causes, but should induce us rather to act at once, and with vigor."

In the opinion of the Secretary of the Treasury, the time has come when the attention of the public is turned naturally to the future financial policy of the country. That policy must rest upon the past and the present. The war caused three great changes in business and financial affairs that have received the careful consideration of the American people: First, the country was compelled to impose heavy customs duties upon merchandise, and thus, without general observation, and with-

out argument upon the principles involved, the nation entered upon a broad system of protection. Second, the Government issued Treasury notes for general circulation, as currency, and prohibited banks of issue by State authority. Third, a system of national banks was established, and their circulation protected by the national credit. The wisdom of these measures, speaking generally, has been established, and, subject to such changes as the changing condition and opinions of the country and people may demand, they will remain a part of public policy until the financial consequences of the war disappear. The weight of the national debt has been so great that, for more than ten years, there has been no opportunity for the practical discussion of the doctrines of protection and free trade, and, in that long period of an unchanged protective policy incident to the burdens of the war, the nation has advanced rapidly and safely in the development of its natural resources. Anticipating a condition of peace, a general reduction in the percentage of customs duties may be anticipated. This reduction, however, should not be measured by the wants of the Treasury, but regard should be had also to the condition of the various branches of industry in which the people are engaged. In presence of the fact that the leading pursuits of the country are stronger than ever before in the possession of adequate capital and a supply of intelligent laborers, there may be a moderate reduction from time to time in the rate of duties, as the diminishing expenses of the Government shall permit, without either alarming capital or injuring labor.

The justification of the present protective system, the Secretary asserts to be found in the following considerations:

For purposes of government, the principles of political economy are national, and not cosmopolitan. A nation that can produce a given article at less cost than it can be produced elsewhere, may wisely accept free trade in it; but a nation having natural advantages for its production, yet destitute of skill in the incident art or trade, must wait for the opportunity that sometimes comes from the calamity of war, or secure a more economical and a more constant support in the policy of the Government. If average natural facilities exist, the period of necessary protection is a short one compared with the lifetime of a nation, while the advantages gained can never be wholly lost; but, if reasonable natural facilities do not exist, then a system of duties for protection is a present and future burden without adequate compensation. So varied and rich, however, are the natural resources of the United States that we either are, or may soon be, in successful competition with the older and more experienced countries of the world in the production of the chief articles of personal necessity, comfort, and luxury, and of the machinery by which these articles are produced or obtained. Herein is a sufficient justification for the existing protective system, and for its continuance during the transition period. Nor is the prospect of ultimate successful competition with other countries disturbed by the circumstance that the wages of labor are higher in this country than in those.

The Secretary is of the opinion that the

tariff system of the country has contributed largely to the general prosperity, and that this general and continued prosperity is the only basis on which even a wise financial policy can rest. He, therefore, more fully expresses his views thus :

If ten years since, it was the thought of any that the only way to a successful contest with Europe was in the reduction of the wages of labor to the European standard, that thought has disappeared probably in presence of the fact that high wages on this side of the Atlantic have stimulated immigration until there is a near approach to equality in the cost of labor, and of the coexisting fact that the addition thus made to the number of laborers has only aided in the development of our resources without yielding in any quarter an excess of products, or retarding in any degree the prosperity of the laboring population. This prosperity on their part is associated with a higher and constantly improving intellectual and social culture and condition. It being given that an intelligent person has all the special knowledge of an art or trade possessed by the most experienced and best-trained operative, who, outside of this special training and experience, is an ignorant person, and equal advantages of capital and machinery being given also, the intelligent person proceeds to improve and simplify methods of production to such an extent that an addition to his wages of even 100 per cent. represents but a small part of the advantage gained. Yet the special training and knowledge of the ignorant man is the basis of the improvement made.

This truth, considered first with reference to a single American laborer, and then multiplied many hundred thousand times, represents the advantages of America over Europe and Asia in the contest for final, peaceful supremacy in the affairs of the world. Thus is America solving the industrial problem of the ages by exacting cheap production from expensive labor.

He then proceeds to discuss the other changes caused by the war, such as the issues of United States notes and the notes of national banks. Thus he presents an argument in favor of a paper currency, composed in part of United States notes, and in part of national bank notes. The aid which such a currency would afford in resuming and maintaining specie payments is fully presented. He says :

In the view I am now to take, I exclude the idea that the Government will ever abandon the issue of national bank notes, and undertake the issue of United States notes in their place. The result of such a policy may be foreseen. The people, deprived of the facilities for business afforded by banks, would seek relief through State institutions, and without much delay Congress would concede to them the right to issue notes for circulation. This concession would be followed by a surrender by the General Government of all control over the paper circulation of the country. The true policy will be found in continuing the national banking system, without, however, yielding to the claim for a material increase of its issues in proportion to the volume of paper in circulation. There are two effectual and certain ways of placing the country in a condition when specie and paper will possess the same commercial value. By diminishing the amount of paper in circulation the difference between the commercial value of paper and coin will diminish, and by pursuing this policy the difference will disappear altogether. All legislation limited in its operation to the paper issues of the banks and of the Government, whether bearing interest or not, and which, in its effects, shall tend to diminish the market value

of coin, will be found, upon analysis, to contain a plan for contracting the volume of paper currency ; and all legislation so limited, which does not contain such a plan, will prove ineffectual. Accepting this proposition, and believing that the country is not prepared to sustain the policy of contraction, it only remains for me to consider the means by which the value of our currency must be improved. The basis of a policy of improvement must be found in a sturdy refusal to add to the paper in circulation until it is of the same value substantially as coin. This being accepted as the settled purpose of the country, there can be no permanent increase of the difference between paper and coin, and an opportunity will be given for the influence of natural causes, tending, upon the whole to a better financial condition. We may count first among these the increase of population and its distribution over new fields of business and labor ; secondly, in the South especially, the number of persons having property, and using and holding money, will increase ; next, we may anticipate a more general use of paper in Texas and the Pacific States, by which, practically, for the rest of the country, the volume of paper will be diminished, and the quantity of coin increased—two facts tending to produce an equality of value. The influence of these natural causes will be counteracted in some degree by the increasing facility for the transfer of money from one point to another, and by the greater use of bank checks and certificates of deposit. The rapid transit of merchandise, in bringing the period of its consumption nearer to the time of its production, is an agency of a similar sort, giving to these views their full weight.

In conclusion, the Secretary anticipates a financial improvement in the affairs of the country of a permanent nature, and thus presents the reasons upon which such anticipations are founded. He says :

I am prepared to say that the experience of the last three years coincides with the best judgment I can form, and warrants the opinion that, under the influence of existing natural causes, our financial condition will gradually improve. During the last fiscal year there were several circumstances of unusual character tending to counteract the natural course of affairs. Our exports of cotton fell off \$87,000,000, and there were excessive imports of wool, tea, coffee, and sugar. The stock of wool in warehouse on the 30th of June was sufficient for six months' consumption ; of sugar for four and a half months, of coffee for five months, and of tea for twelve months. In the ordinary course of trade the importation of these articles will be small during the current year, with consequent favorable effect upon the balance between this and other countries. This anticipation of the wants of the country, in connection with the decrease of our exports, augmented the balance of trade, created an active demand for coin, and advanced the price. Notwithstanding these adverse influences, gold has averaged, substantially, the same premium from January 1st to November 1st of the present year as for the corresponding period of 1871. Not doubting that natural causes will in time produce the result sought, it is yet advisable to bring the power of the Government in aid of the movement as far as practicable.

The revival of our foreign commerce is one instrumentality, and perhaps the most efficient one of all. If the annual earnings of American vessels were \$80,000,000 instead of \$30,000,000, the difference in the amount of exchange available abroad would meet a large part of the adverse balance in ordinary years. The experience of Europe tends to show that the ability of a country to maintain specie payments is due largely to the condition of its foreign trade. Next, every measure which increases or improves the channels of transportation between the seaboard

and the cotton and grain growing regions of the country, or lessens the cost of freights, adds something to our capacity to compete successfully in the markets of the world. Finally, those measures which encourage American manufactures, especially of iron, wool, and cotton, and discourage the importation of like products, affect favorably the balance of trade and help us toward the end we seek. This statement in three parts is a general statement of a policy that, in my opinion, will aid the country in reaching a condition when it will be practicable to resume and maintain specie payments. Anticipating that day, I anticipate also that the burden of resumption will rest upon the Government. There are now more than 1,900 banks in the country, and I cannot imagine a condition of things so favorable for a period of years as to enable them at all times to redeem their notes in specie only. Without pro-

ceeding to the discussion of the subject in detail, I think that all will have been gained that is of value when the Treasury shall be prepared to pay the demand notes of the Government in coin, and the banks shall be prepared to pay their notes either in coin or in legal-tender notes, and then our good fortune will clearly appear in this, that our paper currency is not exclusively of national bank notes, nor exclusively of United States notes.

The following tables were compiled at the office of the *Financial and Commercial Chronicle*, New York, and show the monthly range of Government securities, and the comparative prices of leading articles of produce in the New York market, the prices of gold, stocks, etc.

MONTHLY RANGE OF GOVERNMENT SECURITIES, AS REPRESENTED BY ACTUAL SALES AT THE NEW YORK STOCK EXCHANGE BOARD DURING THE YEAR 1872.

PRICES OF RAILROAD AND MISCELLANEOUS STOCKS DURING THE YEAR 1921.

FISK, JAMES, JR., born in Bennington, Vt., April 1, 1834; shot by Edward S. Stokes, in New York City, January 6, 1872. His father was a pedler, and a few years later removed to Brattleboro, Vt., where the son obtained a very meagre common-school education, which was all he ever had. After some experience as waiter in a hotel, and member of a circus company, he turned his attention to peddling, at first in company with his father, then by himself; and finally, having bought his father out, he employed him to peddle for him among the more scattered population of the rural districts, while he himself visited the larger towns and villages. With the brightest wagons, the showiest horses, and the most glittering harness in the State, and with an abundance of that ready wit and good-natured impudence for which he afterward became famous, he prospered so fast that he was soon one of the principal travelling jobbers in New England. He bought his supplies of Jordan & Marsh in Boston, and the members of this firm were so impressed with his shrewdness that they gave him a position in their establishment as salesman. From salesman he became a partner. He made some excellent bargains with the Government during the war. It is said that he made a happy stroke by smuggling cotton through the lines. In four years he retired from the firm with capital enough to open a dry-goods shop of his own. In four months more his money was all gone, and the business was closed up. When he appeared in New York in 1864, and opened a broker's office in Broad Street, his entire capital consisted (if history can be believed) of a borrowed silver watch. If he had anything more than that he soon lost it, and when he introduced himself to the favor of Daniel Drew, by negotiating for him the sale of the Bristol line of steamboats, he was practically penniless. Mr. Drew first set him up as a broker, in partnership with Belden, and employed the new firm in carrying on his famous war with Cornelius Vanderbilt for the possession of the Erie Railway. That warfare is a matter of history, which we need not here recount. When the crisis came, on the eve of the election for directors, in October, 1867, there were three contestants in the field. Fisk was serving under the Drew party, who wanted to be retained in office. Vanderbilt, master of Harlem, Hudson River, and Central, seemed to be on the point of securing Erie also. Mr. Eldridge was the leader of the Boston, Hartford and Erie party, which wanted to get into the Erie directory for the purpose of making that company guarantee the bonds of his own worthless road. Eldridge was assisted by Jay Gould. As a result of the compromise by which the three opposing interests coalesced, Fisk and Gould were both chosen directors of Erie, and from the month of October, 1867, dates the memorable association of these two choice spirits since so

famous in the money markets of the world. From this association followed, in rapid succession, those stupendous commercial schemes whose magnitude and daring surpassed all ordinary comprehension or belief. One of the best and largest of our great trunk railways was brought under the complete control of these men; its stock and bonds issued, as fast as the scrip could be prepared, till these two persons had accumulated their half a score millions or more; its income subsidized in every way for their benefit; Legislatures were bribed, judges bought, branch railroads bought up or leased, and rivals either fought off, or their silence purchased. For the long suffering stockholders of the road there seemed to be no redress, no way of relief. Not satisfied with these illicit gains, Fisk and his partners began to speculate in gold, and in September, 1869, brought on that crisis which will be long known in Wall Street as "Black Friday." But, with his really large capacity for business, Fisk felt that the affairs of the Erie Railroad, of which he was for four years controller, and the perfect wilderness of lawsuits which were brought against his management, were not sufficient to occupy his great abilities, and, looking about for other employment, he purchased the Eighth Avenue Opera-House, and, leasing part of it to the Erie Railroad for offices, managed the theatre himself; bought the Fifth Avenue Theatre; bought a summer garden in the city, for the purpose of a restaurant; bought two lines of steamboats plying between Fall River and New York, and Bristol and New York, and put himself in naval uniform; bought a ferry line across the Hudson; became the colonel of the Ninth Regiment of the N. Y. State Guard, and paraded his troops in Boston and at Long Branch, and was endeavoring to obtain the brigadier-generalship at the time of his death; bought coaches, and express wagons, houses and lands, and furniture of barbaric gorgeousness, and filled these houses with opera-bouffe singers, and others. At a chance meeting, Stokes, between whom and Fisk a mortal enmity existed, shot him, as he himself says, in self-defence.

FLORIDA. The Legislature of Florida for 1872 commenced its session at Tallahassee on the 2d of January. Early in February the attempt to secure the removal of Governor Reed by impeachment was renewed. On the 10th of February managers on the part of the Assembly appeared at the bar of the Senate and presented articles of impeachment which were received, and on the 14th the High Court of Impeachment was organized with the Chief-Justice of the Supreme Court presiding. The substance of the charges against the Governor was to the following effect:

1. That in 1870 he did "unlawfully and in violation of the constitution and laws of the State of Florida cause to be issued, and did himself sign his official signature as Governor

to a large number of State bonds to the amount of \$528,000 in excess of the amount authorized to be issued by the act of the Legislature entitled 'An act to alter and amend an act entitled An act to perfect the public works, approved June 24, A. D. 1869, approved January 28, A. D. 1870.'

2. That in violation of the same act he did "fraudulently conspire to issue State bonds to the amount of \$1,000,000, for the purpose of purchasing the stock of the Florida, Atlantic & Gulf Central Railroad Company, for the use and benefit of persons and parties, and with full knowledge of and consent to said purpose, and in collusion with such persons and parties, for his and their pecuniary benefit."

3. That he did issue and sign the \$1,000,000 of bonds referred to.

4. That in violation of the same act, and of the constitution, etc., he did "cause to be issued and did himself sign his official signature as Governor to \$4,000,000 of State bonds for the use and benefit of the Jacksonville, Pensacola & Mobile Railroad Company in the State of Florida, having full notice of the fraudulent title of said company to the property of the Pensacola & Georgia and Tallahassee Railroads."

5. That in 1869 and 1870, in violation of the constitution and laws, and "especially the act of the Legislature of the State of Florida, entitled 'An act to fund the outstanding debt of the State, approved August 6, 1868,' and an act entitled 'An act to fund the outstanding debt of the State, approved February 1, 1869,' he did fraudulently conspire with one Milton S. Littlefield, and with divers other persons, to embezzle the moneys received from the hypothecation of State bonds issued under and by authority of the aforesaid acts of the Legislature of the State of Florida, and did embezzle a large amount of the moneys received from the said bonds, to wit, the amount of \$22,000."

6. That in 1871 he did, in violation of the constitution and laws of the State, "receive from Milton S. Littlefield the sum of \$3,500 as a consideration to influence his official action in sustaining the claim of the Jacksonville, Pensacola & Mobile Railroad Company to the title of the property of the Pensacola & Georgia and Tallahassee & Florida, Atlantic & Gulf Central Railroads, and as a further consideration to influence his official action in all matters between the State of Florida and the said Jacksonville, Pensacola & Mobile Railroad Company."

7. That in 1868 and 1869 he did "conspire with one Charles Pond and with one E. B. Bulkeley, of the city of New York, to defraud the State of Florida of \$15,000 of bonds of the State of Florida, and in pursuance of said conspiracy did defraud the State of Florida of \$15,000 of the bonds of the State of Florida applied to the purchase of arms and equipments for the State of Florida."

8. That in 1869, "in violation of the con-

stitution and laws of the State of Florida, and especially of the act of the Legislature entitled 'An act to provide for and encourage a liberal system of internal improvements in this State, approved January 6, A. D. 1855,' and with full intent to violate said act, he did receive from one I. K. Roberts, Esq., in behalf of the Florida Railroad Company, a draft for the sum of \$1,140, which was paid in currency of the United States to said Harrison Reed, Governor, and chairman of the Board of Trustees of the Internal Improvement Fund of the State of Florida, and did tender to the Treasurer of the State of Florida scrip of the State in lieu of said currency, which was due to the Sinking Fund on account of said Florida Railroad Company."

9. That in 1872 he did "conspire to influence one J. W. Toer, a justice of the peace, in the exercise of his judicial action upon a case pending before him, to wit, the case of the 'State of Florida against George W. Swepson.'"

10. That in 1871 he did "unlawfully conspire with one Aaron Barnett to prostitute his official influence and position to the uses and purpose of the said Barnett, in receiving the sum of \$10,000 from said Barnett for his official sanction and signature to a contract for the conveyance of internal improvement lands to the said Barnett, as assignee of the said contract from the Jacksonville, Pensacola & Mobile Railroad Company, and did receive the said sum of \$10,000 from the said Barnett for the reasons and purposes aforesaid."

11. That between September 8, 1868, and July 1, 1869, in the city of New York, he did "unlawfully and improperly appropriate moneys belonging to the State of Florida, to wit: the sum of \$6,948.63, placed in his possession by James D. Westcott, Jr., and received by him as a trustee, in this: that the said Harrison Reed, Governor, did substitute for said moneys certain securities of the State of Florida purchased by him at a large discount, and did pay said securities into the Treasury of the State of Florida, and appropriated to his own personal use and benefit the difference arising from said speculation, and with intent then and there to defraud the State of the full value of said moneys in his hands as trustee for the people of the State."

12. That "on or about the first day of January, in the year of our Lord one thousand eight hundred and seventy, and on divers other days and times in the said year, also on divers other days and times in the year of our Lord one thousand eight hundred and seventy-one and seventy-two, he did embezzle moneys belonging to the State of Florida, to wit: the sum of \$1,897.24, in the possession of Jonathan C. Gibbs, Secretary of State, and did appropriate said moneys to his own use, benefit, and purposes."

13. That he did, "on the 24th day of April, in the year of our Lord one thousand eight

hundred and seventy-one, and on divers other days and times in said year, at Tallahassee, in the State of Florida, divert, misapply, and unlawfully and improperly appropriate the sum of \$11,000 of the Contingent Fund, appropriated by the Legislature of the State of Florida, and did appropriate and apply a large portion of said sum to his own personal use and benefit."

14. That he did, "on the eighth day of June, in the year of our Lord one thousand eight hundred and seventy, at Tallahassee, in the State of Florida, unlawfully and maliciously misrepresent and falsify his official acts and doings to one T. W. Brevard, with full intent thereby to misrepresent and falsify, for the purpose of affecting the interest of certain persons and parties, and to the detriment of the public interests and in violation of the express provision of the constitution of the State, whereby said Harrison Reed, Governor of Florida, did then and there commit and was guilty of a high crime and misdemeanor in office, of incompetency, malfeasance, and of conduct detrimental to good morals."

The Governor announced himself ready to meet and answer these charges, and demanded a prompt and speedy trial. After plea had been entered, the managers applied for a continuance of the trial, and for time to procure the attendance of witnesses residing out of the State, against which the Governor entered a protest. The High Court refused to postpone the trial, and, the managers failing to produce any evidence in support of the charges, it finally adjourned without action.

In accordance with a section of the constitution which provides that "any officer, when impeached by the Assembly, shall be deemed under arrest, and shall be disqualified from performing any of the duties of his office until acquitted by the Senate," Governor Reed had been suspended from the exercise of the executive functions by the action of the Assembly on the 10th of February, and Samuel T. Day, the Lieutenant-Governor, had issued a proclamation assuming "the powers, duties, functions, and authority of Governor of the State of Florida in place of the said Harrison Reed, suspended from office." Mr. Reed, on the other hand, held that the adjournment of the High Court of Impeachment, and of the Legislature, without action on his case, was equivalent to an acquittal, and called on Mr. Day to surrender the office to him. This the latter refused to do, at the same time declining to submit to the judges of the Supreme Court the question of the respective claims of himself and Mr. Reed to the executive office. Reed had meantime taken up his residence at Jacksonville, but on the 8th of April, during the temporary absence from the capital of the acting Governor, with the aid of the Secretary of State, Jonathan O. Gibbs, entered the executive office at Tallahassee, secured the great seal of the State, and issued a proclamation,

wherein he recited the action of the Legislature, and of the Court of Impeachment, and then proceeded as follows:

In virtue of such action, I, the said Harrison Reed, Governor as aforesaid, was duly discharged and acquitted of and from all and singular the charges so as aforesaid preferred, and any constitutional disability which before then rested upon me was thereby removed; and I had well hoped, the premises considered, that Samuel T. Day, impressed with a due regard for the rights and majesty of the people associated with myself, would have, upon the said adjournment and acquittal, quietly ceased so to act as Governor, well knowing my presence in the State.

But now so it is that said Samuel T. Day, regardless of these high and sacred rights of the people, and of their majesty as imparted to me at the polls, unmindful of the confusion, delay, and actual public injury resulting therefrom, has made and is making removals from office and appointments thereto, without authority therefor, thereby calling for this my proclamation;

That to the end that the rights of the people in the proper exercise of lawful authority shall be maintained, that the property of the State shall be preserved, that the imposition and collection of oppressive taxes without authority of law shall be stopped, that the free and equal exercise of political rights in the elections soon to occur shall be had, and that all things whatsoever affecting the public welfare shall be legitimately done:

Now, therefore, I, Harrison Reed, Governor of the State of Florida, do hereby proclaim my authority and power in the performance of all chief executive duties, and the acts and doings of Samuel T. Day since the actings and doings of the Assembly, Senate, and High Court of Impeachment, as aforesaid, to be without authority of law, and forbid him, and all persons acting under and by his authority so since then delegated, from exercising any official power or authority under peril of law, and forbid all obedience to them. And I command full obedience to the lawful authority of the duly-elected Chief Magistrate of the State.

In testimony whereof, I do hereunto set my hand and cause the Great Seal of the State to be affixed at Tallahassee, the capital, this eighteenth [L. s.] day of April, A. D. 1872, and of the Independence of the United States the ninety-sixth.

HARRISON REED, Governor of Florida.

By the Governor:

Attest, JONATHAN O. GIBBS, Secretary of State.

On the 15th of April Mr. Day issued a proclamation, in the preamble of which he recalled the fact of the impeachment, set forth his own right to hold the executive office in view of the suspension of the Governor, and alluded to the recent proclamation of Reed. The body of this proclamation of the acting Governor was as follows:

Now, therefore, I, Samuel T. Day, the duly-elected Lieutenant-Governor and now Acting Governor of this State in the place of the said Harrison Reed, so as aforesaid impeached and disqualified from performing any official duty, do hereby issue this my proclamation, declaring the acts of the said Harrison Reed, in issuing his so-called proclamation, an attempted usurpation of the authority of the Chief Executive of the State, and in total disregard of law and good government, and revolutionary in its tendencies; and hereby warn all good citizens, as well as all designing men, that, while the duties of the office of Governor are devolved upon me, I shall execute the laws of this State, and to this end and for the purpose of suppressing any attempt at usurpation or revolution, and to protect the law-abiding citizens

of this State in their civil rights, I shall use all the power in me vested by the constitution and laws to enforce obedience to the lawfully constituted authorities of this State, hereby publicly warning the people and all officers of this State not to obey, or in any manner respect, the pretended authority of the said Harrison Reed.

In testimony whereof, I have hereunto set my hand, and, in lieu of affixing the seal of the State, hereby proclaim that the same has been secreted or stolen.

Done at the Capitol, in Tallahassee, Florida, this fifteenth day of April, in the year of our Lord one thousand eight hundred and seventy-two, and of the Independence of the United States of America the ninety-sixth.

SAMUEL T. DAY, Acting Governor.

On the 10th Mr. Reed had written to the acting Governor declaring that, "with a view of terminating this question, and settling the public mind," he was willing "to make a case and present the whole matter to the justices of the Supreme Court, to the end that there may be a determination at once of our respective rights, and the rights of the good people of the State." Receiving no answer to this proposition, he filed his own application to the court for a decision of the matter in dispute. In this he recited the facts in relation to the impeachment, the action of Lieutenant-Governor Day, the grounds of his own claim, and the refusal of Day to submit the matter to the court for adjudication, and then put the following question: "Did the action of the said High Court of Impeachment remove the disabilities growing out of suspension from power to perform the said duties, and restore and reinstate me in the powers and duties properly pertaining to said office, particularly in view of said proclamation and assumption thereof?"

The judges ordered a copy of this communication to be transmitted to Lieutenant-Governor Day, and assigned April 23d for the hearing of the parties interested. The question was argued at length by two counsel on each side, and on the 29th of April the court rendered its decision. A majority of the court, consisting of Justices Hart and Westcott, held that the Supreme Court had no jurisdiction in the case. In the opinion delivered by Justice Westcott, it was declared that the suspension of an impeached officer could cease only on acquittal by the Senate, and that acquittal could be effected only by some "affirmative final action by a legal Senate, other than a conviction, by which it dismisses or discontinues the prosecution." The action of the Senate in the matter was then referred to, from which it appeared that no such "affirmative final action was taken." It was, therefore, held that the case was still pending, and that the Senate alone had the power to dispose of it. The position is taken and sustained by considerable argument that the Senate, in its capacity of a Court of Impeachment, is a court of exclusive, original, and final jurisdiction, its decisions not being subject to review in any other tribunal. It had been urged by counsel that, by the adjournment of the Legisla-

ture, the Court of Impeachment had gone out of existence, and all proceedings before it fallen to the ground. The judges held that the court could not cease to exist, so long as there was a Senate, and that any unfinished proceedings remained pending during an appointment of the legislative body. In conclusion they say:

In what we have said, we do not affirm the entire want of jurisdiction or power in this court in proper cases to investigate and inquire into any act of the Senate affecting the rights of parties before it, in a case where what they have done comes before us collaterally. That power cannot be thrown off. But, when the constitution vests exclusive jurisdiction over impeachments in the Senate, we are deprived of the power of deciding questions arising in the course of the trial, or while the impeachment is pending; for these necessarily must belong to the court vested with the principal power or jurisdiction, and there is no appellate power in this court to reverse it. When, therefore, in exercising the power and jurisdiction vested in this court, we proceed to inquire into matters brought properly to our attention, the law does not authorize us to substitute our judgment for that of the Senate, upon questions before that tribunal, and hence, if it appears that no order finally disposing of the case has been made by it, we are at once arrested by the rule of constitutional law, which affirms that the Senate itself is the only tribunal to declare that the party has or has not been discharged.

With these views, we can only say that, until Governor Reed is acquitted by the Senate, we cannot acquit him, and that, during his suspension, his power, as Governor, to demand our opinion upon any question of law, ceases. Under these circumstances, we decline to say whether the law applicable to the proceedings of the Senate, at its last session, entitles him to a discharge. We think, after mature reflection, that it would be improper in this court to go beyond saying that the Court of Impeachment is still in existence, and must determine the matter. We should not suggest to that court how it should determine a question to come before it in a case now pending. With the circumstances reversed, we should not be very much obliged to that or any other tribunal, should it suggest to us how we should determine a case pending before this court; and, should it, unasked by us, give its views of the law of a case pending before this court, we should deem it a grave mistake, as well as an improper interference. Being suspended, Governor Reed's relation to us in this matter is no more than that of a citizen, and it would certainly be improper in us to give a voluntary opinion to a citizen upon a question of law, whether it was involved in a case pending in a court, or not, and whether we had jurisdiction over the subject-matter, or not.

Chief-Justice Randall dissented from the opinion of the majority. He held that the Supreme Court had a right to determine the legal effect of the action of the Senate. His definition of acquittal was "a discharge by virtue of any action of the Senate whereby it refuses expressly or otherwise further to entertain the case, or act upon it, or which places the cause beyond its reach, and by which it has no longer any power or authority to render a judgment upon the guilt or innocence of the officer. The constitution," he said, "contemplates a trial, and, the power to try once gone, all the consequences of the accusation cease. A refusal to try is a refusal to convict." In conclusion, he said: "I must, upon my convictions of duty, say that, in my opinion, Governor

Reed had the right officially to solicit the opinion of the court, whenever, after the adjournment of the Senate, he saw fit to do so; that he had a lawful right, after such adjournment, to resume the power and proceed to the discharge of the duties pertaining to the Executive Department, whenever he saw fit. Yet it was wise to address the constitutional advisers of the Executive upon the matter, before resorting to any measure which would have disturbed the peace of the community."

The reply of the court to Governor Reed's communication was as follows:

SUPREME COURT OF FLORIDA,
TALLAHASSEE, April 29, 1872. }

His Excellency HARRISON REED, Governor of Florida :

Sir: In reply to your communication of the 17th day of this month, we have the honor to state our conclusions as follows:

Your impeachment is still pending before the Senate, which is the only tribunal authorized to acquit you, under the constitution, and, until you are acquitted or discharged by that tribunal within the meaning of the constitution, you are suspended.

It may be true that the action of the Assembly and Senate, in the matter of your impeachment at the late session of the Legislature, would entitle you to have the said impeachment proceedings dismissed, and that the Senate should discharge and acquit you therefrom, but this is a question which can be legally determined by the Senate alone, that being the tribunal before which the matter is pending, and the court which has over the entire subject-matter both exclusive original and final jurisdiction. Were you not suspended, we are inclined to think that it would be our duty in ordinary questions, notwithstanding the want of jurisdiction in this court over the subject-matter involved in any question you might ask, to indicate simply in an advisory manner what was the law of such a case. This, however, would not determine the question, and would have no legal effect. A case of this kind will be found in 12 Florida Reports, 686, and to the action of the court there we refer, as illustrating our view under such circumstances. Even if the case were one which might be adjudicated in this court, our opinion in this way is only advisory, and would not directly affect individual rights, or the legality of acts, and would not restore you to an office held and exercised by another. If it was the office you sought to recover, you would have to resort to the proper proceeding to oust the party.

Lieutenant-Governor Day, however, is neither the *de jure* nor *de facto* Governor. He is in no sense Governor. He is Lieutenant-Governor, exercising the functions of the office of Governor. You are still *de jure* Governor. In case of a contest between you and the Lieutenant-Governor, as to the right to exercise executive functions, if we were of the opinion that the law gave to his acts the same standing as acts of *de facto* officers, it would perhaps result that you, being suspended and not restored, could not require our opinion, that power of office, like all others, being suspended. In such a case, we are inclined to think that you would not be entitled to demand our opinion while there was an adverse party exercising the functions of the office of Governor, unless his acts in office and title to office were void.

In the present state of the impeachment proceedings against you, your power to demand our opinion is suspended. To give an opinion, under all the circumstances, we think, could be properly viewed by the Senate as unsolicited advice by this court upon a question which the Senate alone can determine.

A purely voluntary opinion by this court, upon a subject of the greatest importance then pending before the Senate, might be calculated to embarrass its

action, and might perhaps be viewed as an impertinent suggestion as to its duty in the premises. Whether you are entitled to a discharge, that court must determine.

With the earnest hope that the Senate may bring these proceedings to a speedy and just termination, we have the honor to be, with much respect,

Your Excellency's obedient servants,

O. B. HART,

JAS. D. WESTCOTT, JR.,

Justices of the Supreme Court of Florida.

On the very day that Governor Reed made his application to the Supreme Court, Acting-Governor Day issued a proclamation convening the Legislature in extraordinary session on the 22d of April, and, in lieu of affixing the Great Seal of State to the proclamation, proclaimed that the same had been "secreted or stolen." The Legislature met on the 22d, but no quorum was present in either House until the 26th, when the acting Governor submitted a message, in which he spoke of the "most atrocious attempt by Governor Reed to seize the powers of the government under color of self-asserted right, and in defiance of the judicial proceedings of a high constitutional forum, by which he was deprived of all authority whatever." Regarding his own power and purposes, he said: "Whatever may be the opinion of the supreme judicial authority of the State upon the question of the legal effect of the proceedings thus far held by the Senate in the suspension from office of Governor Reed, I do not deem it disrespectful, during the pendency of the consideration of such opinion, to call your attention to the paramount necessity at all times of recognizing and abiding by the *de facto* executive authority of the State. No department of the government is more essential for the preservation of the peace and order of the community. Its powers and agency are distributed over the State in larger proportion than those of any other branch of the government, and are brought more directly in contact with the people. It is the immediate representative of the sovereign will of the people, and upon its vigorous and discreet action the courts and all judicial authority rely for the ultimate vindication of justice and the security of good government. In this view of my own duty, I hold the conduct of Governor Reed and all his abettors as revolutionary and criminal, and in no manner justifying the countenance or support of any law-abiding citizen, *until* having been declared by a tribunal of competent jurisdiction entitled to resume his executive functions. It is therefore that I feel bound by my oath, and by my sense of public duty, to compel obedience to my authority, and to use every power in me vested by law to suppress all attempts to subvert it."

On the 2d of May the impeachment proceedings were resumed, but the managers failing to bring forward evidence, or take any action for prosecuting the trial, and, the Senate refusing to grant any postponement, an order was adopted on the 4th by a vote of 10 to 7, granting the motion of the counsel for the

accused, and which was as follows: "And now Harrison Reed, Governor of the State, respondent herein, by J. P. C. Emmons, his counsel, comes here into this court, and asks and demands, in virtue of the proceedings had in the premises, that he, the respondent, be acquitted and discharged of and from all and singular said impeachment, as set forth in the articles of impeachment filed, and that he be discharged from arrest, and that he be relieved from any and all further attendance upon this court, or the Senate from which it was organized, growing out of the impeachment or the proceedings aforesaid."

The Court of Impeachment then adjourned *sine die*, and two days later both branches of the Legislature took the same action, without having transacted any legislative business of importance.

At the regular session of the Legislature, which opened on the 2d of January, and closed on the 19th of February, considerable general legislation was effected, mostly of local importance only. The following resolutions were adopted regarding the struggle in Cuba:

Whereas, The people of the island of Cuba are struggling for a national existence against a foreign and alien power, and are attempting to establish for themselves a free government, and to secure the blessings of free institutions for themselves and their posterity: And *whereas*, The war waged by Spanish despotism against their feeble and struggling power has no parallel for its atrocity and inhumanity in the annals of modern warfare, and should in no manner be countenanced by civilized nations: therefore—

Be it resolved by the people of the State of Florida, represented in Senate and Assembly, That the Congress of the United States is hereby requested to adopt such legislation as may be necessary to enable the national Government to extend such aid to the people of Cuba as becomes a great and free republic, whose people so ardently sympathize with the struggles and hopes of the oppressed of all nations; and—

Be it further resolved, That our Senators and Representatives in Congress are hereby requested to present these resolutions to their respective bodies as expressive of the sense of the people of Florida.

A resolution was also adopted requiring the Governor to appoint "a commission of five citizens of this State, whose duty it shall be to examine into, and report to the next session of the Legislature, the entire amount of bonded and floating debt of the State of Florida in detail, and to make such recommendation in relation to the finances of the State as they shall see proper."

Among the acts passed, was one declaring that when a married man dies intestate, without children, and is possessed at the time of his death of real and personal property, the wife shall be sole heir at law, and may take the whole estate or dower at her election. The boundary-line between Orange and Sumter Counties was changed by the annexation to the former of all that portion of the latter lying east of the Ocklawaha River. Another act makes it a misdemeanor "for any person or persons to compound or mix for sale, any drugs or medicines of any kind, in the State

of Florida, or to carry on or engage in the business or avocation of a druggist, or apothecary, in this State, unless such person or persons shall have first obtained a certificate from at least three regular practising physicians, graduates from some regular medical college, said physicians being residents and practitioners of the county with the applicant, and said physicians shall in said certificate set forth under oath, made before some judicial officer, that they have carefully, diligently, and thoroughly examined the applicant under this act, and find that he is of good moral character, of sober and steady habits, and possessed of medical and chemical knowledge to thoroughly qualify him for the business of a druggist or apothecary, in the particular county in this State for which the application is made under this act; and that the citizens of this State may have full faith and confidence in his knowledge, skill, carefulness and ability as a druggist or apothecary, which said certificate shall be acknowledged by the said physicians, before the clerk of the circuit court of the county wherein it is made, and filed in said circuit court, and a copy thereof, under seal of the county, shall be given to the applicant: *Provided, however*, That, if there be not a sufficient number of qualified physicians under this act residing and practising in the county in which the application is made, any other physicians of like qualifications, residing adjacent to the applicant, may act and grant the certificate under this act. Any person convicted of a violation of this act shall be fined not exceeding \$1,000, or imprisoned not exceeding six months, or both, at the discretion of the court."

An act was passed specifying the condition on which insurance companies incorporated in other States may do business in Florida. The officers are required to furnish the State Treasurer with a statement of the condition of their companies in detail, and to obtain a certificate of authority; they must also possess at least \$150,000 in United States or State bonds, or "other bankable interest-bearing stocks of the United States, at their market value." The State Treasurer, Comptroller, and Attorney-General, are constituted a board of insurance commissioners to examine into the affairs of any insurance company doing business, or applying to do business in the State, which examination must be facilitated by the officers and agents of the companies. The statements of the affairs of the companies must be renewed in January of each year. Violation of the act is punishable by a fine of not more than \$6,000, or imprisonment for not more than six months.

An act to secure homesteads to actual settlers on the swamp and overflowed lands of the State was also passed. Another act reorganized the Agricultural College, and made the Superintendent of Public Instruction its president. The corporation formed under this act has power to erect such buildings as may

be required, to receive donations, and purchase and sell lands. Each Senator, during his term of office, is empowered, and it is made his duty, "to nominate and send one student, who shall be a resident of his Senatorial District, to said State Agricultural College, who shall be entitled to receive the benefit of a full course of instruction at said college, without any charge for tuition, subject to such rules and regulations as may be established for the government and direction of said college, according to the provisions of this act."

Brown's Theological Institute was also incorporated with all necessary powers, and the trustees required to make an annual report to the Conference of the African Methodist Episcopal Church.

The first political convention of the year was held by the Republicans, at Jacksonville, for the purpose of appointing delegates to the National Convention. Resolutions were adopted commending the Administration of President Grant for its "careful and economical management of the finances of the nation," and its "uniform support of the great principle that every citizen shall enjoy every right and privilege guaranteed by the Declaration of Independence and the Constitution of the United States." The delegates were instructed to favor his nomination. Resolutions were also adopted characterizing the war carried on by the Spanish authorities in Cuba, as having "no parallel for its atrocity and inhumanity in the annals of modern warfare," and calling on Congress "to adopt such legislation as may be necessary to enable the national Government to extend such aid to the patriots of Cuba as becomes a great and free republic whose people so ardently sympathize with the struggles and hopes of the oppressed of all nations."

The Democratic delegates to the National Convention at Baltimore were named by the "Conservative State Central Committee," on the 11th of June, and instructed to favor the acceptance of the "Liberal Republican" nominees, but to abide by the action of the convention, whatever it might be.

The regular Republican Convention, for the nomination of State officers and presidential electors, was held at Tallahassee, on the 7th of August. Ossia B. Hart was nominated for Governor, Marcellus B. Stearns for Lieutenant-Governor, and John T. Walls and William J. Parmon for members of Congress. A resolution was unanimously adopted, pledging the delegates as representatives of the party, in the event of success at the State election, to use their "entire exertion" for the election of Governor Harrison Reed to the position of United States Senator, "recognizing in him, as we do, a faithful public servant, and a true Republican deserving well of the party for his unflinching devotion to principle."

The State Executive Committee was intrusted with the duty of preparing and publishing

a platform, which they did shortly after the convention. Besides indorsing the Administration and the action of the National Convention at Philadelphia, and condemning the Liberal Republican movement, and reiterating the demand that the Government extend its aid to "the patriots of Cuba," the platform contained the following declarations:

3. That the education of all the people being the surest bulwark of a republican Government—as well as a blessing to which all the people are equally entitled—it is the duty of the State to provide for the education of all, by providing and supporting a liberal system of common schools, indorsing and sustaining colleges, and by placing within the reach of all the people, without discrimination on account of race or color, the means of obtaining at least a thorough common-school education.

4. That the Republican party is based upon these sacred principles of truth and justice, which recognize in its broadest sense the perfect equality of all men before the law, regardless of race or color; that it is opposed to all class distinctions and to all class legislation, and that it aims to secure for all men an equal right to the quiet and unquestioned enjoyment of all the privileges and honors of citizenship.

5. That the most liberal policy should be adopted by the State to encourage a large and immediate immigration from other States and from foreign lands, and that all industrious and intelligent settlers, who will make their homes in Florida, will receive a cordial welcome, and be protected in the full enjoyment of all their personal and political rights and opinions.

6. That it is the duty of the State, by legislative action, or by the action of its proper officers, to unravel the complications which now embarrass the railroad system of the State, and to insist upon such a management of all railroads as will conduce to the general welfare of the State and of the people, and contribute to the proper accommodation of the public; and while we favor a liberal system of State aid for the purpose of encouraging internal improvements, we protest against any grants of bonds or lands that shall benefit corporations, either public or private, at the expense of the people, or increase their burden of taxation.

7. That retrenchment and economy should be rigidly practised in every department of the State government; that every State and county officer should be held to a strict personal accountability for the faithful performance of his duties, and for the safety and proper application of the public property and public moneys intrusted to his care; that officers and legislators, appointed or elected, should be honest, intelligent, and competent men; that the taxes should be made as light as the actual expenses of the State will permit, and that they should be promptly and faithfully assessed and collected, and that in all respects the State government should be administered honestly and uprightly, and with a sole regard to the interests of the people.

9. That the people of Florida are to be congratulated on the unprecedented growth of their towns and cities in wealth and population; on the security afforded to all classes of citizens, equally by the laws enacted by Republican Legislatures, and enforced by the present Republican administration, especially guaranteeing to all, without discrimination, the irrevocable right to vote and to hold office in this State; upon the energetic and successful manner in which this administration has organized and put in operation the school system of the State; upon the success of its efforts to secure a permanent and intelligent immigration, and upon the fact that the present Republican administration has conferred more benefits upon the State and upon its people, and has been more just to all classes, more honorable and more

successful than any single previous four years of government since the State was admitted into the Union.

The Democratic Convention met at Jacksonville, on the 14th of August, and nominated W. D. Bloxham for Governor, R. D. Bullock for Lieutenant-Governor, and S. L. Niblack and C. W. Jones for members of Congress. The following were the resolutions adopted:

Resolved, That we heartily indorse the political principles of the Cincinnati and Baltimore Conventions and their nominees.

Resolved, That an honest administration of the Government, national and State, is of paramount consideration with all good citizens.

Resolved, That in presenting our standard-bearers for the contest in the State of Florida, at the coming election, we offer men of approved integrity and of unquestionable ability, whose selections are made without reference to sections or localities, pledged to retrenchment and reform, and in their support we invite the unity and coöperation of all men who desire that the laws shall be impartially administered, the rights of all citizens protected, and the finances honestly and economically administered and expended.

The election occurred on the 5th of November. The total vote for presidential electors was 88,190, of which those favoring Grant and Wilson received 17,768, and those in favor of Greeley and Brown, 15,427; majority for the former, 2,336. The total vote for Governor was 88,607, of which Hart received 17,603, and Bloxham 16,004; majority for the former, 1,599. The Legislature for 1873 consists of 18 Republicans and 11 Democrats, in the Senate, and 29 Republicans and 23 Democrats, in the Assembly.

Governor Hart, in his message to the Legislature, in January, 1873, speaks of the working of the existing election law in the following terms: "The experience of the past few months has demonstrated the necessity of some changes in the laws relating to elections. It has come to be regarded as a matter of grave concern, under the law as it now stands, whether the choice of officers depends upon the voice of a majority of the people of the State or counties, or whether it depends upon the skill of a board of canvassers, in receiving or rejecting, upon petty and technical grounds, the evidence of the result. The liberties of the people hang upon a slender thread while the law permits mere administrative officers to exercise judicial functions of so grave a character. The law providing for the punishment of those who falsify, suppress, or manufacture, fraudulent returns, is entirely inadequate to protect the people against these criminal practices. Thus far the firmness and integrity of the State Board of Canvassers have protected us against the mischiefs which might have grown out of any improper use or abuse of their official powers in these respects. The attention of the Legislature is respectfully but earnestly invited to this subject."

The financial condition of the State is quite unsettled, owing to the want of proper enact-

ments for the security of the Treasury, and a negligent enforcement of such laws as exist. The exact amount of the public debt is not definitely ascertained, but, independent of aid to railroads, is believed not to exceed \$1,500,000. Seven per cent. bonds to the amount of \$500,000 were authorized in 1856, but what amount was lawfully disposed of, and whether the accrued interest has been wholly paid, is not known. A few bonds of earlier date are also believed to be outstanding. The liabilities incurred during the war have not been reported, and are of doubtful validity. In 1868 and 1869, \$500,000 of six per cent. bonds were authorized, of which about \$100,000 have been sold, and the rest hypothecated as security for \$135,000 borrowed money, including interest. By an act of 1871, seven per cent. 30-year bonds were authorized to the amount of \$350,000, all of which have been sold. The floating debt, consisting mainly of Comptroller's warrants, is believed not to exceed \$230,000. These warrants are generally about 50 per cent. below par, on account of the uncertainty of their redemption. The Treasury at the beginning of 1873 was empty, but about \$340,000 was due for unpaid taxes for years previous to 1872, and the revenue for that year, also uncollected, it was thought would swell the amount due to about \$598,000. The deficiencies of the Treasury seem to have been due to the negligence and dishonesty of officials intrusted with the duty of levying and collecting taxes. The most urgent recommendations of the new Governor to the Legislature, at the opening of the session of 1873, were those in favor of clearly ascertaining the indebtedness of the State, and providing for its liquidation, and for the enactment of laws which should secure a prompt and honest collection of the revenues. The taxable property of the State amounts to about \$50,000,000, while the requirements of the State Treasury do not exceed \$300,000 annually.

Fifty-seven persons convicted of crime were pardoned by the Governor during the year. Four persons were executed for murder.

Among the projects for internal improvement in Florida is that of a canal from the Atlantic to the Gulf coast by way of the St. John River.

According to the census of 1870, there were in the State 736,172 acres of improved land, 1,425,786 of woodland, and 211,583 of other unimproved land. The cash value of farms was \$9,947,920; of farming implements and machinery, \$505,074; total amount of wages paid during the year, including value of board, \$1,537,000; total (estimated) value of all farm productions, including betterments and additions to stock, \$3,909,746; orchard products, \$53,639; produce of market-gardens, \$31,983; forest products, \$7,965; home manufactures, \$131,698; value of animals slaughtered or sold for slaughter, \$520,966; of all live-stock, \$5,212,157. There were 11,902

horses, 8,835 mules and asses, 61,922 milch-cows, 6,292 working oxen, 322,701 other cattle, 26,599 sheep, and 158,908 swine. The chief productions were 2,225,056 bushels of Indian-corn, 114,204 of oats, 401,687 pounds of rice, 157,405 of tobacco, 37,562 of wool, 39,789 bales of cotton, 64,846 bushels of peas and beans, 10,218 of Irish and 789,456 of sweet potatoes, 100,989 pounds of butter, 952 hogsheads of cane-sugar, 344,839 of cane-molasses, 50,884 pounds of honey, 6,052 of wax. The total number of manufacturing establishments was 659, employing 126 steam-engines, of 3,172 horse-power; 79 water-wheels, of 528 horse-power; and 2,749 hands, of whom 2,670 were males above 16, 20 females above 15, and 59 youths. The capital employed amounted to \$1,679,000; wages, \$989,592; materials, \$2,330,873; products, \$4,685,408.

The total number of religious organizations was 420, having 390 edifices, with 78,920 sittings, and property valued at \$426,520. The chief denominations were:

DENOMINATIONS.	Organizations.	Sittings.
Baptist.....	127	21,100
Episcopal.....	17	4,600
Methodist.....	235	42,400
Mormon.....	1	50
Presbyterian.....	29	6,630
Roman Catholic.....	10	3,950
Total.....	412	73,220

The whole number of libraries was 258, with an aggregate of 112,928 volumes. Of these, 178, with 87,554 volumes, were private, and 75, with 25,374 volumes, were other than private.

There were in the State 23 newspapers and periodicals, with a total circulation of 10,545; 649,220 copies were annually issued. There were 3 tri-weekly, circulation, 820; 1 semi-weekly, circulation, 800; 20 weekly, circulation, 9,425.

FLOUR-MILLS, EXPLOSION IN. The report on the causes of the disastrous explosion at the Tradeston Flour-Mills, in Glasgow, made by Prof. Rankine and Dr. S. Macadam, presents the following important facts:

In accordance with instructions received from the secretary of the Committee of the Fire Insurance Offices interested in the loss and damage sustained in the fire and explosion which occurred in the Tradeston Flour-Mills and Granaries, on the 9th day of July, at 4 p. m., we have made a searching investigation into all the circumstances connected with this disastrous affair, and, having inspected the premises, examined all surviving witnesses, visited various other mills, and inquired, by the examination of witnesses and documents, into the history of other fires and explosions of a like nature, we have to report as follows:

1. That the primary cause of the fire and explosion was the accidental stoppage of the feed of one of the pair of stones engaged in the grinding of sharps, which led to the stones becoming highly heated and striking fire.
2. That the fire thus generated inflamed the finely-divided dust which was diffused through the air in the exhaust-conduits, and then passed on to the exhaust-box.
3. That the sudden combustion of the dust dif-

fused through the air would produce a very high temperature in the gaseous products of that combustion, and this would necessarily be accompanied by a great and sudden increase of pressure and bulk—constituting, in fact, an explosion.

4. That the first effect of this explosion would be to burst the exhaust-box, and allow of the diffusion of the dust and flame throughout the atmosphere of the whole mill.

5. That this communication of inflammable dust and flame throughout the atmosphere of the whole mill was the cause of the second explosion, by which the gable-walls were blown out, the mill reduced to ruins, and the wood-work set on fire.

6. That the stores or granaries were set fire to partly by the flame and fire from the mill travelling along the gangways, and partly from the burning materials falling through the skylights.

7. That no explosive or other foreign material was used in the manufacture of the flour, and that we found the steam-boilers uninjured.

8. That we have not been able to trace blame on the part of the proprietors of the mill or of any one in their employment, as every precaution known at the time was used.

We have ascertained, both from the evidence of eye-witnesses and from printed and published documents, that fire-explosions, similar in their cause and nature to that at Tradeston Mills, are accidents of ordinary occurrence in flour-mills, especially since the introduction of the apparatus called the "exhaust." This fact, however, is little known to the general public, or, indeed, to any one except those practically employed in working such mills, though it appears to be better known on the Continent than in Great Britain, being mentioned in French and German treatises upon flour-mills, but not, to our knowledge, in the standard English books on that subject.

Most of these fire-explosions have been comparatively trifling, and not accompanied with loss of life or with serious damage—the extent of personal injury being confined to slight scorching of the hair and skin. In certain instances, however, the effects have been more or less disastrous, extending to the firing and demolition of buildings and machinery, the conflagration of wood-work and stores, and to serious and sometimes fatal injury to workmen and other persons. The recent Tradeston fire-explosion, so far as we know, exceeded all previous ones in its violence and in its destructive and fatal effects, but the difference is not one of kind, but purely of degree.

Indeed, it requires some consideration to see the reason why such fire-explosions are not much more frequent than they have been. A fire-explosion consists in the sudden combustion of a mixture, whether solid, liquid, or gaseous, or partly in each of these conditions, containing a combustible substance and a supporter of combustion, such as oxygen, finely divided and intimately diffused throughout each other, and either exactly or nearly in certain definite chemical proportions; and, to inflame that mixture, there must also be present a body at a white heat, such as a flame or spark. The failure of any one of these conditions prevents the explosion; for example, if there be an excess or a deficiency of any of the ingredients of the explosive mixture, or if they be not thoroughly mingled, the contact of fire will either fail to inflame the mixture or will produce only gradual combustion, and not explosion; or, if the spark or other hot body be below a white heat, the inflaming or combustion will fail. It thus appears that it is only through the coincidence of certain conditions that a fire-explosion is possible, and this accounts for these being of only occasional and not daily occurrence in flour-mills.

In such mills, the explosive mixture consists of atmospheric air through which is diffused a very fine impalpable dust, produced during the grinding and previous cleansing of the grain, the sifting of the

flour, and other processes. The dust is gathered, and, in mixture with air, is collected in confined spaces, mainly through the action of the exhaust. We have ascertained, by direct experiment, the inflammability and explosiveness of this mixture. We have also calculated that, when the theoretical proportions best suited to produce an explosion are exactly realized, the pressure of the resulting gaseous products, if confined in a limited space, suddenly becomes equal to about eight times that of the atmosphere—being sufficient to produce effects of great violence in the way of bursting exhaust-boxes, throwing down partitions and walls and the like. It is probable that, through deviations from the precise theoretical conditions, the before-mentioned great pressure is not actually attained, but still it is certain that a very intense and destructive pressure must be produced.

As for the source of heat which inflames the explosive mixture of dust and air, that may be furnished by the flame of a lamp incautiously brought in contact with the dusty cloud, but more frequently through the millstones striking fire when happening to run empty. A pair of millstones, when the feed is accidentally suspended, readily fire with each other, for they are made of a flinty or other very hard siliceous rock, and the sparks from them are capable of inflaming any combustible substance. The occasional suspension of the feed is an accident which cannot be wholly prevented by any amount of caution. A still more dangerous kind of spark is formed when a piece of metal, such as an iron nail, gets between the millstones, for the sparks then produced are globules of molten metal at a white heat and in a state of combustion. We have ascertained that the presence of a nail between the millstones can set fire to the dusty atmosphere, even when the feed is on. In fact, to guard against this last danger, from the dropping of nails into the hopper, magnets have been placed in the feeding-spouts. It is not to be expected, however, that the mere placing of magnets in the position indicated will wholly prevent the passage of the nails, but will only reduce the danger from this cause to a minimum.

Having given these preliminary explanations as to the nature of fire-explosions in general, and of those in flour-mills in particular, we next proceed to state the grounds of the conclusions at which we have arrived respecting the fire-explosion at Tradeston Mills, together with the special reasons which have led us to form those conclusions.

In arriving at the facts connected with this fire-explosion, we have taken the evidence of all the survivors who were in the mill at the time.

In bringing this evidence to bear upon the immediate cause of the fire-explosion, we have personally visited and inspected the working of other flour-mills in Glasgow, Newcastle, Leith, and Kirkcaldy, and have made particular inquiries at, and examined eye-witnesses of other fire-explosions which have occurred in, such mills. We have also read accounts of similar fire-explosions which are recorded in French and German publications.

The evidence of Dickson Young, James Blackwood, and of John Rooney, is of the greatest importance. Dickson Young was one of the men in charge of the stones at the time of the explosion. He was the first to observe that a pair of stones, which were engaged in grinding sharps, were running empty from a feed being off, and were striking each other. He immediately called the attention of James Blackwood, who had a partial superintendence of that part of the mill, and they were both engaged in examining the feed-spout when a "lowe" or blaze burst forth from the centre part of the stones which scorched the men—Blackwood very severely, who was then rendered, for a time, unconscious. Four other men and a boy were on the same floor, but these were all killed. No other survivor, therefore, saw, or could have seen, what happened up to this point. No light was brought near the stones, and the sparks which

gave rise to the "lowe" or blaze must have originated in the stones rubbing against each other and striking fire. The flame which issued forth from the stones must have been caused by the inflaming of the flour-dust and air, probably intensified at the moment by the feed coming on.

Immediately after observing the blaze and flame from the pair of stones, Dickson Young distinctly remembers hearing the crackling noise of an explosion travelling along the roans or conduits which convey the finer flour-dust to the exhaust-box, which was situated in the next higher or fourth floor, and this ended in a loud report from the direction of the said exhaust-box. James Blackwood was unconscious at this time, but John Rooney, who was on the fourth floor, heard the crackling noise under his feet, felt the floor shake, and thereafter heard the explosion in the exhaust-box, which was at the farther or west end of the flat he was on. We have ascertained that a similar crackling noise, followed by a report, has been observed in the cases of former fire-explosion in other mills which we have investigated. Indeed, the readiness with which flame can be transmitted through an atmosphere of flour-dust and air may be experimentally shown by showering some of the fine dust through a sieve placed a few feet above a gas-jet or other flame. The combustion of the dusty atmosphere takes place with explosive rapidity, and, in some respects, resembles the flame travelling along a train of gunpowder or flashing through a mixture of coal-gas and air.

The flour-dust mainly consists of starch and gluten, accompanied by smaller proportions of gum, sugar, and oil. All these substances are composed in greater part of carbon, hydrogen, and oxygen, and, when burned, they yield carbonic-acid and carbonic-oxide gases, and water-vapor. These gases necessarily tend to occupy a greater space than the dust and air which gave rise to them, and this extra space demanded by the products of the combustion is much enlarged by the high temperature produced during the burning, and which tends greatly to expand the volume of the gases. We have already given an estimate of eight atmospheres as the increase of pressure produced by the effort of the gases to expand when they are confined within a limited space.

The fire explosion which occurred in the exhaust-box must have burst the sides of the box. Both Dickson Young and John Rooney thought so at the time, and we have ascertained that during a previous explosion, which occurred in the same mill about six years ago, the wooden planking of the sides of the exhaust-box was dislodged, two men were scorched, several windows were blown out, and some slates were loosened from the roof of the building. However, we have determined by direct experiment that flour-dust diffused through the air contained in a box, and set fire to, explodes with violence, splits up the wood, bursts the sides, and lifts up the box even when laden with the heavy weights. Indeed, the mixture of flour-dust and air is destructively explosive, and there can be no doubt that the fire explosion of the dusty atmosphere in the exhaust-box in the Tradeston Mills, which was 18 feet long, 9 feet high, and 7 feet wide, would shatter the sides and force the accumulated fine dust lying on the shelves and floor out of the box into the atmosphere of the mill, at least on the fourth floor.

It is also to be observed that all parts of the mill were in communication by means of elevators, hatchways, and other passages, through which dust and flame would readily pass, and also that in other parts of the mill various cleansing and sifting processes went on, which produced large quantities of combustible dust, which would be quickly diffused through the air in the different floors by the shock and blast of the first explosion in the exhaust-box. This diffusion of the flour-dust through the air would necessarily lead to the partial obscuring of the light, or to the apparent momentary darkness

which was observed by some of the survivors between the first and second explosions.

The diffusion of the combustible dust throughout the atmosphere of the mill would be immediately followed by the inflaming and explosion of the whole, leading to the falling of the gable-walls, and the breaking up and firing of the wooden flooring. Several of the survivors speak distinctly of the period of darkness being succeeded by a period of light, when they saw their way of escape from the burning ruins by descending over the *debris* of the gable-walls. The fact of these walls being blown out, and the upper parts of the building being allowed to fall through loss of support, was proved by the position of various objects among the ruins; while, in one case, at least, the difficulty of escaping from the fire arose from the manner in which the men were confined by the fallen beams.

The testimony of the survivors bears out the suddenness of the firing of all parts of the mill. Those who were escaping from the mill in a conscious state felt themselves surrounded by the flames. Those who were in the second and fifth floor gangways were singed and scorched by the flames rushing out by the doorways, while, at the same moment, a blast of flame and air swept out from the first floor across a narrow court, and burst in the windows of the offices. As soon as the proprietor, manager, and foreman, who were in the office at the time, heard the main explosion, they ran into Commerce Street, and by that time the gable-walls were down, and fire was raging throughout the disjointed timber. On returning to the office, and opening an iron trap communicating with the sunk flat, the foreman observed that the fire was raging below.

The sudden and practically simultaneous firing of the whole building is only explainable on the ground of the first explosion in the exhaust-box leading directly or indirectly to the production of a dusty atmosphere in all the floors, which was immediately thereafter fired with explosive rapidity. For it should be observed that the smutting process, which produces a large quantity of very explosive dust, was carried on in the two lower floors of the building.

The firing of the stores or granaries by the flame passing along the gangways, and by burning material dropping through the attic-windows or skylights, is proved by the evidence of the manager and foreman, as also of William Watt, who went up to the granary-floors after the mill was on fire, and saw that the iron doors of communication with the mill were closed, and who observed the progress of the fire in the manner stated.

A sample of the flour, taken by us from the ruins clearly proved, on chemical analysis, that no substance, either of an explosive or non-explosive nature, was used in the grinding or treatment of the grain or flour; and, even after the demolition of the walls, we found the boilers uninjured. We were informed that the safety-valve was open at the commencement of the conflagration, and the boilers thus saved from bursting by Mr. Ooxie, acting under the orders of Mr. Thomas Muir.

All our observations, inquiries, and experiments, therefore, lead us to consider that the cause of the fire explosion in the Tradeston Flour-Mills was a temporary and accidental stoppage of the feed in a pair of stones grinding sharps, which led (1) to the stones striking fire; (2) the inflaming of the dusty atmosphere in the exhaust-rooms, or conduits, and exhaust-box; and thereafter (3) of the fire-explosion of the dusty atmosphere throughout the mill generally. These events would necessarily succeed each other with the greatest rapidity, which accounts for the fact that, while some of the survivors distinctly speak of hearing two explosions, others only recollect one report.

The severity of the fire-explosion in the Tradeston Mill, as compared with other explosions of a like nature, is undoubtedly due to the accidental circum-

stance of all parts in the train of combustion being at the instant charged with readily-inflammable mixtures.

In conclusion, we proceed to state what precautions we think it desirable to adopt in order to prevent the fatal and destructive consequences of such accidents in the future. It is manifest that the great danger in the operations carried on in a flour-mill does not lie in the grinding process proper, but in the plan pursued in the storing up of the finest and most impalpable of the flour-dust. So long as the grinding operations are carried on in the simple manner pursued in small mills, where the stones are merely covered in with wooden boarding, and there is no exhaust, if the feed goes off and the stones strike fire, or a nail or other foreign substance gets between the stones, and luminous sparks are given off, there can only be a limited amount of flour-dust to inflame, and the combustion and explosion must be at a minimum, be confined to a small space, and be not capable of exerting disastrous effects. The fire explosion will be localized in the pair of stones where it originates, or at most not extend beyond the meal-spout attached thereto.

But it is otherwise where the exhaust is employed, and all the fine dust is drawn up by a fan into an exhaust-box—either with or without a supplemental stive-room—where the powder accumulates, and where a flame, sucked up from the stones, must inevitably lead to an explosion of a more or less serious nature. The danger necessarily increases when ten, twenty, or thirty pair of stones are connected with the same exhaust-box and stive-room, and the maximum danger is arrived at when the exhaust-box, with its supplemental stive-room, is placed within the mill, and even occupies part of one of the floors. A similar remark applies to the methods employed in cleansing the wheat.

In fact, all these processes of cleansing the grain and separating and sifting the flour, which the great improvements in milling have introduced of late years, for the ostensible and laudable purpose of raising the quality of the flour, have more or less tended to bring about a condition of matters which renders the majority, at least, of the larger flour-mills liable to accidental fire-explosions of a more or less disastrous nature.

We have, therefore, to recommend for future guidance and safety, that all receptacles in flour-mills, in which a dusty atmosphere collects, should be placed outside the mill in buildings so constructed as to be readily blown to pieces, in order that any explosion which may take place in them may easily find vent, and not be forced to travel back into the mill. Among such receptacles, we include exhaust-boxes, stive-rooms, smut-rooms, and exhaust-fans. If this arrangement be carried out, any flame which may originate in the stones, and even travel along the exhaust-rooms or conduits, will be sucked out of the mill by the exhaust-fan into the exhaust-box, and, should the conditions of a fire-explosion be at the time in the said box, the force will spend itself in blowing off the roof, or bursting the sides of the exhaust-box, and probably also of the connecting-room called the stive-room. It will be necessary to arrange that the roan or conduit leading from the mill to the fans outside be of small size, so that the inflamed gas may only find vent to a very limited extent into the mill itself, and probably this may be altogether hindered by the construction of a swing door placed in the exhaust-roan before the fan. The construction of the exhaust-rooms or conduits of metal would also diminish the probability of the fire spreading through such, by conducting away the heat, and thus reducing the temperature of the flame. The latter arrangement may be objected to, however, on the ground of its leading to the condensation of moisture, and the formation of paste with the flour-dust.

There should be no other direct communication between the mill and the exhaust-box and stive-

room than the exhaust-roan or conduit, and it will be safer if the exhaust-box and stove-room are constructed outside of one end of the mill-building, where there are no windows. The same remarks apply to the smut-rooms. None of these dust receptacles should be entered or cleaned out during the working of the mill.

We also deem it advisable to recommend, as subsidiary precautions: 1. That the use of naked lights, or even of ordinary lamps, be prohibited in or near any place where there is a dusty atmosphere, and safety-lamps only be permitted in such places. The gas-jets should also be enclosed in glass and wire gauze safety-cages. It would be a wise proceeding to insist that no naked flame of any kind be permitted within the mill, as an accidental explosion may occur at any time which will lead to the production of a dusty atmosphere in any of the floors. 2. That the use of magnets, to collect nails or other pieces of iron which might fall into the hoppers, be made universal. This precaution was taken in the Tradeston Flour-Mills, but we have not seen it adopted in any mill we have visited. The evidence we have taken shows the extreme difficulty of insuring the total separation of nails and other material from the grain, even by the employment of the most elaborate cleansing apparatus and the greatest care. The intervention of a number of magnets, however, in the hopper feed-spouts will practically insure that this source of danger in the production of luminous sparks be reduced to a minimum for the future.

FOREY, ÉLIE FRÉDÉRIC, Marshal of France, and Senator from 1859 to 1870, born in Paris, January 10, 1804; died at Besançon, France, June 20, 1872. He received his early education at Dijon, was admitted at the age of eighteen to the Military School of St. Cyr, and after his graduation became instructor to the Second Regiment of Light Infantry. He took part in the first expedition to Algiers, was engaged in garrison duty in the Pyrenees until 1835, when he was promoted to a captaincy, and returned to Africa, where he distinguished himself at the battle of Medeah, in the operations of the retreat which followed the first siege of Constantine, and at the Iron Gates. In 1840 he was placed in command of a battalion of *chasseurs à pied*, and, passing through four more campaigns in Africa, he returned to France with the rank of colonel in 1844, became a general in 1848, took an active part in the *coup d'état* of December, 1851, and was made a general of division and commander of the Legion of Honor in 1852. At the breaking out of the war with Russia, he was placed on the reserve division of the Army of the East, and for a time held the command of the siege force before Sevastopol. In 1857 he was nominated to the first division of the Army of Paris. He commanded this division during the Italian War in 1860; gained, at Montebello, the first battle of the campaign; and distinguished himself at Magenta and Solferino, being wounded at the latter. When the expedition to Mexico was decided upon in 1861, General Forey received the command of the French troops. After overcoming many obstacles and fighting several sanguinary engagements, he attacked and stormed the strong post of Puebla, thereby throwing open the road to the city of Mexico. For this service he was made Mar-

shal of France, when he resigned his command to General Bazaine, and returned home, receiving the command of the Second Corps *d'armée*, December 24, 1863. He had received the Grand Cross of the Legion of Honor in 1859, and was called to the Senate August 16th, in that year. But though he had relinquished the command of the Mexican army, he still felt a deep interest in its movements and welfare, and on the 10th of February, 1866, in his place in the Senate, after showing the fallacy of the hopes entertained by others of its regaining the ascendancy in Mexico, he expressed his firm conviction that success was only possible by means of still greater sacrifices, and the sending out of very heavy reinforcements, and, if this course was not to be taken, he advised the immediate recall of the remnant of the troops. This latter course was taken by the Government. In 1867, Marshal Forey was put in command of the camp at Chalons. Either from impaired health or from some other cause, Marshal Forey held no command and took no part in the Franco-German War, nor in the civil war with the Commune in Paris, which followed it. Since the war, he had been living in retirement and obscurity at Besançon, and his death had been preceded by a long and painful illness.

FORREST, EDWIN, an eminent American tragedian, born in Philadelphia, March 9, 1806; died in that city, December 12, 1872. His father was a native of Scotland, and by occupation a commercial traveller; his mother was of German birth. In childhood his health was delicate, and he seemed to be consumptive, but after the age of fourteen, at which time he travelled extensively in the Western States, he became robust, and eventually was one of the most athletic men of his time. As a child, he exhibited a strong aptitude and taste for declamation. At the early age of eleven he participated in the theatrical representations of a private amateur dramatic club in Philadelphia, of which he was even then a member. His first appearance on the regular stage was made at the Walnut Street Theatre, Philadelphia, on the 27th of November, 1820, when he acted—not *Young Norval*, as is sometimes alleged—but *Douglas*, in Home's play of that name. It attracted little attention, but it seems to have been in so far successful that it showed the actor's precocity, both physical and mental. His next part, played in the same engagement, was *Frederick*, in "Lovers' Vows"—the play that Mrs. Inchbald made out of Kotzebue's drama of "The Natural Son." About a year after his first appearance on the stage, he made an engagement with Messrs. Collins and Jones, theatrical managers in the West and South-West, to play boy parts for them. In the early part of 1822 he made his first appearance at the Cincinnati theatre, then under their management, as *Young Melfort*, in Cherry's comedy of "The Soldier's Daughter." Not long after he made his first attempt at "Richard III."

He was tolerably successful, but gave little promise of his subsequent distinction. For the next twelve months his lot was a hard one; the theatrical company to which he belonged made the tour of the country towns of Ohio and Kentucky, and often lacked for food in consequence of their ill success. In 1823 he made an engagement with Mr. James H. Caldwell, in the American Theatre at New Orleans, and remained in that city and its vicinity for about two years. He did not distinguish himself there as an actor. Returning to the North in the latter part of 1825, he made an engagement with Mr. Charles Gilfert, at a salary of \$7.50 per week. Here he was fortunate enough to attract the attention and commendation of Edmund Kean, while acting *Iago* to his *Othello*. He acted, during this engagement, at Albany, Philadelphia, and New York, and in the last-named city he won his first great success in the part of *Othello*, May 23, 1826. Thenceforth his services were in demand. Mr. Simpson immediately offered him an engagement on excellent terms at the Park; but Mr. Gilfert, who had just taken the Bowery Theatre, of which he was the first lessee, succeeded in securing him for that theatre, on a salary of \$800 a year. The Bowery, under Mr. Gilfert's management, was the scene of great triumphs for Mr. Forrest. Among the parts which he there represented with extraordinary popular success were *Damon*, *Jaffier*, *William Tell*, and *Mark Antony*. He remained here nearly three years; but, at the death of Gilfert, in 1829, he withdrew, and accepted an engagement at the Park. It began October 17th, in that year, when he appeared as *Damon*. At this theatre Mr. Forrest long enjoyed a high popularity. It was here that he first acted *Metamora*, in John H. Stone's tragedy of "Metamora" (produced December 15, 1829), and *Spartacus*, in Robert M. Bird's tragedy of "The Gladiator" (produced September 25, 1831), both of which plays were written with a special view to fit his talents and peculiarities, the perfection of physical realism. In the summer of 1834 his reputation was so high that a company of citizens tendered him the formal courtesy of a public banquet, and presented him with a gold medal, struck in his honor, from a design of Ingham, and engraved by C. C. Durand, on one side of which was his portrait, with the inscription, "*Histrioni Optimo Edwin Forrest, viro prastanti*;" and on the other the tragic muse, with the Shakspearian legend, "Great in mouths of wisest censure." Mr. Forrest was now twenty-eight years old, and in the first flush of his remarkable popularity, a man of magnificent personal presence and muscular beauty, possessing a voice of glorious volume and melodious sweetness, and a power of depicting the emotional experience of turbulent character in an intensely passionate and forcible way. His admirers, and they were many, proudly claimed for him an equal rank with the best foreign representatives of

tragedy. For himself, he was fully convinced that he was the greatest of living tragedians. In 1835 he sailed for Europe, and, after a protracted pleasure-trip through France, Italy, and Germany, reached England, and on the 17th of October, 1836, appeared at Drury Lane as *Spartacus* in "The Gladiator." This performance stirred the theatrical public in England with a sensation different from any it had known before—since it offered an unprecedented union of enormous physical vigor with uncommon talent for tragic acting. Great success and corresponding popularity ensued, and Forrest became a lion of the hour. It is worthy of mention that he received, at this time, especially kind treatment at the hands of Mr. Macready, and from other persons eminent in the profession of the stage. Many and pleasant tokens of courtesy were also extended to him by members of the literary craft. Talfourd presided at a dinner which the Garrick Club tendered to the American actor, and Charles Kemble and Stephen Price gave him swords which had once been the property, respectively, of John Kemble, Edmund Kean, and Talma.

On the 28d of June, 1837, he was married to Miss Catharine Norton Sinclair, daughter of the vocalist John Sinclair, whom he had met for the first time during this visit to England. Immediately after their marriage, Mr. and Mrs. Forrest came to America. The actor made his professional reappearance at Philadelphia, and was welcomed with great enthusiasm. A public banquet, given in his honor, in that city, at which J. R. Ingersoll presided, emphasized this greeting, and indicated the pride and pleasure with which his prosperity and fame were generally recognized. From Philadelphia, still pursuing his triumph, Mr. Forrest proceeded to New York, and appeared at the Park Theatre. The receipts of the box-office on the first three nights of that engagement, says one record, amounted to \$4,200. One of the most interesting incidents of this portion of his career was his first appearance as Aylmere in "Jack Cade," a tragedy written expressly for him, by Judge R. T. Conrad, of Philadelphia. This part was always a favorite with him, and it was one in which he appeared to the best advantage. His second visit was made to London in 1845. Mrs. Forrest went with him, and they were welcomed in the best circles of the most intellectual society of the metropolis and the Scottish capital. Mr. Forrest acted at the Princess's Theatre, in London. Here Sheridan Knowles—so great was his satisfaction with Mr. Forrest's *Virginius*—played, by his own offer, the subsidiary part of *Dentatus*, on the occasion of the tragedian's benefit. Here, also, it happened that the public hissed his performance of *Macbeth*, a character entirely unsuited to his *physique* and style of acting. Mr. Forrest chose to attribute this hissing to the hostile machinations of Mr. Macready, and indulged in the most bitter re-

sentment against him in consequence. A few weeks later, he was in Edinburgh, where Mr. Macready was acting, and, going to the theatre to see the English tragedian as *Hamlet*, Mr. Forrest stood up conspicuously, in a private box, and hissed him. As this gratuitous insult naturally brought down a shower of contemptuous reproaches upon the American tragedian, he strove to justify himself in a letter to the *London Times*, which, however, only aggravated his first offence. About two years later, Mr. Macready was acting *Macbeth*, at the Astor Place Opera-House, New York, when a riot and assault upon the English actor ensued, which resulted in the killing of 22 men, and the wounding of 36 others. This was in May, 1849. In the succeeding year, Mrs. Forrest commenced a suit for divorce against him, which, after nearly two years' delay, was decided in her favor, on all points, and an alimony of \$3,000 per annum was decreed to her by the courts, the payment of which, however, he resisted for twenty years. On the 9th of January, 1852, before the divorce suit was concluded, he appeared at the old Broadway Theatre, New York, and acted for sixty-nine successive nights, drawing crowded houses during the whole time. He continued his career as an actor until 1858, though, the latter part of the time, he absented himself from New York. For the labors of this portion of his public life, he received immense sums, which were judiciously invested, and resulted in his amassing a vast fortune. He had purchased, about 1850, an estate on the banks of the Hudson, where he had erected a sort of castle, which he named Fonthill; this he subsequently sold, for a convent, at a large advance, and, in 1855, purchased a beautiful residence in Philadelphia, to which, on abandoning the stage in 1858, he retired, and began to gather that magnificent library which, for years past, has been reputed the most complete in the United States in its collection of every thing appertaining to the drama. But he could not be contented away from the stage, and, in 1860, he returned to it, with even more than his old enthusiasm. It was in his engagement of that year, at San Francisco, that he first gave to the public his majestic creation of *Richelieu*, which, in its subsequent renderings, has been variously criticised, but is now generally admitted to be one of the best, if not the very best, of American creations of dramatic genius. He remained upon the stage, though with longer intervals of rest, every year till the winter of 1871, when he was compelled by illness to desist from his labors. He appeared in public, in New York, at Steinway Hall, November 19 and 22, 1872, only three weeks before his death, not as an actor, but a reader of "Hamlet," and "Othello," but his step was feeble, his action had lost its old intensity, and there only remained his magnificent voice, and even in the cadences of this there was much that was sad and mourn-

ful. He died of apoplexy, surviving the attack only a half-hour.

As an actor, Mr. Forrest belonged wholly to the school of physical and sensuous art. He was industrious and painstaking in his endeavors to give to this school all the development of which it was capable, but he never went beyond it, never suspected himself capable of committing an error, never sought to improve, even in those particulars in which he was most constantly criticised.

FOWLER, Rev. HENRY, a Presbyterian clergyman, journalist, professor, and author, born in Stockbridge, Mass., in 1824; died at Vineyard Haven, Mass., August 4, 1872. He received his early education in Stockbridge, which has always been celebrated for the excellence of its schools, and graduated with high honors from Williams College in 1847. A year or two after his graduation Mr. Fowler came to New York and entered upon a literary career. He was editor of *Holden's Magazine*, and a large contributor to other journals and periodicals. In 1852 or 1853 he removed to Chicago, and was editor and part proprietor of the *Chicago Tribune* for a year or more. From this position he was called to the professorship of Political Economy in the University of Rochester, which he filled most acceptably for nearly five years, studying theology meanwhile in the Rochester Theological Seminary. In 1858 he was licensed and almost immediately called to the pastorate of the Second Presbyterian Church in Auburn, over which he was ordained the same year. He married in 1858 the daughter of Rev. Chester Dewey, D. D., at that time a professor in Rochester University. His pastorate in Auburn continued till 1871, when he resigned in consequence of ill-health, but had remained in Auburn till two or three weeks before his death, when he visited Vineyard Haven in the hope of restoring his eyesight and improving his general health by sea-bathing, but soon after his arrival was seized with apoplexy. Mr. Fowler was the author of "The American Pulpit," a volume of biographical and descriptive sketches of living pulpit celebrities, published in 1852, which had a large sale.

FRANCE, a republic of Europe. President, Adolphe Thiers, elected August 31, 1871. General Secretary, Barthélemy St. Hilaire. The ministry, at the close of the year 1872, was composed as follows: Minister of Justice, Dufaure; Minister of Foreign Affairs, Charles de Rémusat; Minister of the Interior, De Gaulard; Minister of Finances, Leon de Say; Minister of the Navy, Vice-Admiral Pothuan; Minister of Public Instruction, Worship, and Arts, Jules Simon; Minister of Agriculture and Commerce, Teisserene de Bort; Minister of War, General de Cissey.

The National Assembly consists of 788 members, elected on February 8 and on July 2, 1871. President, Jules Grévy; Vice-Presidents, Vitet, Benoist d'Azy, M. S. M. Girardin;

Secretaries, Desjardins, Vicomte de Meaux, Baron de Barante, Marquis de Costa Beauregard, Fr. Rive, De Rémusat; Questors, Baze, General Martin des Pallières, and Princeteau. At the head of the National Order of the Legion of Honor is Gen. Vinoy, as Grand Chancellor.

The receipts and expenditures in the budgets for 1872 and 1873, were as follows:

	1872.	1873.
Expenditures.....	2,334,759,208	2,333,312,943
Receipts.....	2,344,795,959	2,406,461,671
Surplus of receipts.....	10,036,751	18,148,733

The expenditures in the budget for 1873 (laid before the National Assembly on May 14, 1872) contained the following items:

1. Public Debt and Dotations:		
(a.) Consolidated Debt.....	541,718,561	
(b.) Capital that may be called in.....	446,948,695	
(c.) Floating Debt.....	109,259,228	
(d.) Salary and Household of the President.....	769,400	
(e.) National Assembly.....	8,694,000	
(f.) Dotation for the Legion of Honor.....	13,799,000	
(g.) Invalids of the Navy.....	7,500,000	
		1,198,611,879
2. Ministries:		
(a.) Minister of Justice.....	33,408,340	
(b.) Minister of the Interior.....	85,692,335	
(c.) General Government of Algeria.....	24,496,109	
(d.) Minister of Foreign Affairs.....	11,998,500	
(e.) Minister of Finances.....	18,562,760	
(f.) Minister of Education, Worship, and Fine Arts.....	97,101,368	
(g.) Minister of Agriculture and Commerce.....	16,968,140	
(h.) Minister of Public Works.....	130,927,775	
(i.) Minister of War.....	440,000,000	
(j.) Minister of the Navy.....	143,633,046	
		1,007,808,973
3. Expenditures for collection of taxes.....		240,233,191
4. Allowances and reimbursements.....		11,628,000
Total Expenditures.....		2,333,312,943
The receipts in the same budget were derived from the following sources:		
1. Direct Taxes.....		336,068,139
2. Special Taxes.....		14,702,084
3. Indirect Taxes:		
(a.) Enregistrement and Stamp Duties.....	553,374,000	
(b.) Custom Duties.....	243,696,000	
(c.) Navigation Duties.....	4,301,000	
(d.) Taxes on Salt, Beverages, Native Sugar, and Chicory.....	444,644,000	
(e.) Taxes on Matches.....	15,000,000	
(f.) Tax on Paper.....	10,000,000	
(g.) Various Taxes.....	35,295,000	
(h.) Income from the Tobacco Monopoly.....	287,370,000	
(i.) Income from the Powder Monopoly.....	15,331,000	
(j.) Postal Administration.....	114,380,000	
(k.) Tax on Railroad Tickets.....	67,700,000	
		1,796,461,000
4. Receipts from Domains.....		12,154,406
5. Receipts from Forests.....		41,998,500
6. Receipts from Algeria.....		19,008,584
7. Receipts from Private Telegraphs.....		14,590,000
8. Allowances.....		
9. Universities.....		45,034,935
10. Sundries.....		
11. From the Société Générale Algérienne.....		5,555,000
12. New Taxes.....		190,000,000
Total.....		2,406,461,671

The capital of the public debt was, in 1872, estimated at 22,622,500,000 francs. The capital of the consolidated debt amounted to 15,801,000,000 francs, being composed as follows:

Rentes at 5 per cent.....	2,779,528,000
Rentes at 4½ per cent.....	839,677,944
Rentes at 4 per cent.....	11,152,400
Rentes at 3 per cent.....	12,177,765,787

The area of France, according to the latest calculations, is estimated at 204,091 square miles. The population, which, according to the census of 1866, amounted to 38,067,064, was reduced, by the cession of Alsace and part of Lorraine to Germany, to 36,594,845. A new census was, in 1872, ordered to be taken, and was completed on January 6, 1873. According to the preliminary statement published by the Government, the population of the country amounted to 36,102,921.*

* See AMERICAN ANNUAL CYCLOPEDIA for 1871 for the

The movement of the population, from 1866 to 1869, was as follows:

YEARS.	Births.	Deaths.	Surplus of Births.	Percentage of Increase of Population.
1866...	1,006,258	834,573	121,685	0.33
1867...	1,007,513	886,887	120,626	0.31
1868...	984,140	922,038	62,102	0.16
1869*...	961,533	873,420	88,093

The war of 1870-'71 greatly retarded the collection of statistical information by the Government, and we have complete returns on the movement of population during the year 1870 from eighteen departments, which compare with the returns for 1869 as follows:

area and population of every department, and for the distribution of the members of the National Assembly among the departments.

* For 57 departments only.

	1869.	1870.
Marriages.....	60,965	46,097
Births.....	211,423	216,547
Deaths.....	178,067	212,727
Excess of births.....	33,356	8,820

The following details of the territorial losses suffered by France, in consequence of the treaties of February 26 and May 10, 1871, and the Convention of October 12th of the same year, have been published by the Government:

DEPARTMENTS.	COMMUNES.			POPULATION.		
	Before the War.	Ceded to Germany.	Remaining with France.	Before the War.	Ceded to Germany.	Remaining with France.

The new army law of August 16, 1872, which makes military service general and obligatory,

went into operation on January 1, 1873. Article I. of the law provides that every Frenchman is obliged to do military service. Article II. abolishes the right of furnishing substitutes, etc. Every able-bodied Frenchman must serve for twenty years, namely, four years in the active army, five years in the reserve of the active army, eleven years in the "territorial army" (landwehr), and six years in the reserve of the territorial army. The reorganization was not yet completed at the close of the year 1872. At the time, the infantry embraced 134 regiments, and 33 bataillons, or 569 bataillons; the cavalry, 63 regiments; the artillery, according to the budget of 1873, is to consist of 32 regiments. The genie-troops thus far contained 3 regiments of sappers, each of 2 bataillons and one company of workmen; the train was composed of 3 regiments (of 16 companies each) and one escadron of 3 companies. The effective strength was 382,044 infantry, 60,044 cavalry, 51,308 artillery, 9,000 genie-troops, 8,000 trains; total, about 425,000.

The navy is to consist in future of—

Iron-clads, first-class.....	12	Corvettes.....	8
Iron-clads, second-class.....	12	Avisos.....	28
Iron-clad gunboats.....	20	Transport-steamers.....	25
Frigates.....	8	Gunboats.....	32

The time of service in the French navy is the same as that in the army, with similar conditions as to reserve duties, furloughs, and leave of absence for lengthened periods. It is enacted by the law of 1872, that a certain number of young men liable to service in the active Army may select, instead, the navy service, if recognized fit for duty.

The total and special commerce† of France, during the time from 1855 to 1871, is shown by the following table (value in francs):

YEARS.	TOTAL COMMERCE.		SPECIAL COMMERCE.		GOLD AND PRECIOUS METALS	
	Imports.	Exports.	Imports.	Exports.	Imports.	Exports.
1871.....	?	?	3,993,200,000	2,865,600,000	?	?
1870.....	?	?	2,761,400,000	3,880,100,000	?	?
1869.....	4,008,700,000	3,993,600,000	3,153,100,000	3,074,900,000	647,000,000	284,000,000
1865-1869 (average).....	3,984,000,000	4,003,200,000	2,983,700,000	3,991,900,000	781,000,000	274,000,000
1860-1864.....	3,057,100,000	3,201,000,000	2,298,600,000	2,402,600,000	565,000,000	529,000,000
1855-1859.....	2,421,600,000	2,616,800,000	1,732,100,000	1,594,100,000	651,000,000	471,000,000

* The portion of the two departments Meurthe and Moselle, which remained with France, have been consolidated into one department, called Meurthe-et-Moselle. The remainder of Rhin Haut, embracing three cantons of the Arrondissement Belfort, had, at the close of the year 1872, not yet been united with any other department, and a special administration had been appointed for "the Arrondissement of Belfort."

† Special commerce consists of the imports of goods for home consumption, and of the exports of goods manufactured in France.

The movement of shipping from 1867 to 1869 is given in the following table :

FLAG.	ENTERED.		CLEARED.		TOTAL.	
	Vessels.	Tons.	Vessels.	Tons.	Vessels.	Tons.
French.....	11,607	2,366,418	8,474	1,860,005	20,081	4,146,000
Foreign.....	20,969	4,080,388	18,416	2,365,868	34,405	6,346,000
Total, 1867.....	32,546	6,386,706	21,890	4,125,898	54,436	10,492,000
Total, 1868.....	54,435	10,636,000
Total, 1869.....	53,806	10,434,000

The commercial navy, on December 31, 1869, was composed of 15,324 sailing-vessels of 931,714 tons, and 454 steamers of 142,942 tons; total 15,778 vessels and 1,074,656 tons, exclusive of 8,892 coasting-vessels (in 1867) of 67,077 tons.

The total imports into Algeria, in 1869, amounted to 118,900,000 francs, the exports to 254,000,000; the aggregate number of vessels entered and cleared was 6,232, of 1,125,343 tons; the commercial navy consisted of 153 sailing-vessels, of 4,609 tons.

The aggregate length of the French railroads, in September, 1872, was 17,600 kilometres (—10,912 miles). The French mail forwarded, in 1869, 364,750,000 letters, and 379,190,000 newspapers and printed parcels; in 1870, 281,350,000 letters, and 347,960,000 newspapers. The aggregate length of telegraph-lines was, in 1869, 26,801, and that of wires, 71,829 miles.

The number of saving-banks, in 1868, was 520, 17 of which had suspended their operations; the number of depositors was 1,971,523, or about one for every 20 inhabitants; the amount due to the depositors amounted to 633,238,270 francs. The number of mutual aid societies (sociétés de secours mutuel) was, in December, 1869, 6,189, with 794,473 active and 119,160 honorary members. The aggregate capital of the society was 55,133,551 francs. France had, in 1872, 15 large moneyed institutions (établissement de crédit), namely:

Name.	Capital—Francia.

Total.....	551,500,000

At the beginning of the year 1872, the National Assembly was in session in Versailles, and the conflicts of the great political parties in that body, as well as out of it, were very animated. On January 7th, supplementary elections for seventeen members took place, and resulted in the success of four Conservatives, four Radicals, and nine Moderate Republicans. A notable feature of this election was the defeat, in Paris,

of the Radical Victor Hugo, by the Moderate Republican Vautrain. In the Assembly the United Conservatives, or partisans of a restoration of monarchy, gave many proofs of their continued ascendancy. When the presidents of the fifteen bureaux were elected, all but three were Conservatives. Bishop Dupanloup, of Orleans, was elected president of the Bureau of Education. The Bonapartists were active, and endeavored to strengthen their influence, especially in the army; but, in spite of their great efforts, they appeared to be the weakest of the three monarchical parties. On February 2d a new play by Victorien Sardou, entitled "Ragabas," and containing some expressions in favor of imperialism and the Bonapartes, caused wild scenes of excitement at the Vaudeville of Paris; crowds passing through the boulevards shouting—some, "Down with the Bonapartes!" and others, "Vive l'Empire!" At one time a disturbance was threatened, but the crowd finally dispersed without coming to blows. To prevent the recurrence of dangerous agitation, President Thiers ordered General Ladmirault to suspend the performance of the play, and, if necessary, temporarily close the theatre. Both the Orleanists and the Legitimists appeared to develop a greater strength, and numerous petitions for the restoration of monarchy, either under the Count de Chambord or the Count de Paris, were sent to the Assembly. The Count de Chambord, in the latter part of January, issued a new manifesto to the French people, claiming a divine right to the throne, saying: "I shall never abdicate my claim to throne of France. I shall never forsake the monarchical principle which I have preserved intact for forty years, and which is the last hope of France's greatness and liberties. Caesarism and anarchy threaten France because her salvation is sought in personal questions, and not in principles. I shall ever uphold the flag of France, and aid in restoring the ancient prestige of her armies. Time presses, and alliance and reorganization are urgent. The happiness of France is my only ambition, and I will never consent to become a revolutionist where I am the legitimate king." The hopes of the Radicals centred in Leon Gambetta, who, in the beginning of the year, was travelling in the south of France, and stirring up the popular mind by radical addresses. In Marseilles his presence was the cause of much agitation and some disorder. The assemblage in front of his hotel appearing to become turbulent, troops were ordered to charge upon and dis-

perse the mob. Gambetta was not allowed by the police to leave the hotel for fear that his appearance would lead to further disturbance. He advised his friends not to persist in collecting in large bodies in the streets, or to attempt resistance to the authorities, and not to provoke a collision. The relations between France and Germany appeared to be, on the whole, of a friendly character. Baron von Arnim, the German ambassador to France, was presented to President Thiers on January 9th, and reiterated his former expressions of friendship for the French nation. The French ambassador in Berlin, Goutant Biron, reported to his Government that he had been most flatteringly received by Prince Bismarck. In the country, however, in the districts occupied by the French troops, the excitement of the French people against the Prussians continued. At Luneville, a Prussian soldier was assassinated, and at Epervain another was, on January 24th, badly wounded.

No serious complications, however, resulted from these occurrences. A movement for the payment of the war indemnity by voluntary subscriptions proved to be a failure, and the Assembly in February rejected a motion to commit itself to the measure. A serious difference of opinion showed itself between President Thiers and the majority of the Assembly with regard to the tax to be imposed upon raw materials. The tariff bill submitted by Minister Pouyer-Quertier to the Assembly imposed the following duties: On wool, 80 francs per 100 kilogrammes; cotton, 4 francs; resin, from 1½ to 7 francs; copper, 15 francs; cheese, from 15 to 18 francs; hops, 60 francs. Against this project an intense opposition soon showed itself not only in the Assembly, but throughout the country, and numerous deputations hastened to Versailles to protest against the measure. President Thiers, in addressing the Assembly on the subject (January 19th), strongly insisted upon the absolute necessity of the new tariff, but that body, by a vote of 376 to 307, adopted a resolution offered by Deputy Féray, providing that the Government shall only resort to the taxation of raw materials when other taxes fail to produce sufficient revenue to meet the expenses of the nation. A committee of fifteen were appointed in the mean time to make a thorough examination of the tariff.

At Vitry-le-Français a German court-martial condemned the principal of the college to three months' imprisonment, on account of a hostile demonstration made by the students of the institution.

President Thiers appeared to be deeply mortified at this result, and on January 20th sent to the Assembly his formal resignation as President of the Republic, accompanying it with the announcement that all the ministers had also tendered their resignations. These communications produced a profound excitement in the Chamber, and a vote was almost

unanimously adopted (only six members dissenting), appealing to the patriotism of the President, refusing to accept his resignation, and passing to the consideration of the order of the day. A deputation was appointed to announce to the President the action of the Assembly, and all the parliamentary clubs sent deputations to dissuade the President from his purpose. The deputies of the Right Centre held a meeting and adopted a resolution declaring that the tariff was solely a question of finance, not of politics, and that in voting against the proposal to tax raw materials they had no intention of expressing want of confidence in the Government. The deputation appointed by the Assembly waited on President Thiers on the same evening and informed him of the vote by which the Chamber had refused to accept his resignation. President Thiers, in reply, said he was worn out and discouraged. He could not change his opinions, and he believed that conflicts similar to the present one were likely to occur between the legislative and executive departments of the Government when the military and educational bills came before the Assembly. For the present he consented to withdraw his resignation, but he also expressed his opinion that sooner or later he would be compelled to retire from the presidency of the republic. The members of the ministry, at the earnest solicitation of Thiers, resumed their portfolios. Telegrams were received from several foreign governments, congratulating Thiers upon his continuance as chief of the executive power, and on January 2d the diplomatic representatives of foreign governments waited on him in a body to present their congratulations. As the French journals on this occasion again, as for some time past, had expressed disapproval of the constant participation of the President in the discussions of the legislative body, the ministry decided to make the proposition to the Assembly that Thiers should address it only upon important occasions, for which purpose the pending debate should at any time be adjourned. A bill proposed by the Government concerning the merchant navy was passed by the Assembly on January 30th, by a vote of 422 against 239, and on February 2d another bill, authorizing the Government to notify England and Belgium of the termination of the commercial treaties between France and these countries, was passed by an overwhelming majority. On the same day, Deputy Duchâtel's motion, that the Assembly and Government return to Paris, was rejected by a vote of 377 to 318.

On February 5th the Minister of the Interior, Casimir Périer, resigned, and on the next day the Minister of Commerce, Victor LeFranc, was appointed Minister of the Interior, and Gouffier (heretofore French minister to Italy) Minister of Commerce. At the supplementary elections held in the month of February, Rouher, formerly Minister of State

under Napoleon, and regarded as the ablest leader of the Bonapartist party, was elected from Corsica, and a Republican from the department of Eure. In the latter part of the month a large number of Legitimists paid a visit to Belgium to show their respect to the Count de Chambord. (*See BELGIUM.*)

At the beginning of March, the Minister of Finance, Poyer-Quertier, gave great offence by his testimony in favor of the Bonapartist Janvier de la Motte, ex-Prefect of the Department of Eure, who was on trial at Rouen, charged with embezzlement of funds for the relief of France. Dufaure and other members of the Cabinet threatened to leave unless Poyer-Quertier resigned. After a protracted consultation of the Cabinet, Poyer-Quertier presented his resignation, accompanied by a statement of his action in testifying in favor of M. de la Motte before the court at Rouen. The President appointed Goulard, the Minister of Agriculture and Commerce, as the successor *ad interim*.

The payment of two milliards of the war indemnity, together with the interest to date, on the remaining three milliards, was completed at Strasbourg on March 7th. This gave France entire control of six departments, allowing her to maintain as large a military force as she desired.

On March 8th the Assembly rejected the proposition of Deputy Brunet (one of the deputies for the city of Paris and a member of the Left) to erect on the hill of Trocadero a temple to Jesus Christ as a testimony to belief in God necessary for the national regeneration.

On March 14th the Assembly adopted the bill establishing special penalties against the International. The bill enacts that any Frenchman joining the International Society, or any similar association, shall be liable to imprisonment for from three months to two years, and to a fine of from fifty francs to one thousand francs. He will also be liable to lose his civil and family rights for a *maximum* of ten and a *minimum* of five years. The imprisonment is increased to five years, and the fine to two thousand francs, for a Frenchman or foreigner who is a functionary of the International, or in any way propagates that society's doctrines. Such persons are, moreover, liable to remain under police supervision for a subsequent period of from five to ten years. Abettors of members of the International are rendered liable to from one to six months' imprisonment, and to be fined from fifty francs to five hundred francs. The principal speech in favor of the bill was made on March 18th by Minister Dufaure. He described the International as a permanent menace to European society. The fact of a large number of insurgents being members of the International, proved the complicity of the society in the origin of the Paris insurrection. Dufaure detailed the subsequent atrocities of the agents

of the International, who were the instigators of the attempts to establish the Commune at Lyons and Marseilles. He refuted the objections against the bill, grounded on its special and exceptional character, and the argument that the bill would magnify the importance of the International. The law was also necessary as a warning to misguided Frenchmen, who joined the International in ignorance of its real character and aims, and unaware that they thereby abjured their country, and became blind slaves to a despotism far worse than the alleged grievances from which the International pretended to deliver them. Jules Favre stated that he had always opposed and condemned the International, but he considered that the present bill was illegal and inexpedient, and argued that justice forbade exceptional laws. He warned the Assembly that a violation of legislative principles might establish a dangerous precedent. The Assembly rejected the counter-proposals of Berthand and Pressensé, and adopted the first and principal clause of the bill by 501 votes against 104.

Numerous petitions having been addressed to the National Assembly in behalf of a restoration of the temporal power of the Pope, the debate on these petitions was fixed for March 22d. Bishop Dupanloup, of Orleans, rose to open the discussion, which had attracted large crowds of spectators to the galleries, but yielded the tribune to President Thiers, who deprecated a discussion which he declared could not by any possibility serve the interests of the Holy See. He assured the deputies that the policy of the Government on the Roman question, as announced last year, was unchanged. The independence of the Holy See was dear to France, who had always defended and would continue to defend it. But any discussion now of the petitions before the Chamber would seriously embarrass the Government, while it could not benefit the Holy Father. Bishop Dupanloup said he would not insist on speaking after the appeal made by the President. Easily reconciling the feelings of a bishop with the feelings of a Frenchman, he comprehended the respect due to the misfortunes of France. The policy which had proved fatal to France, had also been fatal to the See of Rome. The Assembly then, by a large majority, decided not to continue the debate.

The proposal to tax raw materials was, at the close of March, abandoned for the present, the committee having devised resources sufficient to meet all financial demands.

On March 30th the Assembly took a recess until the 22d of April.

On May 4th the Duke d'Audiffret-Pasquier presented to the National Assembly the report of the committee on contracts for arms and ammunition, concluded by the military administration in England, from the 28th of July, 1870. The report proposes the appoint-

ment of a committee to ascertain the amount of material existing in the arsenals in July, 1870, how it was disposed of during the war, and what amount the arsenals contain at the present time. It also proposes to submit to the committee a system for an efficient control of the military administration by an independent civil comptroller, travelling through France, inspecting the stores of material, and suggesting the necessary reforms. The Duke d'Audiffret-Pasquier drew a startling picture of the utter unreadiness and disorder of the Imperial War Department, and censured the want of control under the military administration of the 4th of September. He energetically stigmatized the dishonesty and shameless greed of the persons who had undertaken contracts. The disclosures he made excited strong indignation in the Assembly. His speech was heard throughout with deep interest, and he concluded with an earnest peroration praising the army as the best and only school in which the young generation could have a nobler and better training than that which produced such lamentable examples of want of patriotism and want of probity, and recommending the introduction of compulsory military service. The Assembly unanimously adopted the proposals of the committee, and intrusted the inquiry into the war material to the committee on contracts, of which the Duke d'Audiffret-Pasquier is the president. It was also unanimously agreed that the speech of the Duke d'Audiffret-Pasquier should be printed and distributed in all the communes of France.

On June 29th M. de Rémusat, Minister of Foreign Affairs, and Count von Arnim, the German ambassador, signed the treaty, which for some time had been in negotiation, concerning the evacuation of French territory by the German troops. The treaty provides that the first payment of the indemnity still due Germany be made by the 15th of February, 1873, and consist of one milliard francs; that the second payment, a similar amount, be made before the close of 1873; and the third payment, also a milliard francs, during the year 1874; that the departments of the Marne and Haute-Marne be evacuated as soon as 500 millions of the indemnity have been remitted; and the present force of the army of occupation be reduced by one-third after the payment of each milliard to Germany.

The most important discussion of the Assembly during the session, which began on April 22d, was on the reorganization of the army. The discussion on the bill in general commenced on May 27th, and was closed on May 29th, after a number of speeches, among which those of Generals Chanzy and Trochu, Colonel Denfert, and Bishop Dupanloup, were the most important. The discussion on the special articles of the bill ended on June 22d, when the Assembly adopted the entire law as proposed by the Government. The law

recognizes the principle of compulsory service, abolishing the right of furnishing substitutes, and fixes the time of service in the active army at five years. Thiers did not profess any confidence in the principle of compulsion, and, in union with most of the French generals, would have preferred a longer time of service for those actually enrolled in the standing army; but, though reluctantly, consented to shortening the time to five years. The amendments which advocated a further reduction of the time of the service to three or four years encountered, therefore, his most determined resistance; and the Assembly, in accordance with his wishes, rejected, on June 8th, the amendments moved by the deputies Trochu, Keller, Randon, and Chevalier, and providing for a three years' service by 463 against 228 votes; and, on June 10th, those providing for a four years' service by 495 against 59 votes. General Trochu, the chief champion of a three years' term of service, expressed his belief that a few years' practical experience would show the correctness of his view, and the disastrous consequences of the present legislation. Soon after, he notified the Assembly of his resignation. At the beginning of August the Assembly adjourned to November 11th, after electing a standing committee which remained in session.

The session of the General Councils of the French departments began on August 20th. Those who had expected that these councils would use their influence in behalf of a restoration of monarchy saw themselves disappointed. Only a few expressed a preference for monarchy, and voted down resolutions which might be construed as an approval of the continued existence of the republic. The royalist members of the standing committee complained of these resolutions, and particularly the addresses expressing agreement with the policy of President Thiers, as exceeding the proper bounds of the functions of general councils. In general, the transactions of these councils made the impression that the cause of moderate republicanism was steadily gaining ground in the country. The same impression was produced by the result of the supplementary elections for the National Assembly held in October. Only in one district, in the department of Morbihan, a Legitimist was elected by a vote of 89,700, against 80,000 given to the Republican competitor. In the department of Vosges, a Radical candidate, Mellinet, received no less than 80,000 votes, against only 2,400 given to the royalist candidate. In each of the seven other districts Moderate Republicans were successful. In two districts the candidates of the Bonapartists, though defeated, polled a heavy vote—Foucade, in the Gironde, who received 28,700 votes, and Schneider, Jr., in Indre-et-Loire, who received 29,800 votes, against 80,800 given to the Republican Rioche.

The strength and the hopes of the Radical

party were considerably increased by the impressive speeches which Gambetta made on a tour through Southeastern France. The greatest sensation was produced by the speech made at Grenoble on September 26th, in which Gambetta severely criticised the conduct of Thiers in prohibiting public celebrations of the anniversary of the First Republic (September 23d). He also attacked the Bonapartists and the National Assembly, and advocated the return of the seat of government to Paris. The journals of the Conservative parties, including those advocating the policy of Thiers, severely blamed the speech of Gambetta. The *Bien Publicque*, which is considered the semi-official mouth-piece of Thiers, closed an article on the subject with the words, "This speech has done the republic more harm in a few days than its declared enemies have been able to do." As five officers of the garrison of Grenoble had taken part in a banquet in honor of Gambetta, the *Journal Officiel* published a note recalling the fact that the duty of the Army of the Interior consists in defending the law and maintaining order, which excludes all political demonstration, and it is necessary that none who have the honor to wear the uniform should ever forget this. The Minister of War, therefore, as soon as he learned the serious misconduct of the officers, decided that he would at once transfer them to another regiment, and they were to undergo sixty days' arrest upon joining their new regiment. It was credibly reported that the Russian minister, Timacheff, in the course of a conversation with President Thiers, said with regard to the radical demonstrations in Grenoble that, if France became the "hearth" of European revolution, "the powers heretofore friendly with France would extinguish this hearth." The representatives of Germany and Austria were said to have made similar representations to France.

Louis Blanc, like all the radicals of France, agreed with Gambetta in demanding a prompt dissolution of the National Assembly, but he, also, in a letter addressed to the republicans of Avignon, opposed the appointment of any President of the republic. Louis Blanc says that a presidency would always be the counterfeit of royalty, placing the country perpetually between a Tenth of August and an Eighteenth Brumaire.

On October 13th President Thiers ordered Prince Napoleon and his wife, the Princess Clotilde, who were on a visit to the prince's friend, Maurice Richard, at Millemont, to quit the French territory. As a protest of the prince was of no avail, he addressed a letter to the Procureur-Général (dated Prangins, October 14th), in which he demands legal redress against the Minister of the Interior, the Prefect of Police, the director of the Cabinet of the Prefect of the Police, and M. Clement, police commissary, whom he declares to be guilty of violating his personal liberty, an offence punishable by Article 114 of the Penal

Code. The prince points to his character as a French citizen, and shows that he is not under the ban of any law of exile, that he is in full enjoyment of his civil and political rights, and is a member of the Council General of Corsica. He came to France to arrange for the education of his sons, and was provided with a regular passport. The prince adds that he vainly demanded from those who arrested him the production of their warrants, or any statement of the crime or offence wherewith he was charged. Vainly, also, did he request to be taken before a civil or military judge. If the present step has no result, the prince declares that he will seek for redress before the proper tribunals. The Procureur-Général replied, on October 24th, that a minister for his official act could only be impeached by the National Assembly.

The views of the Legitimists received another official expression in a letter written by the Count de Chambord, on October 25th, to M. la Rochelle, a member of the Assembly, in which he says that France can only be saved by a monarchy, and protests against the establishment of a republic, which would be the commencement of social anarchy. The Count de Chambord denies that any difference exists between the party of violence, which promise peace to men while declaring war against God, and those more prudent persons who obtain the same end by more covert means. He appeals to the energy of Frenchmen who really love their country, to counteract the weakness and timid compromising conduct of others, and to oppose a frank policy to a policy of fictions and lies. He declares that France at heart is Catholic and monarchical, and says: "We must guide France to the haven safely. Nothing can make me deviate from my path. I do not retract one word, nor regret a single act of mine; they have all been inspired by love for my country. Let us have confidence in the mission of France. Europe and the papacy have need of her, and an old Christian nation like ours cannot therefore perish."

Among the important acts of the Government during the time when the Assembly was not in session, belong the appointment of a Supreme Council of War, and a new circular on educational reform from the Minister of Public Instruction, Jules Simon. The Council of War, whose appointment was announced by the *Journal Officiel*, on October 7th, consists of Marshal MacMahon, Marshal Canrobert, General Ladmirault, the Duke d'Aumale, Admiral de la Roncière le Novory, and M. Ozenne, and it is charged with the organization and administration of the army, but not with the direction of military movements. The circular of Jules Simon, which is addressed to the directors of Lycées established by the state, suggests and recommends important modifications in the methods of instruction, suppresses some branches and introduces others, and finally holds out a prospect of a more complete reform

at some future time. The reforms of Jules Simon are intended to apply to the Lycées of the state, which number 63, including that of Algiers, and deducting those of Strasbourg and Metz, as well as to the 255 commercial colleges which are, in respect of their studies, subject to the control and jurisdiction of the state. The following are the principal reforms recommended by the minister: The minister states that, under the present system, the pupils leave the Lycée very ignorant of Greek and Latin, with very little acquaintance with history or geography, and only moderately taught in any thing; he desires that in future the pupils should be thoroughly acquainted with the dead languages, should be well versed in history, and still more so in geography; should be well up in mathematics, chemistry, and physics; and that, moreover, they should be able to speak, fluently, at least one modern language—English or German; should have some knowledge of literary history, of comparative grammar; should be able to ride on horseback, be skilful in gymnastics, in swimming, and military exercises. There will be formed in each Lycée, under the presidency of the head master, a council of professors for letters, and another for sciences, which will give their opinions of proposed reforms, and will recommend such others as may appear to them to be useful. Moreover, these councils will have a direct and decisive action in respect of the teaching. The minister will hereafter confine himself to "preparing the general rules which are necessary to insure unity of teaching." Each professor will be free "to choose his method, his class-books, and even to make his own special regulations, upon condition only that he communicates them to his colleagues, and obtains their approval." The study of letters is but of secondary importance, and the exercises in that branch of learning are to be diminished. Grammar is no longer to be learned by heart, but will be mixed up with lessons of hygiene and modern languages. "The dead languages," says M. Jules Simon, "must be learned that they may be read, but the living languages must be learned to be spoken." For the teaching of geography he applies a new method. Subdivisions are first to be studied, the commune, the canton, and the department, the country; after which the student proceeds to deal with neighboring countries, and by degrees the whole globe comes under notice. The minister calls that "an approach to the natural method." M. Jules Simon adds to the future education an instrument most valuable for philological studies—the study of general grammar, or, as he styles it, "comparative grammar." He recalls the fact that it was attempted twenty years ago—he might with truth have said thirty years ago; but he thinks that at that period it was a premature attempt.

The National Assembly reopened at Versailles, on November 11th, nearly all the mem-

bers being present. On the following day Grévy was elected President by a vote of 463 yeas to 43 nays. On November 13th President Thiers read from the tribunal his inaugural message. He commenced by stating that perfect calm had prevailed in the country during the parliamentary vacation, and that progress had been made in the work of reparation and general prosperity, for which thanks were due to God, the sovereign author of all things, who helps and sustains nations in misfortune that have not despaired of Him or of themselves. Relative to the loan, M. Thiers said that the whole available capital of the commercial world had been offered to France. The Government had received in instalments 1,750,000 francs; thus, half the loan had been realized in three months. The Government commenced operations with 1,400,000,000 to 1,500,000,000 in bills of all countries on Germany. Prussia had already received 800,000,000 francs, and would receive 200,000,000 francs more in December. The Government would have 600,000,000 francs remaining in bills toward next year's payments. Speaking of the position of the Bank of France, M. Thiers said the bank has 800,000,000 francs in gold and silver in hand, 44,000,000 francs of bar-gold or deposit, and 50,000,000 francs in gold and silver belonging to the state.

The French imports for the present year, nine months of which were already known, would be 3,457,000,000 francs, and the exports, 3,557,000,000. The Government estimated the public deficit at the end of the year at about 182,000,000 francs. A financial equilibrium would be fully attained at the end of 1878, and the Government felt certain of a considerable surplus in 1874. M. Thiers proceeded to give details relative to the Anglo-French Treaty of Commerce. He said:

We have promised England, and she has promised us, to treat each other on the footing of the most favored nation. The same principle will in the future regulate our relations with Great Britain. We shall do what we consider advisable for the protection of our industry, but we shall not treat English products differently from the products of other nations. England will act in the same manner toward us. But, as we were bound toward several countries by numerous engagements which it was impossible to break without a previous agreement, we have postponed the complete application of the principle we have adopted until the 31st of December, 1876, the period when our engagements, and especially those by which we are bound toward Austria, will expire. Until then, if our fiscal taxes or our treaties should cause temporarily a differential system toward England, England would await on the 31st of December, 1876, the system of equality which we have promised to concede to her. Thus, the conditions stipulated with Great Britain are for the present the immediate collection of our fiscal taxes, and the provisional maintenance of the existing system as regards French products in England and English products in France—for the future reciprocal treatment on the basis of the most favored nation on the day when this equal system shall become possible.

Passing in review the above satisfactory result of the efforts of the Government to repair

the national disasters, M. Thiers said France owed this result to the maintenance of order. He continued as follows:

I shall not cease, gentlemen, to repeat that, if you had not been in full possession of order, this war, unequalled in reverses, this cruel dismemberment of our territory, these frightful burdens which appeared beyond our strength, a throne fallen under the weight of its errors, an antique form of monarchy, under which we had been accustomed to live, suddenly disappearing, and this new form of the republic, which generally disquiets the public mind as soon as it appears—all this, bursting suddenly upon our surprised and disheartened country, might have become an irreparable disaster. I would say to those, who for a long time past have placed their faith in a republic, as their ideal of a government most conformable to their views, and most appropriate to the progress of modern society—I would say to them, "You, above all, should passionately wish for order; for, if the republic, already twice tried without success, can succeed this time, it will be to order that you will owe the fact. Make this, therefore, your task, your every-day solicitude. If the exercise of certain rights which belong to a free people might render the country uneasy, learn to renounce them for the moment. Make for public security a sacrifice which will especially redound to the profit of the republic. If it were possible to say that order has not an equal interest for all, I should presume to affirm that it has an essential interest for you, and that, when we labor to maintain it, we labor for you almost more than for ourselves. Events have given us the republic, and to go back to its causes, in order to discuss and judge them, would be to-day an enterprise as dangerous as it would be useless. The republic exists; it is the legal government of the country. To wish for any thing different would be to wish for a fresh revolution, and one more formidable than all. Do not let us lose our time in proclaiming the republic, but let us employ it in impressing upon this republic those features which are desirable and necessary. A commission appointed by you a few months ago gave it the title of conservative republic. Let us take possession of this title, and, especially, let us endeavor to make it deserved."

M. Thiers continued, insisting upon the necessity for every government to be conservative:

The republic must be conservative, or it cannot exist. France cannot live in continuous alarms. She has absolute need of repose, and will not long endure any government which does not afford her this repose. The republic of a party would only be a thing of a day. The mass might live upon agitation for a few days, but, after inspiring fear in others, it becomes afraid of itself, and throws itself into the arms of an adventurer, thus paying for a few days of disastrous license with twenty years of slavery, and this it has frequently done, as you know. Do you believe that it is not capable of doing it again? It will recommence a hundred times this sad and humiliating journey from anarchy to despotism, and despotism to anarchy—a path strewn with shame and calamity. Let us break this fatal chain; let us tranquilize, instead of exciting. Let us make the necessary sacrifices for the general security, sacrifices that may seem even excessive; especially, let us not afford the spectacle of the reign of a party; for a republic is but a contradiction, if, instead of being the government of all, it be but the government of any single party whatever. If, for example, we seek to represent it as the triumph of one class over another, we drive from it a part of the nation—a part first, and then the whole.

Alluding to the revolution of 1789, M. Thiers observed:

Its material works have perished, but its moral works still live, and constitute the most solid glory of France, much more than victories which, according to the hazard of force, pass from one flag to another. As to myself, I do not understand, I do not admit, a republic, except by taking it as it ought to be, namely, as the government of a nation which, having for a long time, and in good faith, attempted to leave to hereditary power the direction and distribution of its destinies, but having failed therein, through faults which it is impossible now to judge, makes up its mind at last to regulate its affairs itself and alone by means of men freely and wisely chosen, without exclusion of party, of class, or origin, seeking them neither high nor low, neither to the right nor to the left, but in the full light of public esteem. Two years passed in almost complete calm may afford us hope of founding this conservative republic; but hope only—let that not be forgotten. The slightest mistake would suffice to make this hope vanish in a disheartening reality.

M. Thiers proceeded to say that the republic inspired not only France, but the whole world, with confidence. Foreign governments are now sufficiently enlightened to see, in France, France alone. If she is orderly, she will suit everybody; if she is not only orderly but strong, she will suit those who desire a just equilibrium between the powers of the universe:

Therefore I presume to affirm that the efforts which France has made during nearly two years have earned for her an esteem of which she has already received numerous proofs. I make this declaration because I have, as in duty bound, my eyes unceasingly fixed upon Europe. France is not isolated, and it depends upon herself whether she shall be, on the contrary, surrounded by trusting and useful friends. If she is peaceful under a republic, she will alienate no one; if she is agitated under a tottering monarchy, she will see a void created around her.

M. Thiers concluded by saying:

We draw near, gentlemen, to a decisive moment. The form of this republic has been only an incidental form, given by events, and reposing upon your wisdom and your union with the power which you have temporarily chosen. But the public mind is awaiting your action. All are asking what day and what form you will select in order to give to the republic that conservative strength with which she cannot dispense. It is for you to choose both the day and the form. The country, in delegating to you its powers, has evidently laid upon you the task of saving it by procuring for it, first, peace, after peace, order, and, with order, the restoration of its power; and, lastly, a regular government. You proclaimed this, and thenceforth it was for you to fix the succession and the hour of these divers portions of the work of salvation which is confided to you. God preserve us from placing ourselves in your place, but, at the time that you may determine, and when you have chosen some from among you to meditate upon this, if you desire our opinion, we will give it frankly and resolutely! This is the grand session which opens before you. Neither defiance nor coöperation, neither devotion nor resolution, shall be wanting on our part to insure the success of your task. May God bless it, and render it complete, and especially durable, a consummation which has not yet been granted since the commencement of the century!

The President's message was approved by all the moderate republican and radical papers, while the conservative papers, though recognizing the conservative tendency of the

message, objected to the establishment of a republic. At a meeting of the "Right" and the "Right Centre," the fusion of the two parties was unanimously resolved upon. The Duke d'Audiffret-Pasquier pointed out that the present was not an opportune moment to pursue the fusion of the Bourbon branches, a monarchical restoration, in the present state of public opinion, being impossible. The speaker said that the issue now lay between the Conservatives and Radicals, and this was the ground on which the Right and Right Centre must unite, demanding conservative pledges from M. Thiers as a just price of the support of the majority. General Chanzy resigned the chairmanship of the Left Centre on account of his military duties. In his place, Ricard, an intimate friend of M. Thiers, was (November 22d) elected chairman. In the new 15 bureaux of the Assembly, 10 of the presidents belong to the Right and five to the Left. The Right elected 12 of the secretaries and the Left three. On November 17th special prayers were offered in the churches for the National Assembly, and the blessing of God invoked on its proceedings. Government officials attended the services, escorted by details of troops as guards of honor. The congregations at all the churches in Paris were very large. On November 18th the Assembly had an exciting debate over the motion of General Changarnier, censuring M. Gambetta for his inflammatory speeches in the provinces. M. Changarnier complained of the increasing audacity of the Radicals and the laxity of the Government in dealing with them. He accused Gambetta of entertaining and seeking to spread socialistic ideas. President Thiers mounted the tribune in defence of the Government. He protested against being placed at the bar as a criminal, and threw out the intimation that he might appeal to the country. He admitted that the speech made by M. Gambetta at Grenoble was offensive, but claimed that the Government was not responsible. The President concluded by demanding a vote of confidence from the House. In the name of the Right, the Duke de Broglie moved the order of the day in the following terms: "The Assembly, censuring the doctrines enunciated at the Grenoble banquet, passes to the order of the day." Deputy Mettetal, of the Left Centre, proposed a vote of confidence in the following order of the day: "The National Assembly, confiding in the energy of the Government, and censuring the words pronounced at Grenoble, passes to the order of the day." This motion was finally adopted by 267 yeas against 117 nays, half of the deputies abstaining from voting.

A trial-by-jury bill, repealing the law of October, 1870, which restored the legislation of 1848, with regard to the constitution of juries and criminal courts, was passed on November 21st, by a vote of 416 to 178. The bill reestablishes, to a certain extent, the law

of 1853, which intrusts the task of drawing up the jury-lists to a committee of justices of the peace and mayors. Considerable political importance is attached to the bill, which the Left opposed as reactionary, and as attacking the principle of universal suffrage.

The dissatisfaction of the President with the small number of members who, on November 18th, by voting for the amendment Mettetal, had expressed the demanded confidence in his administration, was greatly increased by the report of the committee on an address in reply to the Presidential message. This committee had several interviews with the President, but the majority failed to come to an understanding with him. The President took his stand upon the principles enunciated in his message, and again proclaimed the necessity for every one rallying to the conservative republic. The majority of the committee, consisting of nine members, were, on the other hand, of opinion that it would be difficult, at the present time, to bring into operation the principles of ministerial responsibility, and to define the relations between the President and the Assembly. The report was made to the Assembly by M. Batbie, on November 26th. It acknowledges that M. Thiers in his message proclaims the sovereign power of the Assembly, claims for the Assembly the right to frame a Constitution should it think proper, expresses regret that M. Thiers has not more distinctly separated himself from the Radicals, and in a long passage denounces the doctrines of the socialists and demagogues. It afterward discusses the programme of the constitutional reforms desired by the Government, and in conclusion proposed the appointment of a committee of fifteen members by the Bureau, in order to introduce, with the shortest possible debate, a bill relative to ministerial responsibility. The views of the minority of the committee were represented in an amendment offered by M. Dufaure, providing for the election of a committee of thirty members to lay before the Assembly a bill, and "to regulate the conferring of powers and the conditions of ministerial responsibility. After a very exciting debate, in which M. Thiers defined his position, the amendment of Dufaure, on November 29th, was adopted by 370 votes against 334. This great victory of the Government was, however, on the next day followed by a reverse. A motion of M. Duval, a Conservative, that the municipal councils, which, during the present crisis, had sent encouraging addresses to President Thiers, had violated the laws of the country, and that the Minister of the Interior, Lefranc, in receiving the addresses, had also failed to observe them, was approved by 305 yeas to 299 nays. The Minister of the Interior at once tendered his resignation, which was accepted by the President. The Committee of Thirty, proposed by Minister Dufaure, was elected by the Assembly on December 5th. The Right succeeded in electing 19 members of the com-

mittee (representing 861 votes), and the Left 11 (representing 833 votes). The committee, on the next day, elected the Baron de Larcy (a Legitimist) President, and the Duke d'Audiffret-Pasquier Vice-President.

The ministry was partly modified, on December 9th, by the appointment of M. Goulard to be Minister of the Interior; M. Leon Lay, Minister of Finance; and M. Fourton, Minister of Public Works. Though the ministry thus modified was generally regarded as transitional, the new appointments seemed to indicate a termination of the crisis, and to secure to the Government the support of the Right Centre and the Left Centre.

On December 10th a manifesto was published, signed by 86 members of the extreme and moderate Left, among whom were MM. Gambetta, Cremieux, Louis Blanc, and Quinet. It demanded a pacific and legal dissolution of the National Assembly as the only means of averting fresh dangers to the country, as the division in the Assembly renders the Government powerless. It repudiated force from whatever quarter it may come, because the signers of the address were enemies of disorder, of which during the last two years they have given numerous proofs. The address expressed strong disapproval of the pressure exerted to bring about disorder, which, as had been hitherto proved, could only result in advantage to the enemies of France. The new elections would constitute a compact majority in the Assembly, securing majorities therein to the administration of President Thiers, and for the establishment of republican institutions. The right of petition to the Assembly was claimed to be inviolable, for an attack upon it would be an attack upon the great principle of universal suffrage. In accordance with this manifesto, numerous petitions from all parts of France were sent to the National Assembly, asking for the election of a new Assembly. The subject came up for discussion on December 14th, and the debate was one of the most violent and exciting which has taken place in the Assembly. Minister Dufaure spoke in favor of rejecting the petitions, ridiculing Gambetta, whose speeches, he said, were the cause of the present needless agitation. The Assembly then rejected the petitions by a vote of 409 to 201, and, before adjourning, adopted a resolution directing Dufaure's speech to be placarded in all the communes of France.

On December 19th the National Assembly, by 461 votes against 158, rejected a motion by Bonnet against duties on raw material. On December 21st the Assembly adjourned to January 6, 1873. On December 29th M. Bourgoing, the French ambassador to the papal court, resigned, because some French naval officers in Rome, at the beginning of the holy days, called on the King and the Pope, on the same day, to tender the compliments of the season.

FRAZER, Prof. JOHN W., an eminent physiologist and journalist of Philadelphia, born in Pennsylvania, in 1809; died, in Philadelphia, October 12, 1872. He had been for many years a member of the Franklin Institute, and the editor of the *Franklin Institute Journal* since the death of Prof. Johnson. He was appointed Professor of Natural History and Chemistry, in the University of Pennsylvania, in 1841, and held that position till his death, which occurred very suddenly while he was entering his apartment in the new building of the university.

FRENCH MINING INDUSTRY. The committee of Mineral Industries for the districts of the north of France, have considered that, at the present time, when social questions are occupying so important a place, it would be of great service to gather practical results of mining industry based on incontestable figures, obtained by the owners of coal-mines who have endeavored to assure to the mining population their material well-being, and at the same time their moral improvement by instruction.

There are in the coal-basins of the departments du Nord, and the Pas-de-Calais, 23 coal-mines, of which 18 of the most important have supplied the committee with the desired information.

The production from these mines is about 4,500,000 tons of an average value of \$12,000,000. They employ 31,000 workmen, to whom is annually paid \$5,200,000 in salaries. Besides this sum, the employers distribute in contributions to the relief funds, in gratuities, in coal for domestic purposes, and in reduction of house-rents, an annual sum of about \$450,000, or 8 per cent. on the wages. The 31,000 workmen belong to 18,000 families, numbering 87,000 people, who live directly and almost entirely upon the salaries paid by the employers.

More than one-third of these workmen, and of this population, that is to say, 11,106 workmen, 6,534 families, and 31,432 persons, are lodged in the 7,061 houses erected by the mining companies, and the first cost of building which amounted to \$3,200,000. One house may be allowed to four or five workmen, and to 650 tons of coal produced per annum.

These houses are rented for about \$12 per annum, a rent which is reduced for the companies by the various contributions, repairs, and depreciation, to \$9, or about 2 per cent. on the capital. Similar houses are let in the same localities, and produce an interest of 6 per cent. The difference between the rent of the houses belonging to the mines, and of those of private owners, is about 70 per cent.

Two companies have erected special buildings which they give to their workmen at cost price, which is gradually paid out of the wages. They have parted with forty-three houses under these conditions, and have advanced sums

of money to others in their employ to build on land belonging to them.

As a rule, children under 12 years of age are not permitted to take any part in the work of the mines, and only a very small number of women are employed, about 5 per cent. on the total number of workmen. These 18 companies have formed, at their own cost, 25 schools and 18 asylums, the first charges on which amounted to \$142,500; they have also contributed the sum of \$40,000 for the erection of chapels or churches for their employes.

In the schools and asylums, instruction is given to 6,259 children, and they spend annually, for this work, \$16,500. During the past year they sent, besides, 6,789 children to the communal schools, for which they paid \$13,500. These 13,048 children have received gratuitous instruction at a cost of \$30,000, of which a part only is defrayed by the companies, the rest being paid out of the general relief funds which they have instituted.

Several of the owners have established surgeries, orphan homes, libraries, musical societies, etc., of which they provide all the funds; they subscribe funds, moreover, toward the establishment of a school for master miners.

The proportion of the workmen in these mining towns who can read and write is, deducting children below 10 years of age, only 50 per cent. among the men, and a little over 33 per cent. among the women. These results show how much still remains to be done to instruct the population, and the companies should be encouraged in their efforts, and the sacrifices they have undertaken in this direction.

All the mining companies except that of Anzin have established relief funds, by an obligatory charge upon the wages of 3 per cent., a contribution on the part of the masters of 1 per cent. on the same salaries, and the addition of all the various fines which are levied. These percentages, fines, and various gratuities accorded to the employes, amounted together for the 17 companies, besides that of Anzin, to \$65,000 in the year.

As to the Anzin mines, the owners give directly to their workmen under the form of pensions, aid, medical assistance, instruction, etc., a sum of \$75,000, making a total of \$140,000. The relief funds furnish to all the workmen medical advice and medicine; help in money and food when they are sick or injured; pensions to the widows of workmen killed in accidents, and temporary relief to their children; retiring pensions to old workmen and their widows and children; and extra assistance in special cases of distress. They pay the cost of funerals, and assist in the instruction by the payment of masters and in other ways.

All the companies give coal gratuitously to the men. Seventeen among them distributed thus in 1869 about 1,900,000 bushels of coal, worth \$120,000, and the Anzin company gave fuel to the value of \$50,000.

Collectively, for the various objects to which the companies contributed, \$450,000 were spent by them in 1869, or from \$15 to \$18 per man, more than 10 per cent. on his actual salary, and this sum represents from 23 to 24 per cent. of the dividends distributed by the companies to their shareholders.

Such are the results obtained by an investigation into the existing condition of the mining industries in the two departments of France named above. They prove in the most striking manner that the employers of labor, in these coal-basins at least, leave no means untried to promote the comfort and well-being of their employes.

FRIENDS. The Indian agents of the Society of Friends have the care, in the Central Superintendency of Indians, of the tribes of the Kickapoos, Kaws, Osages, Quapaws, Peorias, Ottawas, Wyandottes, Senecas, Sacs and Foxes, Shawnees, Chippewas, and Munsees, Cheyennes, Arrapahoos, Wachitas, Keechies, Caddoes, Ionies, Kiowas, and Comanches. The total number of Indians in the superintendency is 17,977. Fourteen schools are conducted among them, to which are attached 16 teachers, and which are attended by 404 pupils. Eleven Sunday-schools are taught. There have been contributed to the support of these schools, by Friends, \$3,335; by Moravian churches, \$150. The report of the superintendency presents an exhibit of the quantity of land under cultivation, and the value of the crops raised, and of the stock owned by these Indians, in comparison with the returns for the year 1868. It shows a very great advance in industry and prosperity. Several boarding-schools have been opened in the superintendency. They are well attended by both boys and girls. The pupils are taught, in connection with their literary studies, industrial pursuits appropriate to their sex and condition. The report of the Executive Committee of the Society speaks of the material advance of the people, particularly in the Quapaw special agency, of their growing desire for the education of their children, and of their deepening religious interest, as "encouraging signs of the dawning of a better day." Material advancement, and increased interest in the schools and in religious instruction, are mentioned in connection with most of the other special agencies.

A school has been established at Matamoras, Mexico, by members of the Society, and a considerable work has been accomplished in the distribution of Bibles and tracts.

The operations of the Association of Friends for the aid and elevation of the freedmen were limited during 1872 by the lack of means. The Association, however, continued to support its schools in South Carolina, and kept open thirteen other schools. It reports about 100 pupils in the schools in South Carolina, and 250 scholars at the other schools. The total receipts of the Association for the year end-

ing in October, 1872, were \$1,659.62; the amount paid paid for teachers' salaries was \$1,537.15.

The following statistics are reported of the *Canada Yearly Meeting*: Meetings, 28; families, 297, and 266 parts of families; members, 1,616; children of school age, 276.

The *London Yearly Meeting* of the Society of Friends opened on the 22d of May. Epistles were read from the yearly meetings of Ireland, New York, New England, Baltimore, North Carolina, Ohio, Indiana, Iowa, Canada, and the Western Yearly Meeting, but none was received from that of Pennsylvania. A proposition was introduced that the meeting join the other Non-Conformist denominations of England in support of the principle of making education in the schools, supported by the state, simply secular. The feeling in favor of having the Bible taught in the schools was shown, during the discussion of this subject, to be very strong. No decision was reached upon the motion.

An act of Parliament, in relation to marriages of members of the Society of Friends, had been passed a short time previous to the holding of the yearly meeting. By the provisions of this act, the preliminary proceedings required in the case of marriages in the society were greatly simplified. Under it, marriages are permitted in the meeting-houses and according to the usages of the society, of any persons, whether in the profession of the society or not, who may have obtained the consent of the yearly meeting. New regulations were adopted to correspond with the provisions of the act.

The attention of the yearly meeting, held two years before, had been called to a certain alleged heresy, which had sprung up in the Lancashire and Cheshire quarterly meeting, and a committee had been appointed to investigate it. This committee presented a report of its action in discipline, and along with it a statement of the doctrines held as fundamental truths by the society. This "statement" sets forth at considerable length, and with elaborate minuteness, the distinctive doctrines of the denomination. The doctrines of the Friends, with regard to the Godhead and the Scriptures, are defined as follows:

We have ever believed concerning God the Father, the Son, and the Holy Spirit, according to the testimony of the holy Scripture; that there is one God and Father, of whom are all things; and one Lord Jesus Christ, by whom all things were made, who was glorified by the Father before the world was, who is over all, God blessed forever; and that there is one Holy Spirit, the Leader and Sanctifier and Comforter of the people of God; and we further believe that these three are One.

We believe that all the posterity of Adam are involved in the consequences of his fall.

Very precious is the doctrine of the immediate work of the Holy Spirit; we own no principle of spiritual light, life, or holiness, inherent by nature in the mind of man; we believe in no principle of spiritual light, life, or holiness, but the influence of the Holy Spirit of God, bestowed on mankind, in

various measures and degrees, through Jesus Christ our Lord. This influence must ever be distinguished both from the conscience which it enlightens and from the natural faculty of reason, which, when unsubjected to its operation, is, in the things of God, very foolishness. We disavow all professed spirituality which is divorced from faith in Jesus Christ, of Nazareth, crucified for us without the gates of Jerusalem. One with the Father and the Son, the Holy Spirit works for the regeneration of fallen man. There can be no true repentance or faith without His holy operation. Convincing of sin, of righteousness, and of judgment, and testifying of Jesus, it is the Spirit who leads the humble believer in that course of experience in which he becomes established upon Christ the One Foundation.

We accept the Holy Scriptures of the Old and New Testament as the authentic testimony of the Spirit. * * * The work of the Spirit, truly submitted to, ever prepares and inclines the heart to receive the teaching of the Scriptures. It is the Spirit alone who can open the understanding to understand them. And whatever any may say or do, which is contrary to the Scriptures, though under profession of the immediate influence of the Holy Spirit, is to be accounted a delusion.

A meeting was held in behalf of foreign missions, at which the chairman spoke of the rapid growth of the Missionary Society during the five years of its existence, and testified that the efforts made in this cause had strengthened the Society of Friends itself. The expenditures for missions during the year had been £300. Two missionaries had returned from India on account of ill health, leaving but one at work in that field. This one (Rachel Metcalfe) was conducting, with the aid of one native assistant, two schools in the city of Jabbaipoor. Mr. Sewell had returned from Madagascar, bringing with him two native boys, who are to receive an English education. Arrangements had been made with the London Missionary Society by which a large district of Madagascar would be left under the superintendence of the Friends. The school which had been conducted by Mr. Sewell was reported as being in an excellent condition, with about one hundred and fifty male scholars. A larger school for women and girls was also favorably spoken of. Accounts were given also of the Friends' schools and missions in Syria, and the Foreign Missionary Society of the American Friends.

A very large work in the distribution of tracts was reported by the several local meetings. Extensive efforts had been made by members of the society in behalf of temperance.

The subject of bringing the various voluntary agencies for the extension of the Gospel, which were sustained by members of the society, into closer connection with the Yearly Meeting, was mentioned and received some discussion. It was decided to call a conference later in the year, to consider this subject more fully. This conference met on the 18th of November. It was well attended. From the representations which were made, it appeared that about two thousand persons were brought weekly under the religious influence

of the Friends, in some of the metropolitan districts, and proportionate numbers in the country generally. The conference decided to recommend to the Yearly Meeting that it make arrangements for the holding during its sessions, and in connection with them, of the annual meetings of the Tract, the Temperance, and the Foreign Missionary Associations, and of an association in behalf of home mission work; and that these associations make reports to the Yearly Meeting, which reports are to be entered in its records.

According to the statistical report which was submitted to the Yearly Meeting, that body at the end of the year 1871 comprised 329 particular meetings, containing an aggregate of 14,021 members.

The Friends' First-Day School Association, reported for 1872, in England, Ireland, and Scotland, 101 schools, with 1,179 teachers, and 15,638 scholars.

The Dublin Yearly Meeting was held in May. Visitors were present from England and from two Yearly Meetings in the United States. The names of 15 men and 17 women were returned as recorded ministers, and those of 47 men and 49 women as having been appointed elders. Mention was made of an address which had been forwarded to the Queen, expressing "sympathy respecting the illness of her eldest son." Statistical reports were read respecting the school at Brookfield, and other schools, and respecting the fund for clothing and putting out to apprenticeship the children who leave Brookfield. A minute was adopted respecting the bill which was before Parliament, concerning the solemnization of marriages in the meetings of the society of persons not in its profession; but the action of the meeting on the subject was left contingent upon that of the London Yearly Meeting.

The stationary condition of the Society of Friends, and its decline in numbers in some countries, are much remarked upon by its writers. The decline is most obvious in England, where the number of members of the society at the close of the seventeenth century was estimated at 60,000, or about one in 130 of the population. At present the number is about 14,000, or one in 1,100 of the population. The numbers are nearly stationary in the United States. A decline is shown in the returns of the yearly meetings east of the Alleghany Mountains, while those of the Western States show an increase sufficient to give a slight gain in the aggregate of the whole country. By a statement which was given in the *ANNUAL CYCLOPÆDIA* for 1871, it appeared that the whole number of Friends in the United States in that year was only 755 more than it was twenty years before.

FEUERBACH, LUDWIG MARIE, a German philosopher of the so-called younger Hegelian school, born at Anspach, in Bavaria, July 28, 1804; died at Hanau in Hesse-Cassel, Septem-

ber 17, 1872. He was the son of the late eminent publicist and writer on criminal jurisprudence, Paul Joseph Anselm Feuerbach. After studying at the public school of his native town, he attended the university at Heidelberg in 1822, in order to study theology under Paulus and Daub. Through the latter, he became an ardent partisan of Hegel, and, in order to hear this philosopher, he went in 1824 to Berlin, where, in the following year, he renounced theology and devoted himself entirely to the study of philosophy. In his twenty-fourth year, a thesis which he published at Erlangen, "*De ratione una, universalis, infinita*," secured for him the position of *privat docent* at that place. He, however, withdrew from the chair after a few years, as his hardihood in advocating his opinions had gained him many adversaries. He then devoted himself entirely to literary pursuits. In 1844 he delivered a brief course of lectures at the University of Heidelberg, but soon after retired to a small village in Franconia, where he directed an industrial establishment, and devoted his leisure hours to the study of philosophy and the preparation of his works. Of late years he had withdrawn from this labor, and his last years were spent in frugal poverty though not in neglect, as his disciples gathered around him and were ready to give him any assistance which he needed. Feuerbach, though ranking with the most advanced advocates of free thought, and in some sense an atheist, was a man of pure and irreproachable life, and was much respected even by those who differed from him most widely in their religious views. What his doctrines were, may best be learned from his own statement: "My theory may be condensed in two words, Nature and man. That being which, in my opinion, is the presupposition, the cause of existence of man, is not God—a mysterious, vague, indefinite term—but Nature. On the other hand, that being in which Nature becomes conscious, is man. True, it follows from my theory that there is no God, that is to say, no abstract being, distinct from Nature and man, which disposes of the destinies of the universe and mankind at its discretion; but this negation is only a consequence of the cognition of God's identity with the essence of Nature and man." He denied the personal immortality of the soul, for the same reason that he denied the personal existence of God—he wished to preserve the integrity of existence, to make mortality immortal, to breathe the spirit of eternity into time, to compress all humanity within human limits, and get the full benefit of this life while it lasted. He was jealous of the future life, he grudged every drop of feeling that was spilled on the edge of the grave, and lost on the other side. This world was rich enough for him, and ought to be rich enough for anybody; and to see it neglected, misused, flouted, made him heart-sick. Feuerbach's first published work (after his thesis above named) was "Thoughts

on Death and Immortality," published anonymously at Nuremberg, in 1830. This indicated his revolt from orthodoxy, and it was followed by "History of Modern Philosophy from Lord Bacon to Spinoza," in 1838; "Abelard and Heloise," 1834; "Summary Development and Criticism of the Philosophy of Leibnitz," 1837; "Peter Bayle at his most Interesting Moments for the History of Philosophy and Humanity," 1838; "Philosophy and Christianity," 1839; "The Essence of Christianity," 1841; "The Philosophy of the Future," 1843; "The Essence of the Faith in the Mind of Luther," 1844; "The Essence of Religion," 1845; "Theogony,"

1857. These works were enlarged and slightly modified by subsequent productions of his restless pen; but they remain the principal monuments of his critical researches. As he resolved theology into anthropology, the philosophy of religion into psychology, and the absolute into the final subjective spirit, he was accused of atheism by the theologians, and found himself attacked by numerous other philosophers. His works were collected and published in nine volumes in Leipsic, in 1846-'57, and some of them have been translated and published in England by George Eliot (Mrs. G. H. Lewes).

G

GAUTIER, THÉOPHILE, a poet, critic, and novelist of the French romantic school, born at Tarves, August 31, 1811; died in Paris, October 24, 1872. He was brought to Paris when only three years old, was educated at the Collège Charlemagne, became enamoured with the study of the old French, in which he found a hearty sympathizer in Gérard de Nerval. After leaving college, Gautier determined to become a great painter, and entered the studio of Rioult to acquire the art. He soon became convinced that he was not intended for an artistic career, and turned his attention to poetry. This was in 1830, the era when the production of Victor Hugo's "Hernani" was the signal for an almost bloody contest between classicism and romanticism. Gautier was one of the most redoubtable champions of Victor Hugo, and contributed largely to his triumph. In 1830 he published his first volume, "Poesies," which he followed in 1832 with the charming poetical legend of "Albertus." The same year, though but twenty-one years of age, he became associate editor with Gérard de Nerval of *La France Littéraire*, and in the two years following contributed to it a series of critical articles on the poets of the times of Louis XIII., subsequently republished in two volumes under the title of "The Grotesques." He was successively associated with De Nerval as one of the editors of the *Revue de Paris*, the *Artiste*, the *Charter* of 1830, and, finally of the *Presse*, and, after this had passed into the hands of Emile de Girardin, he continued for twenty years to contribute to it articles on art and dramatic criticism, though writing at the same time for the *Revue des Deux Mondes*, the *Musée des Familles*, etc., etc. In 1838, Gautier published a new poem of great originality and power, "The Comedy of Death;" and, with that versatility of talent for which he was so remarkable, produced a half-score of novels in the course of ten or twelve years, and half a dozen vaudevilles and ballets. One of his novels, "Mademoiselle de Maupin," in two volumes, published in 1835, inflicted a greater stain upon his reputation than

all his other works. It was a brilliant but intensely licentious fiction, and with the bravado of daring and lustful youth (he was but twenty-four when he published it) he defied alike the critics and the moralists in his preface. "It was," says one of his biographers, "the most brilliant novel ever written under the direct inspiration of the devil." He lived to regret most bitterly ever having written it. Later in life he published seven or eight other novels of very considerable merit, and not marred by such gross moral blemishes as his earlier ones. While one of the editorial staff of the *Presse*, he made extensive journeys in Spain, Italy, and the East, and published his observations in "Across the Mountains," 2 vols., 1843; "Zigzags," 1845; "Italy," 1852; and "Constantinople," 1854. In association with others he also prepared a "History of Painters" and "Treasures of Art of Ancient and Modern Russia." In 1856 he left the *Presse*, and became director of the literary *feuilleton* of the *Moniteur*, and dramatic critic to that paper, and in 1869 took the same position on the new *Journal Officiel*, being also most of the time editor-in-chief of the *Artiste*. In 1858 M. Gautier was appointed an officer of the Legion of Honor; in 1863 he was made the recipient of a pension from the Imperial Government, which was ever ready to compensate the few literary men who would lend themselves to its defence. In 1868 he was appointed librarian to the Princess Mathilde. For many years M. Gautier was a constant candidate whenever there was a vacancy for a membership in the French Academy, and had the mortification every time of seeing men greatly his inferiors preferred to him, his "Mademoiselle de Maupin" being constantly brought up to his discredit, and his truckling to the imperial usurpation being also used against him. At length, in 1869, he was elected, after long and repeated ballotings.

GEOGRAPHICAL EXPLORATIONS AND DISCOVERIES IN 1872. With few exceptions, the geographical record of 1872 will be occupied in chronicling discoveries made, par-

tially at least, in 1871, but of which there was no published account until the summer or autumn of 1872, and in some cases not until the winter of 1873. Some activity has been manifested in arctic exploration, new expeditions having been sent from Germany, Sweden, Austria, and Russia. Private explorers were at work from Norway, from Scotland, and from Denmark, some of whom had reached a higher latitude than had previously been attained, had explored Gillis Land and King Carl's Land, which prove not to be the same, had circumnavigated Novaya Zemlaya, and made many interesting discoveries. But little has been heard from our own expedition under Captain O. F. Hall. In Montana, Dakota, Colorado, and Arizona, the work of exploration has gone forward unceasingly, and has been rewarded with many interesting discoveries. In South America the Southern affluents of the Amazons and its tributaries have been opened to steam-navigation, and by a number of well-planned railways the heart of the South American Continent is put in easy communication with the commercial world. In Asia there seems to be comparatively little left to discover; only the filling in of some details of the picture—the courses of rivers, the heights of mountains, and the elevation of mountain-passes; the position of lakes, of deserts, of lofty and arid plains, and the numbers and characteristics of some of the many nomadic tribes, whose habitations are mainly in tents, though some of them are gathered from time to time in the walled towns of Central Asia. We weary of these monotonous details, and turn to other lands, like those of the African Continent, where there is more variety. Here we hear that Sir Samuel Baker, with his little army, is pushing southward toward the sources of the Nile, and, thanks to our countryman, Stanley, who either found Livingstone, or was found by him, we are once more in communication with that veteran explorer. Still farther South, Kiliman-djaro has been ascended, and from its lofty summit the lakes and rivers of Central Africa glittered in the sun; while south of the Zambezi, and between that river and the Limpopo, not only have gold and diamonds been largely discovered, but the ruins of a great city, which may prove to be the Ophir of the Scriptures, or the Queen of Sheba's capital, or something else.

One feature of geographical progress the past year has been, the great advance in cartography. The completion of an elaborate Atlas and Gazetteer of the United States, and of two or three maps of the same, the extensive map of Western Asia, now in preparation by the East Indian Council of the British Government; the extensive and beautiful maps of the trigonometrical survey of India; the large accession to the maps of the Admiralty survey, and the new atlases and single maps, of rare perfection and elegance, which Kiepert, von Spruner, and Petermann, have added to

their publications the past year, including one by the last-named geographer, of the lake-region of Central Africa, showing the routes of Livingstone for six years, as well as those of Stanley and all previous explorers, are indications of great progress in this all-important department of geographical science.

The losses, by death, of eminent contributors to geographical knowledge, were less than in most former years. Of General FRANCIS RAWDON CHESNEY, the explorer of the Euphrates and Tigris, and of the Red Sea navigation, the pioneer of the Overland route to India, and ever the zealous geographer, we have spoken elsewhere in this volume. He died February 1st. (*See CHESNEY, General FRANCIS RAWDON.*)

JAMES CHAPMAN, a South-African traveller, and author of two or three volumes on the South-African region, where he had been the companion of Livingstone, Gordon Cumming, Anderson, and Thomas Baines, died at Du Toit's Pan, in the Diamond Fields, February 6, 1872. His "Travels in the Interior of South Africa," published in 1868, to which we have made reference in former volumes of the ANNUAL, were interesting, and added materially to our geographical knowledge of that region. He had been a Fellow of the Royal Geographical Society since 1867.

JOHN POWER, C. E., for many years a resident of Central America, and the proprietor of the *Panama Star and Herald*, died in England, May 13, 1872, in the 51st year of his age. He was a native of Youghal, Ireland, but had been actively engaged in literary and scientific pursuits, and the management of his paper for many years. He had been a Fellow of the Royal Geographical Society since 1864, and had published, in 1868, "A Description of the Province of Sancto Domingo del Darien in 1754, translated from the Original in the National Archives of Bogotá," and several smaller geographical works. He was engaged at the time of his death on a work upon the "History and Material Progress of Central America and the Adjoining Countries."

Before proceeding to a detailed narrative of the discoveries of the year, we give a list of the most important contributions to geographical science published in this country during 1872.

GOVERNMENT PUBLICATIONS.

U. S. Geological Survey of Montana and Adjacent Territory. By Prof. F. V. Hayden.

U. S. Geological Survey of Colorado and New Mexico. By Prof. F. V. Hayden.

U. S. Geological Survey of Wyoming and Contiguous Territory. By Prof. F. V. Hayden.

U. S. Geological Survey of Nebraska: Final Report. By Prof. F. V. Hayden.

Preliminary Report concerning Explorations and Surveys in Nevada and Arizona. By First-Lieutenant George M. Wheeler.

Report of the Chief Signal-Officer of the War Department. By General A. J. Myer.

STATE REPORTS.

Geological Survey of Ohio. By Prof. J. S. Newberry, State Geologist.

Geological Survey of Indiana.

FROM PRIVATE SOURCES.

Wonders of the Yosemite Valley. By — Kneeland.

California: A Book for Travellers and Settlers. By Charles Nordhoff.

Mountaineering in the Sierra Nevada. By Clarence King.

Illustrated Library of Travels. Wonders of the Yellowstone. By James Richardson.

Isthmus of Tehuantepec. By — Skeel.

Santo Domingo, Past and Present, with a Glance at Hayti. By Samuel Hazard.

Corals and Coral Islands. By James D. Dana, LL. D.

The Ocean, Atmosphere, and Life. By Elisée Reclus.

Travels around the World. By Hon. W. H. Seward.

The Desert of the Exodus. By Prof. E. H. Palmer.

Egypt and the Holy Land. By Rev. — Harman.

How I found Livingstone in Central Africa. By H. M. Stanley.

Illustrated Library of Travels: South Africa. Edited by Bayard Taylor.

Station Life in New Zealand. By Lady Barker.

ATLASSES AND MAPS.

Asher and Adams's Commercial and Statistical Gazetteer of the United States, etc.

G. Watson's New Map (double) of the United States and Territories.

"The United States of America:" a collection of facts, dates, and statistics, to go with the above.

Monteith's Comprehensive Geography.

Putnam's Mercantile Map of the World.

Putnam's Student's Atlas of Physical Geography.

Petermann's Map of Central Africa, and the Discoveries from 1800 to 1872, including Livingstone's Routes, Stanley's, Baker's, Grant and Speke's.

MAGAZINES AND PERIODICALS.

Illustrated Travels: Edited by H. W. Bates, Assistant Secretary of Royal Geographical Society.

Scribner's Monthly: Geographical articles on the Yellowstone, New Zealand, Virginia, and West Virginia, the New South, etc.

Harper's Monthly: Numerous geographical articles.

Appleton's Journal: Many geographical articles.

Pictureque America: Giving views and letter-press descriptions of all sections of the United States.

Having thus indicated the growing interest in geographical science in the United States, we proceed with our usual brief narrative of the explorations of the year:

We begin, as heretofore, with the OCEANS, and especially with the progress of exploration and discovery in the *Arctic Ocean*. We pause a moment, however, to allude to some investigations prosecuted during the year by Dr. W. B. Carpenter, relative to oceanic currents. In the ANNUAL CYCLOPEDIA for 1871 a brief statement was made of Dr. Carpenter's theories. He holds that the warmth of the surface-water in high northern latitudes is due, not to the action of the Gulf Stream in the Atlantic and the Kuro-Siwo in the Pacific, nor to the action of the trade-winds in driving the heated waters of the equator northward, but to what he terms the true oceanic circulation, namely, the constant underflow of intensely cold water from the arctic region along the bed of the oceans, which, in its course toward the equator, was gradually warmed by the heat of the ocean-bed below and the warmer water above, and

thus constantly, by a vertical motion, approached the surface, which it reached near the equator, and thus became the upper or superficial layer of waters, which rushed toward the pole to supply the place of the colder waters which flowed in the contrary direction. He believes that these waters flowing toward the poles are deflected in their course—eastward in the northern hemisphere, westward in the southern—by the earth's diurnal revolution on its axis. This theory was strongly combated by Mr. Croll, a Scottish geologist, and Captain Spratt, R. N., an experienced hydrographer. During the year 1872 Dr. Carpenter has been engaged in further observations and experiments in the Mediterranean Sea and the Atlantic Ocean, and very recently in the Pacific Ocean, all of which, he contends, confirm his theories. He has demonstrated that the superficial layer of warm water is not less than 500 fathoms (= 3,000 feet) in thickness; and, by his observations in the Mediterranean, whose waters are cut off from communication with the deeper stratum of the Atlantic by the ridge at the entrance of the straits of Gibraltar, he has shown that the waters in that sea have a temperature of from 54° to 56° Fahr., at depths between 1,500 and 1,900 fathoms, at which depths the Atlantic, under the same parallels, has a temperature *nearly twenty degrees lower*.

I. ARCTIC EXPLORATIONS AND DISCOVERIES.

—As in former years, the record of polar expeditions, in 1872, is one of great failures and small successes. It is now two-thirds of a century since Scoresby reached N. lat. 81° 30' at the north of Spitzbergen, and in that longitude no other explorer has attained a higher point since. Twenty-one years later, in 1827, Captain Parry reached, by way of Smith's Sound, the latitude of 82° 45' N. lat., in longitude 70° W. from Greenwich; and, though Kane and Hayes both approached this point, neither they nor any one else has ever passed it. Yet, every year, expedition after expedition sets forth, fully persuaded that *they* shall be able to penetrate to the pole either by the navigation of that open Polar Sea, in which so many of them believe, or, if they have their doubts of that, by dog-sledges, by reindeer-teams, or by sealskin, birch, or rubber boats. Each year, too, records their failure in their great object, either from pack-ice, ice-floes, icebergs, or pitiless storms; and, though we may admire the pluck which has enabled them to undergo such exposures and sufferings, without attaining to the success of 46 or 67 years ago, we can hardly restrain the inquiry, "What is gained by all these toils and expenses?" Still, we must admit that there is *some* gain. The great object is never attained, but some contributions are made to science by each expedition, and by-and-by the oft-debated question will be solved which is the best or most practicable route for reaching the north-pole. During the year

1872, four public expeditions and nine or ten private ones were fitted out for the polar regions; while one American expedition (Hall's) was still in the field, and an English expedition is preparing for the spring of 1873. The four public or Government expeditions were: the Austro-Hungarian, under the command of Captain Weyprecht and Lieutenant Payer, already favorably known for their previous experience. This was accompanied by an Italian steamship, sent out by the Italian Government—its destination was the north coast of Novaya Zemlya, and thence, if they found an open sea northward, to the pole; the Swedish expedition, under the direction of Prof. Nordenskiöld, who, for the sixth time, has penetrated the frozen regions of the North. He has two ships, one of them, however, rather a tender than an exploring-vessel. He carries a house of seven rooms, ample stores, and forty or fifty reindeer, with the necessary provender, and their Lapp drivers; and, making his winter quarters at Mossy Bay, in one of the Seven Islands, north of Spitzbergen, proposes in the winter and spring of 1873 to attempt a sledge-journey toward the pole, probably by way of the recently rediscovered Gillis Land which stretches an unknown distance in that direction. The Russian Government sent out two expeditions: one from Archangel toward the northern coast of Novaya Zemlya, and thence northward as far as possible; the other from the Yenisei River, which it was to descend, and, circumnavigating the Novaya Zemlya islands, sail northward to Gillis Land and return to Archangel.

Of Captain C. F. Hall, the leader of our American expedition in search of the north-pole, who sailed from New York in July, 1871, we have very little information, and that little not very satisfactory. Before the *Polaris* reached Upernavik, on the Greenland coast, there had been a disagreement between Captain Hall and a portion of the scientific staff, which led to their leaving the expedition. Captain Hall proceeded on his way, however, and was heard from, at Tossac or Tussu-issac Island, a short distance above Upernavik, being the last Danish station on the coast, on the 24th of August, 1871, when he was just departing for the northern regions, with very high hopes of the future. Dr. Emil Bessels, a German scientist, who remained with him, wrote at the same time to Dr. Petermann, at Gotha, saying that they had taken on board Hans Heindrick, an Esquimaux, who had accompanied Kane and Hayes, but had deserted the latter very shamefully. He seems to have been one of the savages whom partial civilization had spoiled. From this time, now about nineteen months, we have had no certain information of Hall's expedition. The winter of 1872-'73 has been one of such exceptional severity in the arctic regions that serious apprehensions have been entertained of the fate of the *Polaris*. Meanwhile, although we

have no definite intelligence of the success or failure of the European government expeditions, private explorers have made some discoveries and attained to some successes which have given new encouragement to the advocates of polar expeditions by way of Spitzbergen and Novaya Zemlya. In the summer and autumn of 1871, a Norwegian whaling-captain, Elling Carlsen, succeeded in circumnavigating Novaya Zemlya and anchored in Ice-haven (N. lat. about 75° 40', E. long. about 68° 10'), on the southern, or, rather, southeastern shore of the easternmost of the large islands composing Novaya Zemlya, on September 7, 1871. Here he discovered a house built of ship's timbers, standing at the head of the bay, about 100 yards from the water. It was 32 feet long by 20 broad, and proved to be the house erected by the famous Dutch navigator Willem Barents, who after two unsuccessful attempts to reach Cathay, or China, by a northeast passage, was shipwrecked at this point on his third voyage, and whose crew passed the winter of 1596-'97 in this house. Barents himself died in his boat on June 19, 1596, but twelve of the survivors, after passing the winter in this place, escaped and returned to Holland, and the story of their hardships was recorded, and published with rude woodcuts in Holland about A. D. 1600. On landing and entering this house, which had been for 275 years without an inhabitant, Captain Carlsen found and brought away numerous relics which fully identified it as the home of Barents's crew. These relics were purchased by the Government of the Netherlands.

A contribution to geographical science of greater importance than this was made by Captain Nils Jansen, a Norwegian whaling-captain, who in a little twenty-six-ton vessel, cruising to the east of Spitzbergen, in the summer of 1872, found the whole region free from ice, and, running into one of the bays of King Carl's Land, the situation of which has been so frequently disputed and which was long confounded with Gillis or Gillies Land, went on shore and ascended a mountain of considerable height, whence he saw the ocean lying to the east and northeast as far as the eye could reach, and entirely free from ice. Far to the north-northwest was what seemed to be land, supposed to be the real Gillies Land, the shores of which no man has yet reached. Captain Jansen anchored at first in lat. 79° 8' N., and long. 30° 15' E. from Greenwich, and subsequently sailed along the coast for two days and a night, and only on the north coast was there any ice. Some of his most important discoveries relate to the flora and fauna of these far northern lands; he saw birds, seals, and large reindeer in abundance, but he says nothing about whales. He also saw great piles of driftwood along the shore, some of them heaped twenty feet above high-water mark; a careful observation of this drift would
